From the Great Lakes to Tidewater Under the American Flag.

EXTENSION OF REMARKS

OF

HON. HOMER P. SNYDER,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, December 7, 1916.

Mr. SNYDER. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include an address by my colleague [Mr. MOTT], delivered yesterday at the National Rivers and Harbors Convention.

The address is as follows:

ADDRESS OF MR. MOTT DELIVERED AT THE NATIONAL RIVERS AND HARBORS CONVENTION, DECEMBER 6, 1916.

Mr. Chairman and gentlemen, transportation is the first and most vital consideration in the manufacturing and marketing of our goods. Cheaper transportation, I believe, is the underlying reason for the existence of this organization. If the railroads of this or any other country could handle raw materials and manufactured products as cheaply as it may be done by waterways, there would be no occasion for this gathering, neither would there be any excuse for the construction of the Suez Canal, the Panama Canal, and the enlargement of the older canals that have taken place in the past century. I am speaking industrially and commercially, not strategically, for all deep-draft waterways have their value as adjuncts to the navies of the countries that control them.

Therefore we are here to-day to talk about cheaper transportation for this country, and to accept without argument and as a proven fact that the only means through which this may be brought about are waterways, their utilization and improvement.

The National Rivers and Harbors Congress advocates a policy, not a project, yet it is essential that I speak of a project in order to cover my subject; but in doing so I want to be understood as advocating a policy of materially developing and improving all waterways that will in any way tend to cheapen transportation, to unite more closely and economically the producer and the consumer, and to bring the extremes of our country into closer connection.

In brief, the project I shall attempt to explain involves the construction of at least one and possibly two ship canals to connect the Great Lakes with the Atlantic. It is not a new thought, but one as old as the history of commerce in this country. The need for the consummation of some such project has been growing more vital with each successive year, and, in my opinion, it will be but a question of a few years before it will be conceded that this waterway offers the only solution to the vexatious problem of lowering costs on transportation on raw materials and essentials to living from the West to the East and on transporting manufactured products from the East to the West.

In order more thoroughly to comprehend the scope of the plan it will be well to glance mentally over the Great Lakes, their outlay, the States that border them, and the vast territory of the Dominion of Canada that lies to the north and the west of them. These States that border the Lakes have for their population one-third of the total population of this country, while the Canadian territory accessible to the Lakes produces the bulk of all the grain grown in the Dominion. The Eastern States of this country were the first settled, and became the more populous and the manufacturing centers. The production of raw materials is in the West and the Middle West to-day, and in a country with a wide expanse of territory such as ours the need for cheap transportation from the field to the market, from the mine to the mill, from the farm to the city, becomes at once apparent and all important.

Our railroads have been steadily developed to meet this constantly increasing need for communication, but they have failed in the first essential economy. The waterways system has failed, too, in that while it is cheaper it is not continuous and has not been sufficiently developed to meet the growing need. It is this latter failure that we must overcome in order to achieve cheaper transportation and better communication, and the added end that we keep the trade of the western and Canadian grain fields in the hands of Americans, transported by American bottoms, and under the flag of the United States. This is the project I am to discuss—a way by which we can transport our goods from the Great Lakes to the Atlantic wholly under American control.

AMERICAN AND CANADIAN TRADE RIVALRY.

The natural outlet of the Great Lakes is the St. Lawrence River, but that river discharges into the Atlantic wholly within Canadian territory. Four of the five lakes are as much Canadian as American, and the most eastern, Lake Ontario, is cut off from the others by a natural barrier to commerce, Niagara Falls. From the start of commerce on the Great Lakes there has been rivalry between the two countries holding them jointly. How much they were esteemed in the early years is told us by the history of the sea fights that took place on them. The rivalry now is all in commerce, but it is a death-dealing war, just the same. In order to overcome American competition Canada early canalized the St. Lawrence River and constructed the Welland Canal to connect Lake Erie and Lake Ontario. When the United States built the Soo Canal, in the upper lakes, Canada paralleled ours with another in her territory. Her possession of the St. Lawrence River gave Canada the outlet to the sea. She seized her opportunity and utilized the waterway that nature gave. The Dominion Government has let no opportunity go by to better that channel in every way, and to-day, with her mother country, England, in war, struggling to the last man and the last penny, Canada contributes her share out of the men and money, and also her work on the enlargement of the New Welland Canal, so that she will be ready to play her part in the trade war we shall have on our hands after the actual conflict abroad has passed.

We in New York State early realized this competition and the importance of keeping the trade of the Great Lakes within American control. We constructed the Erie Canal. That was soon outgrown, and it was enlarged, only to be outgrown again by the tremendous volume of traffic that passed east and west. But for the time it served its purpose in staving off inroads of Canadian competition. Now we are building the New York State barge canal, still incomplete, after 12 years' work and the expenditure of over $110,000,000 to date, including terminals. The total cost will be nearly $160,000,000.

Compare for a moment our work with that of Canada. The new Welland will be 26 miles long; the Barge Canal over 300 miles. The Welland Canal will have 7 locks, the Barge Canal 32 in the main line. Vessels drawing 30 feet of water may pass the Welland; the Barge Canal lock depth will be 12 feet. The Welland lock will be 800 feet long; the Barge Canal lock 300 feet. The improvement is costing the Canadian Government about $30,000,000, or less than a fourth of the cost of the Barge Canal. So, with all our efforts, it would seem that we are still far to the rear in keeping up with the claims of commerce on the Lakes and that our Canadian neighbors have profited by our errors and petty jealousies to seize our business.

It should be evident to everyone that now is the time for the United States to take steps to recover the ground we have lost and are losing, and to realize the immense advantage that Canada has over our trade route. It is only a question of time until Montreal, on the St. Lawrence, will be in a position to bid successfully for a great portion of the business now done by the port of New York, the real terminal for a canal without traffic, and without boats worthy of the name. It seems a far cry to predict any maritime or commercial danger from Montreal in comparison with our great metropolis. But the growing importance of our sister of the snows should not be forgotten for an instant, and we should not forget that the hugeness of New York, the wealth of the State in which it is, and the immensity

of the Lake traffic itself, is what makes American supremacy so easy to attack, and makes Americans and those not vitally concerned so overconfident and indifferent to changes that are taking place so rapidly and with such telling effects.

TRANSFER CHARGES INCREASE TRANSPORTATION COST.

When the new Welland Canal is completed it will be possible, as it is now possible for the smaller carriers, for the largest-size Lake carriers to load grain on the upper Lakes and proceed to Montreal without breaking bulk or paying 1 cent for transfer charges. The obstacle in the way of the use of the Barge Canal is the transfer charges, which on grain are one-half cent per bushel for elevating and from one to five days' storage. The normal cost of transportation on a bushel of wheat from Chicago to Buffalo, based on figures of the New York Produce Exchange for the year 1915, was 1.480 cents per bushel, which was higher than for any year since 1907, when the car shortage made water transportation more popular than for any year since 1889 up to that time.

Transportation in carriers, then, from the head of the Lakes to Buffalo, for the rates are similar from any upper Lake port to Buffalo, is the smaller portion of the cost from the Lakes to the seaboard. The transfer cost at Buffalo has averaged one-half cent per bushel for 18 years, this including elevating and storage. The average cost per bushel on wheat from Buffalo to New York by canal was, in 1915, 4.6 cents. In other words, it costs over three times as much to get wheat from Buffalo to New York as it does from the head of the Lakes to Buffalo. By lake and rail from the Lakes to New York the rate is 7.48 cents, or was in 1915, and I understand this year the cost is even greater. By all rail from the head of navigation to New York the cost averaged last year 10.08 cents per bushel. On a cargo of 300,000 bushels of wheat from Chicago to Buffalo the freight charge would be at the foregoing figures $4,440, while the elevating and storage charges would total $1,500, and the canal freight rate from Buffalo to New York $13,600.

The cost of handling grain in a modern carrier on the Lakes between the head of navigation and Buffalo amounts to about five-eighths of 1 cent a bushel. This is inclusive of handling, and includes port charges on the vessel. A 400,000-bushel carrier can be operated at an expense of $240 per day. The time in transit is from three to five days, as against double that time from Buffalo to tidewater.

From these figures, into which I have not gone more extensively than seems absolutely necessary because of the shortness of the time allowed me, it is not difficult to see that a ship canal is necessary, first, to save time, and, secondly, to save congestion at the transfer point, but, above all, to save money. It would require 252 freight cars of the largest size to carry that cargo of wheat from Buffalo to New York, or 37 canal boats. Anyone can see the difference in operating costs between one Lake carrier, 252 freight cars, and 37 canal boats or barges. A ship canal, it may be seen, will save a car shortage in rush seasons, abolish the vexatious and costly transfer charges and the delays incidental thereto, and save money in every operation. It works both ways, for the steamer could carry back a cargo that would save equally on cars and canal craft. Considering all these points, all of them important in solving a transportation problem, it should be apparent that a ship canal is the only solution.

The New York State Barge Canal in no way abolishes transfer charges or does anything toward keeping American trade in America. If grain can be shipped cheaper by an all-water route for export, Montreal and Canada will benefit, not New York and the United States. This should be self-evident from a comparison of rates, outlined in the foregoing.

NEW YORK'S DECLINING GRAIN TRADE BY WATER.

Last year there was exported 332,464,976 bushels of wheat or its equivalent in flour. This was nearly 37½ per cent of our country's production. In wheat, 78.11 per cent went abroad as such and the remainder in flour. Of this three hundred and thirty-odd millions of bushels of wheat, 225,886,601 bushels were received in New York City. By canal and the Hudson River some 3,841,000 bushels were received; coastwise, some 7,291,638 bushels; and by rail the remainder, or 214,753,963 bushels. The entire production of wheat in this country in 1915 was 1,011,505,000 bushels. So it may be seen that nearly one-quarter of this production went to New York City, by far the greater proportion going by rail.

The year 1915 was exceptional perhaps in that there was an extraordinary demand for breadstuffs abroad, but it is not unreasonable to presume that this demand may continue for several years to come. The transfer charges at Buffalo annually on grain received there by water total over $2,000,000 annually, as a conservative estimate, while there have been years when that figure has been doubled. On the same basis that the foregoing has been estimated, the transfer charges on the grain shipped into New York City last year were $3,072,057.77. Combine the transfer charges at both points—for every cargo of grain received either by rail or boat takes double toll from the ultimate consumer—and the total for the average year is well over $5,000,000. It is easy to see, therefore, that in a few years a ship canal would pay for itself and leave a handsome margin, not to speak of the lowering of the final cost of flour in the markets of the East.

There would be another result, for with an all-water route competing with the rail lines from the Lakes to the seaboard there would be a lowering in tariff on the railroads. One would help the other, as neither can compete with the other, for the railroads carry finished products and the waterways raw materials or bulk shipments.

A PROPOSED SHIP-CANAL ROUTE.

The earliest trade movement by water in the United States was on the Hudson River, north to the St. Lawrence, through the Champlain lake and river system, and west through the Mohawk River and its territory. These were the fur-trading routes, and of the two, as time progressed, the western route became the greater in importance. In three places in New York State, in Oneida County, tributaries of the Mohawk River come within a distance of from a half mile to a mile of tributaries of the Oneida Lake streams. The fur traders and early freighters utilized these streams and made a carry across the land dividing them, and thus from New York had westward a practically uninterrupted all-water route to the Great Lakes territory. The Oneida River discharges from Oneida Lake and goes to join the Oswego River, which discharges into Lake Ontario. That Oswego became the most important trading post in the North was due to the fact that it was where lake traffic, such as it was, met the fur traders from the east and their agents. It was the transfer point. But when the canals came and followed practically the same route, it still became the transfer point. That the early canals followed the old fur-trading route was just another demonstration that trade follows the line of least resistance. The Barge Canal has been laid out practically along that route, but, for reasons that have been given, the Barge Canal does not fill the requirements of trade.

The route that every engineer who has given the matter any thought has followed has been that same route of least resistance, for it offers three rivers, always navigable to a certain extent, and made safer since by canalization and dredging, an abundance of water, and the other essentials that go to make up the requirements for a deep-draft canal. For over a third of the proposed route a ship canal would be in natural waterways, requiring few locks, and presenting no obstacles of navigation. There would be no restrictions of channel, and for a portion of the way at least there is now over 16 feet of water, and at least 12 feet of water for the entire distance. A board of United States engineers in surveying the route in 1901 reported in its favor and fixed the estimated cost at about $200,000,000. The Barge Canal has cost within $70,000,000 of that latter estimate, and is not built for the future. It, as has been stated, does not abolish transfer charges and can not be said to solve our problem.

In summarizing the points I have endeavored to make, a ship canal would possess the following advantages:

First. It would offer an all-water route superior to that along the St. Lawrence, and would stimulate American commerce, American shipbuilding, and kindred industries.

Second. By abolishing transfer charges and cheapening transportation, it would save annually millions of dollars and do more than anything else toward cheapening the cost of transportation and lowering the cost of wheat and flour.

Third. It would offer 162 miles of open waterway in Lake Ontario against a similar distance to be traversed in the Barge Canal.

Fourth. It would relieve congestion at all transfer points that exist now and open the way for better uniting the production centers with the markets, not on grain alone, but on all raw materials.

Fifth. Barges and canal craft could use the ship canal as well as sea and lake going vessels.

Sixth. On bulk shipments of machinery and other heavy manufactured products from the East to the West the ship canal would do as heavy a return-cargo business as on raw materials.

Seventh. It would relieve congestion on railroads, solve the car-shortage problem that exists always when cars are most needed, and thus confer countless benefits not alone upon the immediate territory it would serve but on the entire country.

Eighth. Comparatively speaking, its cost would be little compared with its benefits. The route has been partially canalized now, and the route outlined would be cheaper and quicker than any other.

Ninth. It offers the only way to keep the commerce of the Great Lakes and our great grain trade wholly in American waters, entirely under American control.

I have attached several interesting tables of figures on transfer costs, wheat and other grain shipments and productions, and other matter of interest in this connection which the time allotted me will not permit me to read, but which go to substantiate the statements made in the foregoing.

Average annual freight rates on wheat, by lake and canal, by lake and rail, and by all rail, from head of Great Lakes to Buffalo.

[Compiled by statistician, New York Produce Exchange.]

	By lake and canal.	By lake and rail.	By all rail.
1906	5.94	6.48	10.50
1907	6.68	6.94	11.30
1908	6.00	6.33	11.70
1909	5.35	6.88	11.70
1910	5.13	6.57	9.60
1911	5.35	5.23	9.69
1912	5.57	6.17	9.60
1913	5.74	7.01	9.60
1914	5.31	6.54	9.60
1915	6.08	7.48	10.08

Since 1898 average transfer charge, elevating, and storage from 5 to 10 days has been 0.500 cents per bushel.

For 10 years the average canal rate on wheat, Buffalo to New York, has been: 1906, 4.2; 1907, 5; 1908, 5; 1909, 3.9; 1910, 4; 1911, 4.3; 1912, 4.4; 1913, 4.6; 1914, 4.3; 1915, 4.6.

Based on above freight charges, on a 400,000-bushel cargo of wheat would be: By lake and canal, 1915, $24,320; by lake and rail, 1915, $29,920; by all rail, 1915, $40,320.

The single transfer charge at Buffalo on the two first would be $2,000.

Comparison of grain received at ports of New York and Montreal, with methods of shipment into the former.

Because of the fact that Canadian carriers were called into the service of the Crown, much of the grain destined for export went via New York last year.

Montreal grain exported paid no transfer charges from the head of the lakes to the port docks; grain destined for New York paid over $4,517,732 transfer charges, based on minimum rate.

The Coast Guard of the United States.

EXTENSION OF REMARKS
OF
HON. FREDERICK C. HICKS,
OF NEW YORK,
IN THE HOUSE OF REPRESENTATIVES,

Monday, December 11, 1916.

Mr. HICKS. Mr. Speaker, the sea with its vast expanse and mighty distances stretching to the far corners of the earth appeals to the imagination and envelopes commerce with the cloak of romance. The use of ships in the transportation of men and merchandise dates back to the earliest periods of human history. Commerce has played a principal rôle in every act of the drama of civilization; it has stimulated trade, encouraged industry, and was the impelling force which inspired those intrepid voyages of the fifteenth century, whose fruits were the discovery and colonization of empires.

Each year adds its toll of death and loss of property to the long list of casualties by sea. For centuries no effort was made to safeguard the lives of those who accepted the calling of the deep, and it was not until the end of the eighteenth century that public apathy was aroused to the necessity of providing means which would mitigate the sufferings and perhaps save the lives of shipwrecked mariners.

The first steps toward the organization of a regular life-saving service were taken almost simultaneously by England, France, and America, and to-day practically every country having a seaboard maintains a system of this kind. Previous to the founding of a regular service all efforts to protect ships from accident had been directed to the establishment of lights and buoys along the coasts. To provide a more effective system of life-saving, the Royal Humane Society of England was organized in 1774, from which has grown the splendid organization of to-day. The English service, from which our own differs very materially, depends upon volunteers, with the Government supplying the boats and all the paraphernalia incident to the system.

In 1785 a small body of benevolent persons instituted the Massachusetts Humane Society, the avowed object of which was to endeavor to alleviate the sufferings of those shipwrecked on the Massachusetts coast. As expressed in the act of incorporation of 1791—

> The end and design of the institution is for the recovery of persons who meet with such accidents as to produce in them the appearance of death, and for promoting the cause of humanity by pursuing such means from time to time as shall have for their object the preservation of human life and the alleviation of its miseries.

To carry out this purpose several small huts were built on some of the most exposed parts of the coast, and the society offered rewards to those who made "signal exertions" to save life. It is evident from perusing the records of the society that their activities were also directed toward the eradication of plagues, for we find that in 1798 the trustees offered a piece of plate "for the greatest number of important and well-established facts instrumental in giving origin to the yellow fever in the United States." A few years later the society assisted in founding an asylum for the insane. This society was the actual pioneer of maritime life-saving in America, and in 1807 established at Cohasset a station equipped with the first lifeboat ever used in the United States. The society gradually enlarged its service as its funds permitted, and maintains to-day 32 stations, which are operated independent of Government control.

The society depends upon private subscriptions, a part of the funds necessary for the work being derived from the income of legacies that have been bequeathed to it. A keeper is maintained at each station, but the crews are enlisted from volunteers on the occasion of a disaster. The equipment is practically the same as that supplied the stations under Federal supervision. Owing to the fact that Government life-saving stations have in many places been established in close proximity to those of the society, the policy of the trustees of late years has been to withdraw from this field of usefulness and direct their energies along other lines.

Nothing was done by our Government to assist distressed mariners until 1837, when a few revenue cutters were detailed to cruise near the coast for the purpose of rendering aid to ships in need of assistance. To make the historical record complete we must go back to the Continental Congress. By act of August 7, 1779, the general charge of the lighthouse system was placed in the hands of the Treasury Department, which made contracts with private parties for the repair and supply of lighthouses. In

1838, as the result of many complaints regarding the management of the system, Congress ordered a general inspection of the service and two naval officers were detailed for the purpose. In the report one of these officers made this very significant suggestion: "Much can be done to alleviate the distressed seamen by having lifeboats stationed at places herein designated," referring, of course, to lighthouses. In 1845 the Secretary of the Treasury instructed two naval officers to visit Great Britain and France for the purpose of procuring information which might tend to the improvement of the Lighthouse Service of the United States. In their report of June 22, 1846, they stated in reference to the system employed in lighting the port of Liverpool:

The authorities have further provided for the safety of seamen by adding a number of lifeboats to their charge.

While the lighthouse bill was under consideration in the Twenty-eighth Congress the following amendment was offered:

For furnishing the lighthouses on the coast with means of furnishing assistance to shipwrecked mariners, $5,000, the same to be under the control and direction of the Secretary of the Treasury.

The amendment became a law March 3, 1848, in the exact terms in which it had been introduced, and was the first appropriation made by our Government for rendering assistance to shipwrecked mariners. This money, however, was not expended by the Government as originally intended, but was carried over and two years later placed at the disposal of the Massachusetts Humane Society "for the construction and maintenance of lifeboats and rockets to throw lines to and from stranded ships." An amendment to the lighthouse bill approved August 14, 1848, provided for the expenditure of $10,000 for the purpose of securing "necessary apparatus for the better protection of life and property from shipwrecks on the coast of New Jersey between Sandy Hook and Little Egg Harbor." This sum was used by the Treasury Department, acting in cooperation with the Board of New York Underwriters, in erecting eight boathouses, 28 by 16 feet in size, and equipping them with life and surf boats, rockets, etc. At this time, and for nearly a quarter of a century after, reliance for assistance on occasions of shipwreck was upon volunteers. Owing to the lack of a coastwise population at some of the most dangerous points along our own and the New Jersey shores and the isolation of the beaches upon which the life-saving stations were located, voluntary service, except in a few instances, could not be depended upon, although in the neighborhood of some of the stations a sufficient number of men with surfing experience to form a boat's crew had an understanding that they would give their services when occasion demanded. Our coasts were wild and lonely, and, owing to the presence of strong currents, the absence of lights, and the severity of storms, exceedingly dangerous to navigators. The few who survived shipwreck by their own efforts perished often from cold and exposure. To relieve their sufferings in case they were able to save themselves from the wreck, a few shelter huts were established at different points.

In 1849, $20,000 was appropriated for life-saving work, $10,000 of which was expended in extending the New Jersey system to Cape May and the other $10,000 in the erection of eight lifeboat houses on the ocean and sound sides of the Long Island coast, under the direction of the Life Saving Benevolent Association of New York, a society which had just been incorporated by the State legislature. This was the beginning of the life-saving system on Long Island. Unfortunately for the embryo service, the appropriations did not carry a provision for the care of the buildings and their contents. No definite policy was inaugurated. There was neither organization nor supervision and no accounting demanded by the department. "There the buildings stood, many of them upon isolated portions of the coast, far distant from any habitation, exposed to the depredations of the covetous, mischievous, and the malicious." Although they occasionally afforded the hardy beachmen an opportunity of rendering good service in rescue work, they were allowed to suffer from neglect, natural decay, and petty thefts. In 1850, $20,000 was appropriated for life-saving purposes. Other appropriations followed, but the voting of these sums by Congress was largely prompted by frequent appalling catastrophes and were not made in conformity to any systematic plan. The lifeboats and the stations were of occasional and signal benefit, but the lack of responsible custodians for the appliances of relief rendered them in large measure nugatory. In some instances natural changes in the beaches wrought by winds and tides rendered the stations useless, while their equipment became diminished by pillage and decay.

By 1854 the inefficiency of the service, if such it could be called, emphasized by frequent calamities, aroused public sentiment. By the act of December 14, 1854, passed with much opposition, provision was made to rehabilitate the system. Under this act a superintendent, at a compensation of $1,500 per annum, was appointed for each of the two coasts. A keeper was assigned to each station at a salary of $200, the stations were made serviceable, and bonded custodians were secured for the lifeboats. Some improvement followed, but it was only temporary and partial. The new appointees put the stations and equipment in condition and for a period the benefit of the step that had been taken was manifest in a marked reduction in the fatalities attendant upon shipwrecks within their purview. The absence, however, of drilled and disciplined crews, the lack of regulations of any kind for the government of those concerned, the failure to hold them to a proper accountability for the care of the property or the discharge of their duties, and, above all, the absence of all administration were radical defects and the record continued to be one of meager benefits checkered by saddest failures. This condition of inadequacy and lack of discipline continued until 1870, when Congress, by the act of July 15 of that year, authorized the Treasury Department to enlist and pay crews. The men were employed for three months only and were assigned to alternate stations.

In 1871 Mr. Samuel I. Kimball, Chief of the Revenue-Cutter Service, determined to improve the Life-Saving Service and to carry his plans into effect, ordered a thorough investigation of the stations and equipment. He secured from Congress an appropriation of $200,000, with which he purchased new gear, repaired old stations, and established new ones. Additional crews were enlisted, the merit system for appointments and promotions was inaugurated, a beach-patrol system, together with a system of signals, was introduced, and regulations for the government of the service were promulgated. The result of the transformation was most beneficial, and the system thus organized and equipped has steadily advanced in efficiency and the esprit de corps of its men, until to-day it is the finest service in the world. The patrolling of the beaches at night and during thick weather was a most important feature of the new regulations, and distinguishes the United States service from that of all other nations. This largely accounts for its unparalleled successes in rescuing shipwrecked seamen from stranded vessels. From this time forward the growth of the system was rapid, although the funds placed at its disposal were inadequate to its needs. Until 1877 the appropriations allowed by Congress did not permit of the stations being opened for service until December 1 of each year, and then only for three months.

The result of this economy was most serious, for on November 24, 1877, the S. S. *Huron* was driven ashore on the North Carolina coast, where nearly 100 perished without any assistance being rendered them from the shore, due to the fact that the crews had not yet reported for their winter duty. A few weeks later another terrible wreck was recorded when the *Metropolis* stranded on the same coast and 85 lives were lost. The mortality was due to the remoteness of the life-saving station from the scene of the disaster, the location of the stations at that time being from 10 to 16 miles apart. These casualties prompted the department to erect 13 additional stations between Cape Henry and Hatteras Inlet.

The service continued to grow in extent and importance until by the act of Congress of June 18, 1878, it was detached from the Revenue-Cutter Service in conjunction with which it had hitherto existed, and organized into a separate and definite establishment of the Treasury Department under the charge of a general superintendent. Under the new act the length of service of the crews at the seaboard stations was extended from September to May and on the Lakes made coterminous with that of navigation of these waters. Until this time the Life-Saving Service had been a part of the Revenue-Cutter Service organized by an act of Congress approved August 4, 1790. This service was designed originally as the coast-defense system of the country and was placed under the Treasury Department, there being at that time no Naval Establishment. In addition to coast-defense work the vessels of the Revenue-Cutter Service were charged with the enforcement of the customs laws in preventing smuggling, which at that time was carried on systematically by vessels regularly engaged in the trade.

By a singular process of evolution, the Life-Saving Service, which had originally been a part of the Revenue-Cutter Service—separated from it in 1878—was reunited with it by the Coast Guard act of January 28, 1915, which in a general way classified the duties of the service as follows:

1. Rendering assistance to vessels in distress and saving life and property.
2. Destruction or removal of wrecks, derelicts, and other floating dangers to navigation.
3. Extending medical aid to United States vessels engaged in deep-sea fisheries.
4. Protection of the customs revenue.
5. Operating as a part of the Navy in time of war or when the President shall direct.

6. Enforcement of law and regulations governing anchorage of vessels in navigable waters.
7. Enforcement of law relating to quarantine and neutrality.
8. Suppression of mutinies on merchant vessels.
9. Enforcement of navigation and other laws governing merchant vessels and motor boats.
10. Enforcement of law to provide for safety of life on navigable waters during regattas and marine parades.
11. Protection of game and the seal and other fisheries in Alaska, etc.
12. Enforcement of sponge-fishing law.
13. International ice patrol of the Grand Banks.

The total authorized complement of warrant officers, petty officers, and men is 3,945, of which 2,107 are employed at the coast stations. The equipment consists of 23 cruising cutters, 24 harbor cutters, and 279 stations, of which 2 are specially constructed vessels, equipped with necessary appliances, 1 anchored off City Point, Boston, and the other in the Ohio River off Louisville, Ky.

A BRIEF SUMMARY OF THE ACTIVITIES FOR THE FISCAL YEAR ENDING JUNE 30, 1916.

One thousand two hundred and sixteen persons were saved through the efforts of the service. There were 1,453 instances which involved the saving of life or the salving of property imperiled. In various ways assistance was rendered to 15,742 persons on board vessels. The total appraised value of the property saved from immediate jeopardy was $10,638,555. The cost of maintaining the service for the year was $5,215,711.34. In addition to the patrols constantly maintained during the active season by station crews along the beaches and the regular cruising of cutters offshore, the latter are charged with special watchfulness during the winter months on the Atlantic seaboard. Much valuable assistance is rendered by these cutters every year. Thirty derelicts were removed or destroyed and 149 cases of sickness treated on American fishing vessels on the Banks. The harbor cutters of the Coast Guard board all incoming vessels that are subject to customs inspection. They assist in the enforcement of the navigation laws, and, in cooperation with the War Department, the Coast Guard supervises the anchorage and movements of vessels at the ports of New York, Chicago, on the Kennebec River, and the St. Marys River, Mich.

Each cruising cutter is assigned to cover a section of the coast, called her cruising district, and a certain port within that district is designated as her headquarters. Certain cruising districts are combined into divisions, each in command of a senior captain.

Cutters are constantly employed to enforce the neutrality laws of the country as well as those regulating immigration. Another duty which devolves upon the Coast Guard is the patrol of Bering Sea and the North Pacific Ocean to prevent pelagic sealing in accordance with the provisions of the convention of 1911, entered into by the United States, Great Britain, Russia, and Japan. During former years pelagic sealing had depleted the Pribilof herd to such an extent that it was feared the seals would be exterminated. In the fall of 1911 the four powers most deeply interested in the preservation of the herd agreed to prohibit pelagic sealing on the part of their respective citizens. The result of this strict patrol has been a marked increase in the seal herd.

Still another activity is the International Ice Observation and Ice Patrol Service performed by vessels of the Coast Guard. This service was begun by the United States in 1914 on behalf of the powers which are parties to the International Convention for the Safety of Life at Sea, signed at London January 20, 1914, by the representatives of 13 States. Under the conditions of the convention the several powers assumed obligation to contribute to the expenses of the international service in certain proportions. The scope of the patrol and the methods of disseminating information and warnings to trans-Atlantic vessels approaching the Grand Banks are set forth in the following instructions issued to the patrol vessels:

The object of the patrol is to locate the icebergs and field ice nearest to the trans-Atlantic steamship lanes. It will be the duty of patrol vessels to determine the southerly, easterly, and westerly limits of the ice and to keep in touch with these fields as they move to the southward in order that radio messages may be sent out daily, giving the whereabouts of the ice, particularly the ice that may be in the immediate vicinity of the regular trans-Atlantic steamer lanes.

The patrol will continue until the ice no longer constitutes a danger to navigation in the trans-Atlantic steamship lanes.

Having located the ice, the patrol vessels will send daily radiograms.

Special cruises are another feature of the service. Under instructions from the Postmaster General large accumulations of winter mail are transported to northern Alaska; villages and Government schoolhouses in these remote regions are visited and supplied, and medical aid given where needed. The Department of Justice also uses the service to carry the United States court to villages in Alaska to facilitate the administration of justice. While the most severe disasters on the water are caused by storms and thick weather, there are a large number of accidents to motor and sail boats which occur in good weather, due to various causes, principally the inexperience of those handling them. In addition to the work of protecting commerce the units of the Coast Guard are frequently called upon to rescue and resuscitate bathers whose lives are imperilled.

The sea and lake coasts of the United States, exclusive of the shore line of Alaska, have an extent of more than 10,000 miles. To-day there are upon these shores 278 life-saving stations—not including the 32 operated by the Massachusetts Humane Society or the one at the Falls of the Ohio—located at selected points where danger to shipping is most prevalent. The stations vary somewhat in character according to the nature of the service demanded of them. On some portions of the coast they are placed at long intervals, while on others they form a continuous chain of posts. The ocean shores of Long Island and New Jersey, one with about 120 and the other with over 130 miles of coast line, form nearly a right angle, the vertex being at the entrance to the harbor of the world's greatest metropolis. This coast line throughout nearly its whole extent consists of a narrow stretch of sandy beach, varying in width from one-quarter of a mile to five miles, and separated from the mainland by channels, bays, and marshes. This long stretch is unbroken except by a few inlets connecting the ocean with the inland waters and by the entrance to the Harbor of New York. A few hundred yards offshore for almost the entire distance are submerged sandbars over which in violent storms the surf breaks with terrific fury. These sands have always demanded a fearful toll from the passing commerce and are strewn with the half-buried skeletons of wrecked vessels whose decaying timbers tell the sorrowful tale of the destruction of human life which has filled the graveyards of the coast villages with unmarked mounds of "they that go down to the sea in ships."

On the Sound side of Long Island there are two stations and on the ocean shore 28 stations, located in close proximity to each other. On the New Jersey coast from Sandy Hook to Cape May there are 41 stations. From the eastern extremity of the coast of Maine to the Cape Cod Lighthouse, a distance of 415 miles, there are 33 stations under the care of the Government, while the Massachusetts Humane Society operates under the voluntary system 32 stations. Between Cape Cod Light and Montauk Point there are 24. Between Cape Henlopen and Cape Charles 19 stations are located, while between Cape Henry and Key West, Fla., there are 42 stations. On the shores of the Gulf of Mexico there are 8 stations, and between Nome, Alaska, and San Francisco there are 19 stations. On the Great Lakes 63 stations are located.

Each station is in charge of a keeper who is a warrant officer, and the crew consists of from 6 to 10 surfmen, with an additional surfman at many stations during the winter months. Warrant officers are appointed by the Secretary of the Treasury and hold their appointments during good behavior. The term of enlistment in the Coast Guard is for one year and is for general service and not for any particular vessel or station. A rigid physical examination is required, and no person can be enlisted as surfman who is under 18 years of age or over 35, who weighs less than 135 pounds or more than 205, or who is not a good swimmer. Ration allowance is provided by the Government and enlisted men receive an annual allowance for their uniforms. Warrant officers and enlisted men are retired under the same conditions as commissioned officers.

Coast Guard stations are grouped into 13 districts, each one under the immediate supervision of a district superintendent. The stations and their equipment depend upon the service required. Along the north Atlantic and lake coasts the stations, in addition to the living quarters of the crew, are equipped with the beach apparatus—line-projecting guns, hawsers, breeches, buoys, and so forth—flag and Coston signals, heaving sticks and lines, life preservers, life and surf boats. As lifeboats are too heavy to be launched from the beach into the surf, they are used only when the stations are located on inlets where smooth water permits the construction of launching ways. Surfboats which can be launched into the surf are the main dependence of the seaboard stations.

On the Great Lakes the power-driven lifeboats are used to great advantage. These boats are of two lengths, 36 and 34 feet, respectively, although the larger boat is now superseding the smaller. It has a beam of nearly 9 feet and is equipped with a 35-horsepower gasoline engine installed in the aft water-tight compartment. It possesses self-righting and self-bailing qualities. The surfboats with which most of the sta-

tions are equipped are of the Beebe-McLellan & Beebe design, either with or without power. They are both clinker built and are practically identical as to model, with the important distinction that the Beebe-McLellan boat possesses the self-bailing feature. Other types of self-bailing boats are also used.

In the fourth district—Long Island—in addition to the rowing surfboats, there are 10 power surfboats, 1 power lifeboat, and 1 ice scooter. On the Florida coasts the stations consist, to a large extent, of houses of refuge, unmanned shelters, in charge of a keeper, having a capacity and provisions sufficient to succor 25 persons for 10 days. No boats or apparatus are provided except a small boat for the use of the keeper. Many of the stations are connected either by private telephone lines or through local exchanges.

Along the beach in each direction from a Coast Guard station a regular patrol is maintained, varying in length, according to the topography of the coast, from one-half to 4 miles. The crew is divided into regular watches of two men each, who from sunset to sunrise patrol the beach, keeping a lookout to seaward. At sunset the first man starts out on patrol in the same direction from all the stations in a district. While the patrolman is out, his watchmate takes the station watch, ready to arouse the crew in case of a signal from his mate. The first patrolman on his return takes the station watch and the other man patrols the beach in the opposite direction. When the watch is up, the man on the station watch calls out the next two men, who must be ready to relieve the first two when their watch expires. While the integrity of the patrol is not questioned, the regulations insist on positive evidence that the patrolman has performed his duty. Where stations are sufficiently close to one another to permit the entire distance between them to be patrolled, a halfway point is established at which place each patrolman must deposit a brass check bearing the name of the station and his crew number. This is taken up by the patrolman from the adjacent station, who in turn leaves his check. The first patrolman at night collects all checks of the previous night. Where the patrols do not meet, the patrolman carries a time clock, which can be registered only by means of a key which is secured in a safe at the end of the patrol. To have the dial of the clock marked, the patrolman must reach the point where the key is deposited. Each patrolman carries a number of red Coston signals with which to warn a vessel standing too close inshore or to notify a vessel in distress that assistance will be rendered. The same system of patrols is maintained by day during thick and foggy weather.

The Coast Guard Academy for instruction of cadets in the line is located at New London, Conn. Appointments are made after competitive examinations which are open to all citizens whose ages are within the prescribed limits—not less than 18 nor more than 24 years. The course of training covers a period of three years, and the candidate must obligate himself to serve for at least three years after graduation.

During all periods of the year, and at such times as least to interfere with the emergent duties of a civil nature, a rigid system of military discipline and training is maintained to fit the personnel for the duty of operating as a part of the Navy at any time, as the law requires. This function of the Coast Guard has always been of value, since in all wars to which the United States has been a party the Government has had at hand an auxiliary force, properly disciplined and trained, ready to become a part of the regular naval forces as occasion required.

The Coast Guard is under the supervision of the Treasury Department, with headquarters at Washington. The captain commandant is Capt. E. P. Bertholf, an officer whose distinguished record for efficiency and courage merits the highest commendation. I am deeply indebted to him for much valuable information pertaining to the service, as I am to Mr. Oliver M. Maxam, Chief of Division of Operations.

BLUE ANCHOR SOCIETY, AID FOR THE SHIPWRECKED, WOMEN'S NATIONAL ASSOCIATION.

In 1880 this society was organized, to render assistance to the shipwrecked. The enterprise is entirely a private philanthropy, having no connection with the Government service. The aim and purpose of the society is to extend aid and comfort to the victims of marine casualties by furnishing wearing apparel, and so forth, to the victims of disasters upon the water. It has found its widest field of usefulness in connection with the service performed by the crews of the Coast Guard stations. As no provision is made by the Government for clothing for those rescued from the sea, the work of this worthy organization has done much to alleviate distress.

Following are the dates when the several powers inaugurated their life-saving services as State institutions, although in most maritime countries privately managed societies for the relief of the shipwrecked were in active operation years before their respective Governments established national systems:

Great Britain and Holland	1824
Denmark	1852
France	1865
Russia	1872
Norway	1891
Belgium	1838
Sweden	1855
Germany	1872
Spain	1880
Portugal	1892

Mr. Speaker, in closing this brief description of the Coast Guard, I desire to pay tribute to the integrity and heroism of the officers and men of the service. The noble self-sacrifice and intrepid obedience to duty which responds with unflinching bravery to the call for help that comes from out the darkness to the lone patrol breasting the winter's storm on his icy beat, or which is heard by the watch on a cutter's deck, merits our unstinted praise and highest commendation. The inspiring courage which directs the life line and mans the surfboat animates these dumb instruments with the spirit of life and sends them as angels of help across the surging seas on their errands of mercy. These men—Americans of unquestioned loyalty—by their experience, training, and discipline have vitalized with energy and humanity their perilous vocation and made our Coast Guard the premier service of all the world.

Uniform Sales Law for the District of Columbia.

EXTENSION OF REMARKS
OF
HON. GEORGE R. SMITH,
OF MINNESOTA,
IN THE HOUSE OF REPRESENTATIVES,
Wednesday, December 13, 1916.

Mr. SMITH of Minnesota. Mr. Speaker, I am about to introduce a bill having for its purpose the enactment of a uniform sales law for the District of Columbia. The uniform sales-of-goods act, framed by the National Conference of Commissioners on Uniform State Laws and indorsed by the American Bar Association, has already been adopted in 13 States, nearly all of them the most important commercial States of the Union, as follows: Connecticut and New Jersey, in 1907; Massachusetts, Rhode Island, and Ohio, in 1908; Maryland, in 1910; New York and Wisconsin, in 1911; Michigan and Arizona, in 1913; and Pennsylvania, Illinois, and Nevada, in 1915. It will be introduced in some 30 State legislatures this winter.

The draftsman of the uniform sales act was Prof. Samuel Williston, of Harvard University, the highest living authority on common-law sales and contracts.

Prof. Williston in a recent communication to S. R. Child, of Minneapolis, chairman of the legislative committee of the National Conference of Commissioners on Uniform State Laws, gives as "fundamental reasons for the enactment of the uniform sales act" the following statement:

"In my opinion it is highly desirable that the uniform sales act should be enacted in States in which it has not yet been passed. The reasons for this conclusion are:

"1. That uniformity of State laws the effect of which go beyond State lines is desirable is everywhere admitted. The general appointment of commissioners in the several States for the promotion of the object proves its importance. In few subjects can it be more important than in the law of sales. Commercial transactions less and less are limited by State boundaries. It is a regrettable thing that a merchant who buys goods in several States, or who sells goods in several States, should find that his rights under the same states of fact differ in different transactions.

"2. Few if any States have already decided as matter of common law all the questions settled by the sales act. In most States a great many questions provided for in the statute have not yet been determined by decisions. The passage of the statute will determine these questions, and determine them in the right way without litigation. Legislation is a cheaper way of determining these questions than litigation.

"3. The sales act has already been enacted in 13 States. In some of them it has been in force for 10 years. This experience has not developed defects in the statute or difficulty in applying it. It has not been productive of litigation. States which have enacted it include many of the most important commercial States of America. Their experience is a safe guide."

It is apparent that there is a great loss in carrying on interstate business under such a multiplicity of laws. However, it may be said that Congress has very little, if anything, to do with such a proposition. Nevertheless, it can set a good example by adopting a uniform sales law for the District of Columbia. We do not hesitate to make liberal donations out of the Federal Treasury to States for the purpose of encouraging them to carry on certain activities which, in their very nature, are purely State matters. It occurs to me, therefore, the enactment of wise and beneficial laws by Congress that will serve as a model for the States to follow will be of greater benefit than the thrusting of Federal funds upon States to get the States to do that which they ought to do without such assistance from the General Government.

With this thought in mind, I have secured a copy of the uniform sales act, prepared by the National Conference of Commissioners on Uniform State Laws and indorsed by the American Bar Association, for the purpose of drafting a uniform sales law, and have introduced it as a bill to establish a uniform sales law for the District of Columbia. Since the States are making a serious effort to establish such a law, I feel it is the duty of Congress to establish it in such parts of the country as it has jurisdiction over. I know of no body of men that can render more valuable assistance to the propaganda of an idea than the House of Representatives.

In order to inform the House and the country of the proposed law that is sadly needed and that will be beneficial to the commerce of the country, I will incorporate, as a part of my remarks, the commission's draft of an act to make uniform the law of sales of goods and an analysis of the bill:

AN ACT TO MAKE UNIFORM THE LAW OF SALES OF GOODS.

Part I.

FORMATION OF THE CONTRACT.

SECTION 1. [Contracts to sell and sales.] (1) A contract to sell goods is a contract whereby the seller agrees to transfer the property in goods to the buyer for a consideration called the price.

(2) A sale of goods is an agreement whereby the seller transfers the property in goods to the buyer for a consideration called the price.

(3) A contract to sell or a sale may be absolute or conditional.

(4) There may be a contract to sell or a sale between one part owner and another.

The most fundamental distinction in the law of sales is between a contract to sell in the future and a present sale. The phrase "contract of sale" used in the English act has been discarded. An explanation of the reasons on which this and the other sections of the act are based, fuller than is possible in brief annotations, may be found in Williston on Sales.

SEC. 2. [Capacity—Liabilities for necessaries.] Capacity to buy and sell is regulated by the general law concerning capacity to contract and to transfer and acquire property.

Where necessaries are sold and delivered to an infant, or to a person who by reason of mental incapacity or drunkenness is incompetent to contract, he must pay a reasonable price therefor.

Necessaries in this section mean goods suitable to the condition in life of such infant or other person and to his actual requirements at the time of delivery.

This section states the prevailing, though not wholly uniform, doctrine of the existing law. (Mechem on Sales, sec. 122 et seq.) The section follows verbatim section 2 of the English act, except that the words "the sale and" which precede the last word in the section are omitted as introducing a possible ambiguity.

FORMALITIES OF THE CONTRACT.

SEC. 3. [Form of contract or sale.] Subject to the provisions of this act and of any statute in that behalf, a contract to sell or a sale may be made in writing (either with or without seal), or by word of mouth, or partly in writing and partly by word of mouth, or may be inferred from the conduct of the parties.

This follows the first part of section 3 of the English act. That act contains the following proviso, which was omitted as unnecessary:

"*Provided*, That nothing in this section shall affect the law relating to corporations."

SEC. 4. [Statute of frauds.] (1) A contract to sell or a sale of any goods or choses in action of the value of $500 or upward shall not be enforceable by action unless the buyer shall accept part of the goods or choses in action so contracted to be sold or sold and actually receive the same or give something in earnest to bind the contract, or in part payment, or unless some note or memorandum in writing of the contract or sale be signed by the party to be charged or his agent in that behalf.

(2) The provisions of this section apply to every such contract or sale, notwithstanding that the goods may be intended to be delivered at some future time or may not at the time of such contract or sale be actually made, procured, or provided, or fit or ready for delivery, or some act may be requisite for the making or completing thereof, or rendering the same fit for delivery; but if the goods are to be manufactured by the seller especially for the buyer and are not suitable for sale to others in the ordinary course of the seller's business, the provisions of this section shall not apply.

(3) There is an acceptance of goods within the meaning of this section when the buyer, either before or after delivery of the goods, expresses by words or conduct his assent to becoming the owner of those specific goods.

Ohio, $2,500; Connecticut, $100.

Subsection (1) of this section follows section 4 (1) of the English act with the exception stated below.

The words of the section of the English act are somewhat altered from those of the seventeenth section of the statute of frauds, but the changes are such as to express more accurately the construction previously given by Lord Tenterden's Act and by the courts to the statute of frauds. (See Chalmers (5th ed.), 16.)

In the United States a provision corresponding to the seventeenth section of the statute of frauds exists in all the States but Alabama, Arizona, Delaware, Illinois, Kentucky, Louisiana, New Mexico, North Carolina, Ohio, Pennsylvania, Rhode Island, Tennessee, Texas, Virginia, and West Virginia.

The words "or choses in action" have been inserted to settle a doubt whether such property is within the statute. Similar words or the broad term "personal property" are found in the statute of frauds now in force in about 20 of the States. (Mechem on Sales, sec. 287.)

The limit of price or value varies considerably in this country, $50 is the commonest limit, but as many important States have no statute corresponding to this section of the statute of frauds, it seemed wise to raise the limit of price considerably. Subsection (2) is intended to reproduce the rule laid down by Shaw, C. J., in Mixer *v.* Howarth (21 Pick., 205), and by Ames, J., in Goddard *v.* Binney (115 Mass., 450), which has found most support in this country. (Mechem, sec. 326.)

Subsection (3) differs from the corresponding English provision, but represents the American rule, as well as the early English rule. (See Mechem, sec. 357 et seq.)

SUBJECT MATTER OF CONTRACT.

SEC. 5. [Existing and future goods.] (1) The goods which form the subject of a contract to sell may be either existing goods, owned or possessed by the seller, or goods to be manufactured or acquired by the seller after the making of the contract to sell, in this act called "future goods."

(2) There may be a contract to sell goods, the acquisition of which by the seller depends upon a contingency which may or may not happen.

(3) Where the parties purport to effect a present sale of future goods, the agreement operates as a contract to sell the goods.

This section follows section 5 of the English act except that contract to sell is here as elsewhere substituted for "contract of sale" and "contract for the sale." Also in subsection (3) "parties purport" is substituted for "seller purports." As the intention of the buyer is as important as that of the seller, the substituted expression is the more accurate.

SEC. 6. [Undivided shares.] (1) There may be a contract to sell or a sale of an undivided share of goods. If the parties intend to effect a present sale, the buyer by force of the agreement becomes an owner in common with the owner or owners of the remaining shares.

(2) In the case of fungible goods, there may be a sale of an undivided share of a specific mass, though the seller purports to sell and the buyer to buy a definite number, weight, or measure of the goods in the mass and though the number, weight, or measure of the goods in the mass is undetermined. By such a sale the buyer becomes owner in common of such a share of the mass as the number, weight, or measure bought bears to the number, weight, or measure of the mass. If the mass contains less than the number, weight, or measure bought, the buyer becomes the owner of the whole mass and the seller is bound to make good the deficiency from similar goods unless a contrary intent appears.

These provisions are new, and six (2) at least probably does not express the English law. It expresses the doctrine of Kimberly *v.* Patchin (19 N. Y., 330), which is supported by the weight of recent American authority, though there are adverse decisions. (See Mechem, sec. 704 et seq.)

SEC. 7. [Destruction of goods sold.] (1) Where the parties purport to sell specific goods, and the goods without the knowledge of the seller have wholly perished at the time when the agreement is made, the agreement is void.

(2) Where the parties purport to sell specific goods, and the goods without the knowledge of the seller have perished in part or have wholly or in a material part so deteriorated in quality as to be substantially changed in character, the buyer may at his option treat the sale—

(a) As avoided, or

(b) As transferring the property in all of the existing goods or in so much thereof as have not deteriorated, and as binding the buyer to pay the full agreed price if the sale was indivisible,

or to pay the agreed price for the goods in which the property passes if the sale was divisible.

Subsection (1) corresponds to section 6 of the English act. The English section does not seem to cover the contingency of deterioration or partial destruction and subsection (2) has been added for that purpose. The section is believed to express the existing law.

SEC. 8. [Destruction of goods contracted to be sold.] (1) Where there is a contract to sell specific goods, and subsequently, but before the risk passes to the buyer, without any fault on the part of the seller or the buyer, the goods wholly perish, the contract is thereby avoided.

(2) Where there is a contract to sell specific goods, and subsequently, but before the risk passes to the buyer, without any fault of the seller or the buyer, part of the goods perish or the whole or a material part of the goods so deteriorate in quality as to be substantially changed in character, the buyer may, at his option, treat the contract—

(a) As avoided; or

(b) As binding the seller to transfer the property in all of the existing goods or in so much thereof as have not deteriorated, and as binding the buyer to pay the full agreed price if the contract was indivisible, or to pay the agreed price for so much of the goods as the seller, by the buyer's option, is bound to transfer if the contract was divisible.

Subsection (1) corresponds to section 7 of the English act. Subsection (2) is added to cover the case of deterioration or partial destruction. This section is believed to express the existing law.

THE PRICE.

SEC. 9. [Definition and ascertainment of price.] (1) The price may be fixed by the contract, or may be left to be fixed in such manner as may be agreed, or it may be determined by the course of dealing between the parties.

(2) The price may be made payable in any personal property.

(3) Where transferring or promising to transfer any interest in real estate constitutes the whole or part of the consideration for transferring or for promising to transfer the property in goods, this act shall not apply.

(4) Where the price is not determined in accordance with the foregoing provisions, the buyer must pay a reasonable price. What is a reasonable price is a question of fact dependent on the circumstances of each particular case.

Subsections (1) and (4) are substantially the same as section 8 of the English act. Subsection (2) is changed from the English law which in section 1 (1) requires a "money consideration." As the rules of law applicable to barter are the same as those applicable to sale, it seemed desirable to bring cases of barter within the meaning of sale in this draft. On the other hand, different principles are often applicable where a bargain concerns real estate, and such cases are, therefore, expressly excluded by subsection (3).

SEC. 10. [Sale at a valuation.] (1) Where there is a contract to sell or a sale of goods at a price or on terms to be fixed by a third person, and such third person, without fault of the seller or the buyer, can not or does not fix the price or terms, the contract or the sale is thereby avoided; but if the goods or any part thereof have been delivered to and appropriated by the buyer he must pay a reasonable price therefor.

(2) Where such third person is prevented from fixing the price or terms by fault of the seller or the buyer, the party not in fault may have such remedies against the party in fault as are allowed by Parts IV and V of this act.

Slightly varied from section 9 of the English act.

CONDITIONS AND WARRANTIES.

SEC. 11. [Effect of conditions.] (1) Where the obligation of either party to a contract to sell or a sale is subject to any condition which is not performed, such party may refuse to proceed with the contract or sale or he may waive performance of the condition. If the other party has promised that the condition should happen or be performed, such first-mentioned party may also treat the nonperformance of the condition as a breach of warranty.

(2) Where the property in the goods has not passed, the buyer may treat the fulfillment by the seller of his obligation to furnish goods as described and as warranted expressly or by implication in the contract to sell as a condition of the obligation of the buyer to perform his promise to accept and pay for the goods.

Section 11 of the English act authorizes not only the waiver of a condition, but the election to treat any condition to be fulfilled by the seller as a breach of warranty. The use of condition as including promise or warranty does not seem happy. It is very unfortunate if the distinction between conditions and promises should become obliterated, for the legal ideas are distinct and should have distinct names.

SEC. 12. [Definition of express warranty.] Any affirmation of fact or any promise by the seller relating to the goods is an express warranty if the natural tendency of such affirmation or promise is to induce the buyer to purchase the goods, and if the buyer purchases the goods relying thereon. No affirmation of the value of the goods nor any statement purporting to be a statement of the seller's opinion only shall be construed as a warranty.

The English act does not define when language amounts to warranty. There is considerable division of authority on the point. On theory the fundamental basis for liability on warranty is the justifiable reliance on the seller's assertions. Whether the buyer was justified in his reliance depends not on the intent of the seller, but on the natural tendency of his acts. As a practical matter, the section as drawn does not seem to set up an unreasonably high standard of morality. The tendency of the courts has been distinctly in the direction of greater strictness against seller's statements. (See Mechem, p. 1072, note 1.)

SEC. 13. [Implied warranties of title.] In a contract to sell or a sale, unless a contrary intention appears, there is—

(1) An implied warranty on the part of the seller that in case of a sale he has a right to sell the goods, and that in case of a contract to sell he will have a right to sell the goods at the time when the property is to pass;

(2) An implied warranty that the buyer shall have and enjoy quiet possession of the goods as against any lawful claims existing at the time of the sale;

(3) An implied warranty that the goods shall be free at the time of the sale from any charge or encumbrance in favor of any third person not declared or known to the buyer before or at the time when the contract or sale is made.

(4) This section shall not, however, be held to render liable a sheriff, auctioneer, mortgagee, or other person professing to sell by virtue of authority in fact or law goods in which a third person has a legal or equitable interest.

This section is copied from the English section 12, except (4), which is an addition. There are a few American decisions and more dicta that there is no warranty of title where the vendor is out of possession. But the weight of recent authority is against this distinction. (See Mechem, sec. 1302.) (4) Represents the English as well as the American law, and it seemed best to make an express provision.

SEC. 14. [Implied warranty in sale by description.] Where there is a contract to sell or a sale of goods by description, there is an implied warranty that the goods shall correspond with the description, and if the contract or sale be by sample, as well as by description, it is not sufficient that the bulk of the goods corresponds with the sample if the goods do not also correspond with the description.

This section is identical in meaning with section 13 of the English act.

SEC. 15. [Implied warranties of quality.] Subject to the provisions of this act and of any statute in that behalf, there is no implied warranty or condition as to the quality or fitness for any particular purpose of goods supplied under a contract to sell or a sale, except as follows:

(1) Where the buyer, expressly or by implication, makes known to the seller the particular purpose for which the goods are required, and it appears that the buyer relies on the seller's skill or judgment (whether he be the grower or manufacturer or not), there is an implied warranty that the goods shall be reasonably fit for such purpose.

(2) Where the goods are bought by description from a seller who deals in goods of that description (whether he be the grower or manufacturer or not), there is an implied warranty that the goods shall be of merchantable quality.

(3) If the buyer has examined the goods, there is no implied warranty as regards defects which such examination ought to have revealed.

(4) In the case of a contract to sell or a sale of a specified article under its patent or other trade name; there is no implied warranty as to its fitness for any particular purpose.

(5) An implied warranty or condition as to quality or fitness for a particular purpose may be annexed by the usage of trade.

(6) An express warranty or condition does not negative a warranty or condition implied under this act unless inconsistent therewith.

This section follows section 14 of the English act.

SALE BY SAMPLE.

SEC. 16. [Implied warranties in sale by sample.] In the case of a contract to sell or a sale by sample:

(a) There is an implied warranty that the bulk shall correspond with the sample in quality.

(b) There is an implied warranty that the buyer shall have a reasonable opportunity of comparing the bulk with the sample, except so far as otherwise provided in section 47 (3).

(c) If the seller is a dealer in goods of that kind there is an implied warranty that the goods shall be free from any defect rendering them unmerchantable which would not be apparent on reasonable examination of the sample.

This follows substantially section 15 of the English act.

Part II.

TRANSFER OF PROPERTY AS BETWEEN SELLER AND BUYER.

SEC. 17. [No property passes until goods are ascertained.] Where there is a contract to sell unascertained goods no property in the goods is transferred to the buyer unless and until the goods are ascertained, but property in an undivided share of ascertained goods may be transferred as provided in section 6.

This section follows section 16 of the English act, except for the addition of the clause beginning "but," etc. See under section 6 for explanation of the difference between English and American law on the point referred to.

SEC. 18. [Property in specific goods passes when parties so intend.] (1) Where there is a contract to sell specific or ascertained goods, the property in them is transferred to the buyer at such time as the parties to the contract intend it to be transferred.

(2) For the purpose of ascertaining the intention of the parties regard shall be had to the terms of the contract, the conduct of the parties, usages of trade, and the circumstances of the case.

Follows section 17 of the English act.

SEC. 19. [Rules for ascertaining intention.] Unless a different intention appears, the following are rules for ascertaining the intention of the parties as to the time at which the property in the goods is to pass to the buyer.

Rule 1. Where there is an unconditional contract to sell specific goods in a deliverable state the property in the goods passes to the buyer when the contract is made, and it is immaterial whether the time of payment, or the time of delivery, or both, be postponed.

Rule 2. Where there is a contract to sell specific goods and the seller is bound to do something to the goods, for the purpose of putting them into a deliverable state, the property does not pass until such thing be done.

Rule 3. (1) When goods are delivered to the buyer "on sale or return," or on other terms indicating an intention to make a present sale, but to give the buyer an option to return the goods instead of paying the price, the property passes to the buyer on delivery, but he may revest the property in the seller by returning or tendering the goods within the time fixed in the contract, or, if no time has been fixed, within a reasonable time.

(2) When goods are delivered to the buyer on approval or on trial or on satisfaction, or other similar terms, the property therein passes to the buyer—

(a) When he signifies his approval or acceptance to the seller or does any other act adopting the transaction;

(b) If he does not signify his approval or acceptance to the seller, but retains the goods without giving notice of rejection, then if a time has been fixed for the return of the goods, on the expiration of such time, and if no time has been fixed on the expiration of a reasonable time. What is a reasonable time is a question of fact.

Rule 4. (1) Where there is a contract to sell unascertained or future goods by description, and goods of that description and in a deliverable state are unconditionally appropriated to the contract, either by the seller with the assent of the buyer, or by the buyer with the assent of the seller, the property in the goods thereupon passes to the buyer. Such assent may be expressed or implied, and may be given either before or after the appropriation is made.

(2) Where, in pursuance of a contract to sell, the seller delivers the goods to the buyer, or to a carrier or other bailee (whether named by the buyer or not) for the purpose of transmission to or holding for the buyer, he is presumed to have unconditionally appropriated the goods to the contract, except in the cases provided for in the next rule and in section 20. This presumption is applicable, although by the terms of the contract the buyer is to pay the price before receiving delivery of the goods, and the goods are marked with the words "collect on delivery" or their equivalents.

Rule 5. If the contract to sell requires the seller to deliver the goods to the buyer, or at a particular place, or to pay the freight or cost of transportation to the buyer, or to a particular place, the property does not pass until the goods have been delivered to the buyer or reached the place agreed upon.

This section follows section 18 of the English act, with some changes. The first rule is altered by omitting from the end the words "and the buyer has notice thereof." The insertion of these words in the English act changed the English law, which had never required notice (see Chalmers, p. 46), in order to make it conform to the Scotch law. There seems no good reason for postponing the transfer of title to this extent. There is no American authority for it.

The English rule 3, which is omitted, is as follows:

"Where there is a contract for the sale of specific goods in a deliverable state, but the seller is bound to weigh, measure, test, or do some other act or thing with reference to the goods for the purpose of ascertaining the price, the property does not pass until such act or thing be done."

This rule of presumption is artificial and has been discarded in New York and some other States. (See Mechem, sec. 515 et seq.) It was, therefore, deemed wise to omit it.

Rule 3 (1) is not in the English act. In that act, a "sale or return" is included in the provision corresponding to rule 3 (2) of this draft (sec. 18, rule 4 of the English act), thereby making the same presumption apply to such sales as to sales on trial. The distinction between a sale with a right to return and a sale to take effect on approval has not been taken in the English decisions, though Chalmers notices it in his annotation. (9 Harv. L. Rev. 110, No. 3.) The distinction has been taken in this country (Mechem, sec. 657 et seq., sec. 675 et seq.), and it seems proper to indicate it in this draft.

Rule 3 (2) is the same as rule 4 of the English act, except that the words "on trial or on satisfaction" are substituted for "on sale or return."

In Rule 4 (2) the last sentence is not in the English act. It settles a disputed question in accordance with the weight of authority. (See 4 Columbia L. Rev., 541; Mechem, secs. 733, 741.)

Rule 5 is not in the English act, but it represents the existing law.

SEC. 20. [Reservation of right of possession or property when goods are shipped.] (1) Where there is a contract to sell specific goods, or where goods are subsequently appropriated to the contract, the seller may, by the terms of the contract or appropriation, reserve the right of possession or property in the goods until certain conditions have been fulfilled. The right of possession or property may be thus reserved notwithstanding the delivery of the goods to the buyer or to a carrier or other bailee for the purpose of transmission to the buyer.

(2) Where goods are shipped, and by the bill of lading the goods are deliverable to the seller or his agent, or to the order of the seller or of his agent, the seller thereby reserves the property in the goods. But if, except for the form of the bill of lading, the property would have passed to the buyer on shipment of the goods, the seller's property in the goods shall be deemed to be only for the purpose of securing performance by the buyer of his obligations under the contract.

(3) Where goods are shipped, and by the bill of lading the goods are deliverable to the order of the buyer or of his agent, but possession of the bill of lading is retained by the seller or his agent, the seller thereby reserves a right to the possession of the goods as against the buyer.

(4) Where the seller of goods draws on the buyer for the price and transmits the bill of exchange and bill of lading together to the buyer to secure acceptance or payment of the bill of exchange the buyer is bound to return the bill of lading if he does not honor the bill of exchange, and if he wrongfully retains the bill of lading he acquires no added right thereby. If, however, the bill of lading provides that the goods are deliverable to the buyer or to the order of the buyer, or is indorsed in blank, or to the buyer by the consignee named therein, one who purchases in good faith for value the bill of lading or goods from the buyer will obtain the property in the goods, although the bill of exchange has not been honored, provided that such purchaser has received delivery of the bill of lading indorsed by the consignee named therein, or of the goods, without notice of the facts making the transfer wrongful.

Subsection (1) follows, with some change of expression, section 19 of the English act, except that for the somewhat loose phrase "right of disposal" is substituted "possession of property."

The first sentence of subsection (2) is in the English act, except that "property in the goods" is substituted for "right of disposal." The remainder of the subsection is new.

Subsection (3) is not in the English act, but is thought to be warranted by the existing law.

Subsection (4) substantially follows the English act as far as the words "If, however." The proviso beginning "If, however," is not in the English act. It expresses, nevertheless, the English law because of the last factors' act. (Cahn *v.* Packet Co. (1899), 1 Q. B., 643.) It undoubtedly is in accordance with mercantile understanding and convenience. The seller has trusted the buyer with the possession of the document of title and should bear the consequences. (See Mechem, sec. 166.)

SEC. 21. [Sale by auction.] In the case of sale by auction—

(1) Where goods are put up for sale by auction in lots each lot is the subject of a separate contract of sale.

(2) A sale by auction is complete when the auctioneer announces its completion by the fall of the hammer, or in other customary manner. Until such announcement is made any bidder may retract his bid, and the auctioneer may withdraw the goods from sale unless the auction has been announced to be without reserve.

(3) A right to bid may be reserved expressly by or on behalf of the seller.

(4) Where notice has not been given that a sale by auction is subject to a right to bid on behalf of the seller it shall not be lawful for the seller to bid himself or to employ or induce any person to bid at such sale on his behalf, or for the auctioneer to employ or induce any person to bid at such sale on behalf of the seller or knowingly to take any bid from the seller or any person

employed by him. Any sale contravening this rule may be treated as fraudulent by the buyer.

This follows section 58 of the English act, and is believed to express the existing law.

SEC. 22. [Risk of loss.] Unless otherwise agreed, the goods remain at the seller's risk until the property therein is transferred to the buyer, but when the property therein is transferred to the buyer the goods are at the buyer's risk whether delivery has been made or not, except that—

(a) Where delivery of the goods has been made to the buyer, or to a bailee for the buyer, in pursuance of the contract, and the property in the goods has been retained by the seller merely to secure performance by the buyer of his obligations under the contract, the goods are at the buyer's risk from the time of such delivery.

(b) Where delivery has been delayed through the fault of either buyer or seller the goods are at the risk of the party in fault as regards any loss which might not have occurred but for such fault.

The exception (a) is not contained in the English act. Otherwise the section is in substance the same as section 20 of the English act. The new exception represents the weight of authority and seems sound on principle. The principal situation at which it is aimed is where a conditional sale has been made, the goods delivered to the buyer, and very likely in use by him. The title is retained instead of taking a mortgage back, as would be done in the case of real estate. The beneficial interest is in the buyer, and the risk should be on him. (See 9 Harv. L. Rev., 109; Mechem, sec. 635.)

Where goods are sent in compliance with an order, but marked "C. O. D.," even though the effect of this were to withhold the title (as to which, however, see sec. 19, rule [2]), the risk would be thrown on the buyer. (See Mechem, sec. 740, note p. 616.)

TRANSFER OF TITLE.

SEC. 23. [Sale by a person not the owner.] (1) Subject to the provisions of this act, where goods are sold by a person who is not the owner thereof, and who does not sell them under the authority or with the consent of the owner, the buyer acquires no better title to the goods than the seller had, unless the owner of the goods is by his conduct precluded from denying the seller's authority to sell.

(2) Nothing in this act, however, shall affect:

(a) The provisions of any factors' acts, recording acts, or any enactment enabling the apparent owner of goods to dispose of them as if he were the true owner thereof.

(b) The validity of any contract to sell or sale under any special common law or statutory power of sale or under the order of a court of competent jurisdiction.

This follows section 21 of the English act, except in (2) (a) "recording acts" has been added.

SEC. 24. [Sale by one having a voidable title.] Where the seller of goods has a voidable title thereto, but his title has not been avoided at the time of the sale, the buyer acquires a good title to the goods, provided he buys them in good faith, for value, and without notice of the seller's defect of title.

This follows section 23 of the English act. Section 22 of that act relates to sales in market overt and is omitted here.

SEC. 25. [Sale by seller in possession of goods already sold.] Where a person having sold goods continues in possession of the goods, or of negotiable documents of title to the goods, the delivery or transfer by that person, or by an agent acting for him, of the goods or documents of title under any sale, pledge, or other disposition thereof, to any person receiving and paying value for the same in good faith and without notice of the previous sale, shall have the same effect as if the person making the delivery or transfer were expressly authorized by the owner of the goods to make the same.

This follows section 25 (1) of the English act. It is comparatively new to the English law, being first enacted in the factors' act of 1889. But, so far as purchasers are concerned, it states in effect the principle commonly laid down in this country, that delivery is not necessary between the parties, but is as against third persons. The rights of creditors are dealt with in the next section.

SEC. 26. [Creditors' rights against sold goods in seller's possession.] Where a person having sold goods continues in possession of the goods, or of negotiable documents of title to the goods, and such retention of possession is fraudulent in fact or is deemed fraudulent under any rule of law, a creditor or creditors of the seller may treat the sale as void.

The law in this country as to the effect of retention of possession on the rights of creditors is in such conflict and the different rules are locally so firmly fixed that it seemed unwise to try to provide a uniform rule. All States, however, agree that if the retention is fraudulent in fact, the sale is void as to creditors. The draft, therefore, so provides, and as to other cases—cases of constructive fraud—adopts the locally prevailing rule.

SEC. 27. [Definition of negotiable documents of title.] A document of title in which it is stated that the goods referred to therein will be delivered to the bearer, or to the order of any person named in such document is a negotiable document of title.

This definition, following as it does the definition of negotiable promises to pay money, represents the mercantile understanding in regard to documents of title.

SEC. 28. [Negotiation of negotiable documents by delivery.] A negotiable document of title may be negotiated by delivery—

(a) Where by the terms of the document the carrier, warehouseman, or other bailee issuing the same undertakes to deliver the goods to the bearer, or

(b) Where by the terms of the document the carrier, warehouseman, or other bailee issuing the same undertakes to deliver the goods to the order of a specified person, and such person or a subsequent indorsee of the document has indorsed it in blank or to bearer.

Where by the terms of a negotiable document of title the goods are deliverable to bearer or where a negotiable document of title has been indorsed in blank or to bearer, any holder may indorse the same to himself or to any other specified person, and in such case the document shall thereafter be negotiated only by the indorsement of such indorsee.

Here, too, both mercantile practice and the analogy of bills and notes are followed.

SEC. 29. [Negotiation of negotiable documents by indorsement.] A negotiable document of title may be negotiated by the indorsement of the person to whose order the goods are by the terms of the document deliverable. Such indorsement may be in blank, to bearer, or to a specified person. If indorsed to a specified person, it may be again negotiated by the indorsement of such person in blank, to bearer, or to another specified person. Subsequent negotiation may be made in like manner.

The note to the preceding section is again applicable.

SEC. 30. [Negotiable documents of title marked "Not negotiable."] If a document of title which contains an undertaking by a carrier, warehouseman, or other bailee to deliver the goods to the bearer, to a specified person or order, or to the order of a specified person, or which contains words of like import, has placed upon it the words "not negotiable," "nonnegotiable," or the like, such a document may, nevertheless, be negotiated by the holder and is a negotiable document of title within the meaning of this act. But nothing in this act contained shall be construed as limiting or defining the effect upon the obligations of the carrier, warehouseman, or other bailee issuing a document of title of placing thereon the words "not negotiable," "nonnegotiable," or the like.

It has been until recently the custom of the railroads to stamp upon bills of lading, even though running to order or assigns, the words "not negotiable." How far the carrier is justified in attempting to limit its liability by such a device may be questioned, but as this act is concerned not with the liability of the carrier but with the rights of the various holders of the bill of lading as against each other it seemed wise to provide merely that as between those parties the words "not negotiable" do not change the legal effect of the document.

SEC. 31. [Transfer of nonnegotiable documents.] A document of title which is not in such form that it can be negotiated by delivery may be transferred by the holder by delivery to a purchaser or donee. A nonnegotiable document can not be negotiated, and the indorsement of such a document gives the transferee no additional right.

The distinction between warehouse receipts and bills of lading negotiable in form and those which are not does not seem to be observed in the English decisions; but it is observed in this country both in the usages of warehousemen and carriers and in the decisions of the courts. (See Hallgarten *v.* Oldham, 135 Mass., 1; Gill *v.* Frank, 12 Oreg., 507; Forbes *v.* Boston & Lowell R. R., 133 Mass., 154; Litchfield Bank *v.* Elliott, 83 Minn., 469.)

SEC. 32. [Who may negotiate a document.] A negotiable document of title may be negotiated—

(a) By the owner thereof, or

(b) By any person to whom the possession or custody of the document has been intrusted by the owner, if by the terms of the document the bailee issuing the document undertakes to deliver the goods to the order of the person to whom the possession or custody of the document has been intrusted, or if at the time of such intrusting the document is in such form that it may be negotiated by delivery.

By this section a negotiable document of title is not given the full negotiability of a bill of exchange inasmuch as neither a thief nor a finder is within the terms of the section. By the uniform bills of lading act, however, the commissioners on uniform State laws adopted the principle of full negotiability. In a jurisdiction where it is desired that the sales act and the bills of lading act should both be passed and should be in harmony the following substitute is suggested for section 32 of the sales act as above printed:

SEC. 32. [Who may negotiate a document.] A negotiable document may be negotiated by any person in possession of the same, however such possession may have been acquired, if by the terms of the document the bailee issuing it undertakes to deliver the goods to the order or such person, or if at the time of negotiation the document is in such form that it may be negotiated by delivery.

SEC. 33. [Rights of person to whom document has been negotiated.] A person to whom a negotiable document of title has been duly negotiated acquires thereby:

(a) Such title to the goods as the person negotiating the document to him had or had ability to convey to a purchaser in good faith for value and also such title to the goods as the

person to whose order the goods were to be delivered by the terms of the document had or had ability to convey to a purchaser in good faith for value, and

(b) The direct obligation of the bailee issuing the document to hold possession of the goods for him according to the terms of the document as fully as if such bailee had contracted directly with him.

This section follows the custom of merchants. It makes the document represent the depositor's right in the goods, so that a purchaser of the document, if he acquires a good title thereto, acquires not simply the rights of his vendor, but whatever property the original depositor had, that being what the document represented. 32 (b) makes the obligation of the warehouseman in regard to the goods negotiable.

Many States already have statutes making warehouse receipts negotiable. Mohun on Warehousemen, 944; and some States have statutes in regard to bills of lading, ibid., 848, but these statutes have generally been so brief and general in terms that they have been variously construed and have to some extent failed of their purpose. (See Shaw *v.* Railroad Co., 101 U. S. 557.)

SEC. 34. [Rights of person to whom document has been transferred.] A person to whom a document of title has been transferred, but not negotiated, acquires thereby, as against the transferor, the title to the goods, subject to the terms of any agreement with the transferor.

If the document is nonnegotiable, such person also acquires the right to notify the bailee who issued the document of the transfer thereof, and thereby to acquire the direct obligation of such bailee to hold possession of the goods for him according to the terms of the document.

Prior to the notification of such bailee by the transferor or transferee of a nonnegotiable document of title, the title of the transferee to the goods and the right to acquire the obligation of such bailee may be defeated by the levy of an attachment or execution upon the goods by a creditor of the transferor, or by notification to such bailee by the transferor or a subsequent purchaser from the transferor of a subsequent sale of the goods by the transferor.

This section states the right of any purchaser of bailed goods. One who purchases therefore a nonnegotiable document of title would gain nothing from the transfer of the document except evidence.

SEC. 35. [Transfer of negotiable document without indorsement.] Where a negotiable document of title is transferred for value by delivery, and the indorsement of the transferor is essential for negotiation, the transferee acquires a right against the transferor to compel him to indorse the document unless a contrary intention appears. The negotiation shall take effect as of the time when the indorsement is actually made.

This follows the analogy of bills and notes. (Crawford, Neg. Inst. Law, sec. 79.)

SEC. 36. [Warranties on sale of document.] A person who for value negotiates or transfers a document of title by indorsement or delivery, including one who assigns for value a claim secured by a document of title unless a contrary intention appears, warrants:

(a) That the document is genuine;

(b) That he has a legal right to negotiate or transfer it;

(c) That he has knowledge of no fact which would impair the validity or worth of the document; and

(d) That he has a right to transfer the title to the goods and that the goods are merchantable or fit for a particular purpose, whenever such warranties would have been implied if the contract of the parties had been to transfer without a document of title the goods represented thereby.

This section, except (d), follows the Negotiable Instruments Law. Crawford, section 115. (d) it is believed states the existing law.

SEC. 37. [Indorser not a guarantor.] The indorsement of a document of title shall not make the indorser liable for any failure on the part of the bailee who issued the document or previous indorsers thereof to fulfill their respective obligations.

Mercantile usage in regard to documents of title differs from that in regard to bills and notes in the matter to which this section relates. It states the existing law, even in jurisdictions where statutes have made documents of title negotiable.

Shaw *v.* Railroad Co. (101 U. S., 557); Mida *v.* Geissmann (17 Ill. App., 207).

SEC. 38. [When negotiation not impaired by fraud, mistake, or duress.] The validity of the negotiation of a negotiable document of title is not impaired by the fact that the negotiation was a breach of duty on the part of the person making the negotiation, or by the fact that the owner of the document was induced by fraud, mistake, or duress to intrust the possession or custody thereof to such person, if the person to whom the document was negotiated or a person to whom the document was subsequently negotiated paid value therefor, without notice of the breach of duty, or fraud, mistake, or duress.

This section merely elaborates for the sake of clearness certain special cases within the terms of section 32.

SEC. 39. [Attachment or levy upon goods for which a negotiable document has been issued.] If goods are delivered to a bailee by the owner or by a person whose act in conveying the title to them to a purchaser in good faith for value would bind the owner and a negotiable document of title is issued for them they can not thereafter, while in the possession of such bailee, be attached by garnishment or otherwise or be levied upon under an execution unless the document be first surrendered to the bailee or its negotiation enjoined. The bailee shall in no case be compelled to deliver up the actual possession of the goods until the document is surrendered to him or impounded by the court.

If the mercantile theory of documents of title, such as bills of lading and warehouse receipts, were carried to its logical extent, no attachment of the goods represented by the document or levy upon them could be permitted while the negotiable document was outstanding.

It was thought best in this draft not to take the extreme position that no attachments, garnishment, or levy could be made on property for which a negotiable document was outstanding, but to cover the essential practical point by making it a condition of the validity of such seizure that the negotiation of the document be enjoined or the document impounded. The following section expressly gives the court full power to aid, by injunction and otherwise, a creditor seeking to get at a negotiable document and the property covered thereby.

SEC. 40. [Creditors' remedies to reach negotiable documents.] A creditor whose debtor is the owner of a negotiable document of title shall be entitled to such aid from courts of appropriate jurisdiction by injunction and otherwise in attaching such document or in satisfying the claim by means thereof as is allowed at law or in equity in regard to property which can not readily be attached or levied upon by ordinary legal process.

As the right of legal garnishment of bailed property is limited by the preceding section, section 40 gives the creditor such rights as are included under the heads of bills of equitable attachment or in aid of execution.

Part III.

PERFORMANCE OF THE CONTRACT.

SEC. 41. [Seller must deliver and buyer accept goods.] It is the duty of the seller to deliver the goods and of the buyer to accept and pay for them, in accordance with the terms of the contract to sell or sale.

This follows section 26 of the English act.

SEC. 42. [Delivery and payment are concurrent conditions.] Unless otherwise agreed, delivery of the goods and payment of the price are concurrent conditions; that is to say, the seller must be ready and willing to give possession of the goods to the buyer in exchange for the price and the buyer must be ready and willing to pay the price in exchange for possession of the goods.

This follows section 27 of the English act.

SEC. 43. [Place, time, and manner of delivery.] (1) Whether it is for the buyer to take possession of the goods or for the seller to send them to the buyer is a question depending in each case on the contract, express or implied, between the parties. Apart from any such contract, express or implied, or usage of trade to the contrary, the place of delivery is the seller's place of business if he have one, and if not his residence; but in case of a contract to sell or a sale of specific goods, which to the knowledge of the parties when the contract or the sale was made were in some other place, then that place is the place of delivery.

(2) Where by a contract to sell or a sale the seller is bound to send the goods to the buyer, but no time for sending them is fixed, the seller is bound to send them within a reasonable time.

(3) Where the goods at the time of sale are in the possession of a third person, the seller has not fulfilled his obligation to deliver to the buyer unless and until such third person acknowledges to the buyer that he holds the goods on the buyer's behalf; but as against all others than the seller the buyer shall be regarded as having received delivery from the time when such third person first has notice of the sale. Nothing in this section, however, shall affect the operation of the issue or transfer of any document of title to goods.

(4) Demand or tender of delivery may be treated as ineffectual unless made at a reasonable hour. What is a reasonable hour is a question of fact.

(5) Unless otherwise agreed, the expenses of and incidental to putting the goods into a deliverable state must be borne by the seller.

This is the same as section 29 of the English act, except that the second half of subsection (3) has been added. The section is believed to state the existing law.

SEC. 44. [Delivery of wrong quantity.] (1) Where the seller delivers to the buyer a quantity of goods less than he contracted to sell, the buyer may reject them, but if the buyer accepts or retains the goods so delivered, knowing that the seller is not going to perform the contract in full, he must pay for them at the contract rate. If, however, the buyer has used or

disposed of the goods delivered before he knows that the seller is not going to perform his contract in full, the buyer shall not be liable for more than the fair value to him of the goods so received.

(2) Where the seller delivers to the buyer a quantity of goods larger than he contracted to sell, the buyer may accept the goods included in the contract and reject the rest, or he may reject the whole. If the buyer accepts the whole of the goods so delivered, he must pay for them at the contract rate.

(3) Where the seller delivers to the buyer the goods he contracted to sell mixed with goods of a different description not included in the contract, the buyer may accept the goods which are in accordance with the contract and reject the rest, or he may reject the whole.

(4) The provisions of this section are subject to any usage of trade, special agreement, or course of dealing between the parties.

This follows section 30 of the English act, and is in accordance with the weight of authority. (See Mechem, sec. 1157 et seq.)

SEC. 45. [Delivery in installments.] (1) Unless otherwise agreed, the buyer of goods is not bound to accept delivery thereof by installments.

(2) Where there is a contract to sell goods to be delivered by stated installments, which are to be separately paid for, and the seller makes defective deliveries in respect of one or more installments, or the buyer neglects or refuses to take delivery of or pay for one or more installments, it depends in each case on the terms of the contract and the circumstances of the case whether the breach of contract is so material as to justify the injured party in refusing to proceed further and suing for damages for breach of the entire contract, or whether the breach is severable, giving rise to a claim for compensation but not to a right to treat the whole contract as broken.

This section is slightly altered from section 31 of the English act. The English act, following prior English decisions, makes repudiation by one party the test of the right of the other to refuse to go on. The section here given makes the materiality of the breach the test. This is in accord with the weight of American authority. (Norrington *v.* Wright, 115 U. S., 188; 14 Harv. L. Rev., 323.)

SEC. 46. [Delivery to a carrier on behalf of the buyer.] (1) Where, in pursuance of a contract to sell or a sale, the seller is authorized or required to send the goods to the buyer, delivery of the goods to a carrier, whether named by the buyer or not, for the purpose of transmission to the buyer is deemed to be a delivery of the goods to the buyer, except in the cases provided for in section 19, rule 5, or unless a contrary intent appears.

(2) Unless otherwise authorized by the buyer, the seller must make such contract with the carrier on behalf of the buyer as may be reasonable, having regard to the nature of the goods and the other circumstances of the case. If the seller omit so to do, and the goods are lost or damaged in course of transit, the buyer may decline to treat the delivery to the carrier as a delivery to himself, or may hold the seller responsible in damages.

(3) Unless otherwise agreed, where goods are sent by the seller to the buyer under circumstances in which the seller knows, or ought to know, that it is usual to insure, the seller must give such notice to the buyer as may enable him to insure them during their transit, and, if the seller fails to do so, the goods shall be deemed to be at his risk during such transit.

These paragraphs follow with slight changes section 32 of the English act. (1) is familiar law; (2) and (3) are probably in accordance with the business usage, but there is little in the way of positive law on the subject. (See Chalmers (5th ed.), p. 73.)

SEC. 47. [Right to examine the goods.] (1) Where goods are delivered to the buyer, which he has not previously examined, he is not deemed to have accepted them unless and until he has had a reasonable opportunity of examining them for the purpose of ascertaining whether they are in conformity with the contract.

(2) Unless otherwise agreed, when the seller tenders delivery of goods to the buyer, he is bound, on request, to afford the buyer a reasonable opportunity of examining the goods for the purpose of ascertaining whether they are in conformity with the contract.

(3) Where goods are delivered to a carrier by the seller, in accordance with an order from or agreement with the buyer, upon the terms that the goods shall not be delivered by the carrier to the buyer until he has paid the price, whether such terms are indicated by marking the goods with the words "collect on delivery," or otherwise, the buyer is not entitled to examine the goods before payment of the price in the absence of agreement permitting such examination.

Section 47 (1) and (2) follow section 34 of the English act, and state the American law also. (Mechem, sec. 1375 et seq.) Subsection (3) is new. It states the actual practice of the large express companies and probably states the existing law. (Wiltse *v.* Barnes, 46 Iowa, 210.)

SEC. 48. [What constitutes acceptance.] The buyer is deemed to have accepted the goods when he intimates to the seller that he has accepted them, or when the goods have been delivered to him, and he does any act in relation to them which is inconsistent with the ownership of the seller, or when, after the lapse of a reasonable time, he retains the goods without intimating to the seller that he has rejected them.

This follows section 35 of the English act, and represents the American law also. (Mechem, sec. 1379 et seq.)

SEC. 49. [Acceptance does not bar action for damages.] In the absence of express or implied agreement of the parties, acceptance of the goods by the buyer shall not discharge the seller from liability in damages or other legal remedy for breach of any promise or warranty in the contract to sell or the sale. But if, after acceptance of the goods, the buyer fail to give notice to the seller of the breach of any promise or warranty within a reasonable time after the buyer knows, or ought to know, of such breach the seller shall not be liable therefor.

This section is not contained in the English act, but section 11 (1) (a) of that act seems to authorize the buyer to accept goods and nevertheless hold the seller liable in damages. The latter half of the section in this draft imposes a qualification sanctioned by good business practice and to some extent by law, both in this country and in Europe. The law in this country is in great conflict. (See Mechem, sec. 1388 et seq.)

SEC. 50. [Buyer is not bound to return goods wrongly delivered.] Unless otherwise agreed, where goods are delivered to the buyer, and he refuses to accept them, having the right so to do, he is not bound to return them to the seller, but it is sufficient if he notifies the seller that he refuses to accept them.

This follows section 36 of the English act. Such American authority as there is is in accord. (Mechem. sec. 1403.)

SEC. 51. [Buyer's liability for failing to accept delivery.] When the seller is ready and willing to deliver the goods and requests the buyer to take delivery, and the buyer does not within a reasonable time after such request take delivery of the goods, he is liable to the seller for any loss occasioned by his neglect or refusal to take delivery, and also for a reasonable charge for the care and custody of the goods. If the neglect or refusal of the buyer to take delivery amounts to a repudiation or breach of the entire contract, the seller shall have the right against the goods and on the contract hereinafter provided in favor of the seller when the buyer is in default.

This follows substantially section 37 of the English act, except for the addition of breach of the entire contract as an equivalent of repudiation. (See note to sec. 45.)

Part IV.

RIGHTS OF UNPAID SELLER AGAINST THE GOODS.

SEC. 52. [Definition of unpaid seller.] (1) The seller of goods is deemed to be an unpaid seller within the meaning of this act—

(a) When the whole of the price has not been paid or tendered.

(b) When a bill of exchange or other negotiable instrument has been received as conditional payment, and the condition on which it was received has been broken by reason of the dishonor of the instrument, the insolvency of the buyer, or otherwise.

(2) In this part of this act the term "seller" includes an agent of the seller to whom the bill of lading has been indorsed, or a consignor or agent who has himself paid, or is directly responsible for the price, or any other person who is in the position of a seller.

This follows section 38 of the English act, except that in (1) (b) "has been broken" is substituted for "has not been fulfilled," and "the insolvency of the buyer" has been inserted.

SEC. 53. [Remedies of an unpaid seller.] (1) Subject to the provisions of this act, notwithstanding that the property in the goods may have passed to the buyer, the unpaid seller of goods, as such, has—

(a) A lien on the goods or right to retain them for the price while he is in possession of them.

(b) In case of the insolvency of the buyer, a right of stopping the goods in transitu after he has parted with the possession of them.

(c) A right of resale as limited by this act.

(d) A right to rescind the sale as limited by this act.

(2) Where the property in goods has not passed to the buyer the unpaid seller has, in addition to his other remedies, a right of withholding delivery similar to and coextensive with his rights of lien and stoppage in transitu where the property has passed to the buyer.

This follows section 39 of the English act, except for the insertion of (1) (d), which is in conformity with the American law and with business usage. (Mechem, sec. 1682.)

UNPAID SELLER'S LIEN.

SEC. 54. [When right of lien may be exercised.] (1) Subject to the provisions of this act, the unpaid seller of goods who is in possession of them is entitled to retain possession of them until payment or tender of the price in the following cases, namely:

(a) Where the goods have been sold without any stipulation as to credit.

(b) Where the goods have been sold on credit, but the term of credit has expired.

(c) Where the buyer becomes insolvent.

(2) The seller may exercise his right of lien notwithstanding that he is in possession of the goods as agent or bailee for the buyer.

This follows section 41 of the English act.

SEC. 55. [Lien after part delivery.] Where an unpaid seller has made part delivery of the goods, he may exercise his right of lien on the remainder unless such part delivery has been made under such circumstances as to show an intent to waive the lien or right of retention.

This follows section 42 of the English act.

SEC. 56. [When lien is lost.] (1) The unpaid seller of goods loses his lien thereon—

(a) When he delivers the goods to a carrier or other bailee for the purpose of transmission to the buyer without reserving the property in the goods or the right to the possession thereof.

(b) When the buyer or his agent lawfully obtains possession of the goods.

(c) By waiver thereof.

(2) The unpaid seller of goods, having a lien thereon, does not lose his lien by reason only that he has obtained judgment or decree for the price of the goods.

This substantially follows section 43 of the English act.

STOPPAGE IN TRANSITU.

SEC. 57. [Seller may stop goods on buyer's insolvency.] Subject to the provisions of this act, when the buyer of goods is or becomes insolvent, the unpaid seller who has parted with the possession of the goods has the right of stopping them in transitu; that is to say, he may resume possession of the goods at any time while they are in transit, and he will then become entitled to the same rights in regard to the goods as he would have had if he had never parted with the possession.

This follows section 44 of the English act, with two exceptions. In the last clause the English act reads, "and may retain them until payment or tender of the price." But the seller under such circumstances has also the right to resell, and under this draft the right to rescind the sale. In the second line the words "is or" have been inserted, so as to make it clear that the seller's right exists even though the buyer were insolvent at the time of the sale. (See Mechem, sec. 1541.)

SEC. 58. [When goods are in transit.] (1) Goods are in transit within the meaning of section 57—

(a) From the time when they are delivered to a carrier by land or water, or other bailee, for the purpose of transmission to the buyer, until the buyer, or his agent in that behalf, takes delivery of them from such carrier or other bailee.

(b) If the goods are rejected by the buyer and the carrier or other bailee continues in possession of them, even if the seller has refused to receive them back.

(2) Goods are no longer in transit within the meaning of section 57—

(a) If the buyer, or his agent in that behalf, obtains delivery of the goods before their arrival at the appointed destination.

(b) If, after the arrival of the goods at the appointed destination, the carrier or other bailee acknowledges to the buyer or his agent that he holds the goods on his behalf and continues in possession of them as bailee for the buyer or his agent; and it is immaterial that a further destination for the goods may have been indicated by the buyer.

(c) If the carrier or other bailee wrongfully refuses to deliver the goods to the buyer or his agent in that behalf.

(3) If goods are delivered to a ship chartered by the buyer, it is a question depending on the circumstances of the particular case whether they are in the possession of the master as a carrier or as agent of the buyer.

(4) If part delivery of the goods has been made to the buyer, or his agent in that behalf, the remainder of the goods may be stopped in transitu, unless such part delivery has been made under such circumstances as to show an agreement with the buyer to give up possession of the whole of the goods.

This follows section 45 of the English act, but with considerable changes in wording and arrangement. The section is believed to state the existing law.

SEC. 59. [Ways of exercising the right to stop.] (1) The unpaid seller may exercise his right of stoppage in transitu either by obtaining actual possession of the goods or by giving notice of his claim to the carrier or other bailee in whose possession the goods are. Such notice may be given either to the person in actual possession of the goods or to his principal. In the latter case the notice, to be effectual, must be given at such time and under such circumstances that the principal, by the exercise of reasonable diligence, may prevent a delivery to the buyer.

(2) When notice of stoppage in transitu is given by the seller to the carrier, or other bailee in possession of the goods, he must redeliver the goods to, or according to the directions of, the seller. The expenses of such delivery must be borne by the seller. If, however, a negotiable document of title representing the goods has been issued by the carrier or other bailee, he shall not be obliged to deliver or justified in delivering the goods to the seller unless such document is first surrendered for cancellation.

This follows section 46 of the English act, except the final proviso. The carrier should be liable to a bona fide transferee of its bill of lading, and unquestionably would be at common law if the transferee took for value before the stoppage. Even though the transferee took after the notice of stoppage, he is protected by section 62. The carrier therefore ought not to be obliged or allowed to surrender the goods unless the document of title is surrendered.

RESALE BY THE SELLER.

SEC. 60. [When and how resale may be made.] (1) Where the goods are of a perishable nature, or where the seller expressly reserves the right of resale in case the buyer should make default, or where the buyer has been in default in the payment of the price an unreasonable time, an unpaid seller having a right of lien or having stopped the goods in transitu may resell the goods. He shall not thereafter be liable to the original buyer upon the contract to sell or the sale or for any profit made by such resale, but may recover from the buyer damages for any loss occasioned by the breach of the contract or the sale.

(2) Where a resale is made, as authorized in this section, the buyer acquires a good title as against the original buyer.

(3) It is not essential to the validity of a resale that notice of an intention to resell the goods be given by the seller to the original buyer. But where the right to resell is not based on the perishable nature of the goods, or upon an express provision of the contract or the sale, the giving or failure to give such notice shall be relevant in any issue involving the question whether the buyer had been in default an unreasonable time before the resale was made.

(4) It is not essential to the validity of a resale that notice of the time and place of such resale should be given by the seller to the original buyer.

(5) The seller is bound to exercise reasonable care and judgment in making a resale, and subject to this requirement may make a resale either by public or private sale.

This section differs considerably from section 48 of the English act. The wording of that section did not seem wholly adequate.

Section 48 (2) of the English act seems to provide that the resale, whether rightly made or not, so long as it is made by a seller having a lien, gives a good title, and section 8 of the factor's act of 1899, providing that any seller in possession has power to make a valid sale or pledge, squares with this; but the provision seems somewhat drastic for this country. (See Mechem, sec. 1644.) The requirements as to delivery and change of possession in this draft would generally protect the purchaser on the resale if he got delivery, and this seems far enough to go.

The point covered by (3) is much disputed. The English law requires notice where the goods are not perishable, and some cases so hold in this country. Others reach a contrary result. (See Mechem, sec. 1633.) On the one hand, it seems undesirable to make a resale invalid under all circumstances for lack of notice. The lapse of time or other circumstances might make it highly unjust to allow the buyer later, when perhaps market prices had risen, to make such a claim. On the other hand, it seems desirable that notice should generally be given. The provision suggested will have the effect, it is hoped, of making notice necessary unless the default of the buyer is very clear and long continued; (4) expresses the law. (Mechem, sec. 1637.)

RESCISSION BY THE SELLER.

SEC. 61. [When and how the seller may rescind the sale.] (1) An unpaid seller having a right of lien or having stopped the goods in transitu, may rescind the transfer of title and resume the property in the goods, where he expressly reserved the right to do so in case the buyer should make default, or where the buyer has been in default in the payment of the price an unreasonable time. The seller shall not thereafter be liable to the buyer upon the contract to sell or the sale, but may recover from the buyer damages for any loss occasioned by the breach of the contract or the sale.

(2) The transfer of title shall not be held to have been rescinded by an unpaid seller until he has manifested by notice to the buyer or by some other overt act an intention to rescind. It is not necessary that such overt act should be communicated to the buyer, but the giving or failure to give notice to the buyer of the intention to rescind shall be relevant in any issue involving

the question whether the buyer had been in default an unreasonable time before the right of rescission was asserted.

This section is not contained in the English act, and the remedy for which the section provides is not allowed by English law. It is allowed in this country and seems fully justified by mercantile custom and convenience. (Mechem, secs. 1681, 1682; Burdick, p. 243.)

SEC. 62. [Effect of sale of goods subject to lien or stoppage in transitu.] Subject to the provisions of this act, the unpaid seller's right of lien or stoppage in transitu is not affected by any sale or other disposition of the goods which the buyer may have made, unless the seller has assented thereto.

If, however, a negotiable document of title has been issued for goods, no seller's lien or right of stoppage in transitu shall defeat the right of any purchaser for value in good faith to whom such document has been negotiated, whether such negotiation be prior or subsequent to the notification to the carrier, or other bailee who issued such document of the seller's claim to a lien or right of stoppage in transitu.

This section is based on section 47 of the English act. The second paragraph is, however, made more far-reaching than in the English act, in order to cover a case which does not seem to have arisen or to have been considered in England, namely, where a bill of lading is transferred to an innocent purchaser for value after notice to stop has been given. The only case is Newhall *v.* Central Pac. R. R. (51 Cal., 345) which properly protects the purchaser.

Part V.

ACTIONS FOR BREACH OF THE CONTRACT—REMEDIES OF THE SELLER.

SEC. 63. [Action for the price.] (1) Where, under a contract to sell or a sale, the property in the goods has passed to the buyer, and the buyer wrongfully neglects or refuses to pay for the goods according to the terms of the contract or the sale, the seller may maintain an action against him for the price of the goods.

(2) Where, under a contract to sell or a sale, the price is payable on a day certain, irrespective of delivery or of transfer of title, and the buyer wrongfully neglects or refuses to pay such price, the seller may maintain an action for the price, although the property in the goods has not passed and the goods have not been appropriated to the contract. But it shall be a defense to such an action that the seller at any time before judgment in such action has manifested an inability to perform the contract or the sale on his part or an intention not to perform it.

(3) Although the property in the goods has not passed, if they can not readily be resold for a reasonable price, and if the provisions of section 64 (4) are not applicable, the seller may offer to deliver the goods to the buyer, and, if the buyer refuses to receive them, may notify the buyer that the goods are thereafter held by the seller as bailee for the buyer. Thereafter the seller may treat the goods as the buyer's and may maintain an action for the price.

(1) and the first half of (2) follow the English act. The addition to (2) beginning "but," etc., is believed to be justified by the weight of American authority.

(3) is not law in England, nor is it in a number of American States. On the other hand, the New York court, in an often-quoted passage, allows the remedy to an unpaid vendor generally without any qualification as to the nature of the goods. It is also allowed in the civil law. The rule suggested goes as far as convenience requires, for if the goods can readily be resold, the action for damages affords adequate relief. (See Mechem, sec. 1394.)

SEC. 64. [Action for damages for nonacceptance of the goods.] (1) Where the buyer wrongfully neglects or refuses to accept and pay for the goods, the seller may maintain an action against him for damages for nonacceptance.

(2) The measure of damages is the estimated loss directly and naturally resulting, in the ordinary course of events, from the buyer's breach of contract.

(3) Where there is an available market for the goods in question, the measure of damages is, in the absence of special circumstances, showing proximate damage of a greater amount, the difference between the contract price and the market or current price at the time or times when the goods ought to have been accepted, or, if no time was fixed for acceptance, then at the time of the refusal to accept.

(4) If, while labor or expense of material amount are necessary on the part of the seller to enable him to fulfill his obligations under the contract to sell or the sale, the buyer repudiates the contract or the sale, or notifies the seller to proceed no further therewith, the buyer shall be liable to the seller for no greater damages than the seller would have suffered if he did nothing toward carrying out the contract or the sale after receiving notice of the buyer's repudiation or countermand. The profit the seller would have made if the contract or the sale had been fully performed shall be considered in estimating such damages.

This follows section 50 of the English act, except (4), which is added. (4) is not law in England, but it is in this country, except in Illinois. (See 14 Harv. L. Rev. 422; Mechem, sec. 1700 et seq.) The provision does not require the seller to cease performance in every case. There may be cases where the damage caused by stopping performance would be greater than that caused by finishing the necessary work. (See Southern Cotton Oil Co. *v.* Heflin, 99 Fed. Rep., 339.) In such a case the seller might complete performance and recover damages based on completed performance.

SEC. 65. [When seller may rescind contract or sale.] Where the goods have not been delivered to the buyer, and the buyer has repudiated the contract to sell or sale, or has manifested his inability to perform his obligations thereunder, or has committed a material breach thereof, the seller may totally rescind the contract or the sale by giving notice of his election so to do to the buyer.

Section 61 allows the seller to rescind the transfer of title in the cases there covered. The rescission of all contractual obligation between the parties—a more extensive right—is covered by this section, which is believed to express the American law.

REMEDIES OF THE BUYER.

SEC. 66. [Action for converting or detaining goods.] Where the property in the goods has passed to the buyer and the seller wrongfully neglects or refuses to deliver the goods, the buyer may maintain any action allowed by law to the owner of goods of similar kind when wrongfully converted or withheld.

This section, which is not contained in the English act, allows trover, replevin, equitable, or other relief, as the local law may warrant.

SEC. 67. [Action for failing to deliver goods.] (1) Where the property in the goods has not passed to the buyer, and the seller wrongfully neglects or refuses to deliver the goods, the buyer may maintain an action against the seller for damages for nondelivery.

(2) The measure of damages is the loss directly and naturally resulting in the ordinary course of events from the seller's breach of contract.

(3) Where there is an available market for the goods in question, the measure of damages, in the absence of special circumstances showing proximate damages of a greater amount, is the difference between the contract price and the market or current price of the goods at the time or times when they ought to have been delivered, or, if no time was fixed, then at the time of the refusal to deliver.

This follows section 51 of the English act.

SEC. 68. [Specific performance.] Where the seller has broken a contract to deliver specific or ascertained goods, a court having the powers of a court of equity may, if it thinks fit, on the application of the buyer, by its judgment or decree direct that the contract shall be performed specifically, without giving the seller the option of retaining the goods on payment of damages. The judgment or decree may be unconditional, or upon such terms and conditions as to damages, payment of the price and otherwise, as to the court may seem just.

This follows, with slight changes in wording, section 52 of the English act.

SEC. 69. [Remedies for breach of warranty.] (1) Where there is a breach of warranty by the seller, the buyer may, at his election—

(a) Accept or keep the goods and set up against the seller the breach of warranty by way of recoupment in diminution or extinction of the price;

(b) Accept or keep the goods and maintain an action against the seller for damages for the breach of warranty.

(c) Refuse to accept the goods, if the property therein has not passed, and maintain an action against the seller for damages for the breach of warranty.

(d) Rescind the contract to sell or the sale and refuse to receive the goods, or, if the goods have already been received, return them or offer to return them to the seller and recover the price or any part thereof which has been paid.

(2) When the buyer has claimed and been granted a remedy in any one of these ways, no other remedy can thereafter be granted.

(3) Where the goods have been delivered to the buyer, he can not rescind the sale if he knew of the breach of warranty when he accepted the goods, or if he fails to notify the seller within a reasonable time of the election to rescind, or if he fails to return or to offer to return the goods to the seller in substantially as good condition as they were in at the time the property was transferred to the buyer. But if deterioration or injury of the goods is due to the breach of warranty, such deterioration or injury shall not prevent the buyer from returning or offering to return the goods to the seller and rescinding the sale.

(4) Where the buyer is entitled to rescind the sale and elects to do so, the buyer shall cease to be liable for the price upon returning or offering to return the goods. If the price or any part thereof has already been paid, the seller shall be liable to repay so much thereof as has been paid, concurrently with the return of the goods or immediately after an offer to return the goods in exchange for repayment of the price.

(5) Where the buyer is entitled to rescind the sale and elects to do so, if the seller refuses to accept an offer of the buyer to return the goods, the buyer shall thereafter be deemed to hold the goods as bailee for the seller, but subject to a lien to secure the repayment of any portion of the price which has been paid, and with the remedies for the enforcement of such lien allowed to an unpaid seller by section 53.

(6) The measure of damages for breach of warranty is the loss directly and naturally resulting, in the ordinary course of events, from the breach of warranty.

(7) In the case of breach of warranty of quality, such loss, in the absence of special circumstances showing proximate damage of a greater amount, is the difference between the value of the goods at the time of delivery to the buyer and the value they would have had if they had answered to the warranty.

This section differs materially from the corresponding section of the English act—section 53. This draft allows rescission as a remedy for breach of warranty. The English law does not. In defense of the remedy of rescission, see an article by the draftsman in 16 Harv. L. Rev., 465. Further, the English act, following Mendel *v.* Steel (8 M. & W., 858), allows the buyer to recoup his damages in an action for the price and thereafter to bring an action for damages. This seems erroneous (see Watkins *v.* American Bank, 134 Fed. Rep., 36 (C. C. A.)), and has been changed in this draft.

SEC. 70. [Interest and special damages.] Nothing in this act shall affect the right of the buyer or the seller to recover interest or special damages in any case where by law interest or special damages may be recoverable, or to recover money paid where the consideration for the payment of it has failed.

This follows section 54 of the English act.

Part VI.

INTERPRETATION.

SEC. 71. [Variation of implied obligations.] Where any right, duty, or liability would arise under a contract to sell or a sale by implication of law, it may be negatived or varied by express agreement or by the course of dealing between the parties, or by custom, if the custom be such as to bind both parties to the contract or the sale.

This follows section 55 of the English act.

SEC. 72. [Rights may be enforced by action.] Where any right, duty, or liability is declared by this act, it may, unless otherwise by this act provided, be enforced by action.

This follows section 57 of the English act.

SEC. 73. [Rule for cases not provided for by this act.] In any case not provided for in this act the rules of law and equity, including the law merchant, and in particular the rules relating to the law of principal and agent and to the effect of fraud, misrepresentation, duress or coercion, mistake, bankruptcy, or other invalidating cause, shall continue to apply to contracts to sell and to sales of goods.

This provision seems obviously desirable.

SEC. 74. [Interpretation shall give effect to purpose of uniformity.] This act shall be so interpreted and construed as to effectuate its general purpose to make uniform the laws of those States which enact it.

The rule in this section obviously states a proper principle in regard to a statute the primary object of which is to make the law uniform. The same provisions will be found in the uniform transfer of stock act, uniform warehouse receipts act, and the uniform bills of lading act. The courts of last resort have applied this rule to the uniform negotiable instruments act. This principle was long ago recognized in Swift *v.* Tyson (1842, 16 Peters, 1, 19, 20).

SEC. 75. [Provisions not applicable to mortgages.] The provisions of this act relating to contracts to sell and to sales do not apply, unless so stated, to any transaction in the form of a contract to sell or a sale which is intended to operate by way of mortgage, pledge, charge, or other security.

This follows section 60 (2) of the English act, except for the words "unless so stated." Though the draft does not generally purport to deal with the peculiar rules of mortgage law, there are a few places in which mortgage relations or similar ones are covered, e. g., sections 20 (2), 22 (a).

SEC. 76. [Definitions.] (1) In this act, unless the context or subject matter otherwise requires—

"Action" includes counterclaim, set-off, and suit in equity.

"Buyer" means a person who buys or agrees to buy goods or any legal successor in interest of such person.

"Defendant" includes a plaintiff against whom a right of set-off or counterclaim is asserted.

"Delivery" means voluntary transfer of possession from one person to another.

"Divisible contract to sell or sale" means a contract to sell or a sale in which by its terms the price for a portion or portions of the goods less than the whole is fixed or ascertainable by computation.

"Document of title to goods" includes any bill of lading, dock warrant, warehouse receipt or order for the delivery of goods or any other document used in the ordinary course of business in the sale or transfer of goods as proof of the possession or control of the goods or authorizing or purporting to authorize the possessor of the document to transfer or receive, either by indorsement or by delivery, goods represented by such document.

"Fault" means wrongful act or default.

"Fungible goods" means goods of which any unit is from its nature or by mercantile usage treated as the equivalent of any other unit.

"Future goods" means goods to be manufactured or acquired by the seller after the making of the contract of sale.

"Goods" include all chattels personal other than things in action and money. The term includes emblements, industrial growing crops, and things attached to or forming part of the land which are agreed to be severed before sale or under the contract of sale.

"Order" in sections of this act relating to documents of title means an order by indorsement on the document.

"Person" includes a corporation or partnership or two or more persons having a joint or common interest.

"Plaintiff" includes defendant asserting a right of set-off or counterclaim.

"Property" means the general property in goods, and not merely a special property.

"Purchaser" includes mortgagee and pledgee.

"Purchases" includes taking as a mortgagee or as a pledgee.

"Quality of goods" includes their state or condition.

"Sale" includes a bargain and sale, as well as a sale and delivery.

"Seller" means a person who sells or agrees to sell goods or any legal successor in the interest of such person.

"Specific goods" means goods identified and agreed upon at the time a contract to sell or a sale is made.

"Value" is any consideration sufficient to support a simple contract. An antecedent or preexisting claim, whether for money or not, constitutes value where goods or documents of titles are taken either in satisfaction thereof or as security therefor.

(2) A thing is done "in good faith" within the meaning of this act when it is in fact done honestly, whether it be done negligently or not.

(3) A person is insolvent within the meaning of this act who either has ceased to pay his debts in the ordinary course of business or can not pay his debts as they become due, whether he has committed an act of bankruptcy or not, and whether he is insolvent within the meaning of the Federal bankruptcy law or not.

(4) Goods are in a "deliverable state" within the meaning of this act when they are in such a state that the buyer would, under the contract, be bound to take delivery of them.

The only one of these definitions requiring comment is that of value, which follows the weight of authority at common law and the provision of the uniform negotiable instruments act as intended by its framers. In regard to property other than negotiable instruments, the law of many States does not regard an antecedent debt as value; but it seems desirable to have a single rule for what constitutes valuable consideration, and mercantile convenience support the one adopted. It is supported, moreover, by the law of England and a few of our States. (See Williston on Sales, sec. 619.)

SEC. 76a. [Act does not apply to existing sales or contracts to sell.] None of the provisions of this act shall apply to any sale, or to any contract to sell, made prior to the taking effect of this act.

This section was added in 1909 primarily to avoid a question which was raised in Massachusetts, where the act was passed without this section. It was questioned whether section 4 of the act as it related to the enforcement of a sale, or contract to sell, rather than to its original validity, did not apply to any litigation arising after the passage of the act without reference to when the sale or contract to sell, which was the subject of the litigation, arose. (See Williston on Sales, p. 1042.) A similar section is found in all the other uniform acts.

SEC. 76b. [No repeal of uniform warehouse receipt act or uniform bills of lading act.] Nothing in this act or in any repealing clause thereof shall be construed to repeal or limit any of the provisions of the act to make uniform the law of warehouse receipts, or of the act to make uniform the law of bills of lading.

This section was added in 1909 especially to avoid the possible effect of section 32 of the uniform sales act upon section 31 of the uniform bills of lading act. Where neither the uniform warehouse receipts act nor the uniform bills of lading act has been passed prior to the passage of the uniform sales act, this section may be omitted.

SEC. 77. [Inconsistent legislation repealed.] All acts or parts of acts inconsistent with this act are hereby repealed except as provided in section 76b.

SEC. 78. [Time when the act takes effect.] This act shall take effect on the ——— day of ———, 19—.

SEC. 79. [Name of act.] This act may be cited as the uniform sales act.

Mr. Bennet on Socialism.

EXTENSION OF REMARKS
OF
HON. J. HAMPTON MOORE,
OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, December 11, 1916.

Mr. MOORE of Pennsylvania. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD by inserting a speech by my colleague, the gentleman from New York, Mr. WILLIAM S. BENNET, on socialism.

The SPEAKER. The gentleman from Pennsylvania [Mr. MOORE] asks unanimous consent to extend his remarks in the RECORD by inserting a speech on socialism, made by Hon. WILLIAM S. BENNET, a Member of the House from New York. Is there objection?

There was no objection.

The speech of Mr. BENNET follows:

EXTRACTS FROM SPEECH OF WILLIAM S. BENNET ON SOCIALISM, DELIVERED AT MCKINLEY SQUARE CASINO, BRONX, OCTOBER 23, 1916.

In approaching a discussion of the principles of socialism I do so with an open and a candid mind. If the Socialist doctrine is the best for our country then it ought to be adopted. If it is not only not the best but the least worthy, then it ought to be so demonstrated.

Neither do I approach this discussion from a partisan standpoint. The respective candidacies of Mr. Dobsevage and of myself are mere incidents to the discussion. Mr. Dobsevage here to-night represents all those who approve socialism; I represent all those of all political faiths who disapprove it.

The Socialist Party assumes to be the special representative of the wageworker. I dispute that claim and assert for all the parties which for this occasion I represent an interest in the wageworker as sincere and unselfish as it is possible for any interest to be.

During my own personal political career I have not been insensible to the real legislative needs of the wageworker. As an assemblyman in 1902 I introduced and secured the passage of the first employers' liability law which this State ever had. In the Fifty-ninth Congress I introduced and secured the passage of a bill classifying every post-office clerk and carrier in the United States and providing for automatic promotions up to the $1,200 grade. When I came home from that Congress the letter carriers of New York City met me in procession and carried me from the train on their shoulders and the post-office clerks presented me with beautifully engraved and handsomely framed resolutions, which have hung ever since on my office wall. In the Sixtieth Congress I took up the cause of the customhouse laborers and succeeded in raising their pay from $720 to $840 per year and securing for them two weeks annual vacation with pay and two weeks sick leave with pay. In this Congress I secured the passage of a provision in the Post Office law preventing the Post Office Department from automatically dropping from the rolls a sick clerk or carrier at the end of a certain rigid number of days. I have also had legislation passed for the benefit of other Government employees in the different services, which they remember and which time forbids me to enumerate.

With some pride I record the fact that no other Congressman now in public life can point to a record of an important labor bill passed in a service in a State legislature and of bills in the interest of Government employees passed in three of the four Congresses of which he has been a member. I am now endeavoring to induce the War Department to install the eight-hour day on the harbor boats of the quartermaster's department in New York City, and I have for years, both in and out of Congress, advocated workmen's compensation, mothers' pension, rural credits, child labor, and similar laws.

In the Sixty-first Congress I was one of the House committee of three which arranged for the holding of the International Congress on Social Insurance in this country.

From this brief and necessarily incomplete résumé of my activities it will be seen that my position on social and labor questions is not only liberal but even advanced.

On one other great question I have taken and maintained a stand for which I have been violently criticized. I allude to the immigration question. I have fought for the right of a man of foreign birth of sound body, sound morals, and of sound mind to come to this country, even though he could not read. For 12 long years I have fought that fight, and so far fought it successfully. Both of the Socialists who have been in Congress, Messrs. Berger and LONDON, have held views similar to mine and voted as I have voted, and for this attitude they, as well as I, have been denounced by the American Federation of Labor. The federation even claims to have defeated me for Congress in 1910 because of my attitude on this question. But when I went back to Congress last year I held the same views, voted as before, hold them still, and shall vote the same way if I am reelected. I shall do this with even the more conviction of right now that it is so plain that a large part of the opposition to the immigrant is based on religious and racial reasons. I do not believe that we have the right to bar out from this country any alien because of his race or religion.

I admire in the Socialist his energy and persistence.

Now, as to his doctrines. The Socialist is necessarily opposed to all organized religion. Numerous Socialist writers, from Marx and Engel down, have avowed this, and of necessity also it must be so, for the Socialist looks to a perfect State here, while organized religion looks to a perfect State hereafter.

"The State," says Morris Hillquit, "is the end, man the means," and the same writer has described man as a cell organism of the State. All organized religions regard man as an individual, with a soul capable of and entitled to personal salvation, and maintain that the State was created for man and not man for the State. All organized religions include faith in God. Practically all religions in this country can say, in faith believing, both the Twenty-third Psalm:

> The Lord is my shepherd; I shall not want.
> He maketh me to lie down in green pastures; He leadeth me beside the still waters.
> He restoreth my soul; He leadeth me in the paths of righteousness for His name's sake.
> Yea, though I walk through the valley of the shadow of death, I will fear no evil; for Thou art with me; Thy rod and Thy staff they comfort me.
> Thou preparest a table before me in the presence of mine enemies; Thou anointest my head with oil; my cup runneth over.
> Surely goodness and mercy shall follow me all the days of my life; and I will dwell in the house of the Lord forever.

And the petition of Jesus:

> Our Father which art in heaven, hallowed be Thy name. Thy kingdom come, Thy will be done in earth, as it is in heaven. Give us this day our daily bread. And forgive us our debts, as we forgive our debtors. And lead us not into temptation, but deliver us from evil.

The Socialist necessarily rejects both.

His Twenty-third Psalm would run something like this:

> There may be a God. I am not industrially or economically interested. My faith and trust are in a perfect State, to be run by the proletariat. I trust in nothing, have faith in nothing, rely on nothing, need nothing but the perfect proletariat State. The proletariat has but one enemy—the capitalist class.

This puts socialism at once in opposition to every person who believes in the fatherhood of God and the brotherhood of man, and who places any trust or reliance in an overruling Providence.

Am I overstating the perfect State as the ultimate aim of socialism?

The present national platform of the Socialist Party describes the cooperative Commonwealth as its ultimate aim, and as it also is, according to the platform, to end all the present evils of organized society, it must necessarily be a perfect State. Anything which will end all the evils of organized society must necessarily be perfect.

We Democrats, Republicans, Progressives, Independence Leaguers, and American Party men, none of us claim or believe that our respective party platforms, if put into full effect, would bring about a perfect State. Even our Prohibitionist friends do not claim that the elimination of the demon rum would end all the evils of organized society.

We all recognize that the perfect State is impossible until all men are perfect. We assert that there are no perfect men anywhere. Are our Socialist friends perfect? As I have come in contact with them on the street corners during the last 12 years I am compelled to admit that they are no better men personally than the rest of us.

Without the perfect State socialism is impossible; without perfect men the perfect State is impossible; and, there being no perfect men, the program of socialism fails. I expect to be a member of a perfect State some day, but in the next world.

I now pass rapidly over a few more reasons why I am opposed to socialism. Socialism is necessarily opposed to the family. According to Socialist writers, "property in children would cease to exist, and every infant that came into the world would be born into full citizenship and would enjoy all its advantages, whatever the conduct of its parents might be." In other words, all control of parents over their children ceases and the little cell organism starts in under the control of the perfect State.

Virtue, chastity, and monogamous marriage are all deprecated by the Socialist international textbook on the woman question, which has run through more than 50 editions in Germany alone. Among other things, it says:

The satisfaction of the sexual impulse is as much a private concern of each individual as the satisfaction of any other natural impulse. No one is accountable to anyone else, and no third person has a right to interfere.

This side of the Socialist propaganda is so disgusting, hideous, and destructive as alone to condemn socialism. The worst of it is that it is essential to socialism.

If the aim is a perfect earthly State, every person must be a member of the State. Moreover, there must always be the number required for each industry, no more nor no less, and therefore the State must control the birth rate. Children as cell organisms of the State will be bred like prize cattle; the family as we now know it will disappear.

Of course, socialism is opposed to the individual. Under the promises of socialism every man will have enough to eat and to wear and a place to sleep, all regulated, of course, by the State. The slave in the South had these.

Under socialism every individual becomes a slave. There are great limitations on our freedom now. Under the socialist state there would be no industrial freedom at all; the State would own all means of production, including land, and the individual would have to work when, where, and how the State told him, at wages fixed by the State. Slavery could be no more thorough. It would be worse than negro slavery, because in that masters were personal equations—usually kind—and through personal interest, if for no other reason, concerned in the welfare of the slave. Under the slavery of socialism the master would be the impersonal State, with no impelling interest in any individual. Life would be a drab treadmill.

I am opposed to socialism because it aims to limit present recognized rights in private property. I know that the Socialist says that he would not abolish private property, but would even greatly extend it. But he also says that he would take over into collective ownership all things, including factories, tools, economic processes and functions, land, mines, forests, railroads, mills, and all other things required for our physical existence. With everything of that character removed from the market a man who took the trouble to save money would be simply all dressed up with no place to go.

I am a trustee of the Commonwealth Savings Bank. It is an unsalaried position. We have 5,700 depositors who have brought to us an aggregate of $1,100,000 to invest and pay them a return on. Every dollar of that $1,100,000 is invested in the kind of property which the Socialist aims to take away from private ownership.

Ours is a smaH bank. The savings banks of the United States have on individual deposit over $5,000,000,000; others invest in life insurance, and those people hold policies calling for the payment of twenty-two billions more, also invested in the same kind of property; others invest in building and loan associations, and such associations have over 3,000,000 members and assets of a billion and a half. Land in farms represent twenty billions more. I cease further enumerations as unnecessary.

The moment the perfect State takes over these properties investment ceases; when investment ceases thrift ceases, and when thrift ceases industrial progress ceases.

Individual gain and success form a large part of the reason for the work and struggle of us all. Take away the chance of individual gain and you destroy individual incentive and impair efficiency. I go in the summer to a pleasant place, Silver Bay, on Lake George. It is run by the Young Men's Christian Association. It is nearer being a perfect place than any place I have ever been. Crime is unknown. Evil is at a minimum. Consideration for one's fellow man is at the highest. You can drop your pocketbook anywhere on the grounds and the person who picks it up will take it to the lost-and-found office. You can drop an individual dollar bill in the grounds and the same thing will and has happened. Profit is eliminated. The place does not aim to make money. But even in that selected company the very fact that profit is eliminated and that no individual can possibly gain anything by the best of service affects unfavorably those branches of the service which minister to our wants.

I have shown that socialism is opposed, and necessarily so, to religion, to the family, to the individual, to virtue, chastity, and monogamous marriage. I have shown that it proposes to eliminate saving, investment, and thrift. I have given my opinion that the incentive of individual gain is essential to progress. I could say more.

How does socialism propose to take over and pay for the hundreds of billions of private property now in individual ownership?

Under the cooperative Commonwealth, who fixes my wages and what recourse have I if I disagree with the value placed on my labor?

I am intensely loyal to my country. Socialism teaches not only evolution through the ballot, which is its right, but also forcible resistance and disloyalty to America. I quote from the 1916 platform:

The Socialist Party * * * urges upon the workers in the mines and forests, on the railways and ships, in factories and fields the use of their economic and industrial power by refusing to mine the coal, to transport soldiers, to furnish food or other supplies for military purposes, and thus keep out of the ruling class the control of armed forces and economic power necessary for aggression abroad and industrial despotism at home.

This is disloyalty to America, and, under certain circumstances, might be even treason.

In the whole Socialist platform there is not one word of loyalty to America or to any American institution. There are some good industrial recommendations, but those are also to be found in the platforms of other parties. All other parties stand for social progress through social evolution. The Socialist alone stands for social progress through social revolution.

Resolutions Adopted by the National Conference on Marketing and Farm Credits.

EXTENSION OF REMARKS

OF

HON. JOHN A. ELSTON,

OF CALIFORNIA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, December 14, 1916.

Mr. ELSTON. Mr. Speaker, under the leave heretofore granted I submit resolutions adopted by the National Conference on Marketing and Farm Credits, held at Chicago, December 4 to 9, 1916, attended by over 2,000 delegates from 47 States and several Canadian Provinces. The conference was the largest national gathering of farmers and students of the economic problems of farming ever assembled in recent years. The resolutions adopted by the conference request congressional action on several subjects of vital importance to the rural development of this country. I deem it most appropriate therefore to give publicity to these resolutions through the CONGRESSIONAL RECORD.

The resolutions are as follows:

NATIONAL CONFERENCE ON MARKETING AND FARM CREDITS.

REPORT OF THE COMMITTEE ON RESOLUTIONS.

In the preparation of resolutions, the committee has in mind the purposes of the call for the conference. The many opinions held of problems pressing for solution have made it impossible to include the content of all resolutions offered to the committee. This conference, however, consisting of representatives from 47 States, the District of Columbia, and from Canadian Provinces, presents its views for public consideration under the head of (1) Farm finance, (2) Land settlement, (3) Marketing, (4) Conservation and rural development, (5) National agricultural organization society, and (6) Congratulations.

FARM FINANCE.

In response to popular demand for the better financing of the farmers of the United States, a law has been enacted known as the "Federal farm-loan act," and to put in operation the system created by said act a Federal Farm Loan Board has been created under said law.

The said Federal farm-loan act offers the first and only effective system for the proper financing of the farmers of the country on long-time mortgage loans at low rates of interest and easy payments.

We believe the bonds to be issued by the Federal land banks created by this act will be of the highest class of investment securities, being supervised by the Government, secured by first mortgages on cultivated lands appraised at not more than 50 per cent of their value, and being further guaranteed by the 12 Federal land banks having a combined capital of $9,000,000 and exempt from all kinds of taxation.

We heartily recommend to the farmers of the United States the Federal farm-loan act and urge upon them that they make the fullest possible use of the same. And we especially indorse the national farm-loan associations as providing the best means of which farmers can avail themselves of the benefits of this law.

A doubt exists as to whether loans under the Federal farm-loan act can be legally made on lands which form a part of irrigation, drainage, or reclamation districts on account of the lien against these lands for the bonds that are outstanding. If necessary, we recommend that an amendment be made to the present law which will clear these lands of any such obstacle and render them eligible for loans without question.

There is urgent need of a system of short-time credits for the farmers of the United States, and the Fourth National Conference on Marketing and Farm Credits urges upon Congress the enactment of a law which will supply that need.

We also recommend that Congress shall create some authorized power to certify notes, properly and adequately secured by live stock, cotton, grain, and other farm commodities, to the end that said notes shall find

a wide and ready market at reasonable rates of interest. This would aid in putting the farming industry on an equal credit footing with other lines of business throughout the country. It would eliminate excessive rates of interest now charged for short-time accommodations by local money lenders.

LAND SETTLEMENT AND RURAL DEVELOPMENT.

At its 1915 meeting this conference called attention to the need for dealing with land settlement as an important economic and social question and for action by the Nation and several States that would broaden the opportunity for those who wish to live in the country, but who must depend mainly on frugality and industry in the purchase and improvement of farms.

The introduction of the Crosser bill in Congress shows that the need for such action is being recognized, and we indorse the general purpose of this measure. But we are opposed to any system of perpetual bureaucratic control of Government promotion which would establish a dependent peasantry.

It is becoming increasingly manifest that the settlement of privately owned lands can not be left wholly to unregulated private enterprises. In too many instances this plan has been inefficient and marked by unnecessary hardship and loss to settlers, resulting in unwarranted inflation of land prices.

All sections and classes are interested in the introduction of better methods of settlement, to overcome the growing menace of farm tenantry, to maintain the balance between city and country life, and by increasing production to lessen the cost of living.

If we are to have a scientific land-settlement policy it should include the following features:

First. Detailed soil and economic surveys of unsettled lands, to determine the character of the soil, the need for drainage and irrigation, and the kind of agriculture or horticulture best suited to the locality. The results of such surveys should be published, as a guide to public and private enterprise in the preparation of plans for colonization and the disposal of land to settlers.

Second. The adoption of a policy under which the Federal or State Governments, or the two cooperating, will provide "ready-made farms," that will be habitable and can be made immediately productive. We indorse plans similar to those formulated in the "Report on land settlement in Wyoming," which provides for cooperation between the Federal and State authorities for the creation of settlements in which community as well as individual needs are cared for. This policy includes provision for town, schools, roads, and the determination of the size of farms needed to furnish employment and give a living income to the settler. The Wyoming plan also provides homes for farm laborers, which will give them economic independence through the ownership of sufficient land to enable the laborer's family to grow its own fruits and vegetables and keep a cow, pigs, and poultry. The object of this is to enable settlers to earn a living income from the soil in less time and with smaller expenditure of money than is possible where each one works unaided and alone. Such expenditures or loans should be repaid by the settler with interest under such conditions and in such time as will permit the money to be earned out of the soil.

Third. Such supervision of private colonization and of the private sale of lands as shall prevent misrepresentation and fraud and aid the settler in selection of lands suited to his needs.

Fourth. The creation of institutions and the employment of competent farm advisers for beginners as will prevent costly mistakes and promote the spirit of agricultural cooperation and of community rather than individual action.

There is an evident need for the establishment of comprehensive, reliable, and disinterested national agencies that will furnish:

(1) Information to would-be farmers, whether American born or immigrants from other countries;

(2) The opportunities for settlement in different sections of the country; and

(3) Assistance in securing homes and becoming established com-

This conference again urging its recommendation of 1915 for the appointment of a Federal commission having authority to employ a body of expert assistants to carry on inquiry in all parts of the country which will show:

(1) Methods and results of unregulated private settlement;

(2) The need for more favorable financial terms of purchase by tenants and would-be farmers of small capital; and

(3) The feasibility and value of adopting in this country some of the policies of other countries which have done so much to improve agricultural and social conditions in these countries.

MARKETING.

We earnestly urge upon Congress the imperative need of a prompt and thorough investigation by the Federal Trade Commission, assisted by the Department of Agriculture, of—

First. The marketing of live stock and the meat-packing industries in this and other countries. We urge that this investigation be followed by a report with constructive recommendations for the improvement of the conditions and methods under which live stock is marketed, and the products thereof manufactured, distributed, and sold.

We urge upon Congress the making of an adequate appropriation and the giving of adequate authority to the Federal Trade Commission to enable it to cover all important phases of the problem, including the experiences of other countries with municipal abattoirs and cooperatively owned packing plants, to the end that a free and uncontrolled market may be assured; that any existing abuses may be corrected; that present wastes may be eliminated; and that new and better methods may be adopted. We further urge that the fullest publicity be given to all facts affecting the prices of live stock received by the producer and the cost of meat products paid by the consumer.

As the Office of Markets of the United States Department of Agriculture has provided facilities for making impartial reports of market conditions and prices, we recommend that the market news service of the Office of Markets be extended as quickly as possible to include all farm products. We believe that the Office of Markets should be authorized and instructed to require all handlers of farm products, including storage plants, to report conditions, prices, receipts, and supplies on hand, and such other facts as may be necessary to show the movement, supply, and prices of farm products.

No standard market quotations are possible unless they are based upon uniform grades and a uniform interpretation of grades. Therefore we recommend that as rapidly as possible the Office of Markets and Rural Organization of the United States Department of Agriculture, in cooperation with the State authorities, be authorized and empowered—

(1) To extend its work of establishing market grades so as to cover all farm products, including meat animals;

(2) To maintain in each of the principal markets official inspectors to enforce the use of the official grades, and to whom all disputes between producers and buyers as to grading may be referred for decision.

We recommend a continuation of the establishment by the States of divisions or bureaus of markets to promote proper methods of organization among farmers; for financing the production and sale of, for grading, and for storing and distributing farm products.

EMBARGOES.

We hereby protest against any legislation by Congress interfering by embargo or export duty with the distribution and sale of foodstuffs in the markets of the world.

CONSERVATION.

We protest against the passage of the Shields and Myers water-power bills or any substitutes for them which fail to protect the public interest by requiring compensation for valuable public rights and by fixing a definite time at which each water power leased shall revert to the people so that the conditions under which it is used may be readjusted to meet the public needs of that time. We urge upon our Senators and Congressmen to defeat the Shields and Myers bills and to pass water-power legislation providing for compensation and effective time limit in all water-right grants, together with full publicity and effective regulation of charges so as to prevent monopoly and extortion.

NATIONAL AGRICULTURAL ORGANIZATION SOCIETY.

In response to the wishes of the conference of last year that some permanent organization be formed which would continue throughout the year the good work of the conference, a committee was created which has brought into existence the National Agricultural Organization Society. This organization has during the past year given scientific help in hundreds of cases and has brought into harmonious relations and understanding many agencies and organizations which would otherwise be working alone. It furnishes legal and other help of the highest value and we urge its hearty indorsement to all cooperative organizations.

ACKNOWLEDGMENTS.

The Fourth National Conference on Marketing and Farm Credits has enjoyed the hospitality and service of the Hotel Sherman and extends thanks for favors extended by the management.

The conference desires to express its thanks and appreciation to President McVey, Secretary Holman, and Treasurer McCarthy and the officers and committee on organization for their faithful and efficient service in arranging for this conference and in doing so much to help bring it to a successful conclusion.

The conference has been gratified to have as its guest the sponsor of this conference and its able supporter, the Hon. Frank P. Holland, of Texas.

ELWOOD MEAD, of California,
Chairman.
FRANK N. BRIGGS, of Colorado.
H. W. TINKHAM, of Rhode Island.
T. S. MCKEE, of Alabama.
HECTOR MACPHERSON, of Oregon.
H. J. HUGHES, of Minnesota.
J. L. DU CHARME, of Arkansas.
F. F. GILMORE, of Kentucky.
W. B. CAMP, of North Carolina.
M. L. NOON, of Michigan.
SAM D. GROMER, of Missouri.
CHAS. MCCARTHY, of Wisconsin.
FRANK L. MCVEY,
Chairman Conference ex officio.
CHAS. W. HOLMAN,
Secretary Conference ex officio.

Letter From the American Federation of Labor Indorsing House Resolution No. 137.

EXTENSION OF REMARKS

OF

HON. J. CHARLES LINTHICUM,

OF MARYLAND,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, December 14, 1916.

Mr. LINTHICUM. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include a letter from the American Federation of Labor inclosing resolutions in favor of House resolution 137, relating to dairy products in the country. The letter is as follows:

WASHINGTON, D. C., *December 6, 1916.*

Hon. J. CHARLES LINTHICUM,
House of Representatives, Washington, D. C.

DEAR SIR: At the thirty-sixth annual convention of the American Federation of Labor, held in Baltimore, Md., November 13–25, 1916, a resolution was introduced dealing with the subject matter of House resolution 137 introduced by yourself in the House proposing an investigation of the charges made against milk and milk products on account of the alleged menace which they constitute to the health of the people in the United States. The convention gave its approval to House resolution 137, and in connection therewith adopted the following resolution:

"*Resolved*, That the secretary of the American Federation of Labor is hereby instructed to communicate our action to each of the gentlemen composing the Committee on Rules of the House of Representatives, urging a favorable report on House resolution 137."

In accordance with the directions of the convention, I am to-day notifying each member of the House Committee on Rules of the action of the convention, urging a favorable report on House resolution 137.

Trusting in view of the importance of the investigation, that the matter will be pressed with all possible expedition, and hoping for the passage of House resolution 137, I am,

Very truly, yours,

FRANK MORRISON,
Secretary American Federation of Labor.

Resolution No. 136 (by Delegate John H. Ferguson) of the Baltimore Federation of Labor.

Whereas Hon. J. CHARLES LINTHICUM, of Maryland, has introduced in the House of Representatives a resolution (H. Res. 137) providing for the appointment by the Speaker of a committee of five Members of the House, whose duty it shall be to investigate and report as speedily as practicable, as follows:

(a) Whether conditions prevailing in dairies and dairy products seriously menace the health and property of the people of the United States;

(b) Whether Federal inspection and supervision, either alone or in cooperation with State and municipal inspection and supervision, is necessary to the reasonable protection of the health and property of the citizens of the United States;

(c) If so, then the best and most economic methods of inaugurating and enforcing such inspection and supervision; and

Whereas a hearing was had on House resolution 137 on April 11, 1916, before the Committee on Rules of the House of Representatives, at which time Dr. E. C. Schroeder, expert bacteriologist of the Department of Agriculture, stated to the committee that 300 children die annually in New York City of bovine tuberculosis, and on this basis the annual death rate in the United States from bovine tuberculosis is 6,000 children every year, and further said that over 9 per cent, or 2,000,000, of our dairy cows have tuberculosis and are capable of transmitting that disease to children; while Dr. John R. Mohler, Assistant Chief of the Bureau of Animal Industry, told the committee that he had personally examined the bodies of a number of children who died of tuberculosis and found that over 22 per cent had died from bovine tuberculosis; and

Whereas The Forecast of December, 1915, page 399, says: "Other investigations * * * have proved with equal conclusiveness that children are the chief sufferers from the bovine type of tuberculosis, which is so prevalent in cattle that it is useless to think of its immediate eradication. The only protection for our children until this is accomplished is pasteurization. There is no escape from the conclusion, therefore, that in permitting the use of milk or milk products without pasteurization we are responsible for the slaughter of innocents, compared with which that of Herod was a trifle; and many of those whom we do not kill we maim and cripple for life, for the deadly tubercle bacillus attacks the bones, joints, and glands of the unhappy little ones rather than their lungs"; and

Whereas if these charges are true, then it is the duty of Congress to investigate and to pass such legislation as may be necessary to remedy the evil; and if they are untrue, then Congress should, by proper investigation, show this to be the fact, that the uncertainty now prevalent among our citizens may be alleviated and the real facts known, so that the people may freely and unceasingly avail themselves without fear and trembling of this splendid product, the most nutritious, useful, and, when produced and distributed under proper sanitary methods, the most healthful of all; Therefore be it

Resolved, That this convention of the American Federation of Labor favors an investigation of the charges made against milk and milk products, and gives its approval to House resolution No. 137; and be it further

Resolved, That the secretary of the American Federation of Labor is hereby instructed to communicate our action to each of the gentlemen composing the Committee on Rules of the House of Representatives, urging a favorable report on House resolution 137; and be it further

Resolved, That the legislative committee of the American Federation of Labor be instructed to do all things necessary to bring to pass the speedy passage of this resolution.

Subtreasury at New York.

EXTENSION OF REMARKS
OF
HON. WILLIAM S. BENNET,
OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Friday, December 15, 1916.

Mr. BENNET. Mr. Speaker, in the five minutes permitted it is impossible to go very fully into the Subtreasury question. A very important function of the Subtreasury at New York City is that it is the depository of hundreds of disbursing officers who have their accounts transferred there as a matter of convenience.

Another function is the buying of both foreign and domestic gold through the assay office, the payments being made by the Subtreasury.

Still another function is the handling of the redemption fund for national-bank notes. Possibly this could all be arranged through the Federal reserve bank, but no one knows certainly. It should be borne in mind that the Federal reserve bank is a stock corporation owned by its stockholders. It is not owned by the Government. Ought the millions in the Subtreasury be turned over to a private corporation? Possibly; but it ought to be clearly safeguarded and thoroughly understood. I append a statement from the Treasury Department:

TREASURY DEPARTMENT,
Washington, December 15, 1916.

The attached statement shows the total cash receipts and payments taken in and paid out by the New York Subtreasury for the fiscal year 1916, as shown in the Treasurer's account. These receipts include such items as—

1. Transfer of funds from this office.
2. Transfers of funds from other Treasury offices.
3. Receipts for issues of gold certificates of 1900.
4. Receipts of moneys to be paid by other Treasury offices.
5. Gold-settlement fund deposits for gold certificates of 1900 to be issued by this office to the Federal Reserve Board.
6. Five per cent fund deposits.
7. Post Office Department deposits.
8. Postal savings deposits.
9. Deposits by Comptroller of Currency as agent for creditors of failed banks.
10. Deposits for retirement of national bank circulation (act of July 14, 1890).
11. Revenue receipts and repayments.
12. Five per cent fund for redemption of Federal reserve notes.
13. Five per cent fund for redemption of Federal reserve bank notes.

Under the heading of "checks cashed" is included—

1. Disbursing officers' checks cashed.
2. Money order funds checks (issued by this office) cashed and the amounts placed to credit of disbursing postmaster with New York Subtreasury.
3. Moneys paid on deposits in other Treasury offices.
4. Checks issued for purchase of bullion by New York Assay Office.

Under the heading of "transfers of funds" made is included—

1. Transfers of unfit currency to Secretary of the Treasury.
2. Transfers of funds to depositary banks to restore balances to the authorized limit.
3. Transfers of funds to other Treasury offices.

Statement showing receipts and payments in the Treasurer's account, by the Assistant Treasurer, at New York for each month during the fiscal year 1916.

	Total receipts.	Payments.		
		Checks cashed.	Transfers made.	Total payments.
July, 1915	$104,838,792.39	$46,620,543.10	$49,410,450.00	$96,030,993.10
August, 1915	110,148,323.35	48,155,504.89	38,442,755.23	86,598,260.12
September, 1915	117,994,945.34	55,235,615.38	42,504,318.96	97,739,934.34
October, 1915	139,442,964.85	100,984,954.74	40,138,161.39	141,123,116.13
November, 1915	144,886,387.98	82,346,173.32	40,065,421.38	122,411,594.70
December, 1915	136,641,793.55	85,902,618.33	35,521,505.45	121,424,123.78
January, 1916	90,189,221.42	51,833,261.51	47,502,969.42	99,336,230.93
February, 1916	61,612,682.56	31,394,023.40	25,553,005.13	56,947,028.53
March, 1916	80,137,885.16	28,880,318.03	39,409,100.53	68,289,418.56
April, 1916	85,942,238.94	26,594,047.08	34,269,029.56	60,863,076.64
May, 1916	93,814,494.32	45,716,965.46	29,890,803.03	75,607,768.46
June, 1916	99,868,116.79	92,271,085.09	80,555,015.09	172,826,100.18
Total	1,265,517,846.65	695,935,110.33	503,262,535.14	1,199,197,645.47

This statement does not include receipts and payments in the local redemption and exchange and disbursing accounts kept in the New York Subtreasury for which accounts this office receives no reports other than daily balances.

F. J. F. THIEL,
Deputy Assistant Treasurer of the United States.

"War Widows" in Distress.

EXTENSION OF REMARKS
OF
HON. J. HAMPTON MOORE,
OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, December 15, 1916.

Mr. MOORE of Pennsylvania. Mr. Speaker, with the approach of Christmas public sympathy for the distressed in all conditions of life is awakened. At this particular season a new element deserving of consideration invites the attention not only of the people generally but of Congress and the executive department. We have a large number of National Guardsmen along the Mexican frontier who are wondering why they can not return to their homes and mingle with their fellow men. Until the Government itself speaks upon this subject we can not ourselves answer the query which comes up from the frontier and is reechoed in the homes of the thousands of families affected.

If these men are held on the Mexican border because the Government deems it necessary for the welfare of the Nation, that is a good and sufficient reason. If they are being so held to arouse the disgust of the country and the soldiers themselves with the National Guard service, for the purpose of destroying it, that is a matter which might fairly demand action at the hands of Congress. All we know at present is that the War Department declines to send our soldiers home, and that in consequence of that administrative attitude we are hearing constantly from business men in the service, who went loyally to the front, believing there was an emergency, and from others who at the time of enlistment had not been fully prepared in their domestic relations for a long absence from their families.

DESTITUTION IN SOLDIERS' FAMILIES.

It is the latter phase of the question to which I shall draw attention briefly. The troops had not long established themselves upon the frontier when it became evident that some provision would have to be made for the families of many of them. The National Guard had been composed of young men who were not seeking military service as a pursuit, but who had entered it with the view of performing a patriotic duty in such emergencies as might arise. It was self-evident that men who had been receiving wages and drawing salaries in private life could not long maintain their families during an absence from home on an income of, say, $15 a month. As the term of service for which the guardsmen enlisted was indefinite, numerous societies were formed throughout the country to aid the families of those who were endeavoring to live up to their patriotic obligations. A citizens' aid society was formed in Philadelphia, which raised $50,000 for this purpose. The mayor and councils of Philadelphia also arranged to assist the dependent families who had been left behind. All of them rendered splendid service. In addition, it is well known that the Government appropriated $2,000,000 for the support of dependent families. Now, as Christmas is approaching, we are advised that all these funds are running low and that some of them have been exhausted. And while there may have been some desertions from camp and an occasional discharge of unworthy soldiers, the great mass of the guardsmen who have dependent families are unable to give personal assistance to those whom they left behind save as they may do it at the rate of whatever is left from their 50 cents a day. In its issue of to-day the Public Ledger, of Philadelphia, contains much information on this subject under the startling headlines of "Eighty 'war widows' of Philadelphia facing poverty." I shall not publish this article in full, because the situation in Philadelphia is doubtless the same as it is in other cities. This much of the article, which describes the position in which many of the families of soldiers find themselves, ought to be laid before Congress for careful thought:

EXPLAINS SOCIETY'S DEMISE.

Explaining the demise of the Citizens' Aid Society, Mr. Carr said:

"We received word from Maj. Gen. Clement, at El Paso, that the Federal Government had received an appropriation of $2,000,000 with which to carry on the work of relief for the soldiers' families of the various States. Under the circumstances, he said, the soldiers might apply for aid and it would be forthcoming to the families at home. It seems that many of these husbands and fathers forgot this detail, and thus placed their families in the plight of facing starvation.

"When we learned that the Federal Government would aid the families we felt that we had no right to ask further contributions from the citizens of the city, who had subscribed $50,000 for this work already. So we notified the wives that on December 15 the aid society would go out of business."

The majority of the families affected are those of men in the Second Artillery, the first Philadelphia regiment to be sent to El Paso. While in Camp Stewart the Second, which left here as an infantry unit, commanded by Col. Hamilton D. Turner, was converted into artillery. For that reason they were held at the border for further training when the First and Third Infantry came home some weeks ago.

The plight of the "war widows" was discovered yesterday through the labors of the Old York Road preparedness unit, of which Mrs. Harry Asbury, of Oak Lane, is chairman. This organization, together with the Ashbourne Girl Scouts, of which Miss Mildred Gates, of Elkins Park, is scout mistress, has held dances, given card parties and other social affairs, and obtained a goodly sum which will be used in playing Santa Claus to the soldiers' wives and their little ones.

Through the efforts of these women already seven families have been snatched from dire poverty, and in one or two cases, actual starvation. One of these wives, whose husband is said to have deserted his company at the border and who has not returned to his family, has been forced to keep her children in bed all day in order that they might not freeze in the wintry weather of the last few days. Her only light has been a small candle.

A woman who occupies two rooms in the rear of the first floor of a North Tenth Street house, furnishes one of the pitiable cases. She has a husband and a brother at the border, and for a time obtained $6 a week from the Citizens' Aid Society. She has four children, one of whom has been at her father's home for some time; another one has been sick. Those with the mother range from 4 to 8 years. The girl, 6 years old, has been sick, and the mother has been unable to work. She has not heard from her husband for two months, although her brother wrote her that he had got into trouble. Friends have said that they saw him in this city, but he has not visited his wife. He was a member of Company H of the Second Artillery, and the wife will write to Capt. Lockhart, company commander, to-day to learn the truth about her husband. Her physical condition is such that she can not seek employment. She has been taken under the wing of the Old York Road unit.

A soldier's wife who lives in North Orkney Street is another whose plight is pitiful. She has a son and daughter, the latter barely more than a baby. She has been receiving aid, but it stopped two weeks ago. At that time her baby girl was taken sick and a neighbor gave her the money with which to pay the doctor. The child is compelled to recline propped up in an improvised bed made of two chairs and has a heavy cough.

Nor does her trouble stop with her own poverty. Her mother is a Belgian, whose husband returned to his native country to fight when war started. For months they have not heard from him, and his fate has worried the mother to distraction. In order, however, that the father at the border might know that he was not forgotten at the yuletide the woman last night, with barely her last pennies, purchased a handkerchief to send him as a reminder of Christmas.

Another woman living on North Clarion Street would seek work at once, she says, except that her children are so small she can not leave them. Her husband was an employee of the Rapid Transit Co., by whom she has been paid $1.62 a week since her husband went to the front. She has been receiving $6 a week from the Citizens' Aid, and had no word of complaint last night about her treatment in this respect.

However, she has been forced to occupy two rooms on the second floor of the house, for which she pays $7 a week, and she frankly declares she does not know how she will fare through the winter unless her husband returns. She has two children, one of whom has been sick intermittently since the father went away in June. She asked that some action be taken to bring the soldier-husband back, and declares that if he reenlists in the National Guard she will leave him.

Three other wives—one on Boudinot Street, another on Tulip, and another on Orianna—revealed the same sad state of family distress. One of these said she was going to write to the governor, while another declared she would send a personal letter to the President.

WHAT OF THE GUARD'S FUTURE?

Without excusing the very few soldiers who seem to have been indifferent to the welfare of their families, how shall we deal in the future with those who felt it a duty under pain of being regarded cowardly, to enter a prolonged service on the frontier at the expense of their families? Gen. Scott, Chief of Staff, in his annual report, has clearly indicated a lack of patriotism on the part of young men who are ready to parade and cheer the flag in moving-picture shows but who are not willing to visit the recruiting office. This, of course, is no reflection upon the patriotism and self-sacrifice of the men who are now upon the frontier, wondering, as other people are enjoying the Christmas season at home, why they are denied that privilege. Does it mean that these faithful servants of the Nation are being punished to the prejudice of the National Guard, or does it mean that there is a real and genuine reason, still undisclosed by the President, for imposing this hardship upon the soldiers themselves and so many others who are now anxiously awaiting their home-coming?

The situation is one fraught with serious consequences to a Nation which may some day call for the services of a National Guard and find no response.

If compulsory military training is the end sought for, that is another matter.

National Guard on the Mexican Border.

EXTENSION OF REMARKS

OF

HON. DANIEL R. ANTHONY, JR.,

OF KANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, December 20, 1916.

Mr. ANTHONY. Mr. Speaker, recently there have appeared what I regard as unfair criticisms of the National Guard and its service on the Mexican border. The continued retention of the National Guard on the border long after it had been determined to make no active use of it was enough to destroy any body of citizen soldiery, and many think such was the intention. A very clear statement of the National Guard situation has been made by Col. T. S. CRAGO, a Member of Congress from Pennsylvania, and published in the Pittsburgh Dispatch. I present Mr. CRAGO's statement and the editorial comment of this newspaper for the information of the House:

WASHINGTON, D. C., *December 16, 1916.*

An able defense of the National Guard of the country is made by Representative THOMAS S. CRAGO, of Pennsylvania, in an authorized statement issued to-day.

Col. CRAGO was an officer of the Tenth Pennsylvania Volunteers and saw active service in the Philippines during the Spanish-American War. For years, before and since that war, he was prominently identified with the National Guard, and at present he is a member of the House Committee on Military Affairs.

Calling attention to the annual report of the Chief of Staff of the Army which alleged the failure of the volunteer military system, Col. CRAGO denies that this criticism should be attached to the National Guard by reason of its record on the Mexican border. On the contrary, he declares that the training had on the border has in a great measure justified the hopes that the friends of the guard expressed for it. Col. CRAGO's statement says:

CRAGO'S STATEMENT.

"The Chief of Staff of the Army in his annual report, just made public, has called attention to the failure of the volunteer military system. This criticism is immediately, of course, attacked by persons antagonistic to it to the part the National Guard has taken in the recent mobilization, but it is not fair to these National Guard organizations to blame any of the deficiencies which have been shown to exist in our system on the National Guard as an organization. In the first place, the friends of the National Guard never contended that this was the ideal military system. What they did contend for was:

"First. That the National Guard was the only body of troops in existence, other than the Regular Army, which could be relied upon to give instant response in the case of any emergency; and

"Second. That since the National Guard had never had a chance to show what it could do when properly armed, equipped, and supported by the Federal Government, it was only fair in considering any great extension of our military system to give the National Guard the first chance to show what could be accomplished by it.

GOVERNMENT'S FAILURE.

"Unfortunately the call was made before the guard had been reorganized under the provisions of the new military act, and they could not be expected to show much improvement over former conditions. The weakness which has been shown has not been the fault of the guard, but of the Federal Government in its failure to properly arm and equip the men who so promptly responded.

"In all of the Eastern and many of the Western States the guard was mobilized promptly with the number of men which they had been allowed to carry on their rolls. These men were equipped, but when, without any warning, each organization was asked to increase its numbers to war strength, it naturally followed that the guard had no means of equipping these new men. This duty was for the Federal Government to perform.

"As a matter of fact, the National Guard organizations did furnish a surprising number of men for this call. It has been shown that these organizations on the border have cheerfully taken the intensive training, and both officers and men have shown that they can be quickly formed into effective organizations.

WAR DEPARTMENT INCOMPETENT.

"On the other hand, it has been shown that the War Department as at present organized is utterly incapable of handling such large bodies of men and properly equipping them for service.

"That more men did not respond to this call can be explained by reason of the fact that the country at large has not realized, and did not believe that any great emergency existed. It seemed foolish to the public to call such a large body of men into the service if it was merely for training purposes; and to imagine that the National Guard consists of men who can afford to immediately leave their civil pursuits and undertake five or six months of training is a mistake and is expecting more of these men than should be required.

"Most people who have given this matter of preparedness serious consideration will agree with Gen. Scott, Chief of Staff, that the only democratic plan for our people to follow is universal military training. In other words, the burden of military duty should be borne by all and not by a few. This does not mean that all of our citizens should be trained in the use of arms and in carrying the rifle, because military training is much broader than this and involves work in so many different departments that a place could be found for all able-bodied men to do their share of this training. Our people, many of them, have come to realize this and they have no fear that it would lead to a military spirit and system which would be a detriment to our free institutions.

"On the contrary, many who have given this subject study believe that it would have just the opposite result and would make our military system a really democratic institution, and that this training would be a great benefit in many ways to our young men.

"If our people would adopt some form of universal military service, it should not be in the Regular Army alone, and it would be necessary for some such organization as the National Guard to be maintained in order that the training and service could be performed in such organizations. It is just as unfair to criticize the splendid men and organizations who have answered the call of the President during this year and expect them to have attained perfection as it would be to have expected our Navy to have advanced by leaps and bounds in its strength and efficiency merely because the present Congress authorized great increases in the Navy and made appropriations to meet these increases.

"All that was attempted by the last military bill was to make possible the building up of a military force in the years to come.

"The sudden call, before the guard had any chance to benefit by the provisions of this act, to undergo this long period of training undoubtedly has been a great blow to future enlistments in the guard. However, this call has given us a great body of trained men who will sooner or later find themselves building up additional organizations.

"Speaking from the experience in Pennsylvania it must be remembered that these troops responded promptly. That in four days' time after reaching Mount Gretna the first unit was started for the border, having been vaccinated and inoculated and fully equipped, and that the last organizations were able to leave Mount Gretna on July 9, only 15 days after they had reached Mount Gretna.

"In this mobilization of these organizations they were handicapped by the inability on the part of the Federal Government to supply them with blankets and other necessary clothing and equipment. The mustering officers were uncertain as to their instructions, and in all of the States of the Union the desks of the adjutants general were piled with telegrams and orders from the different departments of the Army contradictory in nature, making demands which were physically impossible of being complied with.

"That more men did not respond to this call and immediately fill up these organizations to war strength is no fault of the National Guard system. That the War Department has seen proper to adopt a policy of refusing discharges for men on the border, even though the conditions at home would have warranted a discharge during actual war, will make it difficult in the future to secure men to fill these organizations.

"This training, while it has been costly and has developed many weak spots, will not reflect any discredit on the National Guard, but has in a great measure justified the hopes that the friends of the guard expressed for it at the time federalization was being considered."

[From the Pittsburgh Dispatch.]

SHOULD FIRST BE TRIED.

The chorus of critics of the National Guard who are clamorously insisting that the experience in the border emergency has shown the utter unreliability of the federalization law are pertinently answered by Col. T. S. CRAGO, who, as a former officer in the Tenth, who saw active service in the Philippines, and as a member of the congressional Committee on Military Affairs, should speak with some authority on the subject. In an interview secured by the Dispatch's Washington correspondent, Representative CRAGO points out that the call for service on the border was made before the guard had been reorganized under the new military act, consequently it is unfair and absurd to attempt to judge the capabilities of the guard under that act when there has been no opportunity to demonstrate the possibilities.

Congress passed the Hay bill, and as if the mere enactment was all that was needed, and before there was time for the War Department or the guard to put its provisions into practice, the guard was hurried to the border, where it was apparently expected to meet conditions and requirements it had had no chance to prepare for. It would be just as reasonable, because Congress has passed appropriations for a larger Navy, to expect the present Navy to increase its effectiveness correspondingly over night.

Criticism of the War Department and the Regular Army organization would be as unfair for the same reason, that the mobilization of the guard was a larger job than it had tackled, were it not for the altogether absurd assumption by the Federal military pundits that the fault is all with the guard and that they themselves are the last word in superefficiency. The truth, as Col. CRAGO shows, is that the federalization act has had no proper test because neither the War Department, the Regulars, nor the guard have had time to prepare for it, and the hostility shown at Washington to the State organizations has only made matters infinitely worse.

Instead of discarding the federalization plan, which has neither been worked out nor tried as a permanent policy, would not the wise thing be to wait until it has had a fair chance and remedy defects as they are discovered?

Joint Resolution Protesting Against Mediation by the United States in the European War.

EXTENSION OF REMARKS

OF

HON. AUGUSTUS P. GARDNER,

OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, December 16, 1916.

Mr. GARDNER. Mr. Speaker, on December 14 I introduced a resolution protesting against mediation by the United States in the European war. As it was impossible on that day for me to get time to debate my resolution, I gave a statement to the press. Under the permission accorded me by the House I present herewith a reprint of the resolution, together with a copy of the statement aforesaid:

[H. J. Res. 320, in the House of Representatives, Dec. 14, 1916.]

Joint resolution protesting against mediation by the United States in the European war at this time.

Whereas the central European powers are suing for peace; and

Whereas a premature and inconclusive peace at the present time would fail to punish the central European powers for the unbounded misery which they have brought upon mankind; and

Whereas in the darkest hours of our Civil War Abraham Lincoln, through the Secretary of State, peremptorily ordered our minister to Great Britain, Charles Francis Adams, to repudiate the slightest suggestion of mediation in our affairs on the part of any foreign Government:

Resolved, That in the opinion of this Congress the United States should, neither directly nor indirectly, suggest to the entente allies that they accept mediation, and, furthermore, it is the opinion of this Congress that the United States ought to refuse to participate in promoting an unjust peace.

Resolved further, That no peace can be considered just unless the following requirements are included in its terms:

First. That every acre of land shall be returned by the central European powers to the nations which have been despoiled.

Second. That ample indemnities shall be paid to the entente allies who have been fighting for civilization, and more especially to the smaller nations which have suffered the most from a murderous and unprovoked assault.

Third. That by disarmament and disbandment of its troops Germany shall guarantee that the peace treaty is something more than "a scrap of paper."

In presenting this resolution, I said:

WHY DOES GERMANY CRY, "ENOUGH"?

"The timid sentimentalist wants to give Germany a truce in which to catch her breath, for choking she surely is or she would not be suing for peace. Who ever heard of the winner in a fight crying 'Enough'? It is only when he feels that his strength is spent that the brave man asks for a truce, and who is there who can deny the bravery of Germany? Would Germany, think you, forego the execution of her threat to destroy England's power if German leaders saw victory within their grasp?

WE FOUGHT OUR OWN WAR TO A FINISH.

"Of course, I realize that many a well-meaning man in the United States, and even in Great Britain, will eagerly grasp at any peace proposal, no matter how iniquitous, no matter how inconclusive.

"In 1864, during our Civil War, weaklings did not want to fight it out. Rather than consent that the North should hang on like grim death for another year, and so put an end to slavery, we were to draw around us a mantle to cover the phantoms of fright and consent to a miserable compromise.

"In 1864, after three years of strife, McClellan ran for President of the United States on a platform which declared the war a failure. Horace Greeley, the editor of the most important organ of public opinion in the North, completely lost

his nerve a few short months before Lee's heroic army was at last broken. Here is what Greeley wrote to President Lincoln on August 29, 1864, just 90 days before the triumphant reelection of our great President:

"I know that nine-tenths of the whole American people, North and South, are anxious for peace—peace on almost any terms—and utterly sick of human slaughter and devastation.

* * * * * * *

"I beg you, implore you, to inaugurate or invite proposals for peace forthwith. And in case peace can not now be made consent to an armistice for one year, each party to retain, unmolested, all it now holds, but the rebel ports to be opened. Meantime, let a national convention be held, and there will surely be no more war at all events.

"Lincoln sternly rejected Greeley's prayer. Is there any man in this Nation of ours to-day who thinks that he did wrong?

AUTOCRACY AT DEMOCRACY'S THROAT.

"Just as our own war was fought out, so this war in Europe must be fought out till one side or the other triumphs. If not to-day, it must be fought out to-morrow. Autocracy and democracy have at last engaged in a death struggle, and God help us if autocracy wins. Germany offers to return most of her booty if she is spared the penalty of her awful deeds. It is as if some miscreant who had slain a man and stolen his watch were to offer to disgorge the watch if he were promised immunity. But where, Oh where, is the 'freedom of the seas' which Germany promised us?

WE SPURNED MEDIATION IN 1862.

"I was in Europe when this war broke out. I remember my feeling of regret when President Wilson in August, 1914, offered to mediate between the warring powers. If I had been in his place I should perhaps have made the same offer, and yet to anyone across the water as I was it was plain enough that the Kaiser would brook no interference. To-day, if, in compliance with Germany's hopes, we should offer mediation, who can doubt that France and Great Britain would feel so profoundly wounded that our friendly relations would be at an end for many a decade to come, in spite of all the articles in all The Hague conventions put together?

"This name of mediation has an attractive sound, but before we go too far let us glance once more at our Civil War history.

"After the disastrous failure of McClellan's campaign in 1862 no military expert or statesman of Europe thought that the North could possibly overthrow the Confederacy.

"The great English Liberal reformer, William E. Gladstone, at that time advocated mediation by Europe in the affairs of the United States. In his famous Newcastle speech he said:

"We may anticipate with certainty the success of the Southern States, so far as regards their separation from the North. I can not but believe that that event is as certain as any event yet future and contingent can be.

"Sir George Lewis, who at the time was the British secretary for war, directly opposed Mr. Gladstone on this question of mediation, but even Lewis admitted that in the general opinion of Great Britain 'the contest would issue in the establishment of the independence of the South.'

"Russia and France likewise contemplated a mediation offer. A little while after the Battle of Antietam, Prince Gortschakoff said to Bayard Taylor, of the American Legation at St. Petersburg:

"Your situation is getting worse and worse; the chances of preserving the Union are growing more and more desperate. Can you find no basis of arrangement before your strength is so exhausted that you must lose for many years to come your position in the world?

"In fact, the whole situation is summed up by the Comte de Paris in his History of the Civil War. It will be remembered that the Comte de Paris had exceptional opportunities for observation. He was head of the Legitimist Party in France, and, furthermore, he served as a captain of Volunteers on the staff of Gen. McClellan. His sympathies were entirely with the North, and yet in his book he says that Europe during the middle period of the war regarded the efforts of the Federal Government to continue the war as 'the result of culpable blindness, of a bloodthirsty obstinacy.'

WE FORBADE EUROPE EVEN TO WHISPER PEACE TO US.

"But Lincoln was undismayed. Under his instructions Secretary Seward, in August, 1862, issued these stout directions to Charles Francis Adams, our minister to Great Britain:

"If the British Government shall in any way approach you, directly or indirectly, with propositions which assume or contemplate an appeal to the President on the subject of our internal affairs, whether it seem to imply a purpose to dictate, or to mediate, or to advise, or even to solicit or persuade, you will answer that you are forbidden to debate, to hear, or in any way receive, entertain, or transmit any communication of the kind. You will make the same answer whether the proposition comes from the British Government alone or from that Government in combination with any other power.

"Fortunately the cause of the North was fast gaining ground among the British rank and file. Even in the cabinet were found fast friends of the United States, like the Duke of Argyle, Sir George Lewis, and Milnor Gibson. Their utterances in favor of the Union were mightily backed by Cobden, Bright, and Forster. But the balance of power in the British Cabinet was held by men like the premier, Lord Palmerston, who cared nothing for the North and nothing for the South but everything for harmony in the British Cabinet. There was only one thing which that cabinet would unanimously agree to do, and that was to do nothing at all. Let us hope that we shall now remember our own views about mediation when our own country was in sore straits. Let us not forget the sound policy which prevailed in 1870 when our Secretary of State, Hamilton Fish, during the Franco-Prussian War, wired to Bancroft, our minister to Prussia, these significant words:

"Washburne telegraphs that France requests United States to join other powers in effort for peace. Uniform policy and true interests of United States not to join European Powers in interference in European questions.

"Let us apply the words of President Lincoln to our own countrymen. Let us follow his lead, and let us frown on every effort to persuade President Wilson 'to mediate or to advise, or even to solicit or persuade' the entente allies in direct contravention of our own indignant protest in the days when Europe was at peace and the United States was at war."

United States Business After the War.

EXTENSION OF REMARKS

OF

HON. HENRY T. RAINEY,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, December 19, 1916.

Mr. RAINEY. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include an article appearing in the Chicago Herald of Sunday, December 3, and written by Mr. James Keeley, the editor, on United States business after the war.

The article is as follows:

UNITED STATES BUSINESS AFTER THE WAR.

[By James Keeley.]

LONDON, *December 2.*

Before I left Chicago I was asked by a number of leading business men to make an investigation as to the business conditions that would be likely to obtain between the United States and the allies, and more particularly England, after the war is over.

During the last week I have put that question to four members of the British Government, to some of England's leading bankers and financial men with tremendous interests in America, to three editors of London daily newspapers, to the presiding genius of the best-known weekly journal in England, to at least 50 business men whose spheres of activity are circumscribed only by the populated areas of the earth, to various minor officials connected with governmental departments that are directly concerned; in fact, to every man with whom I have come in contact since Monday morning. I have worked steadily as an interrogation point from that moment until now.

HOW BRITAIN VIEWS TALK OF TRADE WAR WITH AMERICA.

The only answer I have received is: "Who knows what is going to happen after the war is over? We are as much in the dark as to that as we are regarding the date of the end of the war."

Then I asked question No. 2: "Did the Paris conference mean that after the restoration of peace there will follow a trade war in which the hands of the allies will be raised not only against their enemies but all other commercial competitors, with America singled out for special attention in this direction?"

Lloyd-George, minister of war, epitomized the official point of view when he said to me:

"Such an idea never entered anybody's mind. It is absurd. The idea that Great Britain could live without America, that Great Britain, with its seabound position and its configuration of coast, its river mouths and estuaries, could lock both the back and the front doors is the notion of a maniac."

PARIS AGREEMENT IS AIMED ONLY AGAINST THE GERMANS.

Neither Mr. Runciman, president of the board of trade; Mr. McKenna, the financial head of the Government; nor Viscount Grey would talk for publication, but I am violating no confidence when I say that they share Lloyd-George's views. It was pointed out that at the Paris conference the deliberations were aimed only at Germany.

Premier Asquith has made one official statement on the subject. He said:

"It has been suggested in neutral countries that we allies have a sinister design after the war is over to combine against them and build up an impenetrable stone wall against their trade. That is childish fiction, for, if it were true, it would mean that we, one and all, were bent on economic suicide. When the time for peace comes, nothing will be more essential to the allies from the standpoint of simple self-interest than to establish and maintain the best industrial and financial relations with all neutral powers."

NO HOSTILE ACTION AIMED AT AMERICAN COMMERCE.

As far as it is possible to judge from the various extended and frank conversations I have had, I think it is fair to assume that if one may speculate on a future problem based on conditions that may change

at any moment, there is absolutely no disposition here to take any action of any kind against American business or commerce when the European slaughter pen has closed.

I have heard nothing, read nothing, seen nothing that gives the faintest support to the theory that because America has kept out of the bloody struggle, because all the gold of the world is flowing westward, there will be any organized effort to punish us in the world's markets.

Many of my interviews took place during the early part of the week, and before the Federal Reserve Board issued its sensational statement advising American banks, in the interest of liquidity of their assets, against the purchase of the short-term paper of the allies. Within the last 48 hours there has developed, to put it mildly, a critical tone and considerable comment.

Some of the London papers are extremely bitter. One member of the Federal Reserve Board is the principal subject of suspicion.

"Bluntly speaking," said one influential banker, "this action is in effect a suggestion to American business men not to sell their goods to us and the other allies, because our credit is not good. It is a perfectly unjustified attack upon the financial standing of solvent nations."

RESERVE BOARD'S RULING IS CALLED AN EMBARGO.

Another man, who because of the public position he occupies could not permit the use of his name, went even further.

"It is an actual embargo," said he. "Call it what you will, that's what it amounts to."

The feeling in England, however, is mild compared with the emotions aroused in France.

To France America has poured out her heart, her sympathy, and her charity. Young America has flown for her and fought her battles in the sky. Our doctors have toiled day and night saving the lives and limbs of French soldiers. Dr. Carrel, from his wonderful store of knowledge and skill, has developed a wonderful life-saving and limb-preserving method of treating wounds, a description of which has been or will be forwarded by John Bass, war correspondent of the Chicago Daily News. American lads have driven ambulances over roads sprinkled with the victims of sudden death. American nurses have tended the sick, comforted the dying. American love, American sympathy, and American charity have performed a noble part in ministering to the stricken of a sister Republic.

FRANCE STUNNED BY BLOW FROM SISTER REPUBLIC.

Knowing all these things, France can not understand the fact and is stunned by the action of the Federal Reserve Board. Why its financial honor, its commercial credit should be stabbed to the vitals is to France incomprehensible. France is astonished and grieved.

I met in London to-day a French official with whom I had several pleasant visits in Paris. There our conversation was of American generosity and American aid. To-day—well, listen to what he said. The utterances that he poured out were emphasized and dramatized by his deep emotion and feeling.

"Why is your Nation doing this thing to my nation; why this assault on democracy, fighting for its life and for democracy, by the greatest democracy of the world? We are shedding our blood, our most precious young blood, freely and copiously, and at this critical moment in the struggle your country, in effect, refuses to sell to us the things we need to preserve our existence, our very life.

"HELPING HESSIANS CRUSH OUR FIRST FRIEND AND ALLY."

"When England was trying to oppress you with the aid of hired Hessians, the peasants of France under Lafayette came to your assistance. They fought with you and for you; they died for you. To-day, in our hour of stress, it is unkind, unjust, and most ungrateful for you to help the descendants of those Hessians to impose the same military tyranny on us from which we helped you to escape.

"France can not understand it."

At this distance, with only the most meager cable reports before me, I can not pretend to pass on the justness or unjustness of the action of our reserve board. But, as a reporter, it is my duty to let the readers of the Herald know the feeling that exists, a feeling that may be pregnant with possibility for the future.

POINTS TO DANGEROUS POSSIBILITIES IF EMBARGO IS PLACED.

Reverting to the London banker quoted above as to the action of the Federal Reserve Board, our conversation drifted to the various attempts made in America to impose an embargo on the exportation of munitions and the possibility of an attempt to revive the project as part of a plan to end the war.

"I wonder," said this banker, "if the advocates of the plan ever considered the possibility that European purchasers of ammunition might refuse payment, if ammunition contracts were unfilled, and the effect on the banks that have loaned money and the attendant train of bankruptcy and ruin and unemployment that would follow in the wake."

The possibility of a food embargo by the United States is not regarded seriously. It is admitted that such an embargo might prove embarrassing in time, but it is not thought possible that America will take such action.

I discussed this subject last evening with a cabinet minister. He was curious as to just exactly what foodstuffs might be prohibited.

"Not wheat," he said. "You have no surplus wheat, and we are not buying any from you."

"But," said I, "in the event of an embargo and in the event that we have a surplus of wheat next year, how would you regard an embargo?"

I can not give his answer, but a fair inference is that such action on the part of America, no matter how just or necessary it might be from the American point of view, would not be forgotten when the war is over and the question of trade relationships came up for discussion.

"We expect an enemy to try to starve us out," said another prominent man, "but for a friend to do so would hurt. A nation will forgive and forget many things, but starvation is hard to efface from the memory."

In what state the business world will be when the rivers of blood are dammed no one should hazard a concrete prophecy. Here in London there are optimists and pessimists. One man sees a financial debacle, with all nations, belligerents and neutrals alike, bearing equal shares of the burden. Others—and here again I may quote Lloyd-George—see no possibility of disaster: "For we have the land, the source of everything, and with that there can be no real or lasting trouble for any nation."

AMERICA MUST BE PREPARED FOR SHARP COMPETITION.

As matters stand, America will have no official hurdles placed in her way in the battle for trade when peace resumes her sway. But the business men of the United States may as well realize right now that they will have, and must make all necessary preparations for, much sharper competition from England. There is a new and more alert hand at the industrial lever; there is a keener brain directing production. Sloth, or what has been regarded as sloth, in mill and factory has disappeared. The ambition of the English manufacturer and the English workman has been sharpened on a German grindstone. There is a new and keener cutting edge and English trade will follow the English flag. It will invade other lands with a vigor that is going to shock with surprise all England's commercial competitors.

In this campaign the British business man is going to have the whole-hearted support of the National Government even to the violation of Great Britain's rock-ribbed policy of free trade. Mr. Runciman, president of the board of trade, has said that the Government fully appreciates the importance of preserving and extending British trade in neutral markets, particularly with reference to "certain important branches of British industry, after the war."

Mr. McKenna, addressing a conference of business men a short time ago, declared:

"We have already shown that we are prepared to give the assistance of the Government to the development of our foreign trade in order to insure that those rivals who are now our bitter enemies shall not have control of the foreign trade which they have enjoyed in the past."

At this meeting the following resolution was adopted:

Resolved, That this association is of the opinion that, with the object of maintaining and increasing our trade after the conclusion of the war, it is desirable that provision be made—

(A) For preferential, reciprocal trading relations between all parts of the British Empire.

(B) For reciprocal trading relations between the British Empire and the allied countries.

(C) For the favorable treatment of neutral countries.

(D) For restricting by tariffs and otherwise our trade relations with all enemy countries so as to render dumping and the return of pre-war conditions impossible, and for the stimulating and developing of home manufactures and a consequent increased employment of native labor.

These resolutions, of course, do not represent the considered, determined opinion of all England. No such radical departure from precedent can come without a full expression by the electorate. But they do represent a decidedly growing tendency.

Free trade is not going to be abandoned, but it is a safe assumption that a protective tariff in some form or other is going to be a part of England's future fiscal policy. Whether it will take the form of graded tariffs, as suggested in the foregoing resolution, or whether duties will be put on only to foster new industries, or what we term in America "infant industries," the future will reveal.

DYE INDUSTRY TO RECEIVE BENEFIT OF PROTECTION.

One new trade that is certain to secure this adventitious aid is the dye industry. The discovery of aniline dyes was made by an Englishman. With the discovery English effort stopped. German chemists developed the discovery, and when the war came the dye business of the world was in German hands.

By Government subvention a firm of British manufacturers two years ago started to make dyes. The new concern has been successful. It has announced the manufacture of a blue dye which German chemists said it would take 10 years to make, and it promises shortly to put other important colors on the market. The English dye industry is not expected for years after the war ends to be able to compete with German dyes. So it is no secret that a protective tariff will be imposed on some German dyes until such time as the English dye manufacturers are able to compete on equal terms.

The helping hand that will be held out to the dyemakers will not be withheld from other businesses in a similar state of development.

One curious fact about the growth of tariff reform, as they call it over here, is the fact that trades-unions, that were adamant against any interference with free trade, are split over the question now, and 25 per cent of the labor members of Parliament are in favor of the proposed radical departure.

WAR REVIVING BRITAIN AS GIANT OF FOREIGN TRADE.

The conclusion I have reached as to the keenness of future competition between American and English manufactures was given added weight by the investigations during the last 10 weeks of William Hard, the well-known American magazine writer, who is writing an authoritative series of articles for the Metropolitan Magazine and the Chicago Herald on this highly important subject. Mr. Hard said to me to-day:

"The general conclusion I have come to is this: The war in the long run is going to send Great Britain up and is going to send it up very fast and very far, not down at all, as a competitor of the United States for trade in South America and everywhere else throughout the world. Before the war we had two big competitors—Great Britain and Germany. Germany was a new fire, blazing all over. Great Britain was an old fire, with cooling embers and streaks of ashes. This war is making Great Britain into a new fire, too.

"I see new American machines all over Great Britain. I also see something a great deal more important than new American machines, and that is new American ideas, ideas about the layout of machines in the factory room, ideas about the using of unskilled labor efficiently by planning all the work out beforehand in the brains of staff specialists; ideas, in short, of scientific management. I have met young engineers in Scotch shipyards who were filled to the teeth with the writings of Frederick Taylor and Harrington Emerson and all our other important American efficiency engineers. They are building warships at a speed that would make Josephus Daniels say, 'It can't be done.'

BRITAIN IMPORTING BRAINS FROM THE UNITED STATES.

"At the end of the war the British will still have all their own ideas, which, after all, made London the world's biggest business center, and, in addition, they will have American ideas as well. We are importing cash from them. They are importing brains from us.

"An American business man, in business in England as well as in the United States, said the other day: 'When this thing is over these people are going to have what they never had before—a numerous race of expert business managers of the scientific sort.'

"But that is only one part of the story. The British are also going to have a combination of science, capital, government, and labor that

we never had. The British Government is now in business on its own account on a large scale, not merely as an adviser to business, like our Government. The British Government is now itself a business concern, with railroads, coal mines, and large numbers of factories and shipyards under its own control. It has learned business at first hand. At the end of the war it will sit at the head of the council table to decide future British business at large and sit there with real knowledge.

FIRST UNION OF ALL THE PEOPLE FOR BUSINESS DEVELOPMENT.

"And labor will sit there, too, in a sense in which it has never sat there before. The Government has given its word to labor that working conditions in British factories after the war will be put back just where they were from the standpoint of labor before the war. But everybody, including the labor leaders, knows that this is impossible. You can't take all these hundreds of thousands of new labor-saving machines and throw them away. Therefore, some new deal must be made. The pledge to labor has to be redeemed, but redeemed in a different way. Labor can not be given the thing it was promised. It has to be given something else. That is, labor has to be admitted to the council table and some kind of bargain must be driven with it, bringing it into harmony with Great Britain's new national efficiency purposes.

AMERICAN TRADE AFTER WAR ENTIRELY UP TO AMERICA.

"This simply means that the mass of the people for the first time in any country will send their representatives to the national conferences, the purpose of which will be to unite the Government and the capitalists and the new race of expert, scientific business managers and the leaders of the trades unions in a national scheme for national prosperity and national trade progress at home and abroad."

Mr. Hard has judged the situation expertly, and as no such combination of national forces is in prospect in the United States the greatest lesson I can see over here is that these European belligerent countries, unless we act quickly, will be ahead of us instead of behind us in organized national industrial strength.

To sum up, American trade after the war is in the hands of America.

Bureau of Animal Industry.

EXTENSION OF REMARKS

OF

HON. WILLIAM W. WILSON,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, December 19, 1916.

Mr. WILSON of Illinois. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include the following statement:

The Lobeck bill, H. R. 16060, is now before the House on Union Calendar 258, and should be enacted into law during the present session. The call on the Union Calendar now rests with the Committee on Agriculture, by which committee the bill was favorably reported. The bill provides a uniform and equitable salary schedule for veterinary inspectors and lay inspectors. The merits of this measure were fully set forth in the hearings held before the House Committee on Agriculture on April 20–21, 1914, on the Lobeck bill, H. R. 9292, and in the hearings held before the same committee on March 28–29, 1916, on the Lobeck bill, H. R. 5792. The bill was reported to the House on June 8, 1916, and a copy of the bill and copy of report No. 810 appear on pages 14377, 14378, and 14379 of the daily CONGRESSIONAL RECORD, August 9, 1916.

This legislation has been indorsed by a large number of boards of trade, chambers of commerce, and other similar bodies, reference to said indorsements being made in the hearings.

The following statistics are compiled from the statements of 483 men—veterinary inspectors and lay inspectors—located at the various packing centers throughout the country and districts where field work is being performed. They are employed by the Bureau of Animal Industry, United States Department of Agriculture. The men who have made these statements are the men affected by H. R. 16060:

From statements of lay inspectors, grade 1, who entered service at $720.

Entrance salary, $720 per annum.

First promotions: Three after 1 year's service, 13 after 2 years' service, 7 after 3 years' service, 2 after 4 years' service, 1 after 5 years' service, 1 after 11 years' service, 1 after 12 years' service, and 1 after 15 years' service.

Second promotions: One after 2 years' service, 1 after 3 years' service, 1 after 4 years' service, 11 after 5 years' service, 3 after 6 years' service, 3 after 7 years' service, 2 after 8 years' service, 2 after 9 years' service, 1 after 10 years' service, and 1 after 11 years' service.

Third promotions: One after 5 years' service, 2 after 6 years' service, 12 after 7 years' service, 2 after 8 years' service, and 2 after 10 years' service.

No promotions: One after 12 years' service.

Present salaries of lay inspectors, grade 1: Two at $720 per annum, 1 at $840 per annum, 2 at $900 per annum, 18 at $1,000 per annum, and 5 at $1,100 per annum.

From statements of lay inspectors, grade 1, who entered service at $840 per annum.

Entrance salary, $840 per annum.

First promotions: One after 1 year's service, 3 after 2 years' service, 14 after 3 years' service, 14 after 4 years' service, 3 after 5 years' service, and 2 after 6 years' service.

Second promotions: Three after 5 years' service, 2 after 6 years' service, and 2 after 7 years' service.

Third promotions: One after 7 years' service.

No promotions: Fifty-six men after 1 year or less service, 39 men after 1 to 2 years' service, 12 men after 2 to 3 years' service, 1 man after 4 years' service, and 1 man after 8 years' service.

Present salaries of lay inspectors, grade 1: Eighty-two at $840 per annum, 1 at $960 per annum, 36 at $1,000 per annum, and 1 at $1,100 per annum.

Five men entered the service at $900 per annum: One received first promotion after 12 years' service, 1 received first promotion after 16 years' service, 2 received first promotion after 18 years' service, and 1 received first promotion after 21 years' service.

They record their present salary in each case at $900 per annum.

Length of service since last promotion: Eighty-seven men 1 year or less, 58 men 1 to 2 years, 25 men 2 to 3 years, 1 man 3 to 4 years, 1 man 5 years, 4 men 7 to 8 years, 1 man 9 years, and 1 man 10 years.

Injuries sustained by lay inspectors, grade 1, for which the nature of their work was directly responsible. Certain of these cases are later described in detail.

General injuries, including sprains, abrasions, painful falls, etc., 11; injured by scalding, 3 men; sustained broken arm, 2 men; sustained broken leg, 2 men; serious cuts, 2 men; and broken ribs, 1 man.

Illness sustained by lay inspectors, grade 1, for which the nature of their work was directly responsible: Pneumonia, 1 man; pleurisy, 1 man; rheumatism, 3 men; tuberculosis, 2 men; nervous trouble, 3 men; and hernia, 1 man. Eight have not fully recovered.

Money loss: In many cases a record has not been kept of the money loss. The amounts recorded, however, range from $10 to $640, showing a total of $2,125.66. It would be impossible, of course, to record their suffering or their mental perturbation during period immediately following the injury.

One hundred lay inspectors, grade 1, made a statement as to their hours of labor. The lowest number of hours stated for a day's work was 7 and the highest 15 hours.

Hours of labor: One works 7 to 8 hours a day, 29 work 8 to 9 hours a day, 2 work 8 to 10 hours a day, 2 work 8 to 11 hours a day, 3 work 1 to 12 hours a day, 22 work 9 to 10 hours a day, 2 work 9 to 11 hours a day, 1 works 9 to 12 hours a day, 26 work 10 to 11 hours a day, 1 works 10 to 12 hours a day, 3 work 11 to 12 hours a day, 4 work 8 to 12 hours a day, 3 work 8 to 14 hours a day, and 1 works 8 to 15 hours a day.

Sunday work: Fifty lay inspectors, grade 1, state that they are called upon to work occasionally on Sundays.

Four have stated that they have received compensatory time on other days of the week for this labor.

Holiday work: Fifty-seven lay inspectors, grade 1, have stated that they work nearly every holiday.

Denied annual leave: One man in 1908, 1 man in 1913, 9 men in 1914, 9 men in 1915, and 3 men in 1916.

The reasons attributed to the loss of annual leave, which ranges from 1 to 15 days, the maximum time allowed to men in this bureau outside of Washington, was that the exigencies of the service made the granting of the leave denied impossible.

From statements of lay inspectors, grade 2, who entered the service at $720, $840, $900, and $1,000 per annum.

First promotions: Six after 1 year's service, 16 after 2 years' service, 17 after 3 years' service, 21 after 4 years' service, 40 after 5 years' service, 29 after 6 years' service, 21 after 7 years' service, 6 after 8 years' service, 2 after 9 years' service, 1 after 10 years' service, 1 after 11 years' service, and 2 after 13 years' service.

Second promotions: One after 2 years' service, 4 after 3 years' service, 2 after 4 years' service, 8 after 5 years' service, 8 after 6 years' service, 8 after 7 years' service, 5 after 8 years' service, 3 after 10 years service, 1 after 13 years' service, and 1 after 20 years' service.

Third promotions: Two after 6 years' service, 5 after 7 years' service, 2 after 9 years' service, 1 after 11 years' service, 4 after 12 years' service, 1 after 14 years' service, and 1 after 15 years' service.

No promotions: Three after 2 years' service, 4 after 3 years' service, 4 after 4 years' service, 1 after 5 years' service, 1 after 6 years' service, and 1 after 10 years' service.

Length of service since last promotion: Fifteen men 1 year or less, 41 men 1 to 2 years, 72 men 2 to 3 years, 13 men 3 to 4 years, 33 men 4 to 5 years, 7 men 5 to 6 years, 3 men 6 to 7 years, 1 man 7 to 8 years, 1 man 8 to 9 years, and 3 men 9 to 10 years.

Present salaries of lay inspectors, grade 2: Twenty-three men $1,000 per annum, 2 men $1,100 per annum, 150 men $1,200 per annum, 6 men $1,320 per annum, and 3 men $1,400 per annum.

Injuries sustained by lay inspectors, grade 2, for which the nature of their work was directly responsible. Certain of these cases are later described in detail.

General injuries, including sprains, abrasions, painfull falls, etc., 11; broken legs, 5; cuts, 2; hernia, 5.

Illness sustained by lay inspectors, grade 2, for which the nature of their work was directly responsible: Pneumonia, 1; rheumatism, 9; tuberculosis, 2; infections, 7; serious colds, 2. Twenty have not fully recovered.

Money loss: In many cases a record has not been kept of the money loss. The amounts recorded, however, range from $2 to $2,212, showing a total of $5,423.83. It will be impossible, of course, to record their mental perturbation during period immediately following the injury.

One hundred and ten lay inspectors, grade 2, made a statement as to their hours of labor. The lowest number of hours stated for a day's work was 8 and the highest 14 hours.

Hours of labor: Nineteen work 8 to 9 hours a day, 10 work 8 to 10 hours a day, 3 work 8 to 11 hours a day, 3 work 8 to 12 hours a day, 40 work 9 to 10 hours a day, 4 work 9 to 11 hours a day, 1 works 9 to 12 hours a day, 24 work 10 to 11 hours a day, 5 work 11 hours a day, and 1 works 14 hours a day.

Sunday work: Fifty-seven lay inspectors, grade 2, have stated that they are called upon to work occasionally on Sundays. Eight have stated that they have received compensatory time for this labor.

Holiday work: Seventy-four lay inspectors, grade 2, have stated that they work nearly every holiday.

Denied annual leave: Ten men in 1914, 4 men in 1915, and 4 men no year stated.

The reasons attributed to the loss of annual leave, which range from 1 day to 15 days, the maximum time allowed to men of this bureau outside of Washington, was that the exigencies of the service made the granting of the leave impossible.

From statements of veterinarians who entered service at $1,400 per annum.

Entrance salary, $1,400 per annum:

First promotions: Seven after 1 year's service, 8 after 2 years' service, 22 after 3 years' service, 20 after 4 years' service, 20 after 5

years' service, 2 after 6 years' service, 1 after 7 years' service, and 2 after 8 years' service.

Second promotions: One after 1 year's service, 1 after 2 years' service, 3 after 3 years' service, 2 after 4 years' service, 4 after 5 years' service, 11 after 6 years' service, 8 after 7 years' service, 13 after 8 years' service, 13 after 9 years' service, and 1 after 10 years' service.

Third promotions: Two after 6 years' service, 3 after 7 years' service, 4 after 8 years' service, 1 after 9 years' service, and 1 after 10 years' service.

No promotions: Twenty-four after 1 year's service, 28 after 2 years' service, 12 after 3 years' service, 3 after 4 years' service, 1 after 5 years' service, 1 after 9 years' service, and 1 after 10 years' service.

Length of service since last promotions: Forty-nine men 1 year or less, 42 men 1 to 2 years, 17 men 2 to 3 years, 9 men 3 to 4 years, 2 men 5 to 6 years, 2 men 6 to 7 years, 2 men 7 to 9 years, 4 men 9 to 10 years, and 3 men 10 to 11 years.

Present salaries: Sixty-nine men, at $1,400 per annum; 2 men, at $1,600 per annum; 16 men, at $1,620 per annum; 1 man, at $1,635 per annum; 1 man at $1,680 per annum; 1 man, at $1,700 per annum; 2 men, at $1,740 per annum; 40 men, at $1,800 per annum; 4 men, at $1,900 per annum; 1 man, at $1,920 per annum; 2 men, at $1,980 per annum; 2 men, at $2,000 per annum; 1 man, at $2,040 per annum; 1 man, at $2,220 per annum; 1 man, at $2,250 per annum; 1 man, at $2,520 per annum.

Injuries sustained by veterinarians, for which the nature of their work was directly responsible. Certain of these cases are later described in detail.

General injuries, including sprains, abrasions, painful falls, etc., 9; broken leg, 4; broken arm, 2; broken bones, 2; cuts, 16; and hernia, 3.

Illness sustained by veterinarians, for which the nature of their work was directly responsible: Pneumonia and pleurisy, 3; rheumatism, 8; tuberculosis, 1; infections, 7; nervous troubles, 1; colds, 1; and typhoid fever, 1. Eighteen have not fully recovered.

Money loss: In many cases a record has not been kept of the money loss. The amounts recorded, however, range from $3 to $1,300, showing a total of $3,645.50. It would be impossible, of course, to record their suffering or their mental perturbation during period immediately following the injury.

Seventy-one veterinarians made a statement as to their hours of labor. The lowest number of hours stated for a day's work was 6 and the highest 13 hours. One works 6 to 7 hours a day, 1 works 7 to 8 hours a day, 1 works 7 to 10 hours a day, 1 works 8 to 9 hours a day, and 1 works 8 to 10 hours a day.

Sunday work: Forty-three veterinarians state that they are called upon to work occasionally on Sundays. Three have stated that they have received compensatory time on other days of the week for this labor.

Holiday work: Fifty-six veterinarians have stated that they work nearly every holiday.

Denied annual leave: Two men in 1913, 10 men in 1914, 6 men in 1915, 3 men in 1916, and 12 men no year stated.

The reasons attributed to the loss of annual leave, which range from 1 to 15 days, the maximum time allowed to men of this bureau outside of Washington, was that the exigencies of the service made the granting of the leave impossible.

SERIOUS ILLNESS OF EMPLOYEES CONTRACTED IN LINE OF DUTY.

Case No. 1: Two employees were assigned to duty in the malarial districts of North Carolina. Both contracted malaria, and aside from their suffering, spent $50 and $25, respectively, securing relief.

Case No. 2: Employee assigned to dourine eradication cut his hand while performing an operation, severing dorsal digital artery and superficial and deep digital nerve. Result: Circulation impaired, innervation not restored.

Case No. 3: An employee assigned to slaughterhouse work was painfully injured by pulley flying off of motor shaft, striking him in the leg. Result: Lame and pain in injured leg.

Case No. 4: Employee assigned to slaughterhouse work scalded leg after slipping on cover of greasy tank. Result: Suffered for 15 days.

Case No. 5: Employee assigned to packing-house work fell and broke leg on slippery stairway. Result: Suffered for three months and five days, has severe pains and lameness at present, and suffered a financial loss of $276.55.

Case No. 6: Employee assigned to slaughterhouse work sustained injury to left forearm when a 180-pound hog fell from rail because of defective switch. Result: Loss of three months' pay and inability to play violin, formerly great source of pleasure.

Case No. 7: Employee assigned to slaughterhouse work fell on slippery floor and ran knife through his hand. Result: Sensory nerves in two fingers severed, leaving paralysis.

Case No. 8: Employee assigned to packing-house work fell on slippery stairs and fractured ankle. Result: Seven weeks' loss of pay and slight lameness.

Case No. 9: Employee assigned to slaughterhouse work was injured on the head when a beef carcass fell from the rear. Result: Thirteen days of inability and money loss of $20.

Case No. 10: Employee assigned to slaughterhouse work sustained cut on left hand; blood poisoning developed. Result: Partial paralysis and atrophy, two weeks of inability, and money loss of $15.

Case No. 11: Employee assigned to foot-and-mouth disease sustained a broken rib when attempting to hold a steer for examination. Nature of work made it necessary for him to continue, injured though he was. Result: Continuous and frequent pains, due to chronic inflammation of pleura, and money loss of $20 at time of accident.

Case No. 12: Employee assigned to live-stock inspection suffered death because of a massacre which occurred at Columbus, N. Mex., where he was working.

The above cases are just a few taken at random of those recorded and show the dangerous condition surrounding the bureau men in their work. No compensation was granted because of these injuries. It is not especially because of lack of compensation that we call attention to them, however, but more particularly to show the dangers that can not be separated from the work that these men are doing.

ILLNESS.

If all of the cases were recorded that are directly traceable to the work the bureau men are doing, ranging from three or four days to several months, they would number in the thousands. Rheumatism, severe colds, and la grippe, pneumonia, various inflammations resulting from cuts are occasioned and aggravated by drafty rooms and extreme differences in temperature of the rooms of the establishments where these employees are obliged to work.

HOURS OF DUTY.

Case No. 1: An employee assigned to slaughterhouse work states that at the present time he is on duty 10, 12, and 13 hours a day. He says that he has been on duty from 2.30 a. m. to 7 p. m., with 30 minutes for breakfast and 30 minutes for dinner.

Case No. 2: An employee assigned to packing-house work states that it is the custom of the packers in St. Paul to work their employees not over 45 hours a week. At this same station, he says, the hours of the bureau employee for nine months in the year range from 55 to 75 hours a week, and not less than 45 hours a week for the other three months.

Numerous similar statements have been submitted from different parts of the country.

RESIGNATIONS AND COMPARATIVE SALARIES.

At Chicago 25 resignations have been recorded since May 1, 1916. The new positions accepted by the ex-employees show an increase over the Government salary ranging from 25 to 100 per cent.

Between October, 1912, and April, 1914, approximately 290 employees resigned from the bureau to better their positions.

At Sioux Falls, S. Dak., the following resignations are recorded:

R. R. Laird, veterinary inspector.
G. E. Golden, veterinary inspector.
R. W. Falk, veterinary inspector.

Recently resigned to accept positions, showing respective increases in salary as follows: 33 per cent, 55 per cent, and 110 per cent.

Mr. Joseph Lehner states that he entered the employ of the Worcester Rendering Co. in 1909, since that time his salary has been increased 100 per cent.

Mr. Andrew P. Farrel entered the service of the Government the same year and has been stationed at the same rendering house. Mr. Farrel's salary has been increased during this time but 19 per cent.

The following are 27 resignations taken at random from statements submitted, showing Government salary at time of resignation and salary or earnings in new position, based on percentage:

Name.	Government salary.	Percentage of increase.
Bud M. Hall	$840	42⅞
Emil Pohl	1,800	33⅓
W. J. Halderman	1,000	20
Geo. Walker	840	78⅝
Henry S. Thompson	840	66⅔
Dr. E. C. Rouche	1,800	66⅔
F. Cooper	840	1,000⅛
John Kennedy	1,400	185⅞
Dr. J. Predmore	1,600	56¼
J. L. Barstow	1,400	42⅞
G. J. Toubrand	1,400	78⅝
J. F. McCartney	1,600	50
Dr. J. J. Hayes	1,900	57⅛
A. Silkman	1,800	33⅓
O. E. Lindberg	1,700	41⅛
Wm. B. Day	1,600	275
Jos. H. Kitzhofer	1,000	40
Wm. R. Laird	1,800	33⅓
Jas. A. White	840	42⅞
J. D. Reardon	1,400	42⅞
Ora Espey	1,000	80
Geo. Laprell	1,000	100
E. E. Oldaker	1,600	56¼
H. S. Lyle	840	114⅜
O. R. Hanson	1,000	68
Henry Forrest	840	85⅞
M. B. Hurd	1,000	80

Statements with results summed up to the above might be extended to hundreds. The above are presented for the purpose of showing the relative value placed upon the services of these employees by the Government and the private employer.

The following is the comparative statement showing salaries paid to tradesmen in the Government employ at the Brooklyn Navy Yard and the rank and file of the employees of the Bureau of Animal Industry:

Lay inspectors, grade 1, $840 to $1,100; lay inspectors, grade 2, $1,000 to $1,200; veterinary inspectors, $1,400 to $1,800.

The employees of the Brooklyn Navy Yard are paid on a per diem basis, are allowed 30 days annual leave, and a half holiday during the three summer months. They earn annually the following amounts:

Divers, annually, $2,935; forgers, annually, $1,797; instrument makers, annually, $1,572; diesinkers, annually, $1,572; electricians, annually, $1,497; engine tenders, annually, $1,387; coppersmiths, annually, $1,297; calkers, annually, $1,248; boiler makers, annually, $1,248; boatbuilders, annually, $1,248; acetylene operators, annually, $1,098; chauffeurs, annually, $923; and holders (rivets), annually, $923.

The following salaries are paid to employees in the classified Customs Service, United States Treasury Department. These employees are laymen:

Class A, less than $720 per annum.
Class B, $720 or more and less than $840.
Class C, $840 or more and less than $900.
Class D, $900 or more and less than $1,000.
Class E, $1,000 or more and less than $1,200.
Class 1, $1,200 or more and less than $1,400.
Class 2, $1,400 or more and less than $1,600.
Class 3, $1,600 or more and less than $1,800.
Class 4, $1,800 or more and less than $2,000.
Class 5, $2,000 or more and less than $2,500.
Class 6, $2,500 or more.

The salaries listed below are paid the city and State employees at Salt Lake City, Utah, and in Utah, with the exception of the chief sanitary inspector, who is a layman and whose duties are about on a par with lay inspectors in the Bureau of Animal Industry. With these city and State inspectors are veterinary and medical inspectors conducting a private practice in connection with their official work.

Chief of city department of health, $3,600 per annum.
Assistant chief of city department of health, $2,400 per annum.
Chief of dairy and food division, $2,400 per annum.
Chief sanitary inspector, $2,400 per annum.

Similar salaries are paid for city and State service in various sections of the country.

Teachers of veterinary medicine in the following States are employed at salaries as indicated:

Alabama, $2,500; California, $1,900 and $2,200; Colorado, $1,000, $2,100, $2,000, $1,700, $1,800, and $1,700; Delaware, $2,000; Idaho, $800; Illinois, $2,500; Indiana, $2,400; Iowa, $2,200; Louisiana, $2,400; Maine, $1,700; Maryland, $1,800; Massachusetts, $2,620; Michigan, $1,766 and $1,600; Minnesota, $3,200 and $1,800; Missouri, $1,500, $3,000, and $500; Montana, $2,100; North Carolina, $2,000 and $1,300; North Dakota, $3,000, $2,000, and $2,000; Ohio, $3,000, $3,000, $2,750, $2,500, $1,900, and $1,600; Oregon, $1,000; South Carolina, $2,000; South Dakota, $2,280 and $900; Tennessee, $780; Texas, $2,500, $2,000, and $1,075; Utah, $1,200; Vermont, $2,000; Virginia, $2,300; Washington, $1,400, $1,600, $2,000, $1,700, and $1,500; West Virginia, $900; and Wisconsin, $3,266 and $2,450.

It is indicated by statements made by various employees that unless substantial increases are granted many resignations will result. These statements show that they will occur simply because of the duty they owe to themselves and their families, and not in any sense because of bitterness toward the bureau. Employees everywhere are refusing higher salaries than the bureau offers, believing the legislation will improve their condition.

One employee from one packing center writes as follows:

"For information would say that within the last week I have known of two packing-house employees that have refused to accept positions in our service on account of low salary."

This seems to be rather a departure from custom in the past and shows that even the entrance salary of the Government employee is not consistent with salary paid in private life.

Statement of employees on living expenses, etc.:

Case No. 1: An employee assigned to packing-house work at Kansas City writes as follows:

"I have a wife and two children. It has taken every dollar of my salary to pay expenses. I have been unable to save anything for emergencies. If any of my family or I get sick, I will have to borrow the money to pay the doctor."

Case No. 2: An employee working at $70 per month writes as follows:

"House rent, $10 per month; groceries and meats, $35 per month; insurance, $3.50 per month; clothing and shoes, $10 per month; fuel and light, $4 per month; doctor and medicine, $4 per month; car fare, $2.60 per month; total, $69.10."

It will be noted from the above that no provision is made for luncheons away from home, laundry bill, or other incidental expenses. No provision is made for pleasure.

Case No. 3: In order to show the loyalty and appreciation of the employee to the bureau, and in order to show that the bureau exerts itself to provide comfort and happiness for the men, as far as it is in a position to do so, we quote the following statement from J. E. Sprindler, veterinary inspector, located at Newport, Vt.

"Have no fault whatever to find with the bureau. I was getting in bad shape with rheumatism at Pittsburgh, Pa., when the bureau saved me by transferring me to Board of Work."

Case No. 4: An employee located at Kansas City submits the following:

Groceries and meats	$30.00
Rent per month	15.00
Insurance per month	3.00
Fuel and light per month	7.00
Car fare per month	2.60
Clothing	10.00
Water	.70
Total	68.30
Doctor and medicine	1.70
Salary (per month)	70.00

Case No. 5: An ex-lay inspector, grade 1, makes the following statement:

"As a married man, with wife and three children, I have been compelled to resign after almost three years' service in this bureau, because of the present insufficient salary.

"During this period I have found it impossible to properly support my family. The high cost of living has compelled me to go back to packing-house work, where living wages and better opportunities for advancement prevail than in this bureau at the present time.

"Below is a summary of my actual living expenses during October, 1916:

Coal	$8.50
Light	2.62
Rent	16.00
Groceries	29.80
Meats	7.25
Car fare	2.60
Medicine and doctor	4.70
Clothing	5.30
Total	76.77
Salary	70.00
In debt	6.77

"This is a very conservative estimate compared with former months when my doctor bills and medicine bills were much higher. I have been compelled to live in a section of the city unsuitable to the proper raising of my children, as you see I have been unable to afford my family the amusements and recreations due them."

Case No. 6: An employee located in Kansas City submits the following:

"My expenses for myself, wife, and three children for 30 days:

Groceries and meats	$35.00
Rent	15.00
Fuel and light	5.00
Car fare (to and from)	2.60
Insurance and taxes	5.00
Clothing and shoes	7.00
Doctor bills	------
Recreation	------
Total	69.60
Salary	70.00

Case No. 7: The following statement comes from Chicago:

"It cost Maurice Bernstein just $6.76 more to feed himself, his wife, and eight children last week than it cost him for the corresponding week in 1915, and the daily menu was practically the same—the same food, the same quality, and the same quantity, according to the family house book. The table shows the article, the price per article in 1915 and 1916, the total amount for each week of 1915 and 1916, and the corresponding cost:

Article.	Cost.			Cost for one week.		
	Unit.	1915	1916	Quantity.	1915	1916
Flour	Per 25-pound sack	$0.55	$1.25	3 sacks	$1.65	$3.75
Potatoes	Per peck	.12½	.60	3 pecks	.38	1.80
Sweet oil	Per bottle	.19	.23	3 bottles	.57	.69
Sugar	Per pound	.06	.08½	10 pounds	.60	.95
Butter	do	.36	.40	3 pounds	1.08	1.20
Coffee	do	.30	.30	1 pound	.30	.30
Cocoa	Per can	.25	.25	2 cans	.50	.50
Beans	Per pound	.06	.12	10 pounds	.60	1.20
Meat (average)	do	.12	.16	30 pounds	3.60	4.80
Cabbage	do	.03	.06	8 pounds	.24	.48
Tomatoes	do	.05	.08	21 pounds	1.05	1.68
Milk	Per quart	.08	.08	21 quarts	1.68	1.68
Oatmeal	Per package	.09	.10	1 package	.09	.10
Corn starch	do	.10	.12	do	.10	.12
Soap (washing)	Per bar	.05	.06	5 bars	.25	.30
Total					12.69	19.45

Case No. 8: A veterinary inspector from Kansas City submits the following statement:

"This is actual living expense as called to mind and does not include incidentals of small amounts, possibly amounting to $5, exclusive of clothes, etc., for wife and baby. I have failed to save a penny in three and a half years, outside of insurance fee:

House rent	$25.00
Light	1.00
Gas	1.00
Heat	4.00
Groceries, etc	40.00
Car fare	2.60
Insurance	4.50
Total	78.10

Case No. 9: An employee from Kansas City submits the following statement:

"Below is list of my actual living expenses for 30 days. My family consists of myself, wife, and two children, ages 7 and 11, respectively:

Groceries and meats	$34.00
Fuel and light	8.50
Street car fare	2.60
Insurance	4.60
Taxes ($50.16 per year)	4.18
Payment on home	11.66
Interest on mortgage on home	3.26
Clothing and shoes	8.00
Total	76.80
Sickness and amusements, etc	7.03

Case No. 11: An employee stationed at Columbus, Ohio, makes the following statement:

"I would say that I find that most any kind of work that requires the same intelligence commands much higher compensation than lay inspectors are paid. The State of Ohio pays $100 per month for the same kind of work that we are paid for performing. I am a married man and I find it almost impossible to live on $70 per month and live in respectable quarters, especially with the present high cost of living. I have to pay $20 per month for a house to live in. After paying grocery bill and other expenses I don't have much left to live on for the next 30 days, until pay day."

Case No. 12: An employee stationed at Rochester, N. Y., lay inspector in charge of station, makes the following statement:

"Living expenses in Rochester, N. Y., are the third highest of any city in the United States.

"I consider that, taking into account the increase in the cost of living expense, my salary is not relatively as large as when first appointed at $720 per annum, on October 1, 1904. Present salary, $1,320."

Case No. 13: Statement of lay inspector located at Cleveland, Ohio:

"During my five years of service in the Bureau of Animal Industry the promotion given me was less than 20 per cent, while living expenses have increased 40 per cent."

Case No. 14: Statement of lay inspector, grade 2, stationed at St. Louis, Mo.:

"My living expenses have greatly increased in the past several months."

Case No. 15: A veterinary inspector located at St. Louis, Mo., writes as follows:

"In last two years living expenses have increased approximately one-third or more."

Case No. 16: A lay inspector, grade 2, located at St. Louis, Mo., makes the following statement:

"Cost of living is 33 per cent higher now than when I was last promoted. It costs even more to live in the West than in New York. Why can't we get more money? Myself and my family can hardly live on $100 per month now."

Case No. 17: Lay inspector, grade 1, located at Sioux City, Iowa, submits the following:

"My titles have been tagger, night patrol, skilled laborer, inspector's assistant, lay inspector, grade 1, and I passed stock-examiner examination. Usually when I am due for a raise in salary I get a change in title, to offset the high cost of living, as a promotion."

Case No. 18: Lay inspector, grade 1, located at Wheeling, W. Va., submits the following statement:

"In regard to living expenses, I give here a list of a few necessaries and the advance in price within the last year:

Supply.	1915	1916
Flour	$3.40 per hundredweight	$5.40
Sugar	$6.80 per hundredweight	8.80
Potatoes	80 cents per bushel	2.00
Turnips	60 cents per bushel	1.40
Cabbage	3 cents per pound	.07
Apples	60 cents per bushel	1.00
Butter	30 cents per pound	.40
Oleo	25 cents per pound	.30
Milk	8 cents per quart	.10
House rent	$13 per month	16.00

[1]Same house.

The above shows the increase has been approximately 43 per cent. All kinds of dry goods from 15 per cent to 25 per cent increase, and in some cases more. The above is a small list of necessaries and does not include all kinds of groceries and meats, all of which have advanced in price.

Case No. 19: To show the condition existing in some of the smaller isolated points we respectfully submit the following statement from veterinary inspector located at Bisbee, Ariz.:

"A raise in salary of $300 per year was given me to defray expenses of keeping a horse, which I am to furnish, as no means of public travel is available to abattoir. This is 3 miles from Bisbee.

"It costs $30 per month to stable a horse here, as this is not an agricultural territory. Living expenses, rent, water, light and gas run very high. Upon transfer here from Kansas City I had to sell my furniture, as I could rent no house here. Bisbee is very congested with people, on account of high wages paid here. This is a one-man station, and it keeps me very busy. Putting in 10 hours every day. Ante-mortem inspection is associated with great danger, as mostly wild range cattle are slaughtered here. Bisbee is not a desirable place to live; it is a barren mountain region; practically no diversion here."

Wages paid in Bisbee, Ariz.

Class.	Monthly scale.	Daily scale.
Miners		$5.50
Muckers		5.35
Common laborers		3.00
Truck drivers	$100	
Butchers		5.00
Meat cutters	110	
Bookkeepers	110	
Carpenters		6.00
Bricklayers		7.00
Painters		5.00

"All the above work eight hours a day; overtime is one and one-half times the above; Sundays double time. Houses rent at $40 to $60 per month; nothing fancy about them, either. My gas bill for cooking purposes last month was $4.50. Water is at $2.50 per 1,000 gallons. Foodstuffs are very high, as everything is shipped from long distances. Eggs are 75 cents per dozen; other things in proportion. We practice great economy.

"It takes nearly all my salary to live. Several times I have been tempted to quit the service and go to work as a carpenter here. The possible passage of the Lobeck bill is the only thing that keeps me from doing so."

Case No. 20: Lay inspector, grade 1, stationed at St. Paul, Minn., writes:

"Although my wife's health is poor it has become necessary, on account of the present cost of living, for her to work in order that we may live decently and comfortably, as $840 per annum is insufficient."

Case No. 21: Lay inspector, grade 1, stationed at St. Paul, Minn., submits as follows:

"I support a family of four children, and find it almost impossible to do so, on $840 per annum, in a way that would be doing justice to them. They don't get what they are entitled to."

Case No. 22: Lay inspector, grade 1, stationed at Cleveland, Ohio, says:

"I expected to be promoted to $1,000 per annum in April, 1910, and to $1,200 per annum in April, 1913. The difference up to December 1, 1916, between what I was promised and what I received amounts to $1,120."

Case No. 23:

"Mr. F. McCARTHY,
"965 Greene Avenue, Brooklyn, N. Y.:

"Referring to the statistical report inclosed, it may look inconsistent to some people that a man with a broken rib should continue to work without loss of time, but to anyone who inquires on that point it might be said that if he or they could have been in Kentucky with me at the time the accident occurred and could have seen the character of the work we were forced to do it could be readily understood that a little thing like a broken rib in a man was of minor consequence. We were doing foot-and-mouth work, you know, and it had to be done, regardless of broken ribs, arms, legs, necks, etc. One of the regrettable things is that some Members of Congress could not have been with us on that campaign to see the conditions under which we were forced to work. Day after day I have worked in 10 inches of snow, with the thermometer registering 10° below zero, and for 14 hours have gone with my clothes covered with ice and frozen stiff. What did I do? I wrote a check for $50 on a bank in which I didn't have a cent. When in Wichita, Kans., I received a telegram to report immediately to Louisville, Ky., and had only $1.50 and no transportation request with me, and then spent the $1.50 in sending telegrams to a friend to get the money in the bank before the check could get in. Some people might call that forgery. I called it expediency, and reached Louisville on time; and if anybody asks you if I held the steer, you may tell them I did and still have my broken rib.

"Regarding the salaries of the men in the States Relations Service, I sent Walkley a statement showing that many county agents are receiving salaries far in excess of those paid to the average man in the Bureau of Animal Industry. It is not my purpose to detract one iota from these gentlemen when I say that they are men without special qualifications for the work. They are fine fellows, and I am glad to see them getting the money; but why the difference?

"Am glad to see you are getting up something tangible to present to the Members of Congress, and wish you success in your efforts.

"With kind personal regards and best wishes for the members of Branch 19,

"Very truly, yours, J. E. GIBSON."

Case No. 24: Lay inspector, grade 1, stationed at National Stock Yards, Ill., submits:

"After nearly 10½ years of continuous service at this station, most of the time on one job—sheep inspection—I am now getting $23½ more than when I received my appointment."

Case No. 25: Lay inspector, grade 2, stationed at National Stock Yards, Ill., writes as follows:

"Figuring on 30-day basis, my salary, $1,000 per annum, is equivalent to $2.77 per day. The minimum paid for common labor at this plant—janitors, truckers, elevator men, etc.—is 22½ cents per hour."

Case No. 26: Lay inspector, grade 2, stationed at New York, N. Y., submits:

"In the past two years that I have been in New York, N. Y., I have had sickness in my family and my expenses have been more than my salary. Last month I had three sick at the same time and I had to think twice before I could spend a cent. It costs me at the least $25 per month to live. That is the lowest figure I can put it at. Last July I had to get a loan of $100 to pay current expenses on account of sickness. There is always one meal a day away from the home, which cost me at least $7.50 per month. My car fare is $2.60 per month riding back and forth to the establishment where I am detailed.

"When I have paid my expenses for the month I have $1.50 left. There are a good many months that I have to borrow a couple of dollars until I get my check."

Case No. 27: Lay inspector, grade 2, located at Pottsville, Pa., writes:

"Living expenses are not as high here as in New York City, but my salary hardly supports my family. Cost of living too high. Unless conditions change I must look for another position as I can not stand this. I am going back, not ahead."

Case No. 28: A veterinary inspector in charge of station, Grand Rapids, Wis., being paid $1,980 a year, writes as follows:

"I am living in a city which has a population of 6,000, and at the present cost of living I find that I am able to save about the same amount of my salary as I saved when I was on a salary of $1,400 per annum."

Case No. 29: Lay inspector, grade 2, stationed at Fort Smith, Ark., writes as follows:

"I have always been satisfied with the hours of work in the bureau service, although I have done considerable overtime work, especially from 1910 to 1912. However, my present rate of compensation is not as high as prospects I had before entering the service or an offer I have had since. As stated above, have been satisfied with the bureau work, consequently am sticking around, hoping to receive higher compensation."

Case No. 30: Lay inspector, grade 1, stationed at Tacoma, Wash., writes the following:

"Wages on the Pacific coast have advanced from 15 per cent to 25 per cent. Living expenses in some instances have doubled, and in all cases a rise of 25 per cent in cost of necessities is present."

Case No. 31: In order to show the nature of the work performed by lay inspectors, grade 1, the following is submitted from Wichita, Kans.:

"Sample of one day's work, November 3, 1916, Est. No. 20 L. Time, 6.30 a. m. to 5.30 p. m. Character of the work, post mortem. Cattle, 300 heads, viscera. Retained carcasses as follows: Three cysticercus bovis (1 in head and 2 in heart), 10 actinomycosis, 2 tuberculosis, 2 peritonitis; also examined and passed 10 calves post mortem, and examined and passed 6 goats. I think a layman doing this kind of work deserves at least $1,400 a year. For the past three months I have averaged 10 hours daily."

Case No. 32: Lay inspector, grade 2, stationed at East Liverpool, Ohio, writes as follows:

"The rising wages and shorter hours have not affected the Government employee. Employees of the United States Government, generally speaking, get no more than they did years ago. The high cost of living hits us all, and particularly a man of family. In the city rents have gone up, coal has increased 10 cents a bushel, potatoes 80 cents a bushel, flour $3 per barrel, oleo 6 cents a pound. Shoes, clothing, meats, and all the necessaries of life are at such a price that a man and family has to deprive that family of much that they need in order to keep his head above water. In our position we are expected to look respectable, and have to buy more clothes than men in many other vocations. Clothing has advanced 25 per cent. It is the duty of the United States Government to pay salaries that will permit an employee to live respectable, be respected by the people he deals with, and be in a position to rear his family in the proper manner. Our work is both hazardous and trying. We hope that the next session of Congress will give the Government employee what is given to employees by private firms, corporations, etc."

Case No. 33: Copy of letter written by lay inspector, grade 2, of Brooklyn, to inspector in charge of station:

"Dr. A. LONG.

"DEAR SIR: Do you think it possible for me to get an increase in salary? I find it extremely hard to make both ends meet with my present salary of $70 a month in New York. Rents are so high that it is hard to find a respectable place to live at what I can afford to pay. Groceries have advanced in some cases 30 per cent and wearing apparel has also shown a decided rise in price, leaving me where I am barely able to make a living. Hoping that it may be possible, etc."

The following matter is taken from newspapers in different sections of the country:

[From the Chicago Tribune, Oct. 27, 1916.]

"It costs 54½ per cent more for food than it did a year ago."

Madison, Wis.: "The price of milk in Madison will be increased on November 1 from 7 to 8 cents per quart."

Philadelphia, Pa.: "The price of all grades of flour was advanced in the local market from 25 to 60 cents a barrel."

Winona, Minn.: "The cost of living in Winona took a decided jump when local bakers and dairymen raised the price of bread and milk."

San Francisco, Cal.: "The California Master Bakers' Association raised the price of fresh bread from 5 to 6 cents a loaf."

[From the New York World, Oct. 20, 1916.]

Washington, D. C.: "High cost of living laid to prosperity."

"New York Association for Improving the Condition of the Poor finds that the cost of living has advanced approximately 30 per cent within the year. * * * From its investigations the association concludes that the average wage earner's family has to spend fully 45 per cent of his income for food * * *."

—

[From the Cleveland Leader, Nov. 13, 1916.]

Cleveland, Ohio: "Foods soar to new high level. Potato, egg, and lard prices attain new high-record mark.

"Market quotations: Butter, 39½ to 40 cents per pound; oleomargarine, 22 cents per pound; cheese, 24 to 25 cents per pound; turkeys, alive, 25 to 26 cents per pound; eggs, 38 cents per dozen; turnips, $1.65 a hundred; pumpkins, $1.75 a dozen; potatoes, $1.90 a bushel; onions, $4 a hundred; cabbage, 3 cents a pound; dried beans, 7 to 7½ cents a bushel; quinces, $4 a barrel; grapes, $6 to $8 a keg; apples, $1.50 a bushel; oranges, $2.25 to $4.55 a box; grapefruit, $3.50 to $3.75 a box; cranberries, $5 to $9.50 a barrel; bananas, $1.75 to $2.50 a box; limes, $10 a barrel; hams, 20 cents a pound; shoulders, 19 cents a pound; bacon, 20½ cents a pound; mess pork, $25.50 to $36 a barrel; pork loins, 18½ cents a pound; dressed hogs, 16 cents a pound; mutton, 12 cents a pound; and lamb, 17 cents a pound."

Newspaper reports similar to the foregoing have appeared in all sections of the country, and show an undeniable general increase in the necessaries of life. Many newspaper notices and cartoons have evidenced the fact that while many businesses have profited recently and the wage earner's pay has been voluntarily increased, the salaried man's pay has not been proportionately increased, especially under civil service.

In order to show the difficulty which has been experienced in securing the right kind of men for the work these men are doing we respectfully quote from a report of the Secretary of Agriculture, Hon. D. F. Houston:

"The securing of men of the requisite training and experience in the various fields of agricultural science has been one of the serious problems which for some time has confronted the department. Two causes have tended to bring about this situation.

"One has been the low maximum salary which the department is permitted to pay to its scientific investigators as compared with the salaries paid by outside institutions and commercial concerns. The other has been the comparatively small number of strong, virile men who have been trained in scientific agriculture. Because of the great demand for such men in this country and abroad, the department is constantly losing men whom it ought to keep, and it is unable to find an adequate supply of just the right type of man to replace them.

"After conference with the civil-service officials, a system of efficiency ratings was inaugurated early in the summer. It is believed that this system will eliminate to a large extent the danger of making favoritism or any other consideration rather than merit the reason for promotion. The department is working in the closest possible relationship with the Civil Service Commission in the handling of its appointments. Because of the technical and scientific nature of much of the work of the department, it has been found difficult to secure the right kind of men from the regular registers of the commission. It has therefore been necessary to hold special examinations from time to time."

The following matter taken from various newspapers will give an idea of some of the recent promotions in private life:

—

[From the Chicago Tribune, Nov. 19, 1916.]

"Chicago Title & Trust gives salary bonus. Employees to get 10 per cent of yearly wage to meet living cost. Harrison B. Riley, president of the company, made the following statement at the annual banquet of the Chicago Title & Trust Employees' Benefit Association: 'I desire to announce that because of the exceedingly high cost entering into the daily lives of our employees the usual custom of distributing gold coins will be omitted this year at Christmas time, and in lieu thereof a payment will be made to each officer and employee below the rank of department manager of a lump sum equal to 10 per cent of the annual salary of such official or employee * * *.'"

—

[From the New York World, Nov. 23, 1916.]

"Cotton, lumber, iron, and powder companies announce they will increase pay. Consolidated Gas to raise wages at rate of dividend. Will pay 17,000 employees bonus equal to profit distribution of all auxiliaries to their stockholders. More concerns make voluntary advances. * * * Announcements yesterday of voluntary increase in wages given to employees, as the United States Steel Corporation gave Tuesday, as told in the World."

The following firms are among those mentioned in the World:

"The Lawton Cotton Mills, Plainfield, Conn.

"The Totokett Manufacturing Co., of Occum, Conn.

"The Connecticut Mills Co., Danielson, Conn.

"The Attawaugan Co., with mills at Attawaugan, Ballouville, and Pineville, and the Quinebaug Cos., of Danielson, Conn.

"Western concerns follow. The Palmer Bros. Co., of Fitchfield, Conn., have given three voluntary increases during the last year."

—

[From the Chicago Tribune.]

"Thirty-seven hundred employees get pay raise. People's Gas gives 10 per cent increase to entire force. Meets costs of living."

—

[From the New York World, Oct. 31, 1916.]

"Police and firemen get praise and raises. Mayor announces increases in both departments totaling $795,100."

—

[From the New York American.]

"Two hundred and thirty-five men to be added to police force. Budget committee also raises pay of first-grade men $50 annually. Firemen get same. One thousand dollars more for Schmittberger. Increases in both departments will total $795,100 a year."

—

[From the Chicago American.]

"One hundred thousand receive wage increase of $10,000,000. Chicago employers respond to demand of high cost of living. Major increases shown.

"The following is a list of some of the biggest firms which have raised wages:

Name.	Employees.	Annual wage increase.
Pullman Co	9,000	$500,000
Montgomery Ward & Co	5,000	250,000
Consumers' Co	1,500	90,000
Western Electric Co	17,000	500,000
People's Gas Light & Coke Co	3,700	350,000
Wm. Wrigley, jr., Co	2,200	300,000
Hart, Schaffner & Marx	8,000	600,000
Sears-Roebuck Co	15,000	1,000,000
Illinois Steel Co	8,000	600,000
Crane Co	6,000	500,000
Maurice L. Rothschild	150	42,000
Armour & Co	8,000	1,250,000
Swift & Co	8,000	1,250,000
Morris & Co	5,000	750,000
Wilson & Co	3,500	500,000
Smaller packing houses (20)	5,000	750,000
Thompson's lunch rooms	3,000	150,000
Weeghman's lunch rooms	500	10,000
Milk-wagon drivers (all big milk concerns)	1,500	83,500
Total	110,050	9,475,000

[From the Boston Post, Nov. 22, 1916.]

"'Millions more pay in raises.' 'Three hundred thousand workers to get increases of 10 per cent.' 'New England Mills' offer is voluntary.' 'United States Steel Corporation will give $20,000,000.'

"List of mills which have boosted wages:

"American Woolen Co., mills in New England, New York, and Kentucky. Approximately 30,000 operatives benefit.

"Arlington Mills, Lawrence, 5,000 operatives.

"Moses T. Stevens Corporation, Andover, Haverhill, and Franklin Falls, N. H., 1,800 operatives.

"Naumkeag Steam Cotton Co., Salem, 1,300 operatives.

"Berkshire Cotton Manufacturing Co., Adams, 2,500 operatives.

"W. C. Plunkett & Sons, Adams, 300 operatives.

"Greylock Manufacturing Co., Greylock; Williamstown and North Pownal, Vt., 3,000 operatives.

"Hoosac Cotton Co., North Adams, 1,000 hands.

"All the textile mills controlled by William Whitman.

"Ludlow Associates, Ludlow, 2,500 operatives.

"Gilbert Mills, Ware, 1,000 operatives.

"Arnold Print Works, North Adams, 5,000 operatives."

—

[From the New York American, Nov. 29, 1916.]

"'Eight million dollars more pay for 32,000 tailors.' 'Advance of 35 per cent given by the clothing manufacturers to meet the high cost of living.' 'Association will put new scale in effect December 18—both union and nonunionists will benefit.'"

—

When the exigencies of the service have demanded long and unusual hours, holiday work, and work under unpleasant conditions, the bureau men have been uncomplaining. Asking for the passage of H. R. 16060, they would like to state as a fact that it has been considered impossible to separate these conditions from the work, however—

The following copy of the letter received from Hon. J. R. Mohler, Acting Chief of the Bureau at the time the letter was written:

"MR. F. MCCARTHY,
"Recording Secretary N. A. B. of A. I. E.,
"965 Greene Avenue, Brooklyn, N. Y.

"DEAR SIR: I am in receipt of your letter of June 11 and wish to thank my fellow employees of Branch No. 19 for their words of appreciation and fidelity. However, it must not be forgotten that the statements presented could be made only because of my knowledge of the loyalty, integrity, industry, and adaptability of the men of whom I spoke. Long hours, holiday work, unpleasant assignments, personal privations, and all other disagreeable features that can not be separated from the work you are performing were rendered into assets because they are unflinchingly borne by the bureau force as a whole. If the men had easy work and short hours, the arguments advanced would have been without force or effect.

"With best wishes, I remain, very truly, yours,

"J. R. MOHLER,
"Assistant Chief of Bureau."

In order to show that the Government employees of this bureau work more hours per day on the average than men employed in private life or other branches of the Government service, we respectfully quote from a speech made by President Wilson before Congress just previous to the passage of the eight-hour law:

"It seems to me in considering the subject matter of the controversy that the whole spirit of the time and the preponderant evidence of recent economic experience spoke for the eight-hour day. It has been adjudged by the thought and experience of recent years a thing upon which society is justified in insisting as in the interest of health, efficiency, contentment, and a general increase of economic vigor.

"The whole presumption of modern experience would, it seemed to me, be in its favor, whether there was arbitration or not, and the debatable points to settle were those which arose out of the acceptance of the eight-hour day rather than those which affected its establishment.

"I therefore proposed that the eight-hour day be adopted by the railway managements and put into practice for the present as a substitute for the existing 10-hour basis of pay and service; that I should appoint, with the permission of Congress, a small commission to observe the results of the change, carefully studying the figures of the altered operating costs, not only, but also the conditions of labor under which the men worked and the operation of their existing agreements with the railroads, with instructions to report the facts as they found them to the Congress at the earliest possible day, but without recommendation; and that, after the facts had been thus disclosed, and adjustment should be in some orderly manner be sought of all the matters now left unadjusted between the railroad magnates and the men."

Fishing Privileges in the Territory of Alaska.

EXTENSION OF REMARKS
OF
HON. WILLIAM KENT,
OF CALIFORNIA,
IN THE HOUSE OF REPRESENTATIVES,

Thursday, December 21, 1916.

Mr. KENT. Mr. Speaker, under leave to print I herewith submit some of my objections to H. R. 17499, a bill which would confer special fishing privileges in the Territory of Alaska.

Also I use the permission to publish a careful statement which was submitted by certain experienced Alaska fishermen to the Fisheries Committee of the United States Senate.

First. It is made mandatory on the Secretary of Commerce to issue permits to take salmon by means of set nets or traps to the person or corporation that shall first have filed a map of the location desired.

Second. That in spite of the provision in section 2 that "the following annual fees" shall be collected, and in spite of the statement in section 5 that "all licenses shall expire on the 31st day of December of the calendar year for which issued," we find thereafter in section 6 the following language:

> From and after the filing of the map in the case of a pound net, or from and after the posting of the number of the license as above provided in the case of a stake net or set net, the claimant of the fishing location shown on such map, or marked by such number, shall have the exclusive right to hold, occupy, and fish in such location, to renew the license therefor, and to mortgage, sell, lease, or transfer the same during the time that he or they in other respects shall comply with the law pertaining thereto.

The contention was made on the floor of the House that this simply meant that the license could be terminated in any year, but admission was also made that no one excepting the original grantee could renew the license, and it was furthermore admitted that, barring specific act of Congress, it was mandatory upon the Secretary of Commerce to renew the license to the prior licensee without change of terms.

Such tenure would amount to a perpetual lease, except that Congress might, by new legislation and by repeal of this statute, authorize a new deal with the original licensee or with some other party.

Nothing contained in the bill gives any leeway to the Secretary of Commerce to limit the catch of fish in any location, except as such limitation will be predicated upon the clauses providing against total stoppage of the streams.

As a matter of fact, it is well known that salmon do not spread out equally over the streams to which they go for spawning, but that certain locations are in their normal route, and that therefore judicious placing of traps or such nets would be capable of greatly depleting, if not exterminating, the schools of fish.

It is obvious that under the bill the licensee would have the right to all salmon that could be taken from a given location by set nets or traps, unless there should be subsequent act of Congress to interfere with this privilege.

The words used in section 6, referring to mortgage, sale, lease, transfer, heirs, executors, administrators, successors, or assigns, obviously intend to create a vested and a property right, which vested and property right is further confirmed by the prohibition in section 22, running against the Territory, as to the Territory's power to tax the real or personal property involved in carrying out the license.

The bill obviously grants great and an unfair preference to those already on the ground and who have doubtless already prepared careful surveys of what they desire in the way of fishing privileges, giving them at the outset all those strategic points for which surveys have already been made, and that, as far as other applicants are concerned, in perpetuity. The bill would render feasible a practical monopoly of the fish-taking privilege, for although fishing might be conducted outside of the privileges granted under the bill it would be in waters not sufficiently valuable to induce the cost of survey.

A bill of this nature should be drafted along entirely different lines. First of all, there should rest in the Department of Commerce the right to curtail the catch in the interest of the conservation of the fish without subsequent act of Congress. Second, there should be an open opportunity, by competitive bidding, lot, or other form of selection, so that all fishermen capable of rendering equal service in the taking and preservation of fish should be allowed equal opportunity. Third, there should be a clear and definite term set for any lease, not more than five years, but of such duration as would justify the necessary expenditure for fishing appliances. And fourth, in consideration of the granting of special sites and privileges for canning, such canneries should be considered as public utilities and forced under reasonable terms to purchase or handle the catch of independent fishermen, or, indeed, of all fish turned in for preservation, treatment, and manufacture.

Furthermore, it would seem unfair to the Territory of Alaska to curtail its privilege to tax real and personal property, taxes from which might be needed for internal improvements, schools, roads, and other items.

The bill as drawn gives no protection to the public as to the price to be charged for the product, and although the Government has not as yet assumed the right to thus regulate, in consideration of the granting of privileges, the time must come when the public interest must be protected by such legislation.

BRIEF SUBMITTED BY CERTAIN ALASKA FISHERMEN.

WASHINGTON, D. C., *December 17, 1916.*

Hon. HARRY LANE,
Chairman Committee on Fisheries, United States Senate.

HONORABLE SIR: We herewith respectfully submit for your consideration the opinion of practical Alaska fishermen regarding the bill H. R. 17499, introduced August 29, 1916, by Hon. J. W. ALEXANDER, for the protection, regulation, and conservation of the fisheries of Alaska, and for other purposes. We note that the main features provide for the licensing of pound nets (fish traps), fish wheels, purse seines, beam trawls and other trawl nets, and any other kind of fishing appliances, as set forth in section 2 of said bill. These provisions are intended as ways and means of protecting and conserving the Alaskan fisheries. Understanding that to be so, we as practical fishermen do not believe that the operation of such a law will accomplish the desired effect; but that the opposite result will be achieved. We desire to give expression to our reasons, as follows:

First. As a general practice traps are placed at points which are known to be in the avenues of travel by the salmon.

Second. It is a well-admitted fact that from Monterey, Cal., to the shores of Bristol Bay, Alaska, salmon follow a course of well-defined lanes, notwithstanding the assertions of Mr. Bower (p. 303, hearings on bill 9528) to the contrary. This knowledge is derived by findings and experience of men who have fished in various salmon streams along the Pacific coast within the distance stated, including British Dominions, and it is through this knowledge that old-time, experienced fishermen will always be found most expert and capable of obtaining the largest catch, no matter in what waters they may be placed.

Third. By the provisions of section 2 the method of trap fishing (pound nets) is by the issuance of license made legal. This, in our opinion, is a dangerous procedure, and the provisions of section 6 aggravate the danger, inasmuch as perpetual rights to locations of trap sites are conferred upon the claimants who comply with the other requirements of this section.

Fourth. Taking into consideration the well-known fact that salmon do travel along a course of well-defined lanes, and have a habit when coming from the sea for spawning to strike certain particular points along the shore, which shores they will follow to the nearest spawning streams or grounds, notwithstanding the fact that the coast line of Alaska is estimated at 25,000 miles, the streams in which salmon run and spawn are but few when regarded in the light of importance for commercial fishing, and in connection with the 25,000 miles. It will readily be seen what a merger, with unlimited capital, can do in these waters, provided legislation, as proposed in H. R. 17499, be enacted into law.

Fifth. Section 6 also provides that before a license is granted proper survey of the land must be made, maps drawn of same, and filed with the Department of Commerce. In our opinion this provision is unjust to the ordinary fishermen, as it will bar from the best locations in Alaska his rights to fish, owing to lack of capital and facilities needed to comply with the requirements. Those fishermen who may have a desire to settle on the shores of Alaska will be prevented from so doing by reason of this curtailment of their rights and adverse legislation.

Fishing being the main incentive to settlement on the coast of Alaska, it will readily be seen the effect this will have to delay the growth in population of that country.

Those who seek investments for their surplus capital will realize under this act the opportunities offered along the Alaskan coast, and with the object for immediate and large dividends in view, and with every facility at hand, will take every advantage. There is no point of any importance in Alaskan waters that can not be speedily reached by agents employed for the purpose of cornering every available site as far as pound-net locations are concerned. There is no limit provided to the number of locations that can be obtained and held, and it is easy to assume that there will be nothing of value that will escape the grasp of the agents for large corporate interests. We desire, respectfully, to inform this committee of a few facts relating to pound nets (fish traps) as follows:

First. Traps are built from the shores, with a long lead extending into the channel of the stream, bay, or sound, as the case may be.

The red salmon of Alaska, in every instance, when striking the shores or entering a river, immediately seek the shallow waters. With traps placed at every point of vantage, leads of such traps covering the entire flat, there is no possible escape for the salmon.

Second. The leads, including pots of these traps, being made of very small mesh, catch not only all salmon along the shores but every other kind of fish that mix and mingle with the salmon, such as codfish, tomcod, halibut, soles, smelt, trout, etc. This other fish is as valuable for food as salmon, but owing to the fact that no provision is made for preservation or canning of same, they are destroyed and cast away as waste upon the waters. Thousands of tons of such valuable food fish are destroyed annually by this method of fishing. Salmon that are too small for canning are likewise destroyed.

Third. There being no limitations upon the number of trap locations that may be acquired, it is fair to assume, by men who are acquainted with the waters of Alaska, that there will not be a single place worth

operating by this method of catching salmon that will not be used. This can have but one result, that of preventing the valuable fish from reaching the spawning grounds in sufficient numbers for reproduction.

Fourth. Traps have been described as being detrimental to the best interests of conservation of salmon, not only by practical fishermen but by several recognized authorities on fish and fisheries, including David Starr Jordan and Capt. Jefferson Moser. The latter, after a long trip of investigation in Alaskan waters, described traps as a destructive method of fishing. We refer to the reports of the Bureau of Fisheries, written by Capt. Moser in 1902 or 1903, where, among other statements made, is one to the effect that "traps are most destructive where most effective," and which we, as practical fishermen, must admit, if the saying is true that "good material is contained in small parcels," is about all that could be said in condemnation of traps.

Fifth. California realized the necessity of abolishing fish traps if its fisheries were to be preserved; hence pound nets were removed by legislation, and the salmon are coming back.

Sixth. The people of Oregon and Washington have filed numerous protests with their respective governments against fish traps, fish wheels, and other fixed and stationary appliances, with the desire of conserving the great fisheries of their States for their children and children's children. We are sorry to admit that to date these efforts have not availed, but they are still fighting, and we hope the time is not far distant when these States will see the necessity of such legislation as will preserve the fisheries.

Seventh. Gill-net fishing means the taking of fish by nets made of a certain size mesh that a certain size of fish having his gills caught in the mesh are taken, hence all salmon of a smaller size than the size of such mesh are permitted free passage on their way to the spawning grounds as well as other little fish which the traps destroy.

Eighth. Gill nets as a general rule are operated by two men in a small boat, cast out along the shores or in the rivers, where the waters are sufficiently muddy to blind the salmon from seeing the mesh. They are picked out of the water at intervals of one or two hours in order that fish caught may be picked out. During the darkest hours of the night the average fisherman realizes the disadvantage of working his net; therefore he makes use of these dark hours for sleeping; hence it will be seen that by the gill-net method of fishing streams are open a considerable period of every 24 hours for free passage of all kinds of fish to their spawning grounds.

Ninth. Compare this with the trap fishing. It will be noted that while considerable time is allowed out of each day for free passage of fish by the gill-net method of fishing, absolutely no opportunity is given the fish where traps are stationed, because they are fishing continuously. Further consideration shows that traps may be built on either side of a strait, bay, or river in a zigzagging manner, with leads from both shores reaching into the channel from both sides.

The red salmon of Alaska having a habit of hugging the shoals, it will require no scientist to understand what will result in a short time to salmon in these waters. Hence we join hands with the best authorities on these questions in saying that "the traps are most destructive where most effective" and appeal to Congress to resolve that if traps must be operated in certain waters of Alaska, where otherwise the expense of canning operations will not be warranted, limitations to their operations should be made and right to locations should only be granted to men willing to operate a trap and then only for the actual period of operation. If license for such operation must be obtained it should be with the provision that none but bona fide citizens of the United States should be entitled to same and with the further understanding that not more than one such license be granted any one individual, be it for a trap, seine, or any fixed or stationary fishing appliance. These provisions should be for protection against monopoly, if one of the greatest natural food resources which a bountiful nature has bestowed upon this great American continent is to be conserved to future generations.

In conclusion, we respectfully state our desire to see the present crude and unsatisfactory laws relating to Alaska fisheries amended in the public interest. We realize that existing conditions are not what they should be, but are not nearly as bad as they would be if the bill introduced should be passed. In the interests of the public there should be legislation insuring the permanency of the salmon supply of the Alaskan coast. In justice to American citizens, whether residents in Alaska or otherwise, there should be equality of opportunity to enjoy the privileges granted under legislation; and furthermore, there should be encouragement given to the settlement of Alaska by independent and self-supporting people, and the elimination, as far as possible, of the necessity for the importation of seasonal labor, whether native or alien.

To the end of rendering permanent the salmon supplies, there should be power reserved in the Federal authorities to limit the catch by whatever means; in the line of providing equal opportunity for equal service in the catching of fish, there should be assurance that those granted location privileges for the purpose of salmon canning or the preservation of the fish by any other means should be only licensed as public utilities, compelled to grant equal treatment to all fish furnished at the manufacturing point; and furthermore, that leases granted should be limited to sufficient time to justify the necessary investment, and no longer.

We realize that it is easy to condemn and criticize proposed legislation and difficult to offer as a substitute a constructive policy, but, in our opinion, the legislation pending before Congress is thoroughly vicious, inasmuch as it tends to monopoly, to unfair privilege, and is seemingly regardless of those factors which should be considered as necessary to the preservation of the future fish supply. The legislation before Congress seemingly started with the assumption of the inalienable rights of existing operators to carry on their monopolistic business regardless of the public welfare. We do not believe that by such legislation there will be preservation of the future fish supply, equality of treatment of citizens of the United States, or proper development of the Territory of Alaska. For which reasons we have entered our objections and have herewith submitted in brief outline our views of the facts that should enter into the formulation of constructive legislation adapted to the public welfare.

We wish to thank the honorable chairman of this committee, including the members thereof, and others present, for the courtesy and privileges granted us in explaining our side of the various questions at issue and herein contained.

Decries the "Pork" in Buildings Bill.

EXTENSION OF REMARKS
OF
HON. WILLIAM E. COX,
OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, December 20, 1916.

Mr. COX. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include an article written by Charles Harris Whitaker, editor of the Journal of the American Institute of Architects. The article is as follows:

DECRIES THE "PORK" IN BUILDINGS BILL—CHARLES HARRIS WHITAKER TALKS OF "SHAMELESS SQUANDERING" OF THE PUBLIC FUNDS—ANALYZES THE MEASURE.

Charles Harris Whitaker, editor of the Journal of the American Institute of Architects, has prepared an exhaustive analysis of the omnibus public-buildings bill for the purpose of showing, he says, that "the whole system of appropriating money for public buildings betrays the shameless manner in which public funds are squandered in order that political patronage may be distributed."

Mr. Whitaker has furnished the Star with an advance copy of his analysis, which he entitles "Mostly Pork," and with a statement in which he says the attention of every citizen of the United States ought to be focused upon the omnibus public-buildings bill. "which," he says, "we have been informed is to be railroaded through Congress in spite of everything which the opposing minority can do, and of all the distributions of 'pork' which take place during a session of Congress none is so far-reaching in its effects as the omnibus public-buildings bill."

INSTANCES CITED.

"Such States as Wyoming, for example," Mr. Whitaker says, concerning his analysis, "or such records as that of Representative LANGLEY, of Kentucky, and the items in Georgia are particularly interesting. They are no more than plain facts based upon established figures, and they are incontrovertible."

The figures for Wyoming, representing requests made by Representative MONDELL, are as follows:

"For the city or town of Green River, in that State, the population of which decreased from 1,723 in 1890 to 1,313 in 1910, the post-office receipts of which at the last showing were $4,370, an appropriation of $75,000 was asked and the committee granted $25,000.

"For the city or town of Newcastle, the population of which decreased from 1,715 to 975 between 1890 and 1910, the post-office receipts of which at the last showing were $4,174, an appropriation of $75,000 was asked and the committee granted $25,000. The sum of $75,000 was asked for a public building in the town of Sundance, Wyo., with a population of 281 in 1910, with post-office receipts of $2,989."

KENTUCKY AND GEORGIA ITEMS.

In Kentucky Representative LANGLEY asked for 11 appropriations of $75,000 each for public buildings in towns which have populations as low as 146 persons, and in none of which the population is more than 1,897, according to the official figures. In one town, McKee, Ky., for which he asked $75,000, the post-office receipts are $526. The committee granted $40,000 for a public building in Hazard, Ky., a town of 537 persons, and $35,000 for a building in Pikeville, a town of 1,280 inhabitants.

Georgia offers a long list of similar situations as to requests for public-building appropriations. Representative LEE asked for $50,000 for a building at Rossville, a town of 1,059 inhabitants, the committee having granted $25,000. Representatives ADAMSON, VINSON, PARK, EDWARDS, BELL, HOWARD, HUGHES, WALKER, WISE, and CRISP all made similar requests, and Representative TRIBBLE made 14 requests for appropriations of $50,000, $60,000, $75,000, or $100,000 each for public buildings in towns ranging in population from 829 persons up to 5,900 in the city of Gainesville.

MR. WHITAKER'S STATEMENT.

In his statement and analysis Mr. Whitaker gives the figures for many other States which offer just as striking comparisons. He says:

"The attention of citizens is not alone necessary in order that they may understand the iniquity of a parliamentary system which permits such bills to be framed and passed upon a basis of political preferment. They should look at this bill and at Congress, and then at themselves, for they are equal partners in the whole proceeding. An analysis of the bill reveals the following salient facts:

"Democratic Senators and Representatives asked for the following grants from the Treasury: Four hundred and twenty-five items, amounting to $66,500,000.

"They received in the omnibus bill 240 items, amounting to $22,000,000.

"Republican Senators and Representatives asked for 290 items, amounting to $44,250,000.

"They received in the omnibus bill 165 items, amounting to $11,650,000.

"It is therefore plain that there are over 400 items in the bill, and that the Committee on Public Buildings feels safe in believing that there will be no difficulty in securing a majority vote. It feels safe because experience has proved that few Congressmen have the courage to vote against an appropriation bill which carries an item for their district or community. But this is precisely the point where the citizen comes in and where he must share in the odium and the debauchery of a democratic principle for selfish ends.

BUDGET SYSTEM THE REMEDY.

"There is no remedy for this condition save a budget system which will take the power of distribution away from Congressmen and leave it in the hands of a board of experts, who shall determine how best to use an annual appropriation for public-building needs. In order to make such a wise use of public-building funds it is imperative that an expert commission make an exhaustive study of all the phases of our public-building question, beginning with the method of acquiring real estate and ending with the dedication of the building. If the Government could show the people of the United States how to carry through a public-building operation with wisdom, economy, and a result which

would be a monument rather than a blot upon our escutcheon, it would confer a larger blessing than is commonly thought possible. Our whole public-building policy in Nation, State, city, town, and municipality is almost always contaminated with the influence of 'pork,' and we seldom get value received for the expenditure or a result which is commensurate with our civilization. The Treasury Department is an exception in this instance, for there can be no question of its ability to carry on the business end of a building operation, but it is powerless under the present system to prevent the erection of buildings which are too small, many of them not being needed at all, and of buildings which are so inadequate to provide for future growth that they are often outgrown before they are erected. It must be remembered that many buildings authorized in the omnibus bill of 1913 are not yet even in process of erection. The history of appropriations for additions and enlargements offers ample testimony to the unwisdom of many a public-building appropriation of the past.

HUNDRED ITEMS FOR SITES ALONE.

"In the present bill there are about 100 items for sites alone. This is a simple method of rolling up a volume of items and thereby a volume of votes, without making the lump sum too strikingly large. But an examination of the items of this class would outrage the sense of justice which American citizens do possess and can use when they see cause. These 100 items mean that 100 votes for the bill are secured incidentally, and that 100 communities are debauched into believing that the Treasury is a grab bag from which they must grab because everybody else does. In scarcely one instance do the actual facts offer any evidence that these 100 communities need a new building; in many of them the annual receipts are less than $5,000 a year. In some cases they are less than $3,000, and the populations are often less than 2,000.

"These are the plain facts that should be laid before the citizens of the United States, and before they seek to point a finger of shame at others they should prepare to look into the mirror of their own civic conscience. We can not by any means excuse the Members of Congress on this score. They are elected to serve, and not to pander. That is the choice they must make when the omnibus public-building bill is brought before them. Gag rule or not, it will be the votes that tell the story."

Subtreasury at Cincinnati.

EXTENSION OF REMARKS
OF
HON. ALFRED G. ALLEN,
OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, December 19, 1916.

Mr. ALLEN. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include the following letter:

THE FIFTH-THIRD NATIONAL BANK OF CINCINNATI,
Cincinnati, December 16, 1916.

Hon. ALFRED G. ALLEN,
House of Representatives, Washington, D. C.

MY DEAR MR. ALLEN:

* * * * * * *

I want to add my congratulations to that of Mr. Hinsch on the splendid work done for Cincinnati by you in saving the Subtreasury, but I want to say that banks in many other States ought to thank you very much for this good work. The Subtreasury here is of greater benefit to banks in Ohio, Indiana, West Virginia, Kentucky, Tennessee, Virginia, Mississippi, Alabama, Georgia, than many of the banks in those States realize, and the good work, therefore, was not for Cincinnati alone but will be the means of preserving an institution that is of good value and convenience to a great number of banks, State and national, in the States named above, and I feel there is hardly any Subtreasury in the United States that could be less done away with than the one in Cincinnati, because the reason that New York, Chicago, and St. Louis have Federal reserve banks and Cincinnati, which is the central city of banking for a great territory, has not a Federal reserve bank, and therefore the loss of the Subtreasury here would be of more detriment than taking away of the Subtreasury from any other city of the United States, except that one possible exception; that would be taking away the Subtreasury from New Orleans, which would be equally bad.

Yours, sincerely, MONTE J. GOBLE, *Cashier.*

The Threatened $300,000,000 Deficit and How to Avert It.

EXTENSION OF REMARKS
OF
HON. WARREN WORTH BAILEY,
OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, December 20, 1916.

Mr. BAILEY. Mr. Speaker, it is encouraging to note that at last there is some disposition to consult economy in public expenditures. During the last two years or so this disposition has been rather conspicuous by its absence. Happily, however, the gentleman from New York [Mr. FITZGERALD] a few days ago sounded a somewhat startling note of warning when he told this House of a prospective deficit of about $300,000,000 for the next fiscal year.

We hear some interesting talk in certain quarters of the curtailment of expenditures by the elimination of rivers and harbors and public buildings from the budget. This would indeed effect a saving at the spigot. And perhaps the country may be justified in permitting public improvements to wait on the ambitious plans of our war lords. From the latter come no hints of economy. They deftly knock in the head of the barrel when it comes to requisitions for Army and Navy, for fortifications and other "preparedness" measures. Thus we find them asking for $298,636,011.22 for 1918, an increase of a modest $147,704,527.75 over the estimates for 1917. For the Navy they are asking for $379,151,701.67 as against $217,652,174.24 estimated for a year ago, an insignificant increase of $161,499,527.43. For fortifications the demand is for $56,999,481.21 for 1918 as against $23,305,123.80, an increase of only a trifling $33,694,357.41. For the Military Academy the call is for $2,058,673.30 for 1918 as against $1,422,775.77 in 1917, an increase of $635,897.53. And in contemplation of these figures our war lords are amazed at their own moderation. They might so easily have doubled them without offense to our jingo friends who think that the bottom of the taxpayer's pocket or the limit of his patience can never be reached.

Here is a total increase in the estimates for military purposes of no less than $343,534,310.12. All records were broken last year in the appropriations on this account. Yet the cry is still for more. The horse leech's daughter is more clamorous than ever. The ravening appetite of gold-lace patriotism is as far from satiation to-day as it was last year or the year before or the year before that or as it will be a year hence or 10 years hence. Nothing short of national bankruptcy will limit its demands unless it is met with a national rebuke which it can not mistake.

Let us glance for a moment at the estimates for some of the other activities of the Government. We find that for agriculture the estimates for 1918 exceed those for 1917 by $1,937,818; for diplomatic and consular the excess is $273,927.96; for District of Columbia, $1,487,416.32; for Indian, $2,055,320.01; for legislative, executive, and judicial, $2,317,704.20; for sundry civil, $17,832,960.94. The total increase for all these is $25,905,147.43—$7,689,209.98 less than the increase demanded by the war lords for fortifications alone.

Where is this sort of thing to stop? Is there really no limit beyond which jingoism will dare to go? Is the patience of the American people as elastic as the conscience of those who play upon their fears and their assumed ignorance? Personally I am inclined to regard the results of the recent election as an indication that jingoism has not met with that favor which a year or so ago it so confidently claimed. It was not the East which determined the result; it was determined rather by the West, and the West has not been swept entirely off its feet by the mad-dog cry of the militarists. The West was for peace. It was not responsive to the appeals of Bethlehem Steel and Du Pont Powder. The terrors which pervaded Wall Street and stalked through the imaginations of Boston and Philadelphia did not unsettle the reason of Kansas, Colorado, and California. The presidential succession was plainly and definitely settled in a region far removed from the influences which drove Congress in 1914 and 1915 and again in 1916 to plunge into an orgy of extravagance in military and naval expenditures. Just why the significance of the elections has been wholly lost upon some who should be able to sense it is beyond my comprehension. The obsession which gripped them a year before the election seems to be gripping them to-day even more tightly than then.

Mr. Speaker, we hear talk of new burdens of taxation to meet the anticipated deficit. Might it not be more profitable were we to turn our attention seriously to the business of avoiding the threatened deficit by the simple expedient of reducing appropriations? Is it enough to shut down on river and harbor improvement? Is it the highest wisdom to cheesepare where public buildings are concerned? Have we wholly lost the sense of proportion? Are we determined to press forward in the mad militarist race which has already carried us so far afield?

Undoubtedly new taxes will have to be laid should we persist in the course marked out by the war lords. Shall they be placed on tea and coffee, as some are urging? Or shall we undo the great work accomplished by the Democratic Party when it amplified the free list and reduced tariff duties on the necessaries of life? Additional taxes on liquors have been suggested, and these will undoubtedly appeal to certain classes who think that such taxes would tend in greater or less measure to moderate the drink evil, although nothing can be much clearer than the

fact that as the cost of liquor has been pushed up by Federal and other taxation so has the consumption of liquor increased. But be this as it may, additional taxes on wine, beer, and whisky will be shifted in the last analysis to the consumer; he will not pay more perhaps for the single drink, but he will get a poorer quality for his money. This is the unfailing story. It is the manner in which such taxes always work.

It has been my contention on this floor, Mr. Speaker, that this huge burden of taxation which militarism has imposed and which it purposes to make still heavier should be saddled, not upon the poor, who have not been clamorous for so-called preparedness, not on the farmer and the workingman, not on the men in mill and mine, not on the small tradesmen and the struggling shopkeepers and professional men. No. It should not be placed upon their shoulders. It should go, instead, upon the shoulders of those who have been chiefly responsible for working the Nation up to a pitch of fear and excitement over the imaginary dangers confronting the country. It should go upon the shoulders of the rich and the powerful who have used every resource at their command in manufacturing a sentiment favorable to the policy of extravagance which we have been writing into law and which is now to be carried to a new high level if pending proposals shall be carried out. For this reason I have urged and I still am urging that the additional revenues required in meeting the stupendous bills which militarism is imposing should be derived from yet more sweeping taxes on large incomes.

The present maximum is 13 per cent. It ought to be 50 per cent. And if the whole of unearned incomes could be taken, that indeed would be in some sense and in some degree a compensation for the folly to which the country has been committing itself in response to the hysteria carefully worked up by our defense leagues and other allies of big business.

But I protest first of all and unceasingly against this hysteria and against the lengths to which it is driving us. I protest against further yielding to militarist pressure. I protest against the continuing enlargement of the fighting arm of the Government. I protest against the displacement of reason and justice in our dealings with the world by brute force. I protest against the monstrous demands of our war lords for universal compulsory military service—against conscription, against the most hateful system that tyranny ever devised or that the sappers and miners of despotism ever sought to fasten upon a free people. I protest against the whole mad business which comes under the false guise of "preparedness" and in the name of patriotism seeks to undermine the very foundations of our liberties. And thus protesting, I appeal to this House and to the country against the monstrous demands of the Army and Navy. I appeal to this House and to the country in favor of reduced and heavily reduced appropriations for the support of these establishments. And in making this appeal I do not doubt that it will strike a responsive chord in the hearts of the lovers of peace in every land. I do not doubt that it will meet the approval of millions who are voiceless, yet who heavily feel the pressure which militarism is bringing to bear upon them in the form of burdensome taxes. I do not doubt that it will go home to those who hold to the simple view that the obvious way in which to avert the threatened deficit is to avoid the staggering and unnecessary expenditures that alone can cause it.

President Wilson's Peace Note to the Belligerent Nations.

EXTENSION OF REMARKS

OF

HON. JOHN M. EVANS,

OF MONTANA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, December 21, 1916.

Mr. EVANS. Mr. Speaker, the morning dispatches carried the information that on December 18 the President sent to each of the belligerent nations a communication intended to bring them into a conference which it is hoped may result in peace.

In any event this communication marks the first step in that direction. The whole world must be in sympathy with the President, and many of us believe he has never done a finer act. If he shall succeed, all humanity will be indebted to him.

Mr. Speaker, I have such confidence in the President's good taste and good judgment that I am convinced that his proposal is fortunate and timely, and I ask that I may extend my remarks by including the text of that note in full.

The full text of Secretary Lansing's note to Ambassador Gerard at Berlin containing the President's peace suggestions is given herewith.

The note to Ambassador Page is practically the same, the variations being largely in the form of address as used throughout.

The text of the peace note follows:

[Telegram.]

THE SECRETARY OF STATE TO AMBASSADOR GERARD.

DEPARTMENT OF STATE,
Washington, December 18, 1916.

The President directs me to send you the following communication to be presented immediately to the Minister of Foreign Affairs of the Government to which you are accredited:

"The President of the United States has instructed me to suggest to the Imperial German Government a course of action with regard to the present war which he hopes that the Imperial Government will take under consideration as suggested in the most friendly spirit and as coming not only from a friend but also as coming from the representative of a neutral nation whose interests have been most seriously affected by the war and whose concern for its early conclusion arises out of a manifest necessity to determine how best to safeguard those interests if the war is to continue.

LONG-PLANNED ACT.

"The suggestion which I am instructed to make the President has long had it in mind to offer. He is somewhat embarrassed to offer it at this particular time because it may now seem to have been prompted by a desire to play a part in connection with the recent overtures of the Central Powers. It has in fact been in no way suggested by them in its origin and the President would have delayed offering it until those overtures had been independently answered but for the fact that it also concerns the question of peace and may best be considered in connection with other proposals which have the same end in view. The President can only beg that his suggestion be considered entirely on its own merits and as if it had been made in other circumstances.

SUGGESTS EARLY VIEWS OF BELLIGERENTS.

"The President suggests that an early occasion be sought to call out from all the nations now at war such an avowal of their respective views as to the terms upon which the war might be concluded and the arrangements which would be deemed satisfactory as a guaranty against its renewal or the kindling of any similar conflict in the future as would make it possible frankly to compare them. He is indifferent as to the means taken to accomplish this. He would be happy himself to serve, or even to take the initiative in its accomplishment, in any way that might prove acceptable, but he has no desire to determine the method or the instrumentality. One way will be as acceptable to him as another if only the great object he has in mind be attained.

OBJECTS ALL THE SAME.

"He takes the liberty of calling attention to the fact that the objects which the statesmen of the belligerents on both sides have in mind in this war are virtually the same, as stated in general terms to their own people and to the world. Each side desires to make the rights and privileges of weak peoples and small states as secure against aggression or denial in the future as the rights and privileges of the great and powerful states now at war. Each wishes itself to be made secure in the future, along with all other nations and peoples, against the recurrence of wars like this, and against aggression or selfish interference of any kind. Each would be jealous of the formation of any more rival leagues to preserve an uncertain balance of power amidst multiplying suspicions; but each is ready to consider the formation of a league of nations to insure peace and justice throughout the world.

UNITED STATES VITALLY INTERESTED.

"Before that final step can be taken, however, each deems it necessary first to settle the issues of the present war upon terms which will certainly safeguard the independence, the territorial integrity, and the political and commercial freedom of the nations involved.

"In the measures to be taken to secure the future peace of the world the people and Government of the United States are as vitally and as directly interested as the Governments now at war. Their interest, moreover, in the means to be adopted to relieve the smaller and weaker peoples of the world of the peril of wrong and violence is as quick and ardent as that of any other people or Government. They stand ready, and even eager, to cooperate in the accomplishment of these ends, when the war is over, with every influence and resource at their command. But the war must first be concluded.

FEARS GRAVER SITUATION.

"The terms upon which it is to be concluded they are not at liberty to suggest; but the President does feel that it is his right and his duty to point out their intimate interest in its conclusion, lest it should presently be too late to accomplish the greater things which lie beyond its conclusion, lest the situation of neutral nations, now exceedingly hard to endure, be rendered altogether intolerable, and lest, more than all, an injury be done civilization itself which can never be atoned for or repaired.

THINKS ACT JUSTIFIED.

"The President therefore feels altogether justified in suggesting an immediate opportunity for a comparison of views as to the terms which must precede those ultimate arrangements for the peace of the world, which all desire and in which the neutral nations as well as those at war are ready to play their full responsible part. If the contest must continue to proceed towards undefined ends by slow attrition until the one group of belligerents or the other is exhausted, if million after million of human lives must continue to be offered up until on the one side or the other there are no more to offer, if resentments must be kindled that can never cool and despairs engendered from which there can be no recovery, hopes of peace and of the willing concert of free peoples will be rendered vain and idle.

WHOLE WORLD AFFECTED.

"The life of the entire world has been profoundly affected. Every part of the great family of mankind has felt the burden and terror of this unprecedented contest of arms. No nation in the civilized world can be said in truth to stand outside its influence or to be safe against its disturbing effects. And yet the concrete objects for which it is being waged have never been definitively stated.

NEVER STATED OBJECT.

"The leaders of the several belligerents have, as has been said, stated those objects in general terms. But, stated in general terms, they seem the same on both sides. Never yet have the authoritative spokesmen of either side avowed the precise objects which would, if

attained, satisfy them and their people that the war had been fought out. The world has been left to conjecture what definitive results, what actual exchange of guaranties, what political or territorial changes or readjustments, what stage of military success even, would bring the war to an end.

IS NOT PROPOSING PEACE.

"It may be that peace is nearer than we know; that the terms which the belligerents on the one side and on the other would deem it necessary to insist upon are not so irreconcilable as some have feared; that an interchange of views would clear the way at least for conference and make the permanent concord of the nations a hope of the immediate future, a concert of nations immediately practicable.

"The President is not proposing peace; he is not even offering mediation. He is merely proposing that soundings be taken in order that we may learn, the neutral nations with the belligerent, how near the haven of peace may be for which all mankind longs with an intense and increasing longing. He believes that the spirit in which he speaks and the objects which he seeks will be understood by all concerned, and he confidently hopes for a response which will bring a new light into the affairs of the world."

LANSING.

Internal Revenue.

EXTENSION OF REMARKS
OF
HON. KENNETH D. McKELLAR,
OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

Friday, December 22, 1916.

Mr. McKELLAR. Mr. Speaker, I desire to place in the RECORD as a part of my remarks a short and concise statement of the operation of the Internal-Revenue Service for the three fiscal years ending June 30, 1916.

This statement shows a splendid record, and the facts therein contained are a monument to the able, efficient, active, and intelligent Commissioner of Internal Revenue, Col. W. H. Osborn, and his corps of assistants and employees.

In addition to being one of the best officials in the Government, Col. Osborn is one of the most delightful and worthy gentlemen and one of the most courteous officials in any of the departments of Government. I think the information contained in the statement will be of great value to the Members of the House.

The statement is as follows:

INTERNAL-REVENUE BUREAU ACTIVITIES AND ECONOMIES.

Efficient business methods inaugurated in Internal-Revenue Service and a fair and impartial enforcement of laws during present administration resulted in uncovering gigantic frauds and evaded taxes to the unprecedented amount of more than $50,000,000, of which $22,509,576.47 was assessed and collected during the three fiscal years ending June 30, 1916. This total recovered amount was greater by $2,700,000 than the entire cost of collecting the total revenue receipts of $1,308,413,205.59.

These frauds and most of the evasions existed unchecked and undiscovered during 12 or more years preceding this administration.

Eleven million three hundred and twenty-six thousand one hundred and twenty-five dollars and eighty-two cents was unearthed in corporation excise tax alone, $8,443,707.60 of which was due since 1909, 1910, 1911, 1912, and 1913.

Five million six thousand six hundred and ninety-six dollars and ninety-two cents of income tax otherwise lost to the Government was discovered and collected.

Nine hundred and eighty-four thousand seven hundred and ninety-one dollars and forty-one cents in compromises of minor evasions was turned into the Treasury.

Gigantic oleomargarine frauds, amounting to more than $27,000,000, existing unchecked during previous administrations, were brought to light. The statute of limitations barred assessment of all but $5,168,166.13, the other being collectible by suit. To date $950,406.87 has been recovered and $1,000,000 more is expected to be recovered in the near future.

Four million two hundred and forty-one thousand five hundred and fifty-five dollars and forty-five cents from fraud and evasions of distilled spirits, tobacco, and miscellaneous taxes was paid into the Treasury.

One gigantic whisky conspiracy, operating for many years in more than a dozen States, was hounded to light. Eleven conspirators tried to date have been convicted and are serving prison sentences. Three hundred and eighty-three thousand one hundred and twenty-five dollars and sixty cents of evaded taxes and fines in this one case is a matter of record. It is estimated that more than $20,000,000 was evaded in remote years by this one conspiracy.

In one oleomargarine conspiracy 34 offenders in a single city were convicted or plead guilty and sentenced to terms of imprisonment totaling 63½ years and to pay fines aggregating $138,000.

One investigation of tobacco frauds, extending over three States, resulted in the seizure of 236 factories of the offenders and the uncovering of a large amount of tax.

ECONOMIES EFFECTED.

While the above millions of taxes otherwise lost to the Government were being ferreted out through the energetic activities of the commissioner and his organization, more efficient methods for handling the public business were put into operation and economies effected which resulted in a saving of more than $500,000 annually.

Four hundred thousand dollars is saved annually through the discontinuance of Government gauging at rectifying establishments.

Fifty thousand dollars is saved in clerks' salaries annually by elimination of duplicate and unnecessary work and installing of modern equipment.

Fifty thousand dollars is saved annually in cost of paper, printing, ink, and labor through improvements made in form and size of internal-revenue stamps.

COST OF COLLECTION.

The activities of the bureau is reflected in the cost of collection. The average cost during the past three years was only $1.51 per $100, as compared with $1.67 per $100 for the four years of the previous administration. If the rate of collection under this administration had remained as high as the cost of the previous administration, the additional expense to the Government during the past three years would have amounted to approximately $2,000,000.

The records of the Internal-Revenue Bureau show that never in its history have results been achieved in any way comparable with those of the last three years. The amount of evaded taxes discovered and economies effected does not in any way measure the value of the efficient administration of internal-revenue laws to the Government, the honest trade, and the public in general. This strict and impartial enforcement of the internal-revenue laws has not only brought additional revenues but will prevent a recurrence of such frauds and conspiracies so long as the present policies are continued.

Printing in the District Schools.

EXTENSION OF REMARKS
OF
HON. J. HAMPTON MOORE,
OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, December 22, 1916.

Mr. MOORE of Pennsylvania. Mr. Speaker, during the discussion of the District appropriation bill the question of printing in District of Columbia schools arose. In consequence of that discussion I have received a letter from the Columbia Typographical Union, the publication of which at this time seems to be appropriate:

COLUMBIA TYPOGRAPHICAL UNION,
Washington, D. C., December 22, 1916.

Hon. J HAMPTON MOORE,
United States Capitol.

DEAR MR. MOORE: I notice in the CONGRESSIONAL RECORD of yesterday that during the consideration of the District of Columbia appropriation bill, Representative PAGE of North Carolina, who has charge of the bill, replying to a query from you, stated that he did not believe that printing was being taught in the high schools of this city.

Permit me to say that this organization is informed that several of the high schools and manual-training schools have courses in printing, some of the latest plants to be installed being at the Central High School at a cost of something like $4,000, and Dunbar Training School at about $3,000, and that regular classes are conducted, the instructor at Central High School, Miss Coolidge, the assistant principal, said to be a very capable and efficient educator, not being what could be called a practical printer, as she is said to have studied the art of printing for only a few months.

This organization takes the position that if printing is to be effectively taught in the high and manual-training schools the instructor should be a practical printer.

Very truly, yours, GEO. G. SEIBOLD, *Secretary.*

Receipts and Disbursements During Our Occupancy of Vera Cruz, Mexico.

EXTENSION OF REMARKS
OF
HON. CHARLES H. DILLON,
OF SOUTH DAKOTA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, December 22, 1916.

Mr. DILLON. Mr. Speaker, I think the general public is interested in knowing the amount of money we collected and disbursed during our occupancy of Vera Cruz, Mexico, and the disposition made of it. As showing such facts I present herewith two letters written by The Adjutant General and the statement referred to therein:

WAR DEPARTMENT,
THE ADJUTANT GENERAL'S OFFICE,
Washington, August 29, 1916.

Hon. C. H. DILLON,
House of Representatives.

MY DEAR SIR: Referring further to your letter of August 9, 1916, asking to be informed as to the amount of money collected at the port of Vera Cruz, Mexico, during the occupancy of that city by the United States expeditionary force, the Secretary of War desires me to inform you that the total collections amounted to $8,290,719.33 Mexican currency, $4,289.51 of which was turned over to the United States consul and $2,604,051.20 deposited with the Assistant Treasurer of the United States at New Orleans. The balance, amounting to $5,682,378.62, represents the expenses of the administration. The fund turned over to the Assistant Treasurer is subject to the order of the Secretary of War.

Trusting that the foregoing will give you the desired information, I remain,

Very truly, yours, H. P. McCAIN,
The Adjutant General.

WAR DEPARTMENT,
THE ADJUTANT GENERAL'S OFFICE,
Washington, September 20, 1916.

Hon. C. H. DILLON,
House of Representatives.

MY DEAR MR. DILLON: Referring further to your letter of August 31, 1916, in response to letter from this office of August 29, 1916, in which letter you request certain additional information concerning the amount of money collected at the port of Vera Cruz, Mexico, during the occupancy of that city by the United States expeditionary force, I beg leave to inclose herewith a statement showing in detail the receipts and expenditures of the United States military government of Vera Cruz, Mexico, from April 21, 1914, to November 23, 1914.

This statement shows total collections amounted to $3,743,130.51 and total expenditures $1,135,946.94. Through inadvertence, the statement of receipts and expenditures given in letter from this office of August 29, 1916, referred to above, included certain bookkeeping entries which, in fact, had nothing to do with income and expenditures, as will be noted by the statement transmitted herewith.

Of the item of $4,289.51 paid to the United States consul, the records of this office give no particulars. It is shown as a part of the balance carried in the Federal stamp office under the head of "Bonds," the closing entry being "Bonds transferred to United States consul."

So far as authority for expenditures is concerned, it is improbable that anything was expended from any fund except in cases where such expenditure could be legally made by Mexican officials had they been in charge.

The amount deposited with the Assistant Treasurer of the United States at New Orleans consisted of $7,644.92 Mexican gold or its equivalent in United States currency at the rate of 2 to 1, the balance being Mexican paper currency.

All figures in the accompanying statement are in Mexican currency.

Trusting that the foregoing will afford you the information desired, I am,

Very truly, yours,

H. P. MCCAIN,
The Adjutant General.

United States military government of Vera Cruz, Mexico, from Apr. 21, 1914, to Nov. 23, 1914.

Conservation in the Interest of the Public of the Water Powers of the Nation.

EXTENSION OF REMARKS

OF

HON. GEORGE R. SMITH,

OF MINNESOTA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, December 19, 1916.

Mr. SMITH of Minnesota. Mr. Speaker, the Montana Power Co., at Great Falls, Mont., is furnishing to the mines at Butte and the smelters at Anaconda power for 3.4 mills per hour per horsepower, or 42 mills per kilowatt hour, although they are compelled to transmit the power 130 miles.

Col. Burr, who is in charge of the Rock Island Arsenal, stated before a delegation of Members of Congress that the Rock Island hydroelectric plant, when developed to its capacity, could produce electric power for from 1½ to 2 mills per kilowatt hour. The Potomac Electric Power Co., of the District of

Columbia, charges the private consumer 10 cents per kilowatt hour. The Minneapolis General Electric Co. charges the householder the same as the Potomac Electric Power Co., and I take it for granted that 10 cents per kilowatt hour is the customary charge made by electric companies to private consumers.

I state these facts in order to call attention to the further fact that electric power can be developed at a nominal expense, and that the consumer is paying an unusually high price for a commodity that costs but very little to produce. True, the Montana Power Co. saved the miners of Montana $55 per horsepower per year, for they had been paying $85 per year for electric power generated by steam. But it does not follow that all power companies will treat the general public as fairly as the Montana Power Co. has treated its customers. On the contrary, there is abundant evidence to show that these companies charge the highest price that the traffic will bear, which is the natural and customary thing to do. This being the situation, is it not wise for the public to retain control of its water-power resources so that in their development the public can get a share of the benefit to be derived from the utilization of natural resources?

Those who are opposed to such measures as the Shields bill are anxious and desirous that the water powers be developed, but in such a way as to retain for the public some of the benefits to be derived therefrom.

Mr. F. N. Feiker, editor of the Electrical World, spokesman for the hydroelectric monopoly, stated in the July issue of his paper that the hydroelectric interests could not understand or comprehend why handicaps should be placed in the way of their right to develop the water powers of the country, because eventually their companies will secure this right. Why not now? Personally I see no objection to their securing this right, provided the rights of the public are properly safeguarded, a thing which the monopoly most seriously objects to. What we want and are seeking to obtain in every possible manner is the right to develop these water powers free from any restrictions or control that amount to anything. Such restrictions and conditions as they are willing to submit to in no wise protects the public in their interest in these natural resources. The Shields bill is a fair sample of what the hydroelectric monopoly wants.

Dr. E. A. Gilmore, of the University of Minnesota, in an able analysis of the Shields bill points out that such a bill, instead of protecting the rights of the public, would forever foreclose the public from any control of their water powers if it should become a law. It would be preferable to have no law at all on the subject; better to give the hydroelectric people a clear title to all of these water powers, free from restrictions or conditions of any kind, than to have them operate under such a measure as the Shields bill. For the benefit of the membership of the House and the country, I will incorporate at this point, as a part of my remarks, Dr. Gilmore's analysis of the Shields bill:

MEMORANDUM CONCERNING THE SHIELDS WATER-POWER BILL (S. 3331).

[By E. A. Gilmore, professor of law, University of Wisconsin.]

"The bill embodies a comprehensive plan for the authorization of dams and other structures in all the navigable waters of the United States, or water over which the United States has jurisdiction, for the improvement of navigation and the development of water power. It also provides for the leasing, on terms fixed by the Secretary of War, of all surplus water power created by dams now built or to be built by the United States to improve navigation. It also provides for the use, on terms, of lands of the United States and public lands in aid of the construction, maintenance, or operation of dams or other structures.

"As to the undeveloped water powers on the navigable streams of the United States the effect of the bill is by authorizing principal and accessory structures in those streams and the use of public lands in connection with such structures, to grant them virtually in perpetuity and without price. This is apparent upon an analysis of the bill.

"It is necessary to notice first the repealing section of the bill and the effect it has on existing laws and rights.

"Page 21, lines 24 and 25, and page 22, lines 1 to 9, repeal the existing statutes, chapter 907, sections 9 and 10, of the Laws of 1890, and chapter 425, sections 9 and 10, of the Laws of 1899, which forbid all obstructions in navigable waters of the United States without the consent of Congress or subject to the approval of the Secretary of War. By the repeal of these sections the construction and the maintenance of dams and other structures in the navigable waters of the United States are governed by this act.

"Section 15 also repeals all existing acts or parts of acts inconsistent with this bill. This, by implication, in effect repeals the act of February 15, 1901 (31 Stat., 790), known as the revocable-permit law, and the amendment thereof in 36 Statute, 1263, because by condition (f), page 6, lines 11 to 26, the Secretary of War is authorized to grant unrevocable permits to use any lands of the United States, including public lands.

"Furthermore, the effect of the first part of section 11 upon existing rights is ambiguous. It is there provided that this act shall not affect any rights previously granted under other acts, but with a proviso that the operation of any structures or accessory works shall be upon the terms and conditions of sections 3, 7, 8, 12, and 13 of this act. All conflicting provisions relating to the operation of previously authorized structures and accessory works are amended or repealed so as to conform to this act. This could be construed as converting all previously granted revocable permits into permits of the sort provided in this act. Section 8 as to forfeitures is by section 11 made applicable to all existing grants.

"The authority to erect structures in navigable waters is granted in two ways, according to the nature of the navigable waters involved:

"(a) Authority after permit obtained from the Secretary of War. Section 1 prescribes the conditions for obtaining this permit. Such a previous permit is required for structures to be erected in the class of waters defined in section 14 (p. 20, lines 24 and 25; p. 21, lines 1 to 5), namely, 'such streams or parts of streams as are in their ordinary natural condition used for the transportation of persons or property in interstate or foreign commerce, or which through improvement heretofore or hereafter made have been or shall become usable in such commerce.'

"(b) Authority without previous permit from the Secretary of War. (See p. 21, lines 5 to 14.) This authority may be used to erect structures in 'all other streams or parts of streams over which Congress has jurisdiction under its authority to regulate commerce with foreign nations and among the several States.'

"It is not clear what kind of waters would be included in the foregoing description. Presumably small streams not used or usable for interstate and foreign commerce, but so related to other streams or bodies of water used or usable for such commerce, and therefore within the jurisdiction of the United States. Such a stream might well be valuable for water-power development directly or in aid of such development. The description is broad enough to cover all small tributary streams, lying wholly within a State, which feed into the larger streams covered by the description under (a) above.

"Whatever the kind of streams may be that are included in the description, the act (sec. 14) grants directly a permit to erect structures therein practically indefensible and subject only to the one condition named on page 21, lines 9 to 14.

"As to these streams, it is not even necessary to have the previous authority of the State wherein the stream exists. In all other cases—that is, authorization on permit from the Secretary of War—the previous authorization of the State concerned is necessary. (See p. 7, lines 23–26; p. 8, lines 1–2.) While Congress undoubtedly has the power, in controlling the navigable waters of the United States, to authorize the erection and maintenance of structures therein and of navigation without the consent of the States, the granting to individuals of permission, in the exercise of this power, should be under more definite control and restriction.

"The authority to place structures in waters of the first class above described is exercisable only after obtaining a permit from the Secretary of War. The permit is subject to certain conditions which may be imposed by the Secretary of War. None of these conditions require compensation for the privilege of utilizing the water power. All the conditions are to be settled and imposed, if at all, at the time the permit is issued.

"Beginning on page 4, line 18, is an enumeration of these conditions which the Secretary may impose, but the imposition of which is not absolute. The Secretary may impose any or all of them 'in so far as he deems the same reasonably necessary to promote the present and future interest of navigation and consistent with a reasonable investment cost to such grantee.' This is very vague and indefinite, and virtually amounts to this: That if the Secretary thinks that the grantee can not afford to submit to the conditions stated the grantee may take the permit without such conditions. Moreover, whether the imposition of such conditions is consistent with the reasonable investment cost to the grantee is to be determined at the outset of the enterprise, regardless of what the subsequent developments and growth of the enterprise may justify him in paying. For example, (e), page 5, line 21, requires the grantee to pay reasonable charges for benefits arising from the use of headwater improvements and storage reservoirs, or condition (f), page 6, lines 11 to 25,

requires the payment of compensation for the use of lands of the United States.

"The imposition of obligations to make the foregoing payments, however, depends upon whether such payments would be consistent with a reasonable investment cost to the grantee; that is, consistent at the time the permit is granted. No matter what a reasonable investment cost may thereafter justify, the act does not provide for any adjustment of conditions to meet the later capacity of the grantee. Conceivably, within 10 years after the permit is granted, the reasonable investment cost may be producing a sufficient earning to justify a substantial charge for the use of headwater improvements or for the use of the public lands, but no provision is made for any readjustments.

"The relative nature of these conditions and their optional character is further illustrated by the language on page 7, lines 4 to 9. Practically the conditions must be settled upon at the time the permit is granted, regardless of the subsequent developments, and will continue for a period of 50 years, and apparently in perpetuity, because page 11, lines 14 to 18, require that the renewal of the permit shall be on the same terms and with the same restrictions.

"While the grant of the permit purports to be for 50 years, it is virtually in perpetuity, because the conditions of forfeiture or of termination are so drastic and burdensome that they will probably never be exercised.

"In view of the provisions of sections 5 and 6, which require the purchase at its fair value of all the property of the grantee if the United States desires to terminate the permit, there should be some opportunity other than the one at the outset of the grant to adjust the conditions in accordance with subsequent developments. If the plant of the grantee became the property of the Government at the end of the 50-year period, as is provided in the laws of a number of the Canadian Provinces and foreign countries, then it would be fair to leave the conditions fixed at the outset undisturbed during the period of the permit.

"Section 8 provides for a forfeiture of the permit for a violation of any of its terms and conditions or for a disregard of the rules and regulations of the Secretary of War. But the forfeiture is very much postponed and trammeled with conditions. Before a decree of forfeiture can be made, a criminal proceeding must have been had, and after that a suit in equity enjoining the misconduct. The disregard of the rules and regulations of the Secretary of War or the breach of any of the conditions of the permit is made a misdemeanor, subject to fine. If a judgment imposing a fine is ineffective, then a suit in equity may be brought to enjoin the further breach or disobedience. If the unlawful conduct continues after final judgment in the criminal and equitable action, then the court may decree forfeiture; but such decree is subject to the condition that the property of the misconducting grantee must be sold, and the sale is on terms not likely to produce a buyer.

"Furthermore, if the sale is to anyone but the United States the purchaser must pay for the 'rights' and franchises granted under this act, even though such a sale is ordered on the very ground that the grantee by his conduct has forfeited his rights or franchise.

"Moreover, the purchaser may be required to take the rights and privileges with all the outstanding obligations and liabilities of the grantee. It is safe to say there will be no purchaser on such drastic terms and that no grantee runs any risk of ever having his rights forfeited for misconduct.

"As to termination by purchase and recapture, provided for in section 6, this likewise is upon such burdensome conditions as to make the exercise of it extremely unlikely.

"While the rights granted are stated to run for 50 years, still it is expressly provided that they shall continue beyond 50 years until they are either forfeited in the manner provided above or the property has been purchased on terms in the act. That is, the permit or lease purports to be for a term, but even after the term has expired the grantor can get rid of the grantee only on buying him out. It is a misnomer to call it a 50-year permit; it is, more accurately, a permit until such a time, not fewer than 50 years, as the grantor may buy out the grantee.

"This provision requiring purchase before termination is essentially different from the provision for purchase in H. R. 408, where the United States is given the right to purchase, but the lease will expire notwithstanding the option to purchase be not exercised.

"The grantee is given the use of the water power for 50 years free of charge and then can be deposed only upon receiving the fair value of all his property, which constitutes part of the plant and dependent in whole or in part upon it (the plant) for its usefulness, and acquired, necessary, appurtenant, valuable or serviceable in the distribution of water, or in the generation, transmission, and distribution of power.

"And in addition to this the United States must pay the cost to the grantee of locks or other aids to navigation and all capital expenditures required.

"And still in addition must assume all contracts entered into by the grantee.

"Moreover, what the property of the grantee includes which the United States must purchase is not clearly set forth in the provisions on page 10, lines 1 to 18. It is open to two interpretations, one of which it would require the United States to buy not only the dam, the appurtenant structures, and the distributing system, but also the dependent industries. While it may not be the intention of the act to require the purchase of the dependent industries, still the very existence of the ambiguity as to precisely what must be purchased is a serious objection and will operate as a powerful deterrent from making any purchase at all.

"For the property, whatever that may include, the United States must pay the 'fair value.' This requirement would not limit the price to the fair value of the physical plant. It includes all elements of value, such as going value, good will, local franchises, and rights and other elements of intangible value. This is in sharp contrast with a provision in H. R. 408 providing for purchase by the United States at a reasonable value, but 'such reasonable value shall not include or be affected by the value of the franchise or good will or profits to be earned on pending contracts or any other intangible element.'

"As further indicating the perpetual nature of the permit, section 13 provides 'that the right to alter, amend, or repeal this act is hereby expressly reserved,' but subject to a proviso immediately following which makes the United States pay for the exercise of the right. The so-called right of alteration, amendment, or repeal is a hollow pretense. By the terms of the proviso all of the rights granted by it when exercised become vested and can be disturbed only upon making full compensation therefore as provided in the act. This is a roundabout method of saying that the United States may exercise the right of eminent domain, not under ordinary conditions but under the hard and drastic conditions of this act. So far as section 13, with this so-called reserved power, and section 6, with its burdensome conditions of purchase are concerned, the United States would be better off if both sections were stricken out, for then the Government could exercise its sovereign power of eminent domain untrammeled by the hard conditions of these sections.

"Not only does the act donate the existing undeveloped water power to the grantee, but section 10 provides for the leasing of all surplus water power produced by dams constructed or to be constructed by the United States. This is to be leased on reasonable terms. Presumably the terms are as to time and price. For how long these leases are to be made or how often the rental would be adjusted is not specified.

"But section 10 also contemplates that the lessee may build other structures to be used in connection with the surplus water power leased from the structures of the United States. The structures which may thus be erected, maintained, or operated are protected by all the terms and conditions of sections 3, 9, 11, and 13. This would enable a grantee taking a lease of the surplus water power of an existing dam to become practically the owner thereof in perpetuity of such surplus."

Mr. Speaker, I wish to assure my colleagues that my constituents are very anxious that the valuable water powers of the country be developed and utilized in the interest of all the people and not for the benefit of a few private individuals who are seeking to obtain from Congress such legislation as the Shields bill that will enable them to reap all the profit to be derived from the development; and as a evidence of the active interest and public spirit of my constituents I will incorporate at this time as a part of my remarks the following communications and resolutions adopted, not only by citizens within my district but by citizens residing throughout the State of Minnesota. It affords me unbounded pleasure to lay before this House evidence of what the citizens of Minnesota think of the Shields bill.

The first communication is a set of resolutions passed by the Saturday Lunch Club of Minneapolis, one of the most progressive and active organizations whose purpose is the betterment of the conditions of all the people to be found anywhere in the country:

Whereas electrically transmitted water power is rapidly becoming, and in the very near future will become, in fact, the dominant and controlling factor for fixing prices and costs of power used in future agricultural, industrial, and domestic service in the United States; and

Whereas the so-called Shields water-power bill now pending before Congress is an attempt to provide the means and method of development and future control of the water power now owned and controlled by our Government; and

Whereas this Shields bill is seriously defective in the following particulars:

It fails to secure to our Government effective inspection and supervision of construction and operation costs, and of contracts.

It fails to secure to our Government full publicity of accounts and records, and effective and immediate control over rates charged for power service.

It fails to secure to our Government the same opportunity for State and municipal government to secure leases of the water-power sites as are enjoyed by private interests urging the enactment of the bill.

It provides that riparian owners of property adjacent to the water-power sites shall have the preference in securing leases over persons not riparian owners, notwithstanding the well-known fact that the hydroelectric trust and its subsidiary interests now have actual control of practically all of the riparian rights for all undeveloped water-power sites.

It permits private water-power development interests to outbid any municipality seeking a lease of water-power site, or force such municipality to bid therefor at a prohibitive price.

It provides so cumbersome and complicated a method of regulation and control of rates that the general public will be obliged to bear intolerable burdens for an unlimited period before relief can be obtained.

It permits a perpetual franchise subject only to purchases by the Government of the entire property investment at the water-power sites, and all property investment dependent thereon, together with any and all unexpired contracts, inequitable or otherwise, which may be in existence, and without adequate provision to get at the reasonable and proper actual cost and fair value thereof.

Its purchase provision will compel the Government to pay a price for the property to include not only the fair physical value, but enormous accessories in the form of intangible values, including going concern value, speculative commercial value of water-power leases, and the capitalized form of existing contracts, land and site values far in excess of their actual cost, the cost of obsolete and inadequate equipment discarded during the term of the grant, and other fictitious values; and, finally,

It includes all of the undeveloped water-power sites owned by the Government, which is unnecessary at this time; and

Whereas the enactment of this Shields water-power bill into law will greatly injure and prejudice the rights and welfare of the general American public and will permit further improper exploitation of, and greatly increased cost of living to, the general public: Now, therefore, be it

Resolved, That it is the sense of the membership of the Saturday Lunch Club of the City of Minneapolis, assembled together November 25, 1916, after hearing this Shields bill discussed by our Congressman, GEORGE R. SMITH, and after examination of this Shields bill by a special committee and deliberation for one week, that the general welfare of the American people will be greatly and irreparably prejudiced and injured if this bill becomes a law, and that we desire that this bill be defeated and rejected by Congress, and if passed by Congress that it be vetoed by the President of the United States; and be it further

Resolved, That the secretary of this club be directed to forward copies of this resolution to all of the Members of Congress from Minnesota and to the President of the United States forthwith; and be it further

Resolved, That it is our desire that this Shields bill be examined and investigated at once by all individuals and organizations not already familiar with it, and that appropriate action be taken promptly to secure its defeat.

The Joint Improvement Association, whose resolutions I herewith submit, is composed of a coordination of all the local improvement associations of the city of Minneapolis, and comprises a membership of several thousand, all engaged in planning ways and means to improve the living conditions of the mass of our people. These resolutions were adopted on December 5, after hearing a report of a special committee on its examination of the Shields bill:

Whereas electrically transmitted water power is rapidly becoming, and in the very near future will become, in fact, the dominant and controlling factor for fixing prices and costs of power used in future agricultural, industrial, and domestic service in the United States; and

Whereas the so-called Shields water-power bill now pending before Congress is an attempt to provide the means and method of development and future control of the approximately 60,000,000 horsepower of undeveloped natural water power now owned and controlled by our Government; and

Whereas this Shields bill is seriously defective in the following particulars:

It fails to secure to our Government effective inspection and supervision of construction and operation costs and of contracts;

It fails to secure to our Government full publicity of accounts and records and effective and immediate control over rates charged for power service;

It fails to secure to our Government the same opportunity for State and municipal government to secure leases of the water-power sites as are enjoyed by private interests urging the enactment of the bill;

It provides that riparian owners of property adjacent to the water-power sites shall have the preference in securing leases over persons not riparian owners, notwithstanding the well-known fact that the Hydroelectric Trust and its subsidiary interests now have actual control of practically all of the riparian rights for all undeveloped water-power sites;

It permits private water-power development interests to outbid any municipality seeking a lease of water-power site, or force such municipality to bid therefor at a prohibitive price;

It provides so cumbersome and complicated a method of regulation and control of rates that the general public will be obliged to bear intolerable burdens for an unlimited period before relief can be obtained;

It permits a perpetual franchise for monopoly use of public property by private interests, subject only to purchase by the Government of the entire property investment at the water-power sites, and all property investment dependent thereon, without adequate provision to get at the actual cost and fair value thereof;

Its purchase provision will compel the Government to pay a price for such property which will include not only the fair physical value, but also enormous additions thereto in the form of intangible values, including going concern value; speculative commercial value of water-power leases and unexpired contracts, inequitable or otherwise and of unknown duration; land and site values greatly in excess of their actual cost; the cost of obsolete and inadequate equipment discarded during the term of the grant; and many other fictitious items which have no real value to the public; and, finally,

It includes many valuable undeveloped water-power sites now owned by the Government which can not and will not be developed at once, and which should be held in reserve by the Government for Government uses; and

Whereas the enactment of this Shields water-power bill into law will greatly injure and prejudice the rights and welfare of the American public, and will permit further improper exploitation of, and greatly increase cost of living to, the general public: Now, therefore, be it

Resolved, That it is the sense of the membership of the Joint Improvement Association of the City of Minneapolis, assembled together December 5, 1916, after hearing report of a special committee on its examination of this Shields bill that the general welfare of the American people will be greatly and irreparably prejudiced and injured if this bill becomes a law, and that we desire that this bill be defeated and rejected by Congress, and if passed by Congress, that it be vetoed by the President of the United States; and be it further

Resolved, That the Secretary of this association be directed to forward copies of this resolution to all of the Members of Congress from Minnesota and to the President of the United States forthwith; and be it further

Resolved, That it is our desire that this Shields bill be examined and investigated at once by all individuals and organizations not already familiar with it, and that appropriate action be taken promptly to secure its defeat.

The Calhoun Commercial Club, of Minneapolis, adopted the resolutions herewith attached at a mass meeting held November 20, at which time over 500 representative citizens from all walks of life gave voice to their convictions on this matter of legislation and vigorously protested against the passage of the Shields bill:

Whereas electrically transmitted water power is rapidly becoming, and in the very near future will become, in fact, the dominant and controlling factor for fixing prices and cost for power used in future agricultural, industrial, and domestic service in the United States; and

Whereas the so-called Shields water-power bill now pending before Congress is an attempt by private water-power development interests to secure a dangerous monopoly control of the remaining 60,000,000 horsepower of our natural water power owned by our Government; and

Whereas the enactment of this Shields bill into law will not conserve and preserve the best interests of the general public welfare of the Nation: Now, therefore, be it

Resolved, That it is the sense of this mass meeting here assembled together on this November 20, 1916, consisting of approximately 500 representative citizens of the city of Minneapolis from all walks of life, after hearing this Shields bill debated by Attorney Rome G. Brown and our Congressman, GEORGE R. SMITH, that the general welfare of the American people will be greatly and irreparably prejudiced and injured if this bill becomes a law, and that we desire that this bill be defeated and rejected by Congress, and, if passed by Congress, that it be vetoed by our President of the United States: And be it further

Resolved, That the Secretary of the Calhoun Commercial Club of this city be requested to forward copies of these resolutions to all of the Members of Congress from Minnesota forthwith: And be it further

Resolved, That it is our desire and request that all organizations and individuals who desire to protect the general welfare of the American people shall at once investigate this Shields bill, and if satisfied that it ought not to become a law take action forthwith, as indicated by these resolutions: And be it further

Resolved, That our newspapers be especially requested to give full publicity to this meeting and to these resolutions.

The Minnesota State Federation of Labor, having a membership of several thousand practical men, who are interested in getting for all humanity the greatest amount of comfort and happiness, have also entered their protest against the Shields bill:

MINNESOTA STATE FEDERATION OF LABOR,
Minneapolis, December 19, 1916.

Hon. G. R. SMITH, M. C.,
House of Representatives, Washington, D. C.

DEAR SIR: I have been instructed to call to your attention three bills which are now before Congress.

One bill, which is known as the Shields bill, and is now in conference and no doubt will be reported to the House at an early date. The working men and women of our State believe that this measure should not pass, but should be conserved for the Government. The Myers bill, which we feel is equally vicious, and also certain provisions of the Phelan bill, we are also opposed to.

We ask you to protect our undeveloped resources for the Government.

Trusting that we may hear favorably from you on these provisions, I am, in behalf of the labor organizations of the State,

Fraternally, yours,

E. G. HALL, *President.*

The Minnesota Forestry Association, which deals directly and constantly with questions of conservation, has also placed itself on record to the Shields bill and the Myers bill as diametrically opposed to all principles of true conservation.

THE UNIVERSITY OF MINNESOTA,
DEPARTMENT OF AGRICULTURE,
University Farm, St. Paul, December 15, 1916.

Hon. G. R. SMITH,
Care of House of Representatives, Washington, D. C.

DEAR SIR: I am advised that the Shields bill and the Myers bill have passed both Houses of Congress and are now in conference. Both of these measures are diametrically opposed to all principles of true conservation, and the Minnesota Forestry Association urges you to exert your best influence against these bills. They, both of them, represent raids on the natural resources of our country and should be suppressed.

I hope you can give this matter your best attention and study.

Very truly, yours,

MINNESOTA FORESTRY ASSOCIATION,
E. G. CHEYNEY, *Secretary.*

Dr. Cook and the North Pole.

EXTENSION OF REMARKS
OF
HON. HENRY T. HELGESEN,
OF NORTH DAKOTA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, September 4, 1916.

Mr. HELGESEN. Mr. Speaker, in my speech on Government Maps of the Arctic Regions Corrected, delivered on the floor of this House January 13, 1916, I presented official correspondence from Hon. Josephus Daniels, Secretary of the Navy, and from Dr. E. Lester Jones, Superintendent of the Coast and Geodetic Survey, showing that Robert E. Peary's so-called "discoveries" in the Arctic have been officially disproved and removed from our Government maps.

As a result of that speech I have received a large volume of letters from all parts of this country as well as from foreign lands. Among these letters are many asking if the testimony given by Peary before the House Committee on Naval Affairs is available. I therefore procured a complete copy of that testimony, which had been suppressed for years, made a careful and complete analysis of the same, and published both analysis and complete testimony in the CONGRESSIONAL RECORD of February 12, 1916. This testimony and the accompanying analysis prove that Peary has no foundation in fact—only in fiction—for his claims to Arctic or polar discovery, and the publication of this material brought me another flood of letters of commendation. Thereupon I made a further analysis, which was printed in the CONGRESSIONAL RECORD of August 3, 1916, this time of Peary's book, The North Pole, and of his magazine articles, which ran through nine months of Hampton's Magazine in 1911, and again it was shown conclusively that Peary's claims have no foundation in fact.

My last analysis of the Peary material brought forth a still larger mass of correspondence of a commendatory nature. Many of these letters asked if I intended to conduct an investigation as to whether or not any American has reached the North Pole, since it is conclusively proven that Peary did not, and a considerable number of people have written me asking when I would take up the case of Dr. Cook. In this connection I shall call attention to my speech of January 13, 1916, in the course of which I was asked by Congressman SLOAN, of Nebraska, if I gave countenance to the discovery of the North Pole "by a rival explorer," to which question I replied:

> In these remarks I am dealing wholly with the correction of our maps, in so far as the Government has put anything upon them that an American discoverer claims to have discovered, and there is no other discoverer that I know of who has got anything on our maps that does not deserve to be there.

Since that time, however, I have received many letters requesting my opinion on "the Cook case," some of them from men of practical Arctic experience. I quote from one of these letters, the writer of which, Middleton Smith, was a member of the Point Barrow International Polar Expedition, and one of the few Arctic explorers who conducted practical experiments and obtained valuable results during his two years' stay in the Arctic. Mr. Smith's letter reads:

WASHINGTON, D. C., *August 24, 1916.*

DEAR MR. HELGESEN: A fool, it is said, never changes his opinion, but the wise sometimes do. When Dr. Frederick A. Cook, on September 1, 1909, cabled to the world from Lerwick, Shetland Islands, "Reached North Pole April 21, 1908," I believed him. When Civil Engineer Robert E. Peary, on September 6, 1909, flashed by wireless to the world from Indian Harbor, Labrador, "I have the pole, April 6," and later, "Nailed the Stars and Stripes to the pole," I had no reason to doubt him, but, coupling with this announcement the accusation that "Dr. Cook has given to the world a gold brick," without first seeing the evidence upon which the doctor based his claim of having attained the pole, an unpardonable breach of polar etiquette, my respect for Mr. Peary, whom I had known for many years, being a fellow member of two clubs—the Arctic Club of America and the Explorers' Club—greatly waned, and my belief in his claim of reaching the pole became, in due course of time, greatly lessened, and still later, when asked whether I was willing to indorse the letter of Rear Admiral W. S. Schley, which credited both explorers with the attainment of the pole, I replied, "Yes; in part." My indorsement of the letter reads:

"I indorse the letter of Rear Admiral W. S. Schley, so far as it relates to Dr. Frederick A. Cook's attainment of the pole."

The elimination by me of Mr. Peary's name in this indorsement was well taken, as is amply proven, Mr. HELGESEN, by the results of your analyses of the Peary data given in your three speeches in Congress—"Government maps of the Arctic regions corrected," January 13, 1916; "Analysis of the Peary hearings," February 12, 1916; "Analysis of Peary's book, The North Pole, and his magazine articles on the same subject," August 3, 1916. These speeches, severally and jointly, constitute the most valuable critical Arctic literature extant, and I am of the opinion that it is beyond belief that anyone reading them could come to any other conclusion than drawn by you, that Civil Engineer Robert E. Peary never was within 100 miles of the pole, and is, therefore, not entitled to or worthy of the honors conferred upon him by the United States Congress; and I will add that if an investigation by a competent tribunal, authorized by the Congress of the United States of America, of Dr. Frederick A. Cook's claim of his attainment of the pole were to disprove his claim, I would acknowledge an error of judgment in having indorsed him, and would have to cancel in toto my indorsement of the Schley letter. If such an authorization by Congress can not be obtained, why not, Mr. HELGESEN, make an analysis of the Cook polar data yourself, and give the result to the world, whether favorable or otherwise to the doctor, and let the people weigh the evidence and judge for themselves?

Very truly, yours,

MIDDLETON SMITH,
Member Point Barrow International Polar Expedition.

Many other letters have been received urging me to analyze Dr. Cook's claims to polar discovery, and as these requests have come from leading geographers, historians, educators, and other persons of learning, I feel that public interest is keen, not so much on the question: "Did *Cook* discover the North Pole?" as: "Did *any American* ever attain the North Pole?"

In view of this interest and general desire for information, I have decided to make public the results of my investigation into this question.

At this time only two Americans have ever claimed the attainment of the North Pole: Frederick A. Cook and Robert E. Peary.

I have contended and still contend that every American is entitled to a fair trial before judgment is rendered. Even a criminal, caught in the act of committing a crime, is given a trial before sentence is passed upon him. My contention in this respect has caused a general belief that I am, and have been, a champion of Dr. Cook's claim to the discovery of the North Pole. I have repeatedly stated that I am not a defender of Cook's claims, but I am a champion of fair play, and even if Cook is a fraud he is still entitled to a hearing.

I have defended Cook only against unfounded charges, for I firmly believe that no man was ever more ill-treated and maligned than Dr. Cook has been by his opponents in the polar controversy; however, such defense as I have made has been only a fight for American justice.

During the two years just past efforts have been made—not at my instigation but by Dr. Cook's friends—to procure for him a congressional hearing similar to that granted Peary. A strenuous effort—not at all commendable—has been made to prevent such a hearing, notwithstanding that prominent Members of Congress in both the Senate and the House have favored the plan. Several resolutions asking for a hearing for Cook have been introduced in the House and referred to the Committee on Education, only to be voted down in executive session, the last time by a vote of 6 to 6. These thwarted attempts to have the Committee on Education act in the matter aroused my interest and a desire to know why a hearing is persistently denied Cook when it was granted to Peary, for surely Cook's claims can not be more foundationless than Peary's! If Cook's opponents are sure—as they claim to be—that he is a fraud, why not give him a hearing, let the American public know officially the fraudulent nature of his claims, and close the matter with finality? Cook's opponents have used only such arguments as the merest tyro, unacquainted with either side of the case, would advance; arguments so silly, childish, and futile that they have been easily demolished, while the really vital points on which Cook could be discredited, as was Peary, have remained untouched. Apparently Cook's detractors have not feared that he could prove his claims so much as they have feared that an investigation would bring to light charges against Peary even worse than those already proven; hence their reluctance to mete out justice to Cook.

I have therefore set myself at the task of analyzing all of Cook's official evidence, and I shall insert the results of my analysis in the CONGRESSIONAL RECORD, in order that the public may know the basis on which rests our claim that an American discovered the North Pole. I approached this task with an unbiased, unprejudiced mental attitude, and my conclusions are not favorable to Dr. Cook's claims.

We all remember that almost immediately after Cook's return from the north, when public sentiment both for and against him

ran high, he suddenly disappeared for about a year. At that time the charge was made by his opponents that he went away to avoid a further investigation into his claims. In 1915, when matters looked as though a hearing might be granted him, he decided on an eight months' tour around the world, though I happen to know that those persons who had his interests at heart remonstrated with him against such a course. The present year, on the more or less plausible excuse of a Chautauqua lecture tour, he went to the West, at a time when, with a little extra effort on his part, his friends hoped to secure for him the hearing which he has so long professed to desire. These actions may possibly be reasonably explained, nevertheless they lend color to the theory that Cook does not desire a bona fide hearing and investigation.

I therefore wrote Cook this letter, under date of August 3, 1916:

MY DEAR DR. COOK: Will you please inform me if you are willing to allow your claim as the discoverer of the North Pole to be decided in Congress on the material presented in your book My Attainment of the Pole? You say in the book that your claim of being the first man to reach the North Pole will rest upon the data presented between the covers of this book, and that it contains all of the facts and proofs concerning your claim.

Kindly reply at your earliest convenience, as this subject may be brought up at any time.

H. T. HELGESEN.

To this letter Dr. Cook replied on August 8, 1916:

DEAR HELGESEN: I will be glad to rest my case in Congress on the evidence presented by the official record as printed in my book. There are some typographic errors, mostly self-evident, and I am further willing to go to any trouble and expense to satisfy any examining commission. But on the whole My Attainment of the Pole contains all the evidence to prove that I reached the North Pole on April 21, 1908. I do hope the matter can be brought up for final adjustment.

FREDERICK A. COOK.

Therefore, since Cook says in his book, dated 1911, that—

I am now presenting every scrap of paper and every isolated fact—

And since he further says in the same book that—

My claim of being the first to reach the North Pole will rest upon the data presented between the covers of this book—

And repeats under date of August 8, 1916, that he rests his claim to polar attainment on the evidence presented in his book, barring "typographic errors, mostly self-evident," I am fully justified in giving my careful, unbiased analysis of his evidence and proofs to the public. In this analysis I ask only pertinent questions, that are answered in the pages of Cook's own book, and I take no unfair advantage of self-evident typographical errors to discredit him on statements which would otherwise be acceptable.

In the course I have pursued I am actuated only by a desire for truth and accuracy. It is sad, indeed, to reflect that two of our American explorers—Cook and Peary—have proven unworthy of the confidence reposed in them by the American Nation, a nation which is so notably represented in Arctic exploration as we have been in times past, by Kane, Hayes, Hall, Greely, and others. Nevertheless, truth must prevail even though, as Americans, we can not but regret that we have no claim as a Nation to the glory of the discovery of the North Pole.

In the preface to Dr. Cook's book, My Attainment of the Pole, he says:

This narrative has been prepared as a general outline of my conquest of the North Pole. In it the scientific data, the observations, every phase of the pioneer work, with its drain of human energy, has been presented in its proper relation to a strange cycle of events. * * * Herein, *with due afterthought* and the better perspective afforded by time, the rough field notes, the disconnected daily tabulations, and the records of instrumental observations, every fact, every optical and mental impression has been reexamined and rearranged to make a concise record of successive stages of progress to the boreal center. If I have thus worked out an understandable panorama of our environment, then the mission of this book has served its purpose.

Much has been said about absolute geographic proof of an explorer's work. History demonstrates that the book which gives the final authoritative narrative is the test of an explorer's claims. * * * In such a narrative, after due digestion and assimilation, there is to be found either the proof or the disproof of the claims of a discoverer. In a similar way, my claim of being first to reach the North Pole will rest upon the data presented between the covers of this book.

On page 245 Cook says:

I am now presenting every scrap of paper and every isolated fact. * * * Upon such a record history has always given its verdict of the value of an explorer's work. It will do the same in estimating the relative merits of the polar quest.

I have quoted thus fully from Dr. Cook's preface and from his later statements to show that he invites analysis and criticism of his book. He has no cause to adopt the pose of a martyr, therefore, if we take him at his word and prove or disprove his claims "upon the data presented between the covers of this book."

Much of Dr. Cook's narrative is devoted to controversial features, of which I shall treat only as they have a direct bearing on the authenticity of his story. He truly says (p. 4):

Few men in all history, I am inclined to believe, have ever been made the subject of such vicious attacks, of such malevolent assailing of character, of such a series of perjured and forged charges, of such a widespread and relentless press persecution as I.

Feeling the force and the truth of this assertion, I have hesitated to add anything to the load of criticism that has been heaped upon a man who has been treated with great injustice. However, the ends of justice are not served by evading the truth, and an impersonal analysis of Cook's narrative can not injure an honest man.

The first chapter of Cook's book is entitled "The polar fight" and is devoted to a brief résumé of the controversy. Chapter 2 opens with the statement:

On July 3, 1907, between 7 and 8 o'clock in the evening, the yacht, which had been renamed the *John R. Bradley*, quietly withdrew from the pier at Gloucester, Mass., and, turning her prow oceanward, slowly, quietly started on her historic journey to the Arctic seas.

On pages 24, 25, and 29, and in a footnote on page 30 of his book, Cook gives his version of the inception of and preparation for the expedition. In the Independent for September 16, 1909, Mr. John R. Bradley, Cook's financial backer and friend, gives *his* account of the manner in which the project was launched. For the purpose of comparison I give these two accounts in parallel columns:

DR. COOK SAYS.	MR. BRADLEY SAYS.
An Arctic expedition had been born without the usual clamor. Prepared in one month and financed by a sportsman whose only mission was to hunt game animals in the North, no press campaign heralded our project, no Government aid had been asked, nor had large contributions been sought from private individuals to purchase luxuries for a Pullman jaunt of a large party poleward. For, *although I secretly cherished the ambition, there was no definite plan to essay the North Pole.*	In the spring of 1907 I had fully made up my mind to go [to the Arctic] that year, and invited *Dr. Cook to go as my guest.* He was to photograph Eskimos and I was to shoot walrus and polar bear. Nothing was then said about a dash for the pole. That was a later development, but one, nevertheless, *that was fully and carefully planned before we started north.*
At the Holland House in New York a compact was made between John R. Bradley and myself to launch an Arctic expedition. Because of my experience Mr. Bradley delegated to me the outfitting of the expedition and had turned over to me money enough to pay the costs of the hunting trip.	The first thing necessary was a suitable vessel. We didn't have time to build, so we decided to buy. Everything essential in the way of equipment was as perfect as one would have on a private yacht. We had 5,000 gallons of gasoline, provisions for two years in case of shipwreck, and everything necessary for shooting and navigation in the Arctic.
So far as the needs of my own personal expedition were concerned I had with me on the yacht plenty of hard hickory wood for the making of sledges, instruments, clothing, and other apparatus gathered with much economy during my former years of exploration, and about 1,000 pounds of pemmican. These supplies were also all that would be required for a polar trip. When, later, I finally decided on a polar campaign, extra ship supplies, contributed from the boat, were stored at Annoatok. *I had no money.* My (previous) work in exploration had netted me nothing.	We fitted the ship according to the doctor's ideas. We had everything that was needed for the doctor's preliminary work of preparation in his winter quarters, his camping equipment, provisions, tools, materials for sleds—every necessary detail was carefully thought out and provided for. We figured this way: In case we got up to Etah and found the natives were not well, or the dogs scarce, or any other conditions unfavorable we would call it a hunting trip and return quietly home again.
Among the many things which the public has been misled into believing is that Mr. Bradley and I together connived the trip for the purpose of essaying this quest of the pole. The fact is, not until I reached Annoatok and saw that conditions were favorable for a long sledge journey did I finally determine to make a poleward trip; not until then did I tell my decision definitely to Mr. Bradley.	When all these preparations were complete, and about four weeks before sailing, Dr. Cook and I were lunching one day at the Holland House, and he said to me, "Why not try for the pole?"
One of the big mistakes which has been pounded into the public mind is that the proposed Polar exploit was expensively financed. It did cost a great deal to finance the planned hunting trip. Mr. Bradley's expenses aggregated, perhaps, $50,000, but my journey northward, which was but an extension of this yachting cruise, cost comparatively little.	I replied, "Not I. Would you like to try for it?"
	He said: "There's nothing that I would rather do; it's the ambition of my life."
Mr. Bradley and I had talked, of course, of the pole; *but it was not an important incentive to the journey.* Back in my brain, barely above the subconscious realm, was the feeling that this, however, might offer opportunity in the preparation for a final future determination. I, therefore, without any conscious purpose, *and with my last penny, paid out of my purse* for extra supplies for a personal expedition should I leave the ship.	He (Cook) thought it would cost only *$8,000 or $10,000 more* to furnish an equipment for this purpose, and we figured it out. Finally I said, "We'll fit this expedition for the pole and say nothing to anyone about it." We did not want the newspapers to get at it. Peary was waiting to go and we did not want him to beat us into Etah and get all the dogs; moreover, I wanted to shoot on the way up and did not want to be in a hurry.

A comparison of these parallel statements shows that they differ in essential points. Dr. Cook says that—

There was no definite plan to essay the North Pole.

Mr. Bradley says that—

A dash for the pole was fully and carefully planned before we started North.

Dr. Cook says:

The pole was not an important incentive to the journey.

Mr. Bradley says:

We'll fit this expedition for the pole and say nothing to anyone about it. Peary was waiting to go, and we did not want him to beat us into Etah.

Dr. Cook says:

Mr. Bradley's expenses aggregated, perhaps, $50,000, but my journey northward *cost comparatively little.*

Mr. Bradley says:

He (Cook) thought it would cost *only $8,000 or $10,000 more* to furnish an equipment for this purpose.

Evidently a mere matter of eight or ten thousand dollars seemed "comparatively little" to Dr. Cook, although immediately before that he says:

I had no money.

And continues with a touch of pathos:

I *with my last penny* paid out of my purse for extra supplies for a personal expedition, should I leave the ship—

which is rather a peculiar statement, if he "had no money," and is also contradictory of his assertion that the polar trip was not planned before he started for the Arctic. A further contradiction is found on page 23 of his book, where we read:

On board all was quiet. I stood alone, gazing back upon the picturesque fishing village (Gloucester) with a tender throb at my heart, for it was the last village of my country which I might see for years or perhaps forever.

Surely a summer hunting trip to the Arctic with an early fall return is not such a hazardous undertaking as to give rise to these melancholy thoughts.

As Mr. Bradley's article, from which I have quoted, was published in the Independent for September 16, 1909, while the first edition of Dr. Cook's book was not published until 1911, it is difficult to understand why Cook so persistently reiterates the statement that the polar trip was not planned before the expedition started. On page 44 of My Attainment of the Pole Cook again says:

I felt growing within me, irresistibly, what I did not dare, for fear it might not be possible, to confide to Bradley—a determination, even in the face of peril, to essay the pole.

Still, again on page 64 Cook writes:

I did not yet confide to Bradley my growing ambition.

It would seem that Mr. Bradley must have been quite aware of Cook's "growing ambition," since he himself said:

We had everything that was needed for the doctor's preliminary work of preparation in his winter quarters.

In the New York Herald of September 15, 1909, Mr. Bradley published a list of supplies provided by him for Dr. Cook's polar dash. These supplies included wood for building house, charts, maps, instruments, compasses, hickory wood for 15 sleds, copper, iron, nails and screws, tools for ironwork, carpenter's tools, and various other articles which could have been of no possible use and would have been only an unnecessary incumbrance on a hunting trip, and which, therefore, must have been planned to meet the exigencies of a polar dash. Yet Dr. Cook says that he did not "confide" his determination to essay the pole to Mr. Bradley!

Chapter 4 of Cook's book describes the trip from Cape Robertson to Etah and Annoatok and some of the hunting in which Dr. Cook and Mr. Bradley engaged. On page 72 we read that Cook selected from the members of the yacht's crew Rudolph Franke to be his only white companion and helper during his stay in the Arctic, and the chapter closes with the words:

Early on the morning of September 3 I bade farewell to Mr. Bradley and not long afterwards the yacht moved slowly southward and faded gradually into the distant southern horizon. I was left alone with my destiny, 700 miles from the pole.

Since Rudolph Franke returned from the Arctic he, too, has written a book, entitled "A German's Experiences in the Far North." This book describes Franke's work with Cook and gives a graphic account of the life of the two men after the Bradley yacht returned and of Franke's personal experiences after Cook had started for the pole. As in my analysis of Robert E. Peary's book, The North Pole, I had occasion to refer to the books written by George Borup and Matthew Henson, respectively, so now I shall occasionally refer to statements in this book written by Rudolph Franke, who, it must be remembered, was a warm friend of Dr. Cook.

Chapter 5 of My Attainment of the Pole relates the preparations for the polar dash and the work which Cook and Franke accomplished with the aid of the Eskimos.

Although Cook does not make the explicit statement that he intended to have Franke accompany him to the pole, he certainly conveys that impression in the first chapters of his book. On page 72 he says:

The party, so far as civilized men were concerned, was to be an unusually small one. That, however, was not from lack of volunteers, for when I had announced my determination many of the crew had volunteered to accompany me. Capt. (Moses) Bartlett himself wished to go along, but generously said that if it seemed necessary for him to go back with the schooner he would need only the cook and engineer, leaving the other men with me.

These men certainly were of the opinion that whoever Cook chose to remain with him at Annoatok would "go along" to the pole. In Hampton's Magazine for January, 1911, Cook also says:

When I had announced my purpose, many of the crew volunteered *to accompany me.* Of these I selected Rudolph Franke.

That Franke thought he was to accompany Dr. Cook to the pole is evidenced on pages 27 and 28 of A German's Experiences in the Far North, where Franke says:

Late one afternoon Capt. Bartlett entered my cabin * * * and informed me that Dr. Cook would like to keep me with him as a companion for his proposed expedition. * * * The next morning Dr. Cook sent for me and I met him, together with Bradley. Capt. Bartlett had not lied, because Cook immediately asked if I wanted to *remain and go with him.*

Again, on page 30 of his book, Franke writes:

Out of a hunting trip an expedition to the North Pole had grown, and under the leadership of a man of rich experience in both the Arctic and Antarctic regions, *I was to begin my Polar travels.*

Franke says further, on page 44:

In order to prepare myself for the sledge trip on the expedition, I trained myself vigorously and energetically and made various short trips with the Eskimos, on which I did not fail to receive some hard knocks.

In various other parts of his book Franke makes it clear that he expected to go with Cook to the Pole.

But while allowing Franke to happily dream of sharing in the race for the pole, let us see of what stuff Dr. Cook's personal dreams were made. On pages 75–76 of My Attainment of the Pole, he says:

During the first day at Annoatok, after the yacht left, I thought of the world toward which it was going, of the continents to the south of me, of the cities with their teeming millions, and of the men with their multitudinous, conflicting ambitions. I could see, in my mind, the gigantic globe of my world swinging in cloud-swept emerald spaces, and far in the remote, vast, white regions in the north of it, far from the haunts of men, thousands of miles from its populous cities, beyond the raging of its blue-green seas, *myself, alone,* a wee, small atom on its vast surface, striving to reach its hitherto unattained goal. * * * A black mite, I saw myself slowly piercing those white and terrible spaces, braving terrific storms, assailing green, adamantine barriers of ice, crossing the swift-flowing, black rivers of those ice fields, and stoutly persisting until, successful, *I stood alone,* a victor, upon the world's pinnacle. This thought gave me wild joy. *That I, one white man, might alone succeed* in this quest gave me an impetus which only *single-handed effort and the prospect of single-handed success* can give. There was pleasure in the thought that in this effort *I was indebted to no one; no one had expended money for me or my trip; no white men* were to risk their lives with me. Whether it resulted in success or defeat, *I alone should exult* or I alone should suffer. I was the mascot of no clique of friends, nor the pawn of scientists who might find a supposititious and mythical glory in the reflected light of another's achievement. The quest was personal; the *pleasure of success must be personal.*

As previously stated, Dr. Cook says on page 29 of his book: *"I had no money!"* How, then, can he say as I have just quoted:

In this effort I was indebted to no one; no one had expended money for me or my trip.

If he had no money, who paid the $8,000 or $10,000 which Cook told Mr. Bradley such a trip would cost, over and above the $50,000 expense of the hunting trip? As Mr. Bradley's guest on the hunting expedition, was not money expended for him? Did not the supplies left by Mr. Bradley at Annoatok cost any money? Possibly Mr. Bradley would hold a different opinion.

A great deal of just criticism has been expressed of Mr. Peary's course in sending Capt. Robert Bartlett back to land before the farthest north of Peary's 1908–9 trip was reached. In this criticism Dr. Cook has joined, and on page 560 of My Attainment of the Pole, he says:

This detestable selfishness (of Peary) culminated in the treatment of Capt. Bob Bartlett. When the pole, to Peary, seemed within reach and the glory of victory was within grasp, the ever-faithful Bartlett was turned back and his place was taken by a negro, that Peary might be, to quote his own words, "the only white man at the pole."

Let us see how Cook's dream compared with Peary's. For this purpose I shall use Peary's testimony before the congres-

sional committee in 1911 and Cook's statement in his book published in 1911:

Peary said (see p. 74 of the hearing before the Committee on Naval Affairs):

"The pole was something to which I had devoted my life; it was a thing on which I had concentrated everything, on which I had expended some of myself, for which I had gone through such hell and suffering as I hope no man in this room may ever experience, and in which I had put money, time, and everything else, and I did not feel that under those circumstances I was called upon to divide with a man who, no matter how able and deserving he might be, was a young man and had only put a few years in that kind of work, and who had, frankly as I believed, not the right that I had to it."

Dr. Cook said (see p. 76 of My Attainment of the Pole):

"I saw myself slowly piercing those white and terrible spaces, * * * and stoutly persisting until successful, *I stood alone*, a victor, upon the world's pinnacle. This thought gave me wild joy. That I, *one white man*, might *alone* succeed in this quest gave me an impetus which only single-handed effort and the prospect of *single-handed success* can give."

(Also from pp. 2 and 3):

"*I stood alone* * * *. Only the ghosts about me which my dazzled imagination evoked celebrated the glorious thing with me—a thing *in which no human being could have shared.*"

We find little to choose between the selfishness of Peary and the egotism of Cook.

Chapter 6 of My Attainment of the Pole gives a description of the "sunset of 1907" and the beginning of the long arctic night, while chapter 7 relates the story of a hunting trip, on which Cook started with a party of Eskimos immediately after the last appearance of the sun, in order to obtain the furs and meat necessary to prepare the supplies for the sledge expedition to the pole. On page 99 he says:

Before the dawn of the sun's afterglow on the morning of October 26 7 sledges, with 60 dogs, were on the ice foot near our camp, ready to start for hunting grounds near Humboldt Glacier, a distance of 100 miles northward.

The party traveled 20 miles on October 26 and 50 miles on October 27, which took them to Dallas Bay, where Cook says on page 104:

The preceding glimmer of *the new moon*, which was to rise a few days hence, offered sufficient light to search for game.

This is the first time that Cook makes any mention of the moon in his book, and it would have been better for the plausibility of his story if he had omitted it in this case, for reference to the Nautical Almanac for 1907 shows that the October moon of that year did not enter the phase of the last quarter until October 28 and the moon was not new until November 5, so that Cook's statement that on October 27 he saw "the glimmer of the *new moon*, which was to rise a few days hence," was premature.

Cook makes no mention of the moon whatever after he left Svartevaeg for the trip across the Polar Sea, but the few references which he gives to the moon prior to that time are of interest.

While on this same October hunting expedition, on the evening of October 29, he says on page 107:

Howls of the dogs rose to a fierce crescendo. I supposed they were saluting the coming of the moon, as is their custom.

On this occasion the moon apparently missed connections, for Cook relates a bear hunt on that night which took place in darkness so dense that he could not see the dogs 20 feet away, and the bear not at all, though the animal was shot, skinned, and dressed.

The next appearance of the moon in Cook's story is on October 31, when Cook and the Eskimos were returning from Humboldt Glacier to Annoatok. On this occasion he says, on pages 111–112:

New and warm, with shimmering veils of color, attended by four radiant satellites, the golden face of the moon rose majestically over the sparkling pinnacles of the Greenland glaciers. Below the lovely planet-deflected images formed rainbow curves like rubied necklaces about her invisible neck. As the moon ascended in a spiral course the rose hues paled, the white light from the stars softened to a rich, creamy glow.

It seems a pity that such a wealth of metaphor and poetic fancy should have been squandered on an unresponsive heavenly body that heartlessly persisted in assuming a phase at that particular time which made it impossible, from purely astronomical causes, for her to "rise majestically over the sparkling pinnacles of the Greenland glaciers." In other words, the moon was three days past her last quarter and five days before the phase of "new" moon; therefore her "spiral course" did not bring her far enough above the horizon for Cook or anyone else to have beheld her ascend "majestically" or otherwise.

But—and herein lies the kernel of the matter—if Cook had been writing of the moon in 1908 instead of 1907 the descriptions which he gives of our lunar satellite would have fitted properly with its phases on the dates mentioned, for the moon was "new" on October 24, 1908, and entered her first quarter on November 1, 1908; therefore, aided by refraction, she could have been seen on October 31, 1908, "rising majestically above the sparkling pinnacles of the Greenland glaciers." In his treatment of his very few moonlight descriptions Cook plainly shows the manufactured nature of his narrative, for if his story had been really written from personal notes made from day to day he could not have fallen into the blunder of using the Nautical Almanac of 1908 when writing about the moon's phases of 1907.

Cook's most remarkable discrepancy of this nature, however, is noted on pages 177–178. He gives the date as March 2, and the incident occurs on his march through Bay Fiord. On page 177 we read:

Long after sunset (of March 2), as we were about to camp, a bear was sighted advancing on us behind a line of hummocks.

Then follows a description of the chase and slaughter of the bear, after which Cook writes:

It was nearly midnight before we returned to our sledge packs (on the ice of Bay Fiord). The work of building the houses was rendered difficult by the *failing moon* and the very low temperature.

At the place which Cook says he had reached on March 2, 1908,—that is, a point in Bay Fiord estimated at about 78° 50′ north latitude and 85° west longitude—the phase of the moon at local mean noon was 1 hour 16.9 minutes before new moon. On that date, from an observation point at sea level, like Bay Fiord, the moon did not rise above the horizon; and on March 3 the moon did not rise until 9 hours 31.4 minutes *a. m.*, and it set on March 3 at 5 hours 37.1 minutes p. m. local mean time, so that it was impossible for Cook to have had the light of the "failing moon" or any other kind of moon by which to build his snow houses at midnight of March 2–3.

Chapter 8 relates the "Moonlight quest of the walrus." This has no bearing on Cook's polar trip, and was possibly not even written by him, for on page 10 of the preface to his book he makes a statement relative to its authorship, a statement which appears in a slightly different form in the second and third editions of the book than the version presented in the first edition. I give herewith the paragraph in question in both forms of wording:

[From the first edition of My Attainment of the Pole.]

In the making of this book I was relieved of much of the routine editorial work by Mr. T. Everett Harry. By his ceaseless study of the subject and his rearrangement of material, a book of better literary workmanship has been made. For his long, friendly helpfulness, this acknowledgment is but a small reward.

[From the second and third editions of My Attainment of the Pole.]

In the making of this book I was relieved of much routine editorial work by Mr. T. Everett Harry, associate editor of Hampton's Magazine, who rearranged much of my material, and by whose handling of *certain purely adventure matter* a book of better literary workmanship has been made.

Note that in the first edition Dr. Cook does not confine the "relief" which Mr. Harry gave him to the "purely adventure matter" of the narrative, but does make this distinction in the second and third editions of the book.

Chapter 9 gives the usual Arctic traveler's conventional description of Eskimo life, with a brief outline of the preparations for the expedition and of the plan of the box house in which Cook and Franke lived at Annoatok. On page 135 Cook says:

By the time Christmas approached I had reason indeed for rejoicing. Our equipment was now about complete. In the box house were tiers of new sledges, rows of boxes, and piles of bags filled with clothing, canned supplies, dried meat, and sets of strong dog harness. *The food, fuel, and camp equipment for the polar dash were ready.* Everything had been thoroughly tested and put aside for a final examination.

Cook gives an interesting description of his Christmas, with Franke, among the Eskimos, and Franke also writes, on page 51, of "A German's experiences in high latitudes":

The Kriss Kringle did not remember us with any gifts, nor could we give any, but Dr. Cook and I shook hands and *promised each other faithfully to stand by one another to the end.*

Of this compact we may say that Franke faithfully fulfilled *his* part.

Cook opens chapter 10 of his book with an account of a "scouting expedition," which was sent out partly to search for the most practicable trail across the ice fields and partly to offer relief to a shipwrecked crew supposed to be at Cape Sabine. The men left the camp at Annoatok on January 14, 1908, and returned on January 16, without having found any shipwrecked persons. On pages 152–153 Cook says:

Another storm came with still more violent force a week later (about January 23). Our men suffered little, but many of the natives in neighboring villages were left without clothing or sleeping furs. In the rush of the storm the ice left the land, and the snow houses were swept into the sea. Men and women without clothing barely escaped with their lives. Two of our new sledges, some dogs, and three suits of winter furs were lost. A rescue party, with furs, had to be sent to the

destitute people. Fortunately our people were well supplied with bed furs, out of which new suits were made. Sledge loads of our furs were also coming north, and instructions were sent to use these for the urgent needs of the sufferers. Other things were sent from Annoatok, with returning excursionists, and in the course of a week the damage was replaced. But the loss was all on the expedition and deprived many of the men in their northern journey of suitable sleeping furs.

Strangely enough, Franke makes no mention of this storm nor of the relief sent to the natives, but does relate the short two days' trip to relieve the supposed shipwrecked refugees at Cape Sabine. It may be that this storm which Cook says swept the snow houses into the sea and destroyed so much property is a part of the "purely adventure matter" written by T. Everett Harry, and is only related to add zest and excitement to the story.

Cook then gives a brief account of a second relief expedition sent to the help of the stranded people supposed to be at Cape Sabine. Of this relief expedition Rudolph Franke was a member. Some supplies were taken to Cape Sabine and Cape Veile and the stuff cached at those points, and the party returned to Annoatok after an absence of four days.

On page 154 of his book Cook says:

The next party of eight sledges, led by Esseyou, Kudla, and Me-tek, started on February 5. The object was to carry advance supplies to the head of Flagler Bay and hunt musk ox to feed the sledge teams as they moved overland. We were to meet this party at an appointed place on the way.

Franke says, on page 66 of A German's Experiences in the Far North:

In the *second week of February* another advance expedition started for Grinnell Land to find a good overland trail to Cannon Fiord or Eureka Sound, on which expedition I did not go, because during the last eight days before the main expedition was to start much work remained to be done. This latest advance expedition consisted of five sleds under the leadership of Kudla and Esjchu.

Note that Cook says this second advance expedition consisted of eight sledges driven by three Eskimos, while Franke says it included five sleds under the leadership of two Eskimos.

On page 155 of My Attainment of the Pole Dr. Cook says:

We made our last arrangements, fastened our last packs, and waited impatiently for the sunrise here at this northernmost outpost of human life, just 700 miles from the pole. And this was the problem that now insistently and definitely confronted us after the months of planning and preparation: Seven hundred miles of advance; almost a thousand as our route was planned; 1,000 miles of return—2,000 miles in all, allowing for detours, for the line to be followed could not be precisely straight; more than 2,000 miles of struggling travel across icy and unknown and uninhabitable wastes of moving ice.

On the morning of February 19, 1908, I started on my trip to the North Pole.

Again Dr. Cook differs from Rudolph Franke as to the day that the start was made. Compare the statements of the two men as given in their respective books:

[From Cook's My Attainment of the Pole, p. 155.]

On the morning of *February 19, 1908*, I started on my trip to the North Pole. Early, as the first real day of the year dawned, 11 sledges were brought to the door of our box house and lashed with supplies for the boreal dash. There were *4,000 pounds* of supplies for use on the Polar Sea and *2,000 pounds* of walrus skin and fat for use before securing the fresh game we anticipated. The 11 sledges were to be driven by Franke, 9 Eskimos, and my self. They were drawn by *103* dogs, each in prime condition.

[From Franke's A German's Experiences in the Far North, pp. 66–67.]

On the morning of the *25th of February, 1908*, 11 sleds stood in front of the box house in Annoatok, loaded to their capacity. Our expedition supplies, irrespective of the dog food, weighed about *2,000 kilograms*, which weight was evenly divided, making a very heavy load for each sled.

(NOTE.—Two thousand kilograms is equal to 4,400 pounds.)

Thus we see that Cook and Franke are six days apart in the day that each gives for departure from Annoatok. At present, in order to follow Cook's narrative closely, we shall adopt the date which he gives, February 19, 1908.

The first day's march, as given on page 157 of My Attainment of the Pole, amounted to 20 miles, and "Cape Sabine was but 30 miles away" from their first camp. Cook continues, on page 157:

We made about 3 miles an hour, and were able to ride occasionally. At noon, of *February 20*, we stopped and coffee was served from our ever-hot coffee box. While we sat regaling ourselves a great ball of fire arose along the icy horizon. Our hearts were glad. The weather was bitterly cold; the temperature was 51° F. (probably a typographical error and intended for −51° F.); but the sun had risen; the long night was at an end.

Franke also mentions their first view of the sun the day after the expedition started; but he, of course, makes the date on February 26 instead of February 20.

On Cook's date of February 21, we again notice a marked difference between his account and Franke's story of the third day away from Annoatok. I herewith give both versions:

[From My Attainment of the Pole, pp. 158–159.]

We turned about, took the advance supplies, and picked a course through Rice Strait to avoid the rough ice northward. Here the surface was good, but a light wind with a temperature of −52° F. came with great bitterness. The dogs refused to face the wind and required some one to lead the way. The men buried their faces in the fur mittens, leaned on the upstanders, and ran along.

[From A German's Experiences in the Far North," p. 69.]

Our sled loads toward the end of the march (Franke's date of Feb. 26) were too heavy for the dogs and we were obliged to leave the loads overnight on the ice. The next morning we were glad to find them unmolested by polar bears or other nocturnal marauders. As the dogs had sore feet from the long, severe march, *a day of rest was ordered*. (This "day of rest" was the third day out, as Franke tells the story.)

Thus, while Cook and Franke are six days apart in their date of leaving Annoatok, they are now only three days away from winter quarters, seven days apart. In view of some events which I shall note later, this extra day is of more than passing interest.

Franke's account of the day following the "day of rest" (the fourth day out) coincides closely with Cook's story of "February 21" (Cook's third day out), as is seen by a quotation from page 69 of Franke's book, and Cook's version of his "February 21," which I herewith repeat for the purpose of comparing the two:

Cook's *third* day out (from My Attainment of the Pole, pp. 158–159).

We turned about, took the advance supplies, and picked a course through Rice Strait to avoid the rough ice northward. Here the surface was good, but a light wind with a temperature of −52° F. came with great bitterness. The dogs refused to face the wind, and required some one to lead the way. The men buried their faces in the fur mittens, leaned on the upstanders, and ran along.

Franke's *fourth* day out (from A German's Experiences in the Far North, p. 69).

As we started the next morning each one of the sleds had an additional box or two of the provisions which our advance expedition left here, so that we needed plenty of time to transport these heavy loads over the ice foot of the island on Rice Strait, but there, too, on account of the heavy wind the ice fields were all clear of snow. We made only slow progress.

Evidently this is a description of the same day's doings; but, as I have already said, Cook has omitted the day of rest, therefore the two men are an additional day apart.

Cook uses only five lines to describe his march of (his) February 22—

Passing Cape Rutherford on February 22, we followed the coast. Here the wind came from the right, caught the tip of the nose, burning with a bleaching effect, which in camp later turned black. At Cape Veile the cache igloo was sighted and there camp was pitched.

He continues his account of *February 23* on pages 159–160:

In the morning (*February 23*) the minimum thermometer registered −58° F. * * * That night we camped near the Weyprecht Islands. Along Bache Peninsula we saw hares staring at us. Four were secured for our evening meal. Dog food had also to be prepared. In efforts to divide the walrus skin, two hatchets were broken. During the night the skin was sufficiently softened by the heat to be cut with the hatchets. * * * It was the first satisfying sleep of the journey for me.

Remember that this quotation which I have just given is Cook's description of the day of February 23, and he adds that it (the night of February 23–24) was his first satisfying sleep of the journey. Then he continues his story:

In the morning of the 23d we heard sounds to the south which at first we thought to be walrus. But after a time the noise was interpreted as that of the dogs of the advance party. They were camped a few miles beyond and came to our igloos at breakfast.

I have quoted thus fully from pages 159 and 160 to show that Cook herewith drops another day from his story. I shall at present make no account of the day when Franke says they "rested" in camp, as that shows merely a discrepancy between the stories of the two men; but here, after a long account of the movements of the party on February 23, and a description of the ensuing night spent in camp, Cook continues his narrative of the next day following the 23d of February with these words:

In the morning of the *23d*, etc.

That this is not a typographical error is shown by its appearance in each of the three editions of Dr. Cook's book. While these minor discrepancies may have no direct bearing on Dr. Cook's ultimate attainment of the pole, they do serve to show a general tendency toward inaccuracy of detail; also that his "daily" (?) records were not made from day to day, but were from memory, after a period of time of greater or less duration.

On pages 160–161 Cook continues his story of meeting the advance party and the consequent return of Franke to the Annoatok headquarters:

One musk ox and 11 hares had been secured. The valley had been thoroughly hunted, but no other game was sighted. The ground was nearly bare and made sledge travel impossible. They were bound for Annoatok at once. This was sad news for us. We had counted on game with which to feed the dog train en route to the polar sea. If animals were not secured, our project would fail at the very start.

and this route would be impossible. To push overland rapidly to the west coast was our only chance, but the report of insufficient snow seemed to forbid this. Something, however, must be tried. We could not give up without a stronger fight. *The strong probability of our failing to find musk ox*, and extending the expedition for another year, over another route, *made it necessary to send Franke back to headquarters to guard our supplies.*

Perhaps nowhere in Cook's narrative is greater inconsistency shown than here. On page 75, as I have already quoted, he says:

I could see, in my mind, * * * myself, *alone*, striving to reach its hitherto unattained goal.

And, again, on page 76:

That I, *one white man, might alone* succeed in this quest, gave me an impetus—

And so forth.

While thus planning to make the dash for the pole "*alone*," so far as white companions were concerned, he allowed Franke to believe that he, too, was to share in the effort. Now, notwithstanding his (privately) preconceived plan to be "alone" at the pole, he gives as his only reason for Franke's return to Annoatok, "the strong probability of failing to find musk ox," basing this "probability" on the report of the advance expedition. But on page 80 Cook says:

I sent out a few hunters along the intended line to seek for haunts of game, *but I was not surprised that their searching in the dark was unsuccessful, and it merely meant that I must depend upon my previous knowledge of conditions.* I knew from the general reports of the natives, *and from the explorations of Sverdrup*, that the beginning of the intended route offered abundant game, and the indications were that further food would likewise be found as we advanced.

In Capt. Otto Sverdrup's book, New Land, he reports an abundance of game after leaving the valley; therefore Cook had no cause to be disheartened at the report of his advance party. A few marches only would take him into the heart of the game country, as he well knew from Sverdrup's reports; therefore it is difficult to understand why his previous unconcern at the failure of his winter exploring parties to find game is suddenly changed to a state of mind which causes him to say, "This was sad news for us." So far as the report of "insufficient snow" is concerned, Sverdrup reported a like condition in this locality; therefore Cook knew before he started that for a few marches in this region he might find the surface of the country blown clear of snow by the high wind, which Sverdrup describes as a "cow wind," or a wind strong enough to blow the horns off the cattle. It therefore appears that Cook, who had from the first secretly planned to be the only white man on the polar dash, was seeking an apparently plausible excuse to give for Franke's return to Annoatok. The inconsistency of his statement that it was necessary "to send Franke back to headquarters to guard our supplies" is emphasized when we note what he says on page 446:

Peary's contention that he placed Murphy in charge "to prevent the Eskimos from looting the supplies and equipment left there by Dr. Cook," is *a mean, petty, and unworthy slur upon a brave, loyal people, among whom thievery is a thing unknown.*

Why, if this statement is true—and we have every reason to believe it is—was it necessary for Franke to return to headquarters to guard the supplies?

Let us see how Franke regarded this action. On page 72 of A German's Experience in the Far North he says:

Soon he (Cook) called me into his snow house and told me that he could not take me any farther, and I was to return to Annoatok with Kudla and Ejshu, there to guard our headquarters and supplies. By the Eskimos whom he was going to send back when he reached the polar sea he would send me instructions and tell me of his experience to that point.

I stood there as though I had been struck by lightning at his words. I made counter propositions and pleaded with Cook, trying to convince him that I wanted to go with him as far as the polar sea, and then, if necessary, return to Annoatok with the Eskimos, but my words were of no avail; he would not listen. Did Cook want to get rid of me? Had I failed in any way to fulfill my duties? Did he not want me to go farther with him because I was not an American? These and similar thoughts revolved in my mind. I was obliged to keep a tight rein on myself, and behave in an orderly manner for the sake of the impression that a white man must make on his Eskimo companions, but I tried to debate the situation in the short time before the expedition started.

The best dogs and some Eskimos were sorted out, as well as all fur clothing and provisions for the expendition to the North Pole. A hasty handshake and we parted, Cook to the west and I to the east. I allowed the Eskimos to chatter and talk among themselves without attention from me. They talked to me, but I could not answer them. I sat on my sled, staring ahead and thinking.

In the evening we reached Cape Viele and late in the afternoon of the next day we came to Cape Sabine, but I scarcely realized where we were. To me it mattered not. I was numb with disappointment. Nothing made any impression on me. I even neglected proper precautions of care for my body, and my nose was frozen, notwithstanding the faithful Kudla warned me several times of the danger. My big toe was also frozen without my realizing it.

When Dr. Cook condemns Peary for sending Capt. Bartlett back to land before the highest northing was reached he would do well to obey the scriptural injunction to first destroy the "beam" in his own eye before he tried to remove the "mote" from Peary's. His nominal reason that he feared a scarcity of provisions is so illogical as to be ridiculous. He knew that Sverdrup reported a rich abundance of game—musk oxen, polar bears, and Arctic hares—between Flagler Bay and Bay Fiord. He had every reason to believe, notwithstanding the discouraging report of his advance party of Eskimos, that within two or three marches he would find food in plenty. The heavy going was likewise expected. Therefore we must conclude that his true reason for not permitting Franke to continue as far as the Polar Sea was that he firmly believed that they *would* encounter the game reported by Sverdrup and he would thus be robbed of his logical reason for insisting on Franke's return. That this injustice of Cook rankled sorely in Franke's mind is shown on page 102 of his book, where he says:

Knud Rasmussen had intended to visit me this winter, but up to this time he has not come. I regret this very much. We understood each other thoroughly, and we could have made a small expedition on our own account to Crocker Land. I have not the necessary instruments; otherwise I should have gone alone to Lady Franklin Bay, through Grant Land and Greely Fiord, and farther along through Fridthof Nansen Sound on to the polar sea.

And again, on pages 106–107:

To-day there was another beautiful sunset, but I asked myself, "Why are you standing here? What for? Why did not Cook take you along to the Pole?" That is what I have asked myself every day since we parted in Flagler Bay. At first I was angry with Cook. Yes; I hated him. Now I am more quiet and am beginning to forgive him. Yes; I even wish him luck and success.

Franke turned back, according to Cook's narrative, on February 24—though to fit his previous story he should have made the date February 23. Cook and his Eskimos made a long march after Franke left them, reaching the head of Flagler Bay late at night, where they camped. Cook says of this march:

A hard wind, with a temperature of —60° F., had almost paralyzed the dogs, and the men were kept alive only by running with the dogs. Comfortable houses were built and preparations made for a day of rest. On the morrow we aimed to explore the land for an auspicious route.

This day of rest, according to Cook's story, was therefore on (his) February 24.

Chapter 11 is entitled "Exploring a new pass over Acpohon" (Ellesmere Land) and begins with the words:

Early in the morning of February 25 the dogs were spanned to sledges with heavy loads and we pushed into the valley of mystery ahead. The easy slopes were enlivened with darting, downy hares. We advanced 20 miles. Pushing onward, we found no fresh signs of musk ox. A few bear tracks were seen, and a white fox followed us to camp. We shot *16 hares*, and for the evening meal unlimited quantities of savory hare meat made an appetizing broth.

Even at this point the prospect for game was improving, for an Arctic hare averages 10 pounds in weight, and 16 of the animals added 160 pounds of fresh meat to the supplies of the party. Cook continues, on pages 163–164:

On the day following—

This was Cook's February 26—

everything was advanced to this point. A prolonged search for musk ox was made, with negative results. On the morning of the 27th—

Cook is still short one day in time—

full loads were taken on our sledges. * * * *Hare and fox tracks increased in number.* * * * Here, I knew, were excellent feeding grounds for musk ox and caribou. But a careful scrutiny gave *no* results *for a long time.*

At this point Cook makes it very difficult to follow the thread of his story and check his dates. He says, on his date of February 27, that their search for musk oxen "gave no results for *a long time.*" Just what he means by "a long time" is left for the reader to determine. However, by careful study and analysis, one can arrive at an exact date. Cook says on page 164:

To us the musk ox was now of vital importance. The shorter way, over Schley Land and northward through Nansen Sound, was possible only if game in abundance was secured en route. If the product of the chase gave us no reward, then our polar venture was doomed at the outset. One day, with a temperature of 100° below the freezing point, and with a light but sharp Arctic wind driving needles of frost to the very bone, we searched the rising slopes of ice-capped lands in the hope of spotting life. *For three days* the dogs had not been fed.

The finding of a small herd of musk oxen is then described, concluding with the words:

Within an hour three huge, fat carcasses were down in the river bed. A temporary camp was made, and before the meat froze most of it had passed palates tantalized by many days of gastronomic want.

Cook mentions feeding the dogs on (his) February 23. From that time until the musk-ox hunt he says nothing of feeding the dogs, but commenting on Franke's return with the members of the advance expedition, he says on page 161:

The reduced numbers of the party gave us extra rations to use in times of need.

This probably referred only to rations for the human members of the party, therefore the three days that the dogs had not been fed would mean (Cook's) February 24, 25, and 26.

which brings the date of the successful musk-ox hunt to (his) February 27. But three days can hardly be construed as "many days" of gastronomic want, therefore we must add at least one day to that time to make it even approximately "many" days. This makes the date (Cook's) February 28. A few hours after the musk-ox hunt just related, the party was overtaken by a storm and obliged to camp for the night. On page 166 Cook says:

When we emerged in the morning the sky was clear. * * * We advanced about 10 miles and made a descent of 500 feet, first camping upon a glacial lake.

If the day of the first musk-ox hunt was February 28, this short march must have been made on February 29. On page 167 Cook writes:

In the searchlight of the frigid dawn I noticed that our advance was blocked by a large glacier, which tumbled barriers of bowlders into the only available line for a path. A way would have to be cut into this barrier of icebergs for about a mile. This required the full energy of all the men for the day.

This accounts for Cook's March 1. While the men were at work breaking a path through the ice, he explored the neighboring country. On page 170 he mentions the extreme cold and adds:

To economize fuel, the fires later were extinguished before retiring to sleep. In the morning we were buried in the frost falling from our own breath.

This brings us to Cook's March 2. On this day the party had advanced 25 miles, and were looking forward to a point about 10 miles beyond as the next camping place, when a herd of musk oxen was sighted. I quote, in part, from the description of the hunt which ensued:

I leveled my glasses on the whale-backed mountain at which the Eskimo were staring, and, sure enough, there were three musk oxen on a steep snow slope. They were not only 3 miles away, but at an altitude of perhaps *a thousand feet above us.* It took but a brief time to cover the 3 miles. All but five dogs from each sledge were freed from harness. There were seven musk oxen in all. The strife was soon over. I snapped my camera at an old bull which at that moment broke through the dogs, and, followed by a group of them, was driven madly over a cliff in a plunge of 5,000 feet. The other oxen were soon killed by the hunters. We began the descent, but the spirit of the upward rush was lost. The dogs, too full to run, simply rolled down the slopes, and we pushed the sledges ourselves. The ox that had made the death plunge was *picked up and taken as reserve meat.*

When we consider that the oxen as first sighted were "at an altitude of perhaps a thousand feet above the party"; that the one which made the death plunge was "driven madly over a cliff in a plunge of 5,000 feet," we must wonder how the difference in altitude between a thousand feet and 5,000 feet was bridged by the men on their way back to camp, for in order to reach the dead animal they must have been obliged to descend 4,000 feet below the level of their camp, which was at sea level, and drag the beast back to camp. It would also be interesting to know how much of that particular musk ox was left to "pick up and take as reserve meat" after its "mad plunge of 5,000 feet."

The next day (Cook's March 3) he describes the sunrise. On page 175 he says:

A few minutes before midday the sledge train halted. We sat on the packs and with eyes turned southward waited. To us there appeared a play of suppressed light and bleached color tints which inspired my companions to shouts of joy. Slowly and majestically the golden orb lifted. The Eskimos greeted the day god with savage chants. The sun, a flushed crimson ball, edged along the wintry outline of the mountains' purplish, snowy glitter. * * * Then slowly the great blazing globe sank into seas of fire-flushed ice.

The sunrise just described occurred on Cook's March 3, and were it not for the description given on February 20, already quoted, we should infer that the sunrise of March 3 was the sun's first appearance in 1908.

On page 176 Cook says:

March 2 was bright and clear and still.

The context shows that this is the day of the sunrise just described, which was really Cook's March 3, therefore he here has dropped another day from his calendar. The day—which he now calls March 2—closes with an account of the bear hunt to which I have already referred, when Cook and his Eskimos returned to their camp on the ice of Bay Fiord and built their igloos by the light of "the failing moon," although at that time and place the moon was invisible to mortal eyes, for on March 2, 1908, the moon was almost exactly in conjunction in longitude with the sun. It was also below the sun and approximately 4° from it. Therefore, even with a considerable elevation above sea level, or even if there were extraordinary refraction conditions, it was not possible to have seen the moon on either March 1 or March 2.

The mix-up in Cook's dates does not account for his moon-lit night, as some charitably inclined person might argue, for the moon rose in the morning of March 3, 1908, at about 9.30 and set at about 5.37 p. m., so that it must have been invisible at "midnight." Furthermore, the moon on March 3, 1908, although above the horizon, showed only a thin line of light on the limb toward the sun, and it would be difficult to see this line of light, even under perfect atmospheric conditions.

Page 178 contains these words:

The sun rose in the morning of March 3 with warm colors.

Cook's March 3, when "the sun rose in the morning with warm colors," is the first day of his trip on which he commenced to make observations of the shadows. As is well known now, these shadow measurements are advanced by Cook as his strongest evidence that he reached the North Pole. Therefore the day that he first observed the shadows is of special interest. The subject will be referred to at greater length later in this analysis.

After a long dissertation on the shadows, including the statement that March 3 marked the coldest temperature of the year (—83° F. in the early morning hours), Cook continues on page 182:

In two difficult marches we reached Eureka Sound.

These "two difficult marches" account for Cook's March 3 and March 4. On page 183 Cook says:

Close to a cape where we paused on Eureka Sound to cut snow blocks for igloos, E-tuk-i-shook noted two bears wandering over the lands not far away.

This must have been at the end of the second "difficult march" or on the evening of Cook's *March 4*. The bears which they had sighted were stalking a herd of musk oxen, 20 in number, and on page 184 Cook says:

In a short time the entire herd was ours. The meat was dressed, wrapped in skins, the dogs lightly fed, and the carcasses hauled to camp. Then we completed our igloos. Bears and wolves wandered about camp all night, but with 100 dogs, whose eyes were on the swelled larder, there was no danger from wild brutes.

Early in the morning of *March 4* we were awakened by a furious noise from the dogs.

Here Cook drops *another* day from the calendar. According to his own story the musk oxen were killed on March 4, or the same day that the party reached Eureka Sound after the two "difficult marches" of March 3 and 4, and now, after a night in the igloos, they were awakened "early in the morning of *March 4*" by a furious noise from the dogs. This makes three days in all that Cook has dropped from his narrative. His diary seems to have been kept in a rather slipshod manner—if kept at all—for in order to make his narrative fit with calendar dates, the morning when they were awakened early by the dogs would have to be March 7 instead of March 4. He continues on page 184:

Koo-loo-ting-wah peeked out and saw a bear in the act of taking a choice strip of tenderloin from the meat. With a deft cut of the knife a falling block of snow made a window, and through it the rifle was leveled at the animal. A holiday was declared. It would take time to stuff the dogs with 20 musk oxen and a bear. Later the same day, another herd of 20 musk oxen were seen. Now even the Eskimos' savage thirst for blood was satisfied.

This holiday to "stuff the dogs" is therefore Cook's March 4, but to make his dates consistent it should be March 7. However, the holiday apparently lasted more than one day, for on page 185 he says:

The pot was kept boiling and the igloos rang with chants of primitive joys. *On March 7* we began a straight run to the polar sea, a distance of 170 miles.

Therefore his holiday apparently lasted for three days, (his) March 4, 5, and 6, and on (his) March 7 they resumed their journey. According to the calendar, however, the holiday would have occupied March 7, 8, and 9, and Cook would have resumed his journey on March 10. However, he says on page 185:

In six marches we reached Schei Island, which we found to be a peninsula. We halted here and a feast day was declared. Twenty-seven musk oxen and 24 hares were secured in one after-dinner hunt. This meat guaranteed a food supply to the shores of the polar sea.

Since, according to Cook, he started on this "straight run" on March 7 and reached Schei Island in six marches, he must have reached Schei Island on his March 12, and the feast day was his March 13. But according to the calendar dates he started on his "straight run" on March 10 and reached Schei Island on March 15, while his "feast day" occurred on March 16.

As the lower extremity of Schei Island is, in round numbers, only 60 miles from "the shores of the polar sea," it would seem that 27 musk oxen and 24 hares would indeed "guarantee a food supply" to that point.

Cook differs from earlier and later explorers in his assertion that "Schei Island" is a peninsula. This island was discovered by the Sverdrup expedition and named for a member of the party. It appears as an island on Capt. Sverdrup's map. In Harper's Magazine for October, 1915, Donald B. McMillan, who visited this place some 14 years later than Sverdrup and 6 years later than Cook, makes this report:

Our four days at Schei Island stand out as one of the bright spots of our trip.

McMillan's route as shown on his map in the same magazine shows that he traveled around the southern and western sides of the island, where, if it was a peninsula, it would have been connected with Axel Heiberg Land; therefore McMillan was in a position to state whether or not it was an island. Hence we find that Cook is in a minority in his statement that Capt. Sverdrup's "Schei Island" is a peninsula.

From Schei Island to Svartevaeg it is impossible to even approximately check Cook's progress or dates. After stating, on page 185 of My Attainment of the Pole, that in six marches we reached Schei Island, he digresses to describe a bear hunt which took place somewhere "in our march of glory through the musk-ox land," time and place not given, except that on page 186 he says:

> We had made a long march of about *40 miles*. The temperature was —*81°*.

This temperature of —81° shows that in his story he suddenly reverts to March 2, for his night of March 2–3 is the only time when this extremely low temperature was felt. That night the temperature ranged from —79° to —83° F., and as a bear was killed on the afternoon of March 2 we are forced to conclude that the bear hunt which Cook now takes four pages to describe occurred on that date. The first account is given on page 177 and the other (and longer) on pages 186–189.

A good description of a snow house or igloo and its manner of building is given after the bear hunt, together with a few details about Ellesmere Island, or "Acpohon," as Cook and the Eskimos call that land. After some 10 pages filled with these various digressions, Cook reverts to a short description of Schei Island, but makes no further mention of the date of his arrival there or his departure therefrom. His feast day appears to have been declared on (his) March 14, but he does not say how long he remained on the island. He says that caches of fur and fuel were left there for the return, and continues, on page 193:

> In passing Snags Fiord (probably meant for Stangs Fiord) the formation changed. Here, for *several marches*, game was scarce. The temperature rose as we neared the polar sea. * * * As we neared Svartevaeg the carboniferous formation became more evident. Camping in the lowlands just south of Svartevaeg Cliffs, we secured 7 musk oxen and 85 hares.

If Cook left Schei Island March 15—and, in order to conform with his story, they could not have left that point earlier—and for "several marches" found game scarce near Snags (or Stangs) Fiord, we may allow March 15 and March 16 for his "several marches." The word "several" usually indicates more than two, but in order to be fair to Cook we concede that his marches of March 15 and 16 are covered by that term. This gives him March 17 to travel through the better game lands "just south of Svartevaeg Cliffs," where he secured 7 musk oxen and 85 hares.

Thus we see that it is only by the most liberal stretching of dates and a generous allowance of elasticity for the other events of the trip that Cook's narrative can be made to conform to his dates up to this point. However, so far as I am aware, his arrival at Svartevaeg at some time or other is undisputed, and March 17 is doubtless as good as any other date for him to have claimed to have reached that point of land.

Chapter 13 of My Attainment of the Pole is entitled "The trans-Boreal dash begins. Five hundrel miles from the pole." The opening paragraph reads:

> Svartevaeg is a great cliff, the northernmost point of Heiberg Land, which leaps precipitously into the Polar Sea. * * * *It is 520 miles from the North Pole.*

This places Svartevaeg at 81° 20′ north latitude, which is the position accorded it by Capt. Sverdrup. Cook continues:

> From this point I planned to make my dash in as straight a route as might be possible. Starting from our camp at Annoatok *late in February*, when the curtain of night was just beginning to lift, *when the chill of* the long winter was felt at its worst, we had forced progress through deep snows, over land and frozen seas, *braving the most furious storms of the season* and *traveling despite baffling darkness*, and had covered in less than a month *about 400 miles—nearly half the distance between our winter camp and the pole.*

Several points in this paragraph are worthy of examination. The first is the time that Cook left Annoatok. As I have previously stated, Cook gives the date of the start as February 19, while Franke places it on February 25. Now, Cook says, "Starting from our camp at Annoatok *late in February.*" This, of course, is an elastic expression, but February 19 is not generally considered as "late" in a month of 29 days, which February had in 1908.

Cook also says that the start was made "*when the chill of the long winter was felt at its worst.*" True, the mercury reached its lowest point during the month that Cook was en route from Annoatok to Svartevaeg, but in this connection I shall quote Cook's own words, as found on pages 169 and 178. On page 169 he says:

> The day was beautiful. For the first time I felt the heat of the sun. It came through the thick fur of my shoulders with the tenderness of a warm human hand. * * * If I had been asked to guess the temperature of the day, I should have placed it at —25° F.

I also quote from page 178:

> The sun rose in the morning of March 3 with warm colors, painting the crystal world surrounding us with gorgeous tints of rose and old gold. It was odd that in the glare of this enrapturing glory we should note *the coldest day of the year.*
>
> With the returning sun in the Arctic comes the most frigid season. Because of the persistence of terrestrial radiation, we have the coldest weather of the year with the ascending sun.
>
> It is a fortunate provision of nature that these icy days of the ascending sun are usually accompanied by a breathless stillness. * * * Although the mercury is frozen, the body, when properly dressed, is *perfectly comfortable.*

As Cook and his men were outfitted with their new fur clothing, made expressly for the polar trip, they must have been "properly dressed," and therefore "perfectly comfortable." This would nullify any apparent hardship endured by the expedition en route from Annoatok to Svartevaeg, account of the excessive cold.

Cook also says that they "had braved the most furious storms of the season."

Only twice does he mention any storms encountered while en route from Annoatok to Svartevaeg. On page 161 he says of (his) February 23, the day that Franke returned:

> A hard wind, with a temperature of —60° F., had almost paralyzed the dogs, and the men were kept alive only by running with the dogs.

Cook claims that on the polar sea, with light loads and a small party, he was able to make only 10 to 15 miles in a day when the wind was high, therefore this storm on his February 23 could not have been of unwonted severity, when with a caravan of 10 sleds, 100 dogs, and a large number of men, he made 25 miles.

The other storm which he mentions is noted on page 165, where he says:

> Continuing our course, we crossed the divide in a storm.

These are the only storms which Cook claims to have encountered between Annoatok and Svartevaeg, while he repeatedly speaks of "still air," "beautiful days," "bright sunshine," and so forth. Thus "the most furious storms of the season" would seem to have been only a slight obstacle to their onward progress.

In addition to "braving the most furious storms of the season," Cook says that they traveled "despite baffling darkness." This, too, is out of accord with the details of his story as presented in foregoing chapters. On page 156 he says of the day that the start was made from Annoatok:

> When we started, a few stars were seen between thin clouds, but *the light was good.*

On page 157, he says of the second day out:

> The next day brought a still air with a temperature of —42° F., and *brilliant light at 8 o'clock.*

On page 159, he says of his February 22:

> The day opened beautifully, with a glow of rose to the south, which colored the snows in warm tones.

As the light increases rapidly after the sun's first appearance in the Arctic regions, if the light was as good as Cook describes on the first days of the trip, he did not suffer either delay or hardship from the "baffling darkness."

Dr. Cook says that notwithstanding untoward conditions, he "had covered in less than a month about 400 miles—nearly half the distance between our winter camp and the pole."

Cook's narrative gives the start from Annoatok on February 19. On page 155, he says:

> This was the problem that confronted us: Seven hundred miles of advance, almost a thousand miles as our route was planned; 1,000 miles of return, allowing for detours (for the line to be followed could not be precisely straight), more than 2,000 miles of struggling travel across icy and unknown and uninhabitable wastes of moving ice.

As the distance from Svartevaeg to the North Pole is only 520 miles, the distance which Cook had traveled (according to his schedule just quoted) in order to reach Svartevaeg, must have been about 480 miles instead of "about 400 miles." This is one of the many inaccuracies in the story.

COOK'S DAILY MILEAGE.

Cook does not give a complete record of the daily distances traveled while en route across Ellesmere Island, therefore it is impossible to give his average mileage per day during this portion of his trip. He says that he "traveled about 400 miles" in less than a month. As he claims to have left Annoatok on February 19, and reached Svartevaeg on March 17, he was, according to those dates, 28 days en route. But he records five

days when a holiday or feast day was declared, which reduces the number of days of actual traveling to 23. This makes his daily average a little over 17 miles per day. The last 170 miles (see p. 185) were made in 10 days of travel, an average of 17 miles per day. But the other days on which Cook records his mileage show a record of 20, 30, 25, 20, 10, 25, 40, and 17 miles daily, and these distances, together with his 170 miles in 10 days, gives him an average of a scant 20 miles per day for 18 days, or, to be exact, 19⅝ miles per day. This accounts for 18 days and 357 miles, leaving 43 miles of the 400 to be traveled in five days, or an average for those five days of 8⅝ miles per day. Cook's 18 *longest* marches from Svartevaeg to the place he called the pole, give an average slightly less than the average of his 18 longest marches from Annoatok to Svartevaeg (about half a mile per day less), which is remarkable when we consider that he traveled from Annoatok to Svartevaeg with a large number of Eskimos, dogs, and heavily loaded sledges; while from Svartevaeg to his nominal pole, his party was reduced to the lowest possible limit, both as to numbers and baggage. We must remember, too, that the 18 days for which I have shown the average mileage between Annoatok and Svartevaeg are the 18 days on which he happened to record his mileage; while the 18 days for which I have shown an average between Svartevaeg and Cook's pole are the days on which he made the longest marches between those points.

COOK'S ESKIMO COMPANIONS.

Cook is vague as to the number of Eskimos who accompanied him from Annoatok to Svartevaeg. In Hampton's Magazine for January, 1911, he says he left Annoatok with 11 sledges driven by 10 Eskimos and himself, omitting all mention of Franke. But as he says editorial changes were made in the Hampton's story, he can not be held strictly to account on that story. In his book, My Attainment of the Pole, page 154, he says that an advance party of "eight sledges, led by Es-se-you, Kudla, and Me-tek, started on February 5." He gives the number of sledges but leaves us in doubt as to whether or not more than three Eskimos accompanied the sledges. On page 155 of the book, he says:

On the morning of February 19, 1908, I started on my trip to the North Pole. The 11 sledges were to be driven by Franke, 9 Eskimos, and myself. They were drawn by 103 dogs, each in prime condition.

On page 160 he says:

They (the advance party) were camped a few miles beyond, and came to our igloos at breakfast.

And on page 161:

There was no objection to the return of *most of the other party* (the advance party), but we took their best dogs and sledges, with some exchange of drivers.

Finally, on page 200, Cook says:

The time had come to part with *most of our faithful Eskimo companions.*

Thus we note that nowhere in his account of the first part of his journey does he state the number of men composing the expedition as far as Svartevaeg. Notwithstanding his vagueness on this point, we can, however, arrive by deduction at a close estimate of the number of Eskimos who went with Cook to the polar sea. On page 155 we are told that—

The 11 sledges were to be driven by Franke, *9 Eskimos,* and myself.

This allows one man to each sledge. We may therefore assume that each one of the eight sledges of the advance party also had a driver. This makes a total of 19 men on the morning when the advance party breakfasted with the main expedition in the igloos of the latter. This was the point where Franke was sent back to Annoatok, and Cook says on page 161:

There was no objection to the return of *most of the other* (the advance) party.

If the advance party contained 8 men, "the most of the other party" must mean at least 5. This would leave Cook with 12 Eskimos who accompanied him to Svartevaeg. This is 2 more than Cook gives in his New York Herald story of September 23, 1909, but as Cook disclaims responsibility for the accuracy of the Herald story, he can not be held accountable for any seeming discrepancies in figures between that and his later accounts. I repeat that it is contrary to the theory and practice of Arctic explorers that greater speed can be made by a party of 13 men, 13 heavily loaded sledges, and something over a hundred dogs than can be made by 3 men with 2 sledges and 26 dogs.

It is also worthy of note that Cook's greatest claimed speed for any one day was made while encumbered with his large party and heavily loaded sledges en route from Annoatok to Svartevaeg—that is, 40 miles on (his) March 2—while the greatest claimed speed made in any one day between Svartevaeg and Cook's pole was made on March 21; that is, 29 miles in 14 hours. At the end of this hike of March 21 Cook says on page 214:

Too weary to build an igloo, we threw ourselves thoughtlessly upon the sleds for a short rest and fell asleep.

While, by way of contrast, after the long march of 40 miles on March 2, a spirited hunt for musk ox and bear was enjoyed, which must have added several miles to the day's journey of 40 miles, for Cook says on pages 187–188:

Our sledges began shooting the boreal shoots. After rushing over minor hills, the dog noses sank into bear tracks. A little farther along we realized we had rivals. * * * The bears were quick to see the force of our intent. They scattered and climbed.

And so on, showing that a very considerable distance must have been traveled in pursuit of the game.

Cook also says, on page 195:

Arriving at land's end, my heart had cause for gratification. * * * We had made our progress mainly at the expense of the land which we explored, for the game en route had furnished *food and clothing.* The supplies we had brought with us from Annoatok were practically untouched.

On pages 135–136 Cook says:

By the time Christmas approached I had reason, indeed, for rejoicing. * * * Our equipment was now about complete. In the box house were tiers of new sledges, rows of boxes, and piles of bags filled with *clothing,* canned supplies, dried meat, and sets of strong dog harness. The food, fuel, and camp equipment for the polar dash were ready.

With everything in such complete readiness weeks before the expedition started, it is difficult to understand the statement that the game en route had furnished food and *clothing.* Also with the supplies brought from Annoatok "practically untouched," Cook was certainly premature and hasty in sending Franke back from Flagler Bay on account of "the strong probability of our failing to find musk ox," when the strong probability was that they would really find an overabundance—as they did.

According to Cook's narrative, "the lowlands just south of Svartevaeg Cliffs" were reached at the end of the day's journey of March 17, and camping there 7 musk oxen and 85 hares were secured (p. 193), the hares alone adding about 850 pounds to the provisions on hand. Pages 196 to 200 of My Attainment of the Pole are devoted to a minute description of the equipment of the expedition. Much unwarranted criticism has been expended on Dr. Cook's equipment, but the description which he gives in the pages just mentioned was ample for the trip which, as he planned, was to extend only over 80 days.

SVARTEVAEG TO "THE POLE."

Beginning with March 18, 1908, Cook's story is easily checked; for, in addition to the general narrative, we find in the appendix, on pages 569 to 577, inclusive, his "Copy of the field notes." Of these "notes" Dr. Cook says, on page 569:

The following copy of the daily entries in one of my *original notebooks* takes the expedition step by step from Svartevaeg to the pole and back to land. As will be seen by those here reproduced, the original notes are mostly abbreviations and suggestions, hasty tabulations, and reminders, memoranda to be later elaborated. The hard environment, the scarcity of materials, and cold fingers did not encourage extensive field notes. Most of these field notes were rewritten while in Jones Sound and some were also copied and elaborated in Greenland. (Notes usually written at end of day's march.)

The reproduction of Cook's notes is headed:

OBSERVATIONS, ETC.

(Exact copy from original field papers.)

A certain license may be accorded the first part of Dr. Cook's narrative, since he himself says, on page 10 of the preface to My Attainment of the Pole, that he has been relieved of much routine editorial work by Mr. T. Everett Harry. It is quite possible, therefore, that through Mr. Harry's collaboration consistency and accuracy of detail was sacrificed in the interest of literary workmanship. No such argument can be advanced to excuse inaccuracy or inconsisteny in the account of the journey over the polar ice, since Cook himself says that the transcript of his notes is an exact copy from original field papers, and the reading matter in the narrative proper of that part of his journey is based on those notes. We must remember, too, that Cook says he is "now presenting every scrap of paper and every isolated fact" in his book; therefore he can not put forth the plea that the records of the journey as given in his book are incomplete.

I shall quote liberally from Cook's description of his equipment, as given on pages 196 to 200, as frequent reference to same is necessary in the course of this analysis. He says:

I decided to reduce my party to the smallest number consistent with the execution of the problem in hand. In addition, for greater certainty of action over the unknown regions beyond, I now definitely resolved to simplify the entire equipment. I decided to take only two men on the last dash. I had carefully watched and studied every one of my party and had already selected E-tuk-i-shook and Ah-we-lah, two young Eskimos, each about 20 years old, as best fitted to be my sole companions in the long run of destiny.

Twenty-six of the best dogs were picked, and upon two sleds were to be loaded all our needs for a trip estimated to last 80 days.

Eliminating everything not actually needed, but selecting adequate food, I made the final preparations.

CAMP EQUIPMENT.

The camp equipment selected included the following articles: One blow-fire lamp (jeuel), 3 aluminum teaspoons, 1 tablespoon, 3 tin plates, 6 pocket knives, 2 butcher knives (10 inches), 1 saw knife (13 inches), 1 long knife (15 inches), 1 rifle (Sharp's), 1 rifle (Winchester .22), 110 cartridges, 1 hatchet, 1 Alpine axe, extra line and lashings, and 3 personal bags.

SLEDS.

The sled equipment consisted of two sleds weighing 52 pounds each; one 12-foot folding canvas boat, the wood of which formed part of a sled; one silk tent; two canvas sled covers; two reindeer-skin sleeping bags; floor furs; extra wood for sled repairs; screws, nails, and rivets.

INSTRUMENTS.

My instruments were as follows: One field glass; one pocket compass; one liquid compass; one aluminum surveying compass, with azimuth attachment; one French surveyor's sextant, with radius 7½, divided on silver, to 10 feet, reading by Vernier to 10 inches (among the extra attachments were a terrestrial and an astronomical telescope and an extra night telescope mounted in aluminum, and also double refracting prisms, thermometers, etc.—the instrument was made by Hurleman, of France, and bought of Keuffel & Esser); one glass artificial horizon; three Howard pocket chronometers; one Tiffany watch; one pedometer; map-making material and instruments; three thermometers; one aneroid barometer; one camera and films.

WEARING APPAREL.

The personal bags contained four extra pairs of kamiks, with fur stockings, a woolen shirt, three pairs of sealskin mittens, two pairs of fur mittens, a piece of blanket, a sealskin coat (netsha), extra fox tails for dog harness, a repair kit for mending clothing, and much other necessary material.

On the march we wore snow goggles, blue fox coats (kapitahs), and bird-skin shirts (Ah-tea), bearskin pants (Nan-nooka), sealskin boots (Kamik), hare-skin stockings (Ah-tee-shah), and a band of fox tails under the knee and about the waist.

FOOD SUPPLY.

The food supply, as will be seen by the following list, was mostly pemmican:

Eight hundred and five pounds of beef pemmican, 130 pounds of walrus pemmican, 50 pounds of musk-ox tenderloin, 25 pounds of musk-ox tallow, 2 pounds of tea, 1 pound of coffee, 25 pounds of sugar, 40 pounds of condensed milk, 60 pounds of milk biscuit, 10 pounds of pea soup (powdered and compressed), 40 pounds of petroleum, 50 pounds of surprises, 2 pounds of wood alcohol, 3 pounds of candles, and 1 pound of matches.

We planned our future food supply with pemmican as practically the sole food; the other things were to be mere palate satisfiers. For the 80 days the supply was to be distributed as follows:

For three men: Pemmican, 1 pound per day for 80 days, 240 pounds. For six dogs: Pemmican, 1 pound per day for 80 days, 480 pounds. This necessitated a total of 720 pounds of pemmican.

DOGS.

Of the 26 dogs we had at first figured on taking 16 over the entire trip to the pole and back to our caches on land, but in this last calculation only 6 were to be taken. Twenty, the least useful, were to be used one after the other as food on the march as soon as reduced loads and better ice permitted. This, we counted, would give 1,000 pounds of fresh meat over and above our pemmican supply. We carried about 200 pounds of pemmican above the expected consumption, and in the final working out the dogs were used for traction purposes longer than we anticipated.

This equipment left nothing to be desired for a party of three men in a quick dash of 80 days.

After camping at the end of the day's journey of March 17 "in the lowlands just south of Svartevaeg," he arrived at Svartevaeg itself, the end of the land, on March 18. I quote from his notes of March 18, and also, in a parallel column, from his narrative of his movements on the same day:

[From narrative proper, p. 200].

After making several trips about Svartevaeg, arranging caches for the return, studying the ice and land, I decided to make the final start on the polar sea on March 18, 1908.

The time had come to part with most of our faithful Eskimo companions. Taking their hands in my manner of parting, I thanked them as well as I could for their faithful service to me. "Tigishi ahyaung uluk!" ("The big nail"), they replied, wishing me luck.

With a snow-charged blast in our faces it was impossible for us to start immediately after the Eskimos returned. Withdrawing to the snow igloo, *we entered our bags and slept a few hours longer. At noon the horizon cleared.* Doubly rationed the night before, the dogs were not to be fed again for two days. The time had come to start. We quickly loaded our sleds. Hitching the dogs, we let the whips fall, and with bounds they leaped around deep ice grooves in the great paleocrystic floes. Our journey was begun. * * * By the time we paused to rest we had covered 26 miles. We pitched camp on a floeberg of unusual height. * * * We busily built in the course of an hour a comfortable snow igloo.

[From notes.]

(March 18, 1908). Miles covered, 26. Svartevaeg. Made cache here for return. Supporting party goes back. Noon start; 4 men, 46 dogs, 4 sleds; 26 miles. Ice heavy, wavy; little snow; crystals hard; land screened by drift. Camp on old field. Night uncomfortable; air humid, penetrating. Snow house of hard snow imperfectly made. *(Compass directions, unless otherwise noted, are true.)*

With Svartevaeg at 81° 20′ north latitude, Cook's first day's journey took him, according to his estimate, to 81° 46′ north latitude.

March 18 was Dr. Cook's "busy day." From more than 100 lively Eskimo dogs he had to select the 26 best suited for his purpose—no small task in itself. He had to select the two best sledges and decide on the equipment and supplies necessary. Then he says (p. 200):

After making several trips about Svartevaeg, arranging caches for the return, studying the ice and land, I decided to make the final start on the polar sea on March 18, 1908.

Then followed the farewell to the returning Eskimos, after which Cook and his two men withdrew to the snow igloo, entered the sleeping bags, and *slept a few hours longer.* At noon they loaded the sleds and began their journey. The task of sorting out the supplies for the caches, of deciding what was to be taken on the two sleds for the polar journey, and of selecting the dogs must have required considerable time, while the "several trips about Svartevaeg, studying the ice and land" must also have consumed the greater part of the morning of March 18. And after all this the men had time to reenter their sleeping bags and sleep "a few hours" before making their final start at noon. Truly, this was snappy work!

At the end of the first march over the polar ice, when the men were comfortably housed in the igloo, Cook says, on page 202:

My wild companions covered their faces with their long hair and sank quietly into slumber. For me sleep was impossible. The whole problem of our campaign had again to be carefully studied, and final plans made, not only to reach our ultimate destination but for the two returning Eskimos and for the security of the things left at Annoatok, and also to reexamine the caches left en route for our return. These must be protected as well as possible against the bears and wolves.

Already I had begun to think of our return to land.

One would think that Cook's final plans would be perfected before he embarked on the last stage of his journey, and certainly that he would have arranged for the protection of the stores at Annoatok, while the caches of Arctic explorers are usually made bear proof and wolf proof at the time they are established. A striking instance of this is the fact that a cache of the Greely expedition, established in 1882, was opened in 1909, 27 years later, by members of the Peary expedition of 1908–9 and the contents found in good condition. But this does not appear to have been Cook's "system."

On the second day's progress Cook says, on pages 203–204 and in his notes (p. 570):

[From the narrative proper, pp. 203–204.]

It was intensely cold, not only because of a temperature of 56° below zero, Fahrenheit, but a humid chill which pierced to the very bones. A light breeze came from the west. The sun glowed in a freezing field of blue. Hitching our dogs we started. For several hours we seemed to soar over the white spaces. Then the ice changed in character, the expansive, thick fields of glacier-like ice giving way to floes of moderate size and thickness. These were separated by zones of troublesome crushed ice thrown into high-pressure lines, which offered serious barriers. Chopping the pathway with an ice ax, we managed to make fair progress. We covered 21 miles of our second run on the polar sea.

[From Cook's notes, p. 570.]

March 19, 1908.—Miles covered, 21. Clearer, overland thick; —56° F.; wind 2 W.; sun feeble; blue haze. On march, ice smaller; use of ax; crossings troublesome. Camp lee of big hummock. Can not send supply back; must follow for another day.

This second march is notable for the fact that on only four days throughout the entire trip from Svartevaeg to the place Cook called the North Pole did he make any greater speed than on this day when "troublesome crushed ice thrown into high-pressure lines offered serious barriers," which he had to chop away with an ice ax in order to make a passage for the dogs and sleds. A run of 21 miles is a good day's journey over the polar ice, even under good traveling conditions, and doubly so under the difficulties which Cook describes. This second march, accepting his own figures, brings him to 82° 7′ north latitude.

On March 20 we read:

[From the narrative proper, p. 204.]

With axe and compass in hand, I led the way. With prodigious effort I chopped openings through barriers after barriers of ice. With increasing difficulties in some troublesome ice we camped after making only 16 miles.

[From notes on page 570.]

March 20, 1908: Miles covered, 16. Land more clearly visible; sky, overcast; wind, W. S. W. 1; ice, worse. Small igloo. The last feed men return.

These 16 miles should have taken Cook to 82° 23′ North latitude. At the end of the march Cook fed his two returning Eskimos preparatory to their starting on the return trip to land and thence to Annoatok. On pages 204–205, Cook says:

By these men I sent back instructions to Rudolph Franke to remain in charge of my supplies at Annoatok until June 5, 1908, and

then if we should not have returned by that date to place Koo-looting-wah in charge and go home either by a whaler or some Danish ship.

These instructions to Franke are of special interest. On pages 127–129 of Franke's book, A German's Experiences in the Far North, is given an exact copy of Cook's letter which he sent to Franke by the Eskimo, Koo-loo-ting-wah, and which was delivered to Franke on May 5, 1908. The letter reads:

POLAR SEA, NORTH OF CAPE HUBBARD,
March 17, 1908.

DEAR RUDOLPH: Thus far it has gone very well but the weather has been awful cold. We got no musk ox until we had crossed Ellesmereland, but since we have secured 102 musk ox, 5 bears, and about 150 hare.

The Eskimo will probably return slowly for they like this land very well. I do not expect the Eskimo to reach you until about the middle of May. If we are lucky we will take a short cut back and will get to Annoatok by the end of May.

When the natives get back give them all one block of tobacco and nothing more until I get back, except those that go away. Puodluna and Igingwah will go away. Give them a knife and hatchet each, and any other things we can spare which they want.

If you get a chance send to Igloodahominy and also to the island off North Star a box of biscuits and a can of alcohol.

To the present we have seen nothing of Croker Land, and I am taking a strait course for the pole. The boys are doing well, and I have plenty of dogs. I hope to succeed. At any rate, I will make a desperate attempt.

While I expect to get back to you by the end of May, still I wish you to be ready to go to Acponle, the island of North Star, where the whalers' steamers come, by the 5th of June, and if I am not back go home with the whalers. I think, however, we will be back.

Gather all the blue-fox skins you can. These must be our money on the return trip. If you can get a few bear skins take them, also narwhale and walrus tusks, but do not give too much for them.

The dogs that come back that belong to us turn over to Ponikpa to feed and work.

If Kudno (the Dane) is still there urge him to wait for our return either to Annoatok or at North Star, for I am anxious to go to Upernavik at once on our return, and he can be of much use to us.

There is likely to be much open water between you and Etah, so you had better send the trunk, the narwhale tusks, and all things for the return to Etah at least, if not farther, as soon as you can.

I have regretted many times that you are not with us, but *at the moment* it seemed best to send you back, and on the whole you are of more assistance to me at the house to guard and care for our things than here in the field in this awful cold and wind. I trust you are of the same opinion.

So good-by, and now for the pole.

Yours, cordially, FREDERICK A. COOK.

Remember that Dr. Cook claims to have reached Svartevaeg proper on the morning of March 18; that the forenoon of March 18 was spent in various movements around Svartevaeg and in sleeping "a few hours longer"; that Cook claims to have made three hikes out on the polar sea before the two Eskimos by whom this letter was sent to Franke returned. (The Eskimos returned at the *end* of the day's advance of March 20.) Yet the letter to Franke is dated: "March 17, 1908; *Polar Sea*, North of Cape Hubbard." One may argue that the letter could have been written a few days before the Eskimos returned, which is true, but that argument does not hold good, for on March 17 Cook claims to have camped "in the lowlands just south of Svartevaeg," therefore he could not have been on the "polar sea, north of Cape Hubbard (or Svartevaeg)," on that date. Where, then, was Cook on March 17—on the lowlands south of Svartevaeg or on the polar sea, north of Cape Hubbard? And on what date was the letter to Franke really written, and from what point? These are relevant questions to which I should be glad to have Dr. Cook reply.

Note also Cook's liberality (?) toward the Eskimos who had traveled about 400 miles with him on his journey to the pole (as he claims). He instructs Franke to "Give them all *one block of tobacco and nothing more until I get back*, except those that go away." Doubtless the Eskimos felt well repaid for their two months' absence from their families when they received this bountiful reward.

The fifth paragraph of Cook's letter to Franke says:

To the present we have seen nothing of Croker Land.

As Peary claims to have seen his fictitious "Crocker Land" from an elevation on Svartevaeg (Peary's Cape Hubbard) Cook could not have seen it (had it existed) from the lowlands south of Svartevaeg, where he claims to have camped on March 17. Evidently, therefore, he wished Franke to believe that he had advanced some distance on the polar sea when the letter which he sent to Franke was written, especially as he adds:

I am taking a straight course for the pole.

The last paragraph of the letter is also significant. In it Cook says:

I have regretted many times that you are not with us, but *at the moment* it seemed best to send you back.

This proves that he had given Franke no previous hint of a preconceived plan for Franke's return, but had allowed him to go happily along, believing that he was to be one of the party to make the final dash.

Cook's mileage from March 18 to March 24, as computed by his "dead reckoning" corresponds exactly with the distance covered in that time, according to his observations. Therefore, if we accept these distances as correct (for the sake of argument) we find that Cook sent his two last supporting Eskimos or "feed men" (as he calls them) back to land from 82° 23′ north latitude. But, in a letter written to Capt. Bernier, a photographic copy of which is in my possession and which I shall quote later in full, Cook claims to have sent these two Eskimos back from 82° 10′ north latitude. In the letter to Capt. Bernier, he writes:

From *82° 10′* I started with but two young Eskimos, 26 dogs pulling two sleds and supplies for 80 days.

This, of course, is at variance with Cook's official record as published in his book, for, on page 209, he says:

By this kind of dead reckoning our position on March 20 (the day the Eskimos returned) was latitude *82° 23′*.

A notable feature of Peary's narrative of his last polar expedition is his rapid increase in speed immediately after the return of his last supporting party. So with Dr. Cook. The day following the return of the two Eskimos who composed what he called his "last feed men" his mileage jumped from 16 miles on March 20 to 29 miles on March 21, almost double the speed of the previous day. I quote from his notes for March 21:

March 21, 1908. Miles covered, 29. Awoke, sun N. E.; orange glow; —63° F.; bar. 30.10, steady; no clouds; sky pale purple. More snow (on ice); groaning sledges; mirages, lands, mountains, volcanoes. Air light; wind sky N.; Grant Land a mere line; —46°. Torture of light snow; march 14 hours.

On page 209 Cook says:

We had been traveling about 2½ miles per hour. By making due allowances for detours and halts at pressure lines, the number of hours traveled gave us a fair estimate of the day's distance. Against this the pedometer offered a check, and *the compass gave* the course. Thus over blank charts our course was marked. By this kind of dead reckoning our position on March 20 was latitude 82° 23′, longitude 95° 14′.

SIMILARITY TO PEARY'S STORY.

A striking similarity between Cook's report of his so-called polar trip and Peary's story of his last expedition is shown in their respective method, or lack of method, in following their course. Peary says that he traveled by compass only, without making any observations for longitude or for compass variation. Dr. Cook also says that he traveled by compass, though he claims to have made various observations for latitude and a few for longitude, but neither did he make any observations for compass variation. Therefore Cook, like Peary, assumed that the compass variation at the last point of land (in Cook's case, Svartevaeg; in Peary's, Cape Columbia) remained constant throughout the entire journey over to the polar ice to the places which they respectively called the pole. Peary asserts that he traveled the 413 miles between Cape Columbia and the pole on the meridian of Cape Columbia, while Cook claims that he kept close to the ninety-seventh meridian from Svartevaeg to about 85° north latitude and traveled close to the ninety-fifth meridian the balance of the distance to his "pole." The absurdity of these assertions and of the assumption that the isogonic lines or lines of equal variation follow either the longitudinal or latitudinal meridians is shown by a letter written to me by Capt. J. S. Hoogewerff, Superintendent of the United States Naval Observatory, Washington, D. C., on January 16, 1916, from which I quote:

Hon. H. T. HELGESEN.

DEAR SIR: Replying to your letter of the 14th instant inquiring about magnetic variations, variation changes with change of position of the observer in either latitude or longitude.

Neither the north nor the south magnetic poles are coincident with the geometric poles of the earth. (There are presumably two magnetic south poles.)

Observations in numerous parts of the world have established the values of the variation, and these have been plotted in curves. They appear, with other data, on the Pilot Chart issued by the Hydrographic Office, Navy Department.

The curves of variation on the Pilot Chart are not extended into extreme polar regions for the reason that there have been no observations sufficient to permit a definite charting of the lines. * * * The traveler from Cape Columbia to the North Pole might expect to find large changes in variation.

J. S. HOOGEWERFF,
Captain, United States Navy, Superintendent.

This letter shows that wide differences exist in the variations of the compass, even when the observer is traveling on the same longitudinal or latitudinal "circles"; therefore Dr. Cook could not have known or "estimated" correctly the variations of the compass from Svartevaeg to the pole. In this respect he has no better claim to accuracy of observation or knowledge than has Peary.

The distance of 29 miles on March 21 should have made Cook's latitude 82° 52′ north. On page 214 he says of March 21:

Every condition favored us on this march. The snow was hard and the ice, in fairly large fields, separated by pressure lines, offered little resistance. On March 21, at the end of a forced effort of 14 hours, the register (pedometer) indicated a progress of 29 miles.

At the end of the advance of March 22, Dr. Cook reports reaching the shores of the "Big Lead." In his notes, on page 570, he says:

March 22, 1908. Miles covered, 22. A. M. wind E. 3; —59°. Start 12 (noon); sky clearer; wind 2; water sky N. Grant Land visible p. m. (Later) temperature rose to —46°. Wind tolerably high; pressure lines; the Big Lead. Camp on old field on bank; ice noises; search for the crossing. Young, elastic ice.

This 22 miles should have placed Cook at 83° 14′ north latitude, or 114 miles from Svartevaeg and 406 miles from the pole. On page 217 Cook says:

The first hundred miles of our journey on the polar pack had been covered. The pole was 400 miles beyond.

The Big Lead is an obstacle which has blocked other polar expeditions. Peary relates a forced halt of six days north of Cape Columbia in 1909. But Cook seems to have been more fortunate. On page 217 he describes the Big Lead:

My hopes sank within me. Twisting snakelike between the white field and separating the packs was a tremendous cut several miles wide, which seemed at the time to bar all further progress. It was the Big Lead, that great river separating the land-adhering ice from the vast grinding fields of the central pack beyond at which many heroic men before me had stopped.

After making camp Cook and one of his Eskimos started in search of a safe crossing. Cook says:

There were several narrow places, while here and there floes which had been adrift in the lead were now fixed by young ice. * * * In exploring the shore line a partially bridged place was found about a mile from camp, but the young ice was too elastic for a safe track.

Notwithstanding these unfavorable conditions, Cook reports making a safe crossing of the Big Lead on March 23, thus experiencing no delay whatever at this dreaded spot. Though differing in minor details, Cook's story of this crossing brings vividly to mind Peary's account of crossing this Arctic terror on his return from his Farthest North in 1906:

[From Cook's My Attainment of the Pole (1911) pages 222–223.]

We separated our dog teams from the sleds, holding to long lines which were fastened about our bodies and also to the sleds. The sleds were hitched to each other by another long line. I knew, as I gently placed my foot upon the thin yellowish surface, that at any moment I might sink into an icy grave. Gently testing the ice before me with the end of my axe, with spread legs, on snowshoes, with long, sliding steps I slowly advanced. A dangerous cracking sound pealed in every direction under my feet. The Eskimos followed. With every tread the thin sheet ice perceptibly sank under me and waved in small billows, like a sheet of rubber. Stealthily, as though we were trying to filch some victory, we crept forward. We rocked on the heaving ice as a boat on waves of water. *None of us spoke* during the dangerous crossing. We covered the 2 miles safely, yet our snail-like progress seemed to cover many anxious years. I can not describe the exultation which filled me when the crossing was accomplished.

[From Peary's Nearest the Pole (1907), pages 145–146.]

I gave the word to put on snowshoes and make the attempt. I tied mine on more carefully than I had ever done before. I think every other man did the same, for we felt that a slip or stumble would be fatal. When we started it was with Panikpah, lightest of us all and most experienced, in the lead, the few remaining dogs attached to the long broad-runner sledge following him, and the rest of the party abreast in widely extended skirmish line, 50 to 60 feet between each two men, some distance behind the sledge. *We crossed in silence*, each man busy with his thoughts and intent upon his snowshoes. Once started, we could not stop, we could not lift our snowshoes. It was a matter of constantly and smoothly gliding one past the other with the utmost care and evenness of pressure, and from every man as he slid a snowshoe forward, undulations went out in every direction through the thin film incrusting the black water. The sledge was preceded and followed by a broad swell. When we stepped upon the firm ice on the southern side of the lead, I was more than glad.

Since Peary's description of the Big Lead was published some five years earlier than Cook's, Peary certainly did not copy Cook's report of this Arctic feature, as he has been accused of copying others.

On pages 224–225 Cook says:

With the perilous Big Lead behind us, a bounding course was set to reach the eighty-fifth parallel on the ninety-seventh meridian.

In his notes for March 23 we read:

March 23, 1908. Miles covered, 17. Cross the Big Lead. Young ice elastic and dangerous; western sky again threatening; ice movement east; fields small; narrow, open lanes. Course for eighty-fifth on ninety-seventh; —40°; march 11 hours; 23 miles, credit 17 miles. Ice noises; night beautiful; sun sank into pearly haze. (Later:) Orange glow; pack violet and pale purple blue; sky late, partly cl.; appearance of land W.

Cook fails to state in his notes or elsewhere how he knew when he was on the ninety-fifth, ninety-seventh, or any other meridian, without making observations for compass variation, but he contents himself with the bare statement that the course was set in the direction of the ninety-seventh. This claimed net advance of 17 miles should have taken the party to 83° 31′ north latitude.

On March 24 Cook records his first observations after he left Svartevaeg. The result shows that his ability to gauge his traveled distances by dead reckoning, if accepted, was nothing short of marvelous, for his observations at noon of March 24, before starting on the day's advance, give his latitude at exactly 83° 31′ north latitude, or precisely the same as he had gauged it by his dead reckoning. This remarkable coincidence arouses a suspicion that his "observations" at this point were nothing more nor less than a reading of his pedometer, with a reasonable allowance for detours, for it is unbelievable that Cook could tell to the last fraction of a mile how far he had traveled in six days over the uneven ice of the polar sea. On March 24 his notes read:

March 24, 1908. Miles covered, 18. Observations 83° 31′ —96° 27′; —41°; bar. 29.70. West bank of fog and haze. Start afternoon; no life; old seal hole and bear tracks; long march; ice improving; 10 h. pedometer 21 m.; camp in coming storm; rushing clouds; signs of land W.; 18 m. (credited on course).

On page 225 Cook says:

Starting forward in the afternoon of March 24, we crossed many small floes with low-pressure lines separated by narrow belts of new ice. Our speed increased. At times we could hardly keep pace with our dogs.

Again, on page 228, he says of this same march:

We swept resistlessly onward for 23 miles. As we had taken a zigzag course to follow smooth ice, I therefore recorded only 18 miles to our credit.

At first sight this seems a careful, conservative method of estimating the day's advance, but two things are noticeable: First, in his notes Cook says that the ice was improving and that the pedometer showed 21 miles, while he credited 18 miles on the course, and in the text of the narrative he says that their speed increased, so that at times they could hardly keep pace with the dogs. Yet, notwithstanding this high rate of speed and exceptionally favorable ice conditions, they did not make as great an advance as they made on March 22, when, as Cook says on page 216:

We continued, urging the dogs and struggling with the wind just as a drowning man fights for life in a storm at sea. * * * We laboriously picked a way among hummocks and pressure lines which seemed impossible from a distance. Our dogs panted with the strain; my limbs ached.

And on this day, under these unfavorable conditions, hampered with reluctant dogs and poor ice, they advanced 22 miles, while on March 24, with the ice improving and the dogs racing at such a speed that the drivers could hardly keep pace with them, although they "swept resistlessly onward," they traveled only 21 miles!

Second. While Cook says in his notes:

Pedometer *21 m.;* 18 m. (credited on course).

In the text on page 228 he says of this same day, March 24:

We swept resistlessly onward for 23 miles. * * * I recorded only 18 miles to our credit.

This difference between Cook's notes and the text of his narrative has no effect on his claimed net advances, as in both instances he credits only 18 miles to the day's run. Nevertheless, it is interesting to consider that he probably confused the day's run of March 24 with that of March 23, for on March 23 he says in his notes:

Twenty-three miles; credit, 17 miles.

It is also difficult to understand why, on March 23, with a pedometer mileage of 23 miles, he should have credited only 17 miles to the day's advance, while on March 24, with a pedometer record of 21 miles, he credited 18 miles to the net advance.

The most important event of March 24, however, was Cook's sighting of Crocker Land, that fictitious and mythical land which, in combination with many other fictitious "discoveries," has proved Peary's undoing as an accurate and reliable Arctic explorer and which now bids fair to assist in performing the same good office for Dr. Cook. True, Cook does not say in his *book* that he *saw* Crocker Land. On the contrary, on pages 225–226 he says:

An altitude of the sun at noon on March 24 gave our position of 83° 31′. The longitude was estimated at 96° 27′. The land clouds of Grant Land were still visible. The low bank of mist in the west occasionally brightened. For a while I believed this to be an indication of Crocker Land. Until midday I took observations and endeavored to study the appearances of land. Our dogs sniffed the air as if scenting game. After a diligent search one seal blowhole was located, and later we saw an old bear track. Signs of seal and bear were encouraging to us as possible future food supply.

On page 490, in discussing one of the phases of the "polar controversy," Cook says:

These same Eskimos—

Who had traveled with both Cook and Peary—

have since said, without quizzing from me, that Mr. Peary never saw Crocker Land.

Again, on page 559, in an apparent effort to be on the safe side, Cook says:

Peary's Eskimos of a former trip positively deny Peary's claimed discovery of Crocker Land. *I still prefer to believe that Crocker Land does deserve a place on the map.*

Apparently Cook's first intention was to support Peary's statement that he had discovered this now discredited continent in the polar sea; but when Peary returned from his own 1908–9 trip simultaneously with Cook's return from *his* claimed polar trip, and at once attacked Cook's claim to the attainment of the pole, Cook immediately attempted to "hedge" on the question of Crocker Land, and we note, on page 226 of My Attainment of the Pole, Cook merely says, as I have already quoted:

For a while I believed this to be an indication of Crocker Land.

In a letter written on May 4, 1916, by Dillon Wallace, Esq., lawyer, explorer, and author, to the Hon. Edmund Platt, Mr. Wallace says:

You mention Crocker Land. On the place where Peary stood when he claimed to have seen Crocker Land, it was physically and scientifically impossible to have seen land anywhere near as far north as 84°. The *day after Cook arrived in New York from the north* I asked him about Crocker Land. I told him that if Crocker Land was there he must have passed close to it in going north. *He told me that Crocker Land did not exist;* that Peary had probably seen a mirage. In August, 1914, I met Cook on the street in Chicago. I spoke of McMillan having gone north to explore Crocker Land, and Cook said: "He will never explore Crocker Land because there *is no Crocker Land.* I passed where Peary is supposed to have seen land, and have reported that *there is no land there.*"

But this is just what Cook did *not* report in the first accounts of his polar trip. In the New York Herald of October 6, 1909, is printed a letter written by Dr. Cook to Capt. J. E. Bernier on May 23, 1909, in which Cook makes the unqualified statement that *Crocker Land was sighted.*

I have in my possession a photographic reproduction of the original, hand-written letter, in Dr. Cook's own handwriting, to Capt. J. E. Bernier, dated at Upernavik, Greenland, and written by Cook while he was at Upernavik, waiting for a ship on which he could return to civilization. Cook sent that letter by a whaling vessel from Upernavik to Capt. Bernier, who was then in Lancaster Sound. I give herewith an exact copy of that letter:

UPERNAVIK, *May 23, 1909.*

MY DEAR CAPT. BERNIER: I hasten to write to you the first letter after being sealed behind icy barriers for two years. The unexpected coming of the *Arctic* makes a suitable closing climax to our long run of hard adventure. It was the supplies which you so thoughtfully left in charge of Mr. Whitney which enabled me to come to Upernavik. All my other property had been taken by Peary under the guise of a "Relief station for Dr. Cook." Mr. Murphy, the man in charge of this station, however, was instructed not to engage in any relief efforts, nor to allow the Eskimos to cross and search until March of the following year—1909—when, of course, all relief efforts would be useless. My large store of supplies and my station was therefore used for barter with the natives to satisfy Peary's commercial greed. The splendid assistance which you have given and the liberality of your Government in sending the ship is a happy contrast to the bunglesome hindrance and injustice of one of my own countrymen. I therefore extend to you and to your people such a gratitude as man must offer for help in the dire hour of need.

Fortunately we were able to work out our problem without relief efforts except such as you offered. We have pushed into the boreal center and picked the polar prize, but the effort was dangerous beyond all conception. Starting from Annoatok on February 19, 1908, we crossed Ellesmereland, pushed along its west coast to the polar sea, feeding the 10 Eskimos and 103 dogs en route on musk ox and bears. From 82° 10′ I started with but 2 young Eskimos, 26 dogs pulling 2 sleds, and supplies for 80 days. The ice was found fair after passing the 84°.

Crocker Land was sighted and a new land to the north of it extending to the eighty-fifth. Beyond no land was seen. The pole was reached on *April 22, 1908.* The return was forced slightly westward of the northward route, but above the eighty-fifth we drifted eastward and south. Below the eighty-fourth we drifted strongly westward with fog, open water, and an active pack of small ice. We were hopelessly carried to the west, unable to reach our line of caches along Nansen Sound. We were pushed into Prince Gustav Sea, without food or fuel. Still unable to press eastward, we went with the ice south. Food and fuel were now exhausted, but polar bears came along as life-savers, and with them we went into Wellington Channel, hoping to be able to reach the whalers in Lancaster Sound. But we were soon stopped by failing food supply and jammed small ice. With no game this short route to an early ship was no longer possible, and to satisfy the pangs of hunger we sought Jones Sound. Here, after a long run of hard adventures by boat and sled, a cruel necessity forced us into winter camp in September at Cape Sparbo without fuel, food, ammunition, or winter clothing. With no dogs, no shelter, and no guns our outlook was nearly hopeless. But fortune came our way.

Bows and arrows, harpoons, lances, and other implements were made. The musk ox and the bear were taken with the line, the lance, and the knife. Small game was secured with the bow and arrow and the slingshot. Foxes were trapped in stone traps. The walrus and the seal were attacked and secured in our little folding canvas boat. An underground den was built, and the winter of 1908–9 was passed with a taste of savage life, for we had not a morsel of civilized food, not even salt. A new equipment was devised, and as the sun of 1909 rose over the hills of North Devon, we started for Annoatok February 18, dragging dried musk-ox meat as food and molded tallow as fuel for 30 days on our sled. Deep snow, bad ice, open water, and continued storm made the return slow and arduous. We reached Annoatok after a run of hard luck on April 5. Here we were met by Mr. Whitney, only to find that the Peary men had misused our station with its equipment under protest of Mr. Whitney.

We enjoyed excellent health at all times. Mr. Whitney and the Peary men are in good health. There is no news of the steamer *Roosevelt* or of the civilized world except such as the whalers will be able to give you.

I hope that the winter and the year has afforded you and your companions the hoped-for explorer's luck, with suitable opportunities and good health.

Yours, very cordially,

FREDERICK A. COOK.

To Capt. BERNIER,
Steamer Arctic, Lancaster Sound.

Note that Dr. Cook says unqualifiedly in this letter that "Crocker Land was sighted"! Note, also, that he says that he reached the North Pole on *April 22, 1908.*

This letter was written while Cook was yet in the Arctic, and was the first written report that he had given to anyone of his claimed polar trip. It was written while he was resting quietly at the house of Gov. Kraul, the governor of Danish Greenland. Here Cook says (p. 458 of My Attainment of the Pole) that he remained for a month "putting the finishing touches on my narrative," on which Cook says he had already done much work at Cape Sparbo. As the letter to Bernier was written under these quiet, favorable circumstances, while every feature of the trip must have been fresh in his mind, and after he had ample time to compare his dates with the calendars and almanacs if he had so desired, and since the copy of the letter in my possession is a photographic copy, showing Cook's own handwriting, in which the words, "Crocker Land was sighted," and the date, "April 22, 1908," are very plainly written, so that there is no chance to mistake them for anything else, there seems to be no reasonable excuse for the variation of this story from Cook's latter accounts. Nevertheless, Cook did write to Capt. Bernier on May 23, 1909, that "Crocker Land was sighted," and on September 22, 1909 (according to Dillon Wallace), Cook said that Crocker Land does not exist. Where did Dr. Cook find out his mistake about the mythical Crocker Land? Peary's critics have truthfully and logically argued that McMillan's proof of the nonexistence of Crocker Land is also proof of Peary's unreliability and inaccuracy as an explorer. But Peary has steadfastly held to his story that he "saw" Crocker Land, hoping, perhaps, that his repeated assertion would meet with credence, notwithstanding the facts. What can we say, however, of an explorer who one day reports seeing a fictitious land, and a short time afterwards as unqualifiedly contradicts that report?

If Peary is convicted of fraud and deception by the proof of the nonexistence of Crocker Land, Dr. Cook is doubly convicted of the same fraud and deception, for while it is barely possible—though not probable—that Peary *might* have seen a mirage, it is painfully evident that Dr. Cook saw neither land nor mirage, else why has he changed his statement that Crocker Land was sighted? Even when his book was published in 1911, Cook says on pages 225–226:

An altitude of the sun at noon on March 24 gave our position as latitude 83° 31′. The longitude was estimated at 96° 27′. The low bank of mist in the west occasionally brightened. For a while I believed this to be an indication of Crocker Land.

And in his notes for March 23, we find recorded:

Appearance of land W.

On the night of March 24 Cook reports a heavy storm, and early in the morning of March 25 he says that he had a narrow escape from drowning, caused by the opening of a fissure in the ice under his sleeping platform, which precipitated him into the icy water from which, helpless in his sleeping bag, he was dragged by his Eskimo companions. In The North Pole Peary relates a very similar circumstance of the opening of the ice in the night, but in his case it was merely the igloos that were separated from each other, and no one took a cold bath as a consequence of the mishap. In his notes for March 25th, Cook writes:

March 25, 1908. Miles covered, 18. Early awakened by dogs. Storm spent soon; sunrise temperature —26°, later —41°; west again smoky. Back to the bags; cracking ice; the breaking and separating ice and the crevasse episode; in a bag and in water; ice, water, and pemmican; masks of ice. Good march over newly fractured ice; ice in motion.

In the main narrative he says little of his day's march, but uses four pages in a general description of life on the trail.

Cook's notes for March 26 read:

March 26, 1908. Miles covered, 18. Still windy; some drift snow; another storm threatening. How we need rest! Strong wind during the night. Position D. R. 84° 24′: 96° 53′.

On March 27 Cook reports an advance of 16 miles, which exactly completes 200 miles from Svartevaeg. Owing to a heavy storm March 28 was spent in camp, but on March 29 Cook again records in his notes:

March 29, 1908. Miles covered, 9. Start early p. m. A little blue in the west; sun bursts; pack disturbed; hard traveling due to fresh crevasses. Camp midnight; only 9 miles.

On pages 241 and 242 Cook says:

Soon after noon of March 29 the air brightened. It became possible to breathe without being choked with floating crystals, and as the ice about our facial furs was broken, a little blue patch was detected in the west. Hitching the dogs we raced off. With full stomachs, fair weather, and a much needed rest, we moved with renewed inspiration. Camping at midnight we had made only 9 miles by a day's effort. The conditions under which this second hundred miles were forced proved to be in every respect the most exciting of the run of 500 miles over the polar sea.

According to Cook's notes the "second hundred miles" were finished at the end of the hike of March 27, and this advance of 9 miles was the beginning of the third hundred away from Svartevaeg.

Peary has been subjected to much criticism for his vagueness relative to the dogs which he used on his last Arctic trip, their number, and the times at which they were killed or otherwise disposed of. Cook is even more vague and general in his statements relative to his dogs. On page 199 of his book, when planning the supplies for the expedition, he estimated:

For six dogs: Pemmican, 1 pound per day for 80 days, 480 pounds.

He then adds:

Of the 26 dogs, we had at first figured on taking 16 over the entire trip to the pole and back to our caches on land, but in this last calculation only 6 were to be taken; 20, the least useful, were to be used one after the other as food on the march as soon *as reduced loads and better ice permitted.* * * * In the final working out the dogs were used for traction purposes *longer than we anticipated.*

Cook reports that when he returned to land on June 13 he had "10 bony dogs" left, so that in his claimed absence from land for a period of 88 days he used only 16 dogs as food for the others. Yet on March 29, only 9 days after the return of his last "feed men," with his loads reduced (according to his schedule) by only 261 pounds (and not as much as that if the dogs were fed only every other day), he says:

One dog after another went into the stomachs of the hungry survivors.

But he does not tell us when the dogs were killed, nor why it was necessary at this early stage of the proceedings to thus dispose of his tractive power, which, it would seem, would be more valuable to him, with heavy loads and poor ice, as motive power than as food in "the stomachs of the hungry survivors." But on this, as on many other points, Cook's narrative is exceedingly vague and noncommittal.

March 30 was, perhaps, the most notable day of the trip between Svartevaeg and the place Cook called the pole, for on March 30 Cook claims to have discovered "new land," which he named "Bradley Land," in honor of John R. Bradley, whose financial aid had alone made possible Cook's expedition. In his Notes Cook describes the finding of this new land:

March 30, 1908. Miles covered, 10. Land 9 a. m., cleared; land was seen; westerly clouds settled over it. Observations 84° 50′; 95° 36′ (longitude); bearing of land, southern group, west by south to west by north true. Other bearings taken later place a coast line along the one hundred and second meridian from latitude 84° 20′ to 85° 10′. There must be much open water about the land, for banks of vapor persistently hide part. A low fog persistent; can not see shore; for days we have expected to see something W., but never a clear horizon. Probably two islands S. like Heiberg, 1,800 feet high, valleys, mountains, snow N., table 1,000, thin ice sheet, bright nights. From observation paper: Bar. 30.10, had risen from 29.50 in 2 hours; wind 2–3 mag. S.; clouds mist, east, water bands W.; shadow (of 6-foot pole) 39 feet.

In his narrative Cook further says on pages 243–247:

On March 30 the eastern sky broke in lines of cheering blue. * * * Soon the western heavens, ever a blank mystery, cleared. Under it, to my surprise, lay a new land. * * * This new land was never clearly seen. A low mist seemingly from open water hid the shore line. We saw the upper slopes only occasionally from our point of observation. There were two distinct land masses. The most southern cape of the southern mass bore west by south, but still further to the south there were vague indications of land. The most northern cape of the same mass bore west by north. Above it there was a distinct break for 15 or 20 miles, and beyond the northern mass extended above the eighty-fifth parallel to the northwest. The entire coast was at this time placed on our charts as having a shore line along the one hundred and second meridian, approximately parallel to our line of travel. At the time the indications suggested two distinct islands. Nevertheless we saw so little of the land that we could not determine whether it consisted of islands or of a larger mainland. The lower coast resembled Heiberg Island, with mountains and high valleys. The upper coast I estimated as being about 1,000 feet high, flat, and covered with a thin sheet ice. * * * This new land made a convenient milepost, for from this time on the days were counted to and from it. A good noon sight fixed the point of observation to 84° 50′, longitude 95° 36′. We had forced beyond the second hundred miles from Svartevaeg. Before us remained about *300 more miles* to my alluring, mysterious goal.

As seen in the quotation from his notes, Cook places the new land as extending parallel with the one hundred and second meridian of longitude, with about 50 miles of its length visible from his line of march. This 50 miles extended approximately from 84° 20′ to 85° 10′ north latitude. This land consisted of at least two distinct masses, and possibly more, as Cook says he could not determine whether it was islands or a larger mainland.

On pages 225 and 226 Cook claims that he saw indications of Crocker Land at 83° 31′. In describing his new land, or "Bradley Land," he says, on page 245:

The most southern cape of the southern mass bore west by south, but *still further to the south there were vague indications of land.*

This would indicate that he is still supporting his theory of the existence of "Crocker Land," for with the southern point of the southern mass visible at 84° 20′ his "vague indications of land further to the south" would locate such an "indicated" land at the point where Cook "sighted" Crocker Land, as he later wrote Capt. Bernier. Therefore this appears like another attempt to bolster up Peary's alleged discovery of the fictitious Crocker Land.

Cook also says of his newly discovered land:

The lower coasts resembled Heiberg Island, with mountains and high valleys.

The photograph which Cook publishes of "Bradley Land," opposite page 214 of My Attainment of the Pole, so strikingly resembles the coast of Axel Heiberg Land as shown in Capt. Sverdrup's book, New Land, that more than one person has concluded that until Cook's "Bradley Land" is rediscovered by some reliable explorer it will be open to the suspicion of having been "seen" off the shores of Axel Heiberg Land.

Cook also says, on page 245, that "this new land was never clearly seen." Yet the picture which he shows opposite page 244 is a remarkably clear photograph for a picture of a land taken at a point between 35 and 40 miles distant. Cook says that a low mist hid the shore line, but his photograph certainly shows the appearance of a shore line, and as clear a line as could be expected at a distance of more than 30 miles from the land on sea level. At the time this photograph was taken, therefore, it would seem that mist was not obscuring the land.

Cook concludes this chapter with these words:

Before us remained about 300 more miles to my alluring, mysterious goal.

Cook's 10 miles of advance on March 30 placed him, according to his records, 219 miles from Svartevaeg, or, if his figures had been correct, at 84° 59′ His observation of March 30, taken before starting on the day's journey, shows a difference of only 1 mile in 13 days between his estimated mileage and that obtained by his observations.

On page 245 Cook gives his detailed observation of March 30, 1908, and publishes a note in connection with the observation, which reads:

My friends have criticized me for not sending the data given below (itemized observations) and similar observations to Copenhagen to prove my claim, but I did not deem it worth while to present more, taking the ground that if in it there was not sufficient material to explain the movement step by step of the polar quest, then no academic examination could be of any value. This viewpoint, as I see it at present, was a mistake. I am now presenting every scrap of paper and every isolated fact, not as proof but as part of the record of the expedition, with due afterthought and the better perspective afforded by time. Every explorer does this. Upon such a record history has always given its verdict of the value of an explorer's work. It will do the same in estimating the relative merits of the polar quest.

Although in his notes Cook refers to an observation of March 24, the first one which he gives in detail is the observation of March 30, printed on page 245 of My Attainment of the Pole. The next published observation is the one shown on page 257, purporting to be made on April 8, 1908; another of April 14, on page 274; and finally his so-called "polar" observations on page 292. In the observation of March 30, shown on page 245, Cook has apparently taken sextant observations of the upper limb of the sun only, at any rate we feel that we must give him the benefit of the doubt and assume that his two sextant observations were taken, as his figures indicate, of the upper limb only.

In the observations of April 8 and April 14, shown on pages 257 and 274, respectively, we find that he made double observations, including both the upper and lower limbs of the sun.

While I make no pretensions to scientific knowledge of navigation or nautical observations, one thing is as easily understood by a tyro or novice as by an experienced navigator or astronomer, namely, in the case of a double observation, taken with an artificial horizon giving both the upper and lower limb of the sun, a difference of about 1° or 60′ will be found in the alti-

tude. In the first edition of Cook's book, however, in the observation of April 8, which he shows on page 257, we find these figures:

April 8, 1908:			
Upper limb	21°	49′	30″
Lower limb	21	18	20
Addition	43	7	50

Upper limb	21°	49′	30″
Lower limb	21	18	20
Subtraction		31	10

This subtraction shows a difference of but little more than one-half a degree, while it should be about a degree, and is therefore an error. See The American Practical Navigator, in use by United States Government for nautical observations.

Cook's attention was apparently called to this error after the publications of the first edition of his book, for in the second and third editions we find the figures changed to read:

April 8, 1908:			
Upper limb	21°	59′	30″
Lower limb	21	08	20
Addtion	43	7	50

Note that the juggling of these figures was such that the result of the subtraction shown in the opposite column gives a difference of nearly a degree, while the result of the addition given above remains the same as in the first edition.

Upper limb	21°	59′	30″
Lower limb	21	08	20
Subtraction		51	10

This subtraction shows a difference of 51′, or very nearly a degree, and making due allowances for unfavorable conditions is a decided improvement over the figures shown in the first edition.

In the first edition of Cook's book, in the observation of April 14, which he shows on 274, we find these figures:

April 14, 1908:

Lower limb	22°	12′	05″
Upper limb	22	46	20
Addition	44	58	25

Lower limb	22°	12′	05″
Upper limb	22	46	20
Subtraction		34	15

This subtraction, like the one for April 8, in the first edition, shows a difference of but a little more than one-half a degree, while it should be about a degree, and is therefore an error. See "The American Practical Navigator" in use by United States Government for nautical observations.

In the second and third editions of Cook's book we find the figures for the observation of April 14, 1908, changed to read:

April 14, 1908.:

Lower limb	22°	02′	05″
Upper limb	22	56	20
Addition	44	58	25

Note that the change in these figures, like those of April 8, was such that the result of the subtraction shown in the opposite column has increased to nearly a degree, although the result of the addition given above remains the same as in the first edition.

Lower limb	22°	02′	05″
Upper limb	22	56	20
Subtraction		54	15

This subtraction shows a difference of 54′ or very nearly a degree, and making due allowance for unfavorable conditions is a great improvement over the figures shown in the first edition.

I give herewith Cook's complete observations for April 8 and April 14, showing why it was necessary to leave the figures giving the result of the addition unchanged, otherwise the whole problem would have shown a different result from the one which he desired to publish as his position for the respective dates. I have copied these figures from the first edition of "My Attainment of the Pole":

Observation on April 8, from original field papers. April 8, 1908, longitude 94° 2′. Bar. 29.80, rising. Temp. —31°. Wind 2, Mag. NE. Clouds St. 3.

Shadow 30½ ft. (of tent pole 6 ft. above snow).

We may argue—as has been done—that these errors which I have shown are merely typographical errors, which might easily have occurred in the first edition of Cook's book and have as easily been corrected in succeeding editions. This hypothesis is improbable because:

First. Every author and every proof reader knows that extra care is taken in proof reading figures, when a seemingly slight error makes a wide difference in the result; especially would such care be taken in a technical problem like an astronomical observation.

Second. In order to accept the theory of "typographical errors" we have to assume that two such errors occurred in the same problem and that both escaped the attention of the typesetter as well as the careful and critical eyes of author and proof reader. This is improbable to the point of absurdity.

Third. The "error" is such that to correct it a mere transposition of the figures in the "minutes" of the reading of the upper and lower limbs of the sun is necessary, a transposition which makes no difference in the addition of the two readings. It is unbelievable that two "typographical errors" in the same problem, if accidental, could be of such a nature as this. But even if we strain our credulity to the breaking point and accept the argument that such an error *might* occur, we are yet confronted with the fact that:

Fourth. A second "error," exactly similar to the first, which needs only the same kind of transposition to correct it, occurred *in another observation taken at another place on another day.*

It is wholly unbelievable that the two errors in each problem, if "typographical" or accidental, would all four be of such a nature that when corrected the addition of the two rows of figures will produce the same result after the correction as before the correction, while at the same time they show the necessary difference of about one degree of altitude. If Dr. Cook was as clever in making observations as in correcting the errors after they were brought to his attention, he would be able to more convincingly demonstrate that he really knew anything about his geographical position during the various stages of his so-called "Polar journey." As his observations prove that he was either deplorably ignorant or inexcusably careless in making his observations, we can place no more reliance upon them than we can upon Peary's, which have been shown to be thoroughly unreliable and erroneous.

It is worthy of note also that these two observations in which the aforesaid errors occur are the only observations which Dr. Cook gives showing a reading of both limbs of the sun.

In his notes for March 31, Cook says, relative to his "new land" or "Bradley Land":

Land screened by mist; wind, 2—0; ice fracture; no sign of life—none since 83.

In Chapter XVII which he heads: "Beyond the range of life 200 miles from the Pole," on page 248 he says:

A curtain of mist was drawn over the new land in the afternoon of March 31, and although we gazed westward longingly, we saw no more of it.

As Cook says that his observations at noon of March 30 gave him latitude 84° 50′, and as his day's march on that date was only 10 miles, which should have placed him at the eighty-fifth parallel, he could not have seen the new land after he crossed the eighty-fifth parallel. His only view of it therefore was en route from 84° 49′ to 84° 59′ north latitude. That he was in

camp at 84° 49′—according to his notes—when the land was first sighted is evidenced by his statement that the land was first seen at 9 a. m. of March 30. His estimate of the distance traveled from Svartevaeg places his camp at the close of March 29 at 84° 49′, and as his noon observations of March 30 placed him at 84° 50′ he was evidently only 1 mile away from camp when the observations were made. The distance traveled on March 30 was only 10 miles, and as the land was "screened by mist" on March 31, Cook's observations of the land must have been made along his claimed route between 84° 49′ and 84° 59′.

In the text of his book Dr. Cook says very little about his trip on March 31, April 1, and April 2. His notes, however, are more explicit. We note particularly that on March 31 he writes, as I have already quoted:

No signs of life; none since 83°.

This is in direct contradiction to his story on page 226, for on that page he relates stopping at his claimed 83° 31′, where he saw indications of Crocker Land, and says:

Signs of seal and bear, however, were encouraging to us as possible future food supply.

A hypothetical explanation for this discrepancy between Cook's notes and the text of his book is that his alleged Crocker Land was really below the eighty-third parallel and his "signs of seal and bear" were at, possibly, 82° 31′ instead of 83° 31′. This hypothesis would place Crocker Land at about the point where Peary claimed to have "discovered" it and would also reconcile Cook's statement on page 226 of his book that he found "signs of bear and seal" with the statement in his notes that there was "no sign of life; none since 83°."

On April 1, in his notes, Cook says:

April 1, 1908. Miles covered, 18. Time of traveling, 9 to 6; ice better; fields larger; crevasses less troublesome; temp. —32°. There is no more darkness at night.

On page 248 of My Attainment of the Pole, Cook says of this period of time:

A curtain of mist was drawn over the new land in the afternoon of March 31, and, although we gazed westward longingly, we saw no more of it. Day after day we now pushed onward in desperate northward efforts. Strong winds and *fractured, irregular ice* increased our difficulties. Although progress was slow for several days, we managed to gain a fair march between storms during each 24 hours.

In his notes Cook makes no mention of storms of any kind for the "several days" following March 31, nor of the "fractured, irregular ice." On the contrary, he says, on April 1, in his notes:

Ice better; fields larger; crevasses less troublesome.

But in the text of his book it is not until after April 3 that he says (p. 249):

The fields became larger and less troublesome.

This, again, is contradicted in his notes for April 4, on which day he says:

Snow softer; used snowshoes; have crossed *11 crevasses;* much chopping; brash and small hummocks.

In the text of his narrative, writing of the trip between the eighty-fourth and eighty-fifth parallels, Cook says in a footnote on page 251:

Peary claims to have seen life east of this position (between 84° and 85° north latitude). This is perfectly possible, for Arctic explorers have often noted when game trails were abundant one year none were seen the next. In these tracks of foxes and bears, as noted by Baldwin, are positive proofs of the position of Bradley Land, for such animals work only from a land base.

If this contention of Cook (or Baldwin) was absolutely correct, then Cook's observation of animal life opposite the point where he (Cook) located Crocker Land, or "indications of land" would be positive proof of the position and existence of Crocker Land. But the existence of Crocker Land in any position has already been disproved by Donald B. McMillan, leader of the Crocker Land expedition. Thus we have a number of possible errors confronting us. If, as Cook says, such animals as bears and foxes work only from a land base, then, since Crocker Land does not exist, either Cook did not see the signs of bears which he claims to have seen opposite the point where he saw indications of Crocker Land or else he was not at the point where he claimed to have been when he located signs of Peary's Crocker Land.

Peary has been proven, beyond question, to be wrong on so many points, both as regards his observations and his journey, that we can place no reliance on his statement that he saw tracks of animals north of the eighty-fourth parallel; for if he did see the animal tracks which he claims to have seen on the day when he claims to have seen them, we have no proof that he was north of the eighty-fourth parallel at that time, and the animals could as easily have come from Grant Land as from Bradley Land. Peary also claims to have seen fox tracks near the eighty-seventh parallel; but, even admitting for the sake of argument that he was ever as far north as the eighty-seventh degree of latitude, he claims to have traveled on the seventieth meridian of longitude. Therefore, accepting his claimed position for the fox tracks, they would have been found 120 miles north and about 100 miles east of the place where Cook locates Bradley Land, which would be quite a distance away from land even for a fox. So far as the "proof" of the existence of either Peary's Crocker Land or Cook's Bradley Land is concerned, we can only say this: Crocker Land has been found to be a myth and has been removed from the maps. The existence or nonexistence of Bradley Land is yet to be established.

On page 253 Cook says:

The weather was good enough to permit *frequent nautical observations.*

This statement is made in Cook's narrative between April 3 and April 7. It is interesting to note what Dr. Cook considers "frequent" nautical observations, for his notes show an observation on March 30—opposite Bradley Land—after which time no observation was made until April 8, or nearly two weeks later:

On page 255 we read:

The night of April 7 was made notable by the swing of the sun at midnight above the usual obscuring mist behind which it had during previous days sunk with its night dip of splendor. We were unable to determine sharply the advent of the midnight sun, but the colored cloud and haze into which it nightly sank produced a spectacular play which interested us immensely.

This corresponds with Cook's notes for April 7, where he says:

Midnight sun first seen.

Cook's notes for April 8 read:

April 8, 1908: Miles covered, 9. Observation *before starting,* 86° 36′; (longitude) 94° 2′. In spite of what seemed like long marches we made only *106 miles in nine days.* Much distance lost in crossings. (From field paper:) Bar. 29.50, rising; temp. —37°; wind mag. N. E. 2; clouds St. E; shadow (6 ft. pole), 32 feet.

On page 257 of his narrative Cook says:

Observations on April 8 placed camp at latitude 86° 36′, longitude 94° 2′. Although we had made long marches and really great speed, we had advanced only *96 miles* in the nine days.

We note that in his notes Cook says that the observation was taken *before starting* on April 8. He also says in his notes, that he had made only *106 miles in nine days.* His estimated mileage for the nine days from March 30 to April 7, inclusive, amounts to 116 miles; but as he also says that "much distance was lost in crossings," the distance lost in that manner accounts for the apparent discrepancy between 116 miles and the 106 miles shown in his observations. But why does he say in the text of his book, on page 257, that—

We had advanced only *96 miles* in the nine days.

The same error occurs in each of the three editions of his book; therefore it can hardly be a typographical error, or it would surely have been corrected in some one of the three editions, especially since various corrections and changes of more or less importance have been made in the book since the first edition was published.

As Cook says that much distance was lost in crossings, we must count his mileage after that time (April 8) from the latitude shown in his observations, namely, 86° 36′ at the *beginning* of the day's march of April 8. Between his observation on March 30 and his observation on April 8 his estimated mileage showed a difference of 10 miles between it and his observed latitude.

On April 10 Cook wrote in his notes:

April 10. Miles covered, 16—10 p. m. to 7 a. m. Working hours changed. *Big marches and long hours no longer possible;* snow good; ice steadily improving; bodily fatigue much felt; wind 1—28 W.

Cook's mileage for the five days immediately preceding April 10 had, according to his record, totaled 65 miles, an average of 13 miles daily. His mileage for the five days from April 10 to April 14, inclusive, totaled 93 miles, or an average of 18⅗ miles per day; yet on April 10 he wrote:

Big marches and long hours no longer possible.

Another peculiar feature of this statement is that on April 7 Cook gives his marching time from 11 to 10, or 11 hours, in which time he claims to have traveled 14 miles. On April 8 he does not give the number of hours traveled, but the distance made was only 9 miles. April 9 he traveled 8½ hours and made 14 miles. April 10 he traveled 9 hours and made 16 miles. On April 11 (notwithstanding that "long hours were no longer possible") he claims to have traveled 9½ hours and made 15 miles. On April 12 he marched 8 hours and made *21* miles; on April 13, in a march of 7 hours, he made 17 miles; and on April 14, in 8 hours, he made *23 miles.* And yet "big marches and long hours were no longer possible!"

Cook's account of April 11, both in his notes and in his narrative, is of especial interest and worthy of careful study. In his notes he writes:

April 11, 1908. Miles covered, 15—10.30 to 8 a. m. Observation end of march, 87° 20′, 95° 19′ (longitude); the pack disturbance of B. Ld. lost; farthest north; little crushed ice; old floes less irregular; anxious about food; wind 3 W. (true); 300 miles in 24 days; work intermittent; too tired to read instruments. (From other field notes, Temp. —39°; bar. 29.90°.)

Cook's claimed observation *before starting* on April 8 gave him a latitude of 86° 36′. His claimed observation at the end of his day's march on April 11 showed 87° 20′, or an advance of 44 miles in four days. His total estimated mileage for these four days amounts to *54* miles, or a loss of 10 miles in four days. This is remarkable for the reason that during the entire 21 days from March 18 to April 7, inclusive, the total difference between his estimated mileage and his observations was only 9 miles, while it now jumps to a difference of 10 miles in four days. Also in the first three weeks of his trip from Svartevaeg northward Cook mentions the drift of the ice, as, for instance, on page 249 (Apr. 3):

The horizon moved. Our footing was seemingly a solid stable ice crust, which was, however, constantly shifting eastward. All the world on which we traveled was in motion. We moved, but we took our landscape with us.

On page 253:

The very heavy, undulating fields, which give character to the midpolar ice and escape along the east and west coasts of Greenland, are mostly augmented from the surface.

Yet in spite of the obstacle of constantly drifting ice he was able to estimate his distance in three weeks of travel with only 9 miles of error, while in the four days from April 8 to April 11, inclusive, his error was 10 miles.

On page 263 of his book Dr. Cook says in writing of April 11:

Our observations on April 11 gave latitude 87° 20′, longitude 95° 15′. * * * Nearly half of the food allowance had been used. In the long marches supplies had been more liberally consumed than anticipated. Now our dog teams were much reduced in numbers. Because of the cruel law of the survival of the fittest, the less useful dogs had gone into the stomachs of their stronger companions. Now, owing to food limitations and the advancing season, we could not prudently continue the onward march a fortnight longer.

We had dragged ourselves three hundred miles over the polar sea in twenty-four days. Including delays and detours, this gave an average of nearly thirteen miles daily on an air line in our course. There remained an unknown line of one hundred and sixty miles to the pole. The same average advance would take us to the pole in thirteen days.

Svartevaeg is located in latitude 81° 20′. Cook's *estimated* mileage for the 24 days of travel from Svartevaeg to his camp of April 11 totaled *373* miles. Some of this mileage was lost in detours and drifts. But Cook says in his notes:

300 miles in 24 days.

And on page 263 he says:

We had dragged ourselves *three hundred miles* over the polar sea in *twenty-four days.*

Cook had really been on the polar ice for 25 days, but as one day (March 28) was lost on account of bad weather, he had only traveled, as he says, 24 days, in which time he says he had advanced 300 miles.

But Cook's reported observations on April 11 place him at 87° 20′, or *360 miles* from Svartevaeg. If it was only in Cook's notes that he made the statement that he had traveled "300 miles in 24 days," we might account the error as one of typography, but in the text of each edition of his book he says on page 263:

We had dragged ourselves *three hundred miles over the polar sea in twenty-four days.*

and then proceeds to figure out his average rate of speed for the 24 days on that basis, and he draws various deductions as to the length of time he could safely proceed north at the same rate of speed. Three hundred miles in 24 days would make, as Cook says, "an average of nearly 13 miles daily on an air line"; or, to be exact, 12½ miles daily.

Notwithstanding Cook says he had traveled only 300 miles in 24 days, he still claims that he has only 160 miles to go to reach the pole, and "the same average advance would take us to the pole in 13 days." But if he was correct in saying that he had only 160 miles to go to reach the pole, then he must have already traveled 360 miles, and this would make his average daily rate of speed 15 miles instead of 12½, and at the same average advance he would have reached the pole in about 10 days, which, as a matter of fact, he does claim to have done. But if he was correct in saying that he had only traveled 300 miles in 24 days, then he would have had 220 miles before he reached the pole, and his same average advance of 12½ miles would have taken him to the pole in 17⅗ days; so from whatever angle the problem is figured, Cook is in error.

It may be noted that the discrepancy between Cook's notes and his narrative proper is exactly 60 miles, or 1° of latitude. It may also be remembered that in his notes for March 31 Cook says—

No sign of life; none since 83°—

although a week earlier he claimed to have seen signs of seal and bear at 83° 31′ opposite "Crocker Land." As I pointed out in that connection, if these signs of life were really seen (as Cook says in his notes for Mar. 31) below the eighty-third parallel, thus locating the supposed Crocker Land at 82° 31′ instead of at 83° 31′, we then have the same discrepancy of 60 miles, or 1°, which we now find on April 11. Since Cook, like Peary, made no observations for compass variation on his polar trip, we may assume that his observatins were in error, both on March 24 when he placed Peary's mythical Crocker Land at 83° 31′, and again on April 11 when he claims an observed latitude of 87° 20′ in direct contradiction to his claimed advance of 300 miles in 24 days.

However, this is not the only peculiar feature of Cook's story of April 11. Remember that when starting from Svartevaeg (pp. 196–200) Cook said:

Twenty-six of the best dogs were picked, and upon two sleds were to be loaded all our needs for a trip estimated to last *80 days.* Of the 26 dogs * * * 20, the least useful, were to be used one after the other, as food on the march, as soon as reduced loads and better ice permitted. We carried about 200 pounds of pemmican above the expected consumption, and in the final working out *the dogs were used for traction purposes longer than we anticipated.* But with a cautious saving the problem was solved *somewhat more economically than any figuring before the start indicated.*

On page 207 Cook says (Mar. 20):

Of the 9° between land's end and the pole, we had covered 1; *and we had done this without using the pound of food per day* allotted each of us out of the 80 days' supply transported.

On page 210 (also Mar. 20) he says:

Hereafter there was to be *a short daily allowance of food and fuel.*

Nine days later, March 29 (p. 242), Cook writes:

One dog after another went into the stomachs of the hungry survivors.

On page 263 (Apr. 11) he says:

Our dog teams were much reduced in numbers. Because of the cruel law of the survival of the fittest, the less useful dogs had gone into the stomachs of their stronger companions.

As I have already quoted, it was a part of Cook's plan to feed dog to dog. He had planned on leaving Svartevaeg to feed 20 of the dogs, at more or less stated intervals, as the sled loads lightened, to the other dogs. As he carried provisions for 80 days and planned his arrangements accordingly, this would have meant one dog fed to the others every four days. He had now been en route 25 days, and if he had carried out his original plan only six of the dogs would have been fed to the others. But on page 200, he says:

In the final working out the dogs were used for traction purposes longer than we anticipated,

and to bear out this statement, Cook reports that he returned to land with "10 bony dogs." Therefore, as the dogs were used for traction purposes longer than he had anticipated, we may infer that he had not used his allotted six on April 11, when he writes:

Our dogs were *much reduced* in numbers,

for even had he used the maximum allowance of 6 in 25 days, he could hardly consider that 6 from a team of 26 would leave the team "much reduced." Perhaps one may say that this is too slight an inconsistency to note, but the frequency with which these inconsistencies occur in Dr. Cook's narrative lead one to query if he read his own—or Mr. Harry's—story as carefully as was desirable before he gave it to the world as a support to his claim to Polar discovery.

Not only in the reported reduction of his dog teams is discrepancy noted, but in his own food supply. Remember that Dr. Cook left Svartevaeg with ample supplies for 80 days. Not only this, but he says on page 200 that—

With a cautious saving the problem was solved somewhat more economically than any figuring before the start indicated.

On March 20 he says:

Of the 9° between land's end and the pole, we had covered one; and we had done this *without using the pound of food allotted each of us out of the 80 days' supply transported.*

This statement, if true, reduces the number of days which he had been using the supplies from the two Polar sledges, to 22 instead of 25. In 22 days, therefore, he had used "nearly half of the food allowance" originally intended to last 80 days, or in a fraction more than one-fourth of the time for which the journey was planned, he had used "nearly half of the food allowance" for the entire trip.

On April 12 Cook records in his notes:

April 12, 1908. Miles covered, 21. 11 p. m. to 7 a. m. Thoughts of return. Food supply reduced. Hope to economize in warmer weather. Very heavy ice, much like land ice. Wind 2 W. S. W. The awful monotony.

And on April 13:

April 13, 1908. Miles covered, 17. 12 p. m. to 7 a. m. The same heavy, glacier-like ice. * * * The occasional soup. Hummocks 15-20 feet. Ah-we-lah in tears at start. W. black. Sun under rushing vapors. Ice changes. Leads.

On pages 265–266 of his book, Dr. Cook says of this time:

With our dogs bounding and tearing onward, from the eighty-seventh to the eighty-eighth parallel we passed for two days over old ice without pressure lines or hummocks. There was no discernible line of demarcation to indicate separate fields, and it was quite impossible to determine whether we were on land or sea ice. The barometer indicated no perceptible elevation, but the ice had the hard, wavering surface of glacial ice, with only superficial crevasses. My nautical observations did not seem to indicate a drift, but nevertheless my combined tabulations do not warrant a positive assertion of either land or sea. I am inclined, however, to put this down as ice on low or submerged land.

Great stress is laid by Cook and his supporters on the argument that whoever accepts Peary's story as true must accept Cook's, because Cook's claim to the attainment of the pole was made before Peary's, and his description of conditions en route to the pole and return was given to the world before Peary's story was published, and Peary's story strongly corroborates Cook's story in every essential detail. On pages x and xi to My Attainment of the Pole (preface) Cook says:

If you have read this book, then read Mr. Peary's North Pole. Put the two books side by side. When making comparisons remember that my attainment of the pole was one year earlier than Mr. Peary's claim; that my narrative was written and printed months before that of Mr. Peary; that the Peary narrative is such that Rear Admiral Schley has said, "After reading the published accounts daily and critically of both claimants I was forced to the conclusion from their striking similarity that each of you was the eyewitness of the other's success. Without collusion it would have been impossible to have written accounts so similar."

This opinion coming, as it does, from one of the highest Arctic and naval authorities is indorsed by practically all Arctic explorers. Capt. E. B. Baldwin goes even further and proves my claim from the pages of Peary's own book. Gov. Brown, of Georgia, after a critical examination of the two reports, says, "If it is true, as Peary would like us to believe, that Cook has given us a gold brick, then Peary has offered a paste diamond."

Since my account was written and printed first the striking analogy apparent in the Peary pages either proves my position at the pole or it convicts Peary of using my data to fill out and impart verisimilitude to his own story of a second victory.

In the appendix to My Attainment of the Pole 10 pages are devoted by Capt. Evelyn Briggs Baldwin to an analysis of the respective claims of Peary and Cook. The apparently strong points made by Capt. Baldwin are:

First. Cook reported Bradley Land between 84° and 85° north latitude. This report, Baldwin claims, is corroborated by Peary's report of open water and animal life east of Cook's line of march, at 85° 48′.

Second. Cook's "land ice" or possible submerged island between the eighty-eighth and eighty-ninth parallels, corroborated by Peary's fox tracks near the eighty-eighth parallel.

Capt. Baldwin is not alone in the belief expressed by him in 1911 that Peary's apparent corroboration of Cook is proof positive of one of two facts, either Cook reached the North Pole in 1908 and Peary reached it a year later or Cook reached the pole in 1908 and Peary copied Cook's story in order to make the account of his own trip correspond with Cook's. Cook himself advances this theory as a strong argument to support his claim of polar attainment.

Now, let us see the relation which Cook's account really bears to Peary's story.

In 1905 Robert E. Peary left the United States for the Arctic regions on a trip which he then said was to be his last "dash for the pole." He returned late in 1906 with the assertion that he had reached the farthest north of any explorer—87° 6′. As he had no companions beyond the Big Lead except his colored assistant, Matthew Henson, and a party of Eskimos, Peary's statements relative to this polar dash rest wholly on his unsupported word. Peary's book, Nearest the Pole, giving a full account of this 1905–6 expedition was published in April, 1907, three months before Dr. Cook started for the north; and I have the word of one of Cook's companions that Peary's book was included in the library of the box house at Annoatok. I have in my possession a letter written by Rudolph Franke, from which I quote.

* * * I can not give you information as to all books that were on the "Bradley," but we were well stocked at Annoatok. Kane's, Greely's Sverdrup's (Part I) books were there; also Peary's "Nearest the Pole." The Eskimos were very much interested in it, especially Egingwah, who remembered Crocker Land talk; also Innachu. Edgar Allen Poe's books were also there; McAllister's Recapitulation of Arctic Discoveries—in fact, I can't remember all, but Peary's "Nearest the Pole" was there; also Peary's books of his 1891–2 and 1893–4 expeditions.

In Nearest the Pole, Peary records:

1. The "discovery" of Crocker Land at about 82° 31′. (See pp. 202–207 of Nearest the Pole.)

2. Open water at 84° 36′, the "Big Lead." (See p. 117 of Nearest the Pole.)

3. Fog bank, "probably caused by open leads," at 85° 12′, and a lead at about 85° 52′. (Pp. 130–131 of Nearest the Pole.)

4. Most important of all is Peary's account of "several berg-like pieces of ice discolored with sand," between 85° 42′ and 86° 12′. (See p. 131 of Nearest the Pole.)

In his account of his northward trip Cook therefore had these data of Peary's to guide him. In other words, if he accepted Peary's account as true (and at that time little was known of Peary's alleged explorations beyond his personal statements), Cook knew that in order to place an account before the world which would be generally accepted it must conform closely to Peary's recorded statements.

Therefore, Cook "sighted" Crocker Land (as he says) at 83° 31′, but as I have already shown by his reports of animal signs opposite Crocker Land, this "sight" was probably made at 82° 31′ instead of 83° 31′.

Cook crossed the "Big Lead" at about 83°, while Peary in his 1906 trip crossed it at 84° 38′. The trend of the "Big Lead," however, is at times from southwest to northeast, so that in this respect also, Cook corroborates Peary's earlier account.

Cook reports the "discovery" of Bradley Land which he locates at from 84° 20′ to 85° 10′. This corresponds with Peary's "probable open leads," at 85° 12′ and the leads at 85° 52′, which, if they really existed, could have been caused by the obstruction of the land—"Bradley Land"—to the west of Peary's 1906 line of march.

Finally, as I have quoted from pages 265–266 of My Attainment of the Pole, Cook reports land or glacial ice between the eighty-seventh and eighty-eighth parallels, which corresponds to Peary's sand-discolored ice beyond the eighty-sixth parallel. Cook's reported possible "glacial island" at about 87° 50′ latitude North, and possibly 95° longitude West, would be in the correct line of drift for Peary to intercept the sand-discolored ice from the possible island.

Instead, therefore, of Cook's corroboration by Peary, Peary, contrariwise, is corroborated by Cook. One may argue that this does not prove that Cook copied Peary's report, but may rather tend to prove that Peary really attained a northing in 1906 of 87° 6′, and that Cook paralleled Peary's 1906 route, while following a more westerly course. But Peary's story of his 1906–7 expedition is even more deplorably lacking in coordination and plausibility than his account of his 1908–9 expedition, and contains no convincing evidence that he really attained the high northing of 87° 6′ which he claims, but, on the other hand, contains much to disprove his claim. Furthermore, Peary's other Arctic "discoveries" have been proven spurious; and Crocker Land, one of the notable results of his 1905–6 expedition has been removed from the map by the report of Prof. Donald B. McMillan and Ensign Fitzhugh Green.

A careful analysis of his book Nearest the Pole shows the same characteristic unreliability of his other books, hence we can not accept the theory that Cook really did find conditions as Peary reported them. It is more probable that Cook, after studying Peary's report of his 1905–6 trip, composed the details of his own story to apparently correspond with Peary's report, without verification. As I have said before, Peary's claims to Arctic discovery were generally accepted in this country prior to 1909, therefore Cook felt that he was safe in building up a story which would correlate Peary's book Nearest the Pole.

The Scottish Geographical Magazine, Edinburgh, Scotland, published an article in February, 1914, from which I quote:

With a knowledge of Peary's Crocker Land, found in 1906, Peary's land ice near 86° N., found the same year, and the experience in polar travel, which Dr. Cook certainly had, both in the Arctic and Antarctic, we submit that an imaginative man, taking into account probabilities, had an easy task in writing the story. And surely any man of even average education could write of the pole as "an endless field of purple snows. No life. No land."

Peary claimed to have seen Crocker Land from Svartevaeg and from Cape Colgate, a distance of approximately 120 miles from the place where he located Crocker Land. Cook, if he traveled north between the ninety-sixth and ninety-seventh meridians of longitude, must have passed within about 34 miles of Peary's Crocker Land. A few persons claim that Peary is excused for his pretended "discovery" of Crocker Land on the ground that he was so far away from the supposed land that he might have mistaken an iceberg for a snow capped mountain. But icebergs presuppose the existence of glaciers, and where glaciers exist there must also be land; therefore the frailty of this argument is apparent. Cook, however, has not even this argument to support his assertion that he "sighted" Crocker Land, for instead of a distance of 120 miles, he claims to have passed within about 34 miles of Crocker Land, or, as

he says in his letter to Capt. Bernier, "Crocker Land was sighted"; and he also claims to have passed within about 40 miles of the point where Crocker Land was located by Peary, and therefore must have felt reasonably sure that no land with mountains bearing snow-clad summits, as described by Peary, existed there. Why, then, did Cook assert that he "sighted" Crocker Land, and why does he show Crocker Land on his map without a question mark (p. 285)? Did he fear that if he reported the nonexistence of land he would not be credited? That is not plausible, for later explorers always confirm or disprove the reports of their predecessors. The more plausible hypothesis is that Cook never traveled as far north as the alleged Crocker Land, but turned back at or about the Big Lead and, unwilling to admit defeat in the project which he asserts was his life's ambition, proceeded to write his story from the data previously outlined by Peary. "If the blind lead the blind, both shall fall into the ditch." As regards Crocker Land, Peary and Cook are both in the same ignominious ditch.

Even if later explorers report the existence of land at or about the place where Cook reported "Bradley Land," such a report will not prove that Cook was ever there, for the theory of an Arctic Continent in the Polar Sea has long been held, and in the light of Cook's other contradictory reports, such a possible confirmation of his Bradley Land can be only considered as the confirmation of a "lucky guess."

Cook's account of April 13 also deserves careful study. In his notes he writes:

April 13, 1908. Miles covered, 17; 12 p. m. to 7 a. m. The same heavy glacier-like ice. The occasional soup. Hummocks 15 to 20 feet. Ah-we-lah in tears at start. W. black. Sun under rushing vapors. Ice changes. Leads.

On April 11, as I have already shown, Cook gave his observations at the *end* of the day's march as 87° 20′, and on the same day (p. 263) said:

There remained an unknown line of *one hundred and sixty miles to the pole.*

As the observation of 87° 20′ was made at the *end* of the day's march of April 11, and as Cook reports Ah-we-lah in tears "at *start*" of the march of April 13, he had traveled only one day's march since the observation of 87° 20′ was made, when he wrote:

There remained an unknown line of one hundred and sixty miles to the pole.

On that one day, April 12, he reports an advance of 21 miles. One hundred and sixty miles less 21 miles leaves, according to his own figures, *139* miles from the pole on the morning of April 13, when he says "Ah-we-lah in tears at start."

On pages 268 to 273, inclusive, Cook has given his complete version of Ah-we-lah's breakdown. I quote in part from his account:

I shall never forget that dismal hour. Ah-we-lah, a thin, half-starved figure in worn furs, lay over his sled, limp, dispirited, broken. It was a critical moment. Desperate as was my condition, and suffering hellish tortures, the sight of the despair of my companions aroused me. Should we fail now, after our long endurance; now, when the goal was so near? The *pole was only one hundred miles beyond!*

Yet Cook's notes, accepting his observation of April 11 as correct, show that the pole was *139* miles beyond.

That this is no typographical error or casual mistake is evidenced by Cook's repetition of the statement of "one hundred miles" as he continues his narrative:

Holding up one hand, with a reach poleward, I tried to convey the idea that in five sleeps the "Big Nail" would be reached and that then we would turn homeward. "Tigishu-conitu," I said. (The pole is near.) "Sinipa tedliman dossa-coatonie tomongma ah youngulok tiglay toy hoy." (At the end of five sleeps is finished, beyond all is well; we return thereafter quickly.)

This statement is remarkable, for even if they had really had only 100 miles to go five days would be a short allowance of time to travel that distance, especially when we remember that two days earlier Cook said: "The same average advance (13 miles daily) would take us to the pole in thirteen days." Now, he is planning to travel 20 miles a day for five days, a greater average advance than he has yet made.

As the result of his persuasions, the Eskimos regained their courage, and on page 273 Cook says:

E-tuk-i-shook gripped his whip. "Ka, aga" (Come, go!), he said. Ah-we-lah, determined but grim, braced his body and shouted to the dogs, "Huk, Huk, Huk," and then to me he said, "Aga-Ka!" (Go—come.) With snapping whip we were off for that *last hundred miles.*

Still another interpretation of this statement of Cook's is made by taking the combined stories of April 11 and April 13 *literally*. On page 263, at the end of the march of April 11, Cook says:

We had dragged ourselves *three hundred miles* over the polar sea in *twenty-four days.*

This statement is paralleled in his daily log on page 572, where he records, at the *end* of the day's march of April 11, "*300 miles* in 24 days," thus reiterating the statement that at the end of the day's march of April 11 he was 300 miles away from Svartevaeg, which, it must be remembered, is 520 miles from the pole.

A march was made on April 12, and at the *beginning* of the day's hike of April 13 Cook repeats again and again, "*100 miles from pole.*"

Therefore since, as he claims, he was only 300 miles away from Svartevaeg at the end of the march of April 11, and only 100 miles from the pole at the beginning of the march of April 13, he must have traveled on April 12—the only hike that was made between April 11 and April 13—a distance of *120 miles.*

If we are to accept his statements as made in his book, Cook surely holds the record for long marches.

The march of April 13 was 17 miles, according to Cook's figures, and on April 14, 23 miles. On the latter day Cook's Notes read:

April 14, 1908. Miles covered, 23; 11 p. m. to 7 a. m.; 88° 21′, 95° 52′ (longitude). Wind light but penetrating. Off the big field; ice smaller. Some open leads. Little signs of pressure. Snow soft, but less precipitation. Dogs get up better speed. *100 miles from pole.* (From other observation papers: Bar. 29.90, falling; temp. —44°; shadow (6-f. pole), 30½ feet.

On page 274 Cook says that this observation was made at noon of April 14, and as the march ended at 7 a. m. (they were now making night marches), the observation was made at the end of the day's march. Since making his observation on April 11, therefore, he has traveled 40 miles, and now locates himself at 88° 21′, or 99 miles from the pole, or, as he says in his Notes, *100 miles* from the pole. But he also says that he was *100 miles* from the pole on April 11, at which time his observation placed him 139 miles from the pole. How does Cook explain these discrepancies?

Cook's Notes for April 15 read:

April 15, 1908. Miles covered, 14; 10 p. m. to 7 a. m. Ice same. Wind, —1, S. W. Working to the limit of muscle capacity. So tired and weary of the never-ceasing tread.

On page 274 Cook writes that "More dogs had gone into the stomachs of their hungry companions." It will be remembered that on April 11 he said his dog teams were much reduced in numbers. Now, four days later, he writes that "*more dogs*" have been fed to the others, showing that he did not follow his scheme of one dog to be fed to the others every four days, for in four days' time he says "More *dogs*." The only check that we have on Cook's dogs is that when he started from Svartevaeg he had 26 dogs, and when he reached land again, on June 13 or 14, he had still "10 bony dogs," showing that 16 must have been used en route.

On page 276, in describing the time directly after his observation of April 14, presumably April 15, Cook says:

As we progressed over the last hundred-mile step, my mind was divested of its lethargy.

And on pages 277–278:

Daily, by careful measurements, I found that our night shadows shortened and became more uniform during the passing hours of the day, as the shadow dial was marked. With a lucky series of astronomical observations, our position was fixed for each stage of progress.

Neither in his notes nor in his narrative does Cook give the results of this "lucky series of observations." His estimated mileage is all that he presents to show his progress from April 14 to April 19.

On page 278 of My Attainment of the Pole, Cook says, in describing the condition of the ice:

From the 88th to the 89th parallel the ice lay in large fields; the surface was less irregular than formerly.

This statement is contradicted by the data in his notes. According to his notes for April 14, which I have already quoted, he crossed the 88th parallel early in the march of April 14, and also according to his notes, he did not cross the 89th parallel until the end of the march of April 17. His notes relative to the condition of the ice for April 14, 15, 16, and 17 read:

April 14th: *Off the big field, ice smaller.* Some open leads.
April 15: Ice same.
April 16: Ice passed. Several heavy old floes. Made 6 crossings.
April 17: Ice same. Crevasses new. Seven crossings.

April 18 is the first day on which Cook mentions that the ice is less irregular than formerly, and as he passed the 89th parallel on April 17 this can not be included in the territory "from the 88th to the 89th parallel." From the 89th to the 90th degree, however, the description which Cook gives in his notes of the ice corresponds to the description given in the text of his story for the region between the 88th and 89th parallels. Here, again, we have that missing degree, or 60 miles, which Cook has twice before so mysteriously dropped from his calculations.

According to his own story, therefore, we are justified in placing his farthest north at least 60 miles from the pole.

A peculiar feature of Cook's notes is his record of barometer readings and his temperature readings. His instruments, as listed on page 198, included a thermometer attachment to his sextant, also three other thermometers, and one aneroid barometer. Owing to the exigencies of the polar dash, the difficulty of making accurate astronomical observations with the sun at the low altitudes it reaches in March and April, and unfavorable weather conditions, we may say that an explorer is excusable for omitting daily astronomical observations. But no such difficulties attach to the use of the thermometer and barometer. These instruments do not depend on sunlight or calm weather for their use. Since Cook had them in his possession it is strange that he did not make better and more frequent use of them. On page 262 Cook says:

That I must steadily keep up my notes and the records of observations was a serious addition to my daily task. *I never permitted myself to be careless in regard to this* for I never let myself forget the importance of such data in plotting an accurate course.

That being the case, why, in a journey covering 35 days from Svartevaeg to Cook's "Pole," do we find only 13 days when the barometer record is given, and only 17 thermometer readings in the same period of time? On April 11 Cook writes in his notes: "Too tired to read instruments," and then straightway proceeds to give the results of his observation at the end of the march, the temperature and barometer readings, which he says are taken "from other field notes." He does not say of what his "other field notes" consist or where they were kept, but on page 245 he does say:

I am now presenting every scrap of paper and every isolated fact.

And on page vii of the preface to his book he also says:

Herein the rough field notes, the disconnected daily tabulations, and the records of instrumental observations, every fact, every optical and mental impression has been reexamined and rearranged to make a concise record.

It would therefore appear that on 22 days out of 35, or more than two-thirds of the time, Cook kept no record of his barometer readings, although these would seem to be of great interest and value to him on his journey; and that he only kept temperature records for one-half of the time occupied in his journey from Svartevaeg to the place he called the Pole. This, too, notwithstanding that he says, as I have just quoted, that he never permitted himself to be careless in keeping up his notes and records of observations. On the return journey, covering a period of 53 days from April 23 to June 14, inclusive, Cook gives no barometer readings whatever, and only 10 thermometer readings. Truly, this was a most careful (?) record!

On April 19, Cook's notes contain this record:

April 19, 1908. Miles covered, 16—11 a. m. to 8 p .m. Position, 89° 31′. D. R., 94° 03′ (long.) Camp on old field—the only one on the horizon with big hummocks. Ice in very large fields; surface less irregular, but in other respects not different from farther south. Eskimos told that in two average marches Pole would be reached. Extra rations served. Camp in tent. (Bar., 29.98; temp., −46°.)

One word in this entry from Cook's notes for April 19 is significant, and while I do not advance the argument that because of this one word his account is a made-up story, I do claim that it is one of many significant items which prove the manufactured nature of his narrative. I refer to the word "would" in the sentence:

Eskimos told that in two average marches Pole *would* be reached.

This sounds much more like a retrospective memorandum—as though Cook was writing of something that had occurred at some time in the past—than it does like the daily entry of a kept-up-to-the-day daily diary.

In the text of My Attainment of the Pole, Cook covers two pages with an account of his movements at his camp of April 19, and on page 281 he adds:

With the Pole only 29 miles distant, more sleep was quite impossible. * * * A few hours more were agreeably spent in the tent. Then we started out with new spirit for the uttermost goal of our world.

We were excited to fever heat. Our feet were light on the run. *Even the dogs caught the infectious enthusiasm. They rushed along at a pace which made it difficult for me to keep a sufficent advance to set a good course.*

In the Peary hearing before the Committee on Naval Affairs, in 1911, Peary was asked a question relative to a statement in his book as to the actions of his dogs on nearing the place he called the North Pole:

Mr. MACON. Pardon me for calling attention to one observation that I noticed in your book. Just before you got to the pole you state that the dogs even caught the spirit of the occasion, or of the party, and tossed their heads in the air and curled their tails and emitted yelps, and so on. What in the world could have brought about such a feeling as that upon the dogs?

Capt. PEARY. My impression is that I stated that the dogs appeared to have caught the spirit of the party, and I think I stated that that might be due to the reduced friction of the sledges.

As I have before stated, Peary has been frequently accused of "copying" Cook's reports in order to make his own story seem more plausible and reasonable, and this incident of added life and spirits in the dogs when approaching the boreal center is cited as an instance of such plagiarism. The mere fact that Peary's book, The North Pole, was published in 1910, while Cook's My Attainment of the Pole did not appear until 1911, does not serve to relieve Peary of the stigma of plagarism, for Cook's friends say:

Ah, yes; but Cook's newspaper story was in print first, at least he described the conditions at the pole first.

Let us see on what this opinion is based. The New York Herald had the exclusive rights to Cook's story, while Peary chose the New York Times as the medium through which to present his account to the world. I quote the first messages received from Cook and Peary and published in these respective papers:

COOK'S FIRST MESSAGE AS PRINTED IN THE NEW YORK HERALD OF SEPTEMBER 2, 1909.

Lerwick, Shetland Islands, September 1, 1909.

Reached North Pole April 21, 1908. Discovered land far north. Have left sealed exclusive cable of 2,000 words for you with Danish consul at Lerwick. I go steamer *Hans Egede* to Copenhagen.

F. A. COOK.

PEARY'S FIRST MESSAGE AS PRINTED IN THE NEW YORK TIMES OF SEPTEMBER 7, 1909.

Indian Harbor, Labrador, via Cape Ray, N. F., September 6.

The New York Times, New York:

I have the pole April 6. Expect arrive Chateau Bay September 7. Secure central wire for me there and arrange expedite transmission big story.

PEARY.

Cook's telegraphic synopsis of his polar trip was printed in the New York Herald of September 2, 1909, but made no mention of the effect of the polar atmosphere on his dogs.

Peary's telegraphic synopsis of *his* Polar trip was printed in the New York Times of September 9, 1909. It gives the barest outline of his journey with no details of any kind, while Cook does give the briefest possible description of the physical conditions at and en route to the place he called the Pole. Thus, the contention of Cook's friends that he was the first to describe the boreal center of the earth is upheld—although he says nothing in this telegraphic dispatch of the effect on his dogs.

Peary's *complete newspaper story* was published in the New York Times of September *10 and 11*, 1909.

Cook's *complete newspaper story* was published in the New York Herald of *September 15 to October* 7, 1909, inclusive, one instalment appearing every other day. I quote from each man's story the statements relative to the actions of the dogs when the place which Cook and Peary called the North Pole was approached:

[From Cook's story of *October 5*, 1909.]

We were excited to fever heat. Even the dogs caught the infectious enthusiasm and rushed along at a pace which made it difficult for me to keep a sufficient advance to set a good course.

[From Peary's story of *September 11*, 1909.]

A rise in temperature to 16 below reduced the friction of the sledges and gave the dogs the appearance of having caught the spirits of the party. The more sprightly ones as they went along with tightly curled tails frequently tossed their heads with short, sharp barks and yelps.

These quotations and their respective dates prove that if either man was guilty of plagiarism, in this instance at least, that man was not Peary.

Peary makes the absurd statement in his book that he took no longitude observations on his last Arctic trip, and in the hearing before the Committee on Naval Affairs in 1911 he adds the equally ridiculous statement that he made no observations for compass variations, so that while he claims to have made three latitude observations between Cape Columbia and the pole he traveled "by compass" without knowing in which direction his compass needle pointed, or whether he was on the longitudinal meridian of Cape Columbia, Point Barrow, or other geographical point. This in a journey of 413 air-line miles.

Cook does a little better than Peary in regard to latitude observations, for he claims to have made seven observations for latitude between Svartevaeg and the point he called the pole, a distance of 520 air-line miles.

Cook also tells a better story than Peary relative to his observations for longitude, for on March 30 and April 8, 11, and 14 he claims to have made longitudinal observations, but he is in the same class with Peary when we consider compass variation, for in the entire distance of 520 air-line miles from Svartevaeg to the point he called the pole he made no observations for compass variations, although he, too, traveled "compass in hand," without knowing the direction in which his compass needle pointed, assuming that throughout the entire 520 miles from Svartevaeg to the place he called the pole it pointed in the same direction that it did at Svartevaeg. If Cook had con-

sulted the map showing the variations of the compass, published by the Hydrographic Office of the Navy Department, he would have seen that the isogonic lines or lines of equal variation do not follow either the latitudinal or longitudinal "circles" on land or sea, but that wide and sudden variations may be expected. Moreover, Cook did not travel on any one longitudinal meridian, but snaked around from the ninety-third to the ninety-seventh, so that even if the compass was constant in its direction along any one meridian, Cook could not then have known in which direction he was headed, since he did not travel on any given meridian. This fact, in conjunction with Cook's "doctored" latitude observations, is sufficient proof that he never attained the "boreal center," as he calls the geographic point known as the North Pole.

Cook's notes for April 20 read:

April 20, 1908. Miles covered, 15½. 8 p. m. to 4 a. m. An exciting run; ice aglow in purple and gold; Eskimos chanting. Wind S., l. 89° 46′ 45″. (D. R.) 94.52. New enthusiasm; good march. Temp., —36°; bar. (not legible on notes); course set for 97th.

This last entry brings out another point relative to Cook's longitude observations: As one nears the pole the distance between the longitudinal meridians decreases until at the pole the meridians all meet and at the pole itself there is no longitude. Therefore when Cook gave his longitudinal position, by dead reckoning, on April 20 as 94° 52′, and his latitude as 89° 46′ 45″, and adds: "Course set for 97th," it means (assuming that his latitude was correct) that he was less than half a mile to the east of the ninety-seventh longitudinal meridian toward which a "course was set." Cook fails to state how he obtained his longitude by "dead reckoning" without observations for compass variation; and it would be interesting to know how, with no longitudinal observations for a week and none whatever for compass variation, he was so carefully accurate in his position that he could, by "dead reckoning," discern the difference between the ninety-fifth and the ninety-seventh meridians of longitude, when there was less than half a mile distance between them.

DESCRIPTION OF THE POLE.

The crucial point of Cook's story is his description of the regions immediately surrounding the pole. His friends and supporters have steadfastly claimed that Cook was the first man to give a description of these regions to the world; that Peary followed with a description so nearly similar to Cook's that it proved that he either copied Cook or corroborated him; and that if either man reached the pole, Cook was the one, while if both men were at the pole, Cook must have been there first.

As I have already shown in the respective "first messages" of the two men, sent by Cook from Lerwick, Shetland Islands, and by Peary from Indian Harbor, Labrador, the only "new fact" stated in Cook's message is: "Discovered land far north," while Peary's contains nothing new whatever.

As I have also previously shown, Cook could easily have figured out from Peary's 1906 book, Nearest the Pole, that if Peary's reports in that book were accepted as true, land probably existed between the eighty-fourth and eighty-fifth parallels; therefore the theory that Cook must have been as far north as 84° 50′ because he reported the existence of "Bradley Land" does not hold good. This brings the "new" features of each man's report down to those contained in the stories first published.

Peary's first telegraphic synopsis contained nothing but the merest outline of his trip; therefore Cook's telegraphic story published in the New York Herald of September 2 was the first description given to the world. Let us see if that report contained anything which could not as easily have been written at Svartevaeg as at the North Pole.

Since Peary claimed to have reached 87° 6′ in 1906 and had already described his trip to that point, whatever Cook reported as far north as the eighty-seventh parallel would either corroborate or dispute Peary. His report of Bradley Land tends to corroborate Peary's report and could easily have been "guessed" by any man whose interest in Arctic matters had led him to make a study of the reported conditions in the polar sea.

The second feature of importance in Cook's report is the "appearance of land" or land-ice between the eighty-seventh and eighty-eighth parallels. This could also have been easily assumed from Peary's report of his 1906 expedition, in which he states that he found ice containing sand between the eighty-fifth and eighty-seventh parallels.

As the drift of the ice in that part of the world had been proven by previous explorers—Nansen, Cagni, and so forth—to be in a general line from the point where Cook reported his possible glacial island to the point where Peary claimed to have found sand-discolored ice, Cook easily might have assumed that the land from which Peary's reported sandy ice came must lie between the eighty-seventh and eighty-eighth parallels. This reasoning, of course, rests on the assumption, for the sake of argument only, that Peary really traveled as far north as he alleges to have gone on his 1906 trip. The glacial island, however, must be eliminated from those features about whose existence Cook could have known nothing prior to his polar trip.

Cook reported an active pack on the eighty-eighth to the eighty-ninth parallel, which was to be expected at the time of year he was in the North; he also reported improving ice conditions from the eighty-ninth parallel to 90° north.

Again, on the scientific theory held for years by learned men that no land exists for a considerable distance south of the pole in any direction, the ice conditions would naturally improve as the pole was approached and the distance from the disturbing land influences increased. This brings us to Cook's report of the physical features of the region at and about the pole.

In the New York Herald of September 2, 1909, Cook reports:

And endless field of purple snows. No life; no land; no spot to relieve the monotony of frost. We were the only pulsating creatures in a dead world of ice.

Many lengthy arguments and learned dissertations are based on Cook's description of "purple ice" and "purple snow" to prove that he reached the pole, and because he first gave this description of the ice and snow at the pole he must have been the first, if not the only, man to attain the pole.

But without going to the North Pole, Cook or any other man could with perfect confidence and expectation of credence state that the surface of the globe at the pole was radiant in purple snow, for it is well known that the snow and ice fields of the Arctic, under certain atmospheric conditions and when the sun is at certain altitudes, appear purple, lilac, rose, and violet. This condition prevails not only at the pole but throughout the Arctic wherever Arctic travelers have made their way to fields of ice and returned with their reports of these fields.

Peary in his "Reconnaissance" of the Greenland Ice Cap in 1886 wrote on his return:

The sky above was flawless blue, the crimson sun in one direction, the yellow moon opposite, and the plain on which we traveled spread with diamond dust. At midnight the northern sky was a sea of crimson light and *the snow lay bathed in delicate shades of rose.* (Pp. 15 and 16 of Northward Over the Great Ice.)

On page 252 of his Farthest North, Dr. Fridtjof Nansen gives a description of the Polar Sea which also notes the wonderful color scheme of the region:

The sky is like an enormous cupola, blue at the zenith, shading down into green, and then into lilac and violet at the edges. Over the ice fields there are cold, *violet-blue shadows,* with lighter pink tints where a ridge here and there catches the last reflection of the vanished day.

Dr. Hayes, in his description of the Arctic sunrise at the point near Etah which he named "Sunrise Point," also emphasized the purple color of the view. I quote from page 253 of his book, The Open Polar Sea:

We awaited the approaching moment with much eagerness. Presently a ray of light burst through the soft mist clouds which lay off to the right of us, opposite the cape, blending them into a *purple sea,* and glistening upon the silvery summits of the tall icebergs which pierced the vapory cloak as if to catch the coming warmth. The ray approached us nearer and nearer, the *purple sea* widened, the glittering spires multiplied as one after another they burst in quick succession into the blaze of day.

In his description of his Farthest North, on page 349 of the same volume, Dr. Hayes says:

The sea beneath me was a mottled set of white and dark patches. * * * These spots were heightened in intensity of shade until the belt of water-sky blended them altogether into one uniform color of *dark blue.*

Dr. Kane, in his account of his second expedition, also writes of the sunrise in the Arctic:

We have marked every dash of color which the great Painter in his benevolence vouchsafed to us, and now the *empurpled blues,* clear, unmistakable, the flickering yellow, everything seemed superlative luster and unsurpassable glory.

Frank Wilbert Stokes, the famous painter of Arctic scenery, in a paper entitled "Color in the North and South Polar Regions," presented at the Eighth International Geographic Congress, said of the color effects in the Arctic:

The polar ice has its own intrinsic colors. The colors of the Arctic ice are varied shades of cobalt and ultramarine blue and malachite greens.

Contrary to generally received opinions, the long Arctic night is full of beautiful color harmonies. At the far southern horizon a deep orange glow, the reflected light of the hidden sun, can be seen, succeeded by orange yellow, greenish yellow, greenish blue, fading into the deep ultramarine blue of the zenith. The Arctic colors are characterized chiefly by their rich splendor and brilliant intensity. * * * The darkest part of the long night was enlivened when the weather was clear by the sun's reflection in the south, the wonderful clearness of the atmosphere, and the unrivaled brilliancy of the moon

and stars, while the long, *deep-blue, purpled* shadows across the *lilac-golden* surface of the ice were rendered more beautiful by their penumbra, which had the colors of the rainbow.

I do not mean to insinuate by my use of these quotations and many others that I might make that Cook copied his description of the region surrounding the pole from any of these writers and explorers, but I do insist that with Cook's own Arctic and Antarctic experience he knew that a description of the colors of the ice in one part of the Arctic regions would apply equally well to the ice in the other portions of the polar regions. Therefore he was safe and beyond criticism in describing his "endless field of purple snows," for whether they covered land or sea anywhere in the Arctic when the sun is low, one can see the same "endless field of purple snows."

Cook could also feel secure in the statement that at the pole he found no land, for this was established by explorers in the seventeenth century, and verified by Nansen and Cagni, who, although they did not reach the pole, gave such scientific data as the result of their respective expeditions as would tend to verify the theory that no land exists at the pole. Therefore, while Cook's report in regard to the physical conditions at the pole contains nothing to prove that he was *not* at the pole, it contains nothing to convince one that he was there. Furthermore, the report which Cook gave of the physical conditions at the pole corresponds in a marked degree with his own article published in 1904, which expressed his theory at that time as to what an Arctic explorer who penetrated to 90° north latitude might expect to find. In this paper, published in the United States Government Report of the Eighth International Geographic Congress, entitled "A comparative view of the Arctic and Antarctic," Dr. Cook said:

The Arctic land area is nearly continuous with the continental masses of the northern hemisphere, inclosing a landlocked sea. *The North Pole is in the center of an imprisoned sea of ice.*

The Arctic Ocean occupies an area somewhat larger than the probable extent of the combined spread of the Antarctic lands—approximately 4,000,000 square miles. The continents of the northern hemisphere are so grouped around it that the physical environment is similar to that of a great lake with well-defined inlets and outlets.

In the North the great attraction to explorers has been the glory of attaining the pole. The fascination of the north polar dash will increase rather than diminish. A forced march to the boreal center, though quickly made and under difficulties so great as to prevent detailed investigation, would give us a valuable record of the physical environment of the mysterious Arctic basin.

Here (in the Arctic) the color is bright and cheerful, and the weather characteristics are stimulating.

This quotation from Cook's paper, published in 1904, three years before he started on his north polar trip, shows that he had a well-defined theory as to the conditions he would find at the North Pole. Again, this does not prove that Cook was not at the pole, but it does show that he, in company with many scientists, had a clear idea as to what he ought to find there, and therefore had reason to believe that his story would meet with general acceptance if he returned with such a description as he outlined in 1904.

Some minor features of Peary's story, printed in the New York Times of September 10 and 11, 1909, are duplicated in Dr. Cook's newspaper story published in the New York Herald of October 5, and in his book published in 1911, a year after Peary's book was published. One of these points I have already mentioned, namely, the infectious enthusiasm of the dogs. Peary was the first to mention this interesting fact in the New York Times of September 11, 1909, and Cook duplicated it in the New York Herald of October 7, 1909.

Peary was first to relate the extra precaution of traveling in different directions beyond the place he called the pole, in order to verify his position. Cook says nothing of any such procedure until his story is published in Hampton's Magazine. In the February number of that magazine, page 163, he says:

On April 22 we moved southward, pitched the silk tent, and after midnight made a second series of observations. Then we started on the return journey.

This account varies slightly from the story as related in My Attainment of the Pole; nevertheless it is the first hint he gives officially, of observations made at more than one camp. This is considerably more than a year after Peary's story of "quartering the ice in different directions" was published.

In the New York Times of September 10, 1909, Peary relates his story of the ice opening while the party was in camp, and separating his igloo from Bartlett's, while the floe on which Bartlett's igloo was placed drifted rapidly away. In the New York Herald on September 27, 1909, more than two weeks later, Cook goes Peary one better and tells how *his* igloo was broken apart by an opening crack in the ice, while he himself was precipitated into the water, from which he was rescued by the prompt action of the Eskimos.

I quote from Cook's notes for April 21:

April 21, 1909. Miles covered, 13¾. 1 a m. to 9 a. m. Observations noon: 89° 59′ 45″; ped. 14. Camp; sleep in tent short time; after observations, advance; pitch tent; (also) made camp—snow—prepared for two rounds of observations. Temp., 37.7°; bar., 29.83. Nothing wonderful; no pole; a sea of unknown depth; ice more active; new cracks; open leads; but surface like farther south. Overjoyed but find no words to express pleasure. So tired and weary! How we need a rest! 12, night. Sun seems as high as at noon, but in reality is a little higher, owing to its spiral ascent. The mental elation—the drying of furs and (making) photos—Eskimos' ideas and disappointment of no pole—thoughts of home and its cheer. But, oh, such monotony of sky, wind, and ice! The dangers of getting back. (From other observation papers: Temp. ranged from —36° by mercury thermometer to —39° by spirit thermometer; clouds Alt. St., 1; wind mag. S. 1; ice blink E.; water sky, W.; shadow (of 6-ft. pole) 28 feet.)

The temperature which Cook reported at the place he called the pole and for the last 15 miles of his northern journey was from 8 to 10° higher than he reported for the region farther south. This may have been due to the advancing season; but, on the other hand, the theory has long been held that the temperature is higher at the poles than in other parts of the Arctic and Antarctic Circles. I quote from a paper on the climate of the North Pole, read before the Royal Geographical Society of London on April 10, 1865, by W. E. Hickson, Esq.:

It had always been supposed that the immediate areas of the poles must be the coldest regions of the globe, because the farthest points from the equator. Hence the argument that the higher the latitude the greater must be the difficulties and dangers of navigation. Quite an opposite opinion, however, has begun to prevail among meteorologists on the publication, in 1817, of the Isothermal System of Alexander Von Humboldt, which showed that the distance from the equator is no rule for cold, as the equator is not a parallel of maximum heat. The line of maximum heat crosses the Greenwich meridian in Africa, 15 miles north of the equator, and rises to the eastward, five degrees higher, running along the southern edge of the Desert of Sahara. In 1821 Sir David Brewster pointed out, in a paper on the mean temperature of the globe, the probability of the thermometer being found to range *10 degrees higher at the pole* than in some other parts of the Arctic Circle. No new facts have since been discovered to invalidate this conclusion; many, on the contrary, have come to light tending to confirm it.

As seen by this quotation, the theory has been current for nearly a hundred years that the temperature in the Arctic Circle rises as one travels toward the poles, and it is of note that both Cook and Peary reported this rise in temperature, Peary's figures showing a wider range than Cook's, as Peary gives the minimum temperature during his 30 hours' stay at "the pole" as —32° F. and the maximum —11° F., while Cook gives a range of only 5°, from —36° to —41° F. In Von Humboldt's isothermal theory, to which I have referred, Von Humboldt says:

The icy pole, or the point of the greatest cold, no more corresponds with the terrestrial pole than does the thermal equator, which connects together the hottest points of all meridians with the geographical equator. Arago concludes from the gradual decrease of mean temperatures that the degree of cold at the northern terrestrial pole is —13°.

I make these quotations merely for the purpose of showing that neither Cook nor Peary reported anything at the respective points which each called the North Pole different from the theories which had been held for many years, and which could have been written into their reports without either one having been within hundreds of miles of the pole. A peculiar feature of both reports is that each man confined himself to those features about which well-known theories have long been held.

But, we may ask, what record can a man bring back which will not either prove or disprove the theories so long held? If these theories are correct, Cook's report and Peary's report would have to show these same conditions, and could show nothing else.

This is a pertinent question to be answered in only one way: Cook and Peary could both have followed the plan adopted by Nansen, Amundsen, Sverdrup, Cagni, and other explorers, and taken at least one reliable white man of sufficient scientific attainments to have verified and corroborated their observations, reports, and claims.

But (both Cook and Peary claim) the same results could not have been attained with a larger party. Very well; they need not have increased their parties. Cook could have taken Rudolph Franke and one Eskimo. Peary could have taken one white man of sufficient ability to have made observations that would stand inspection instead of one of his four Eskimos. But both of the two men who claim to have reached the pole seem to have carefully studied out a plan whereby it would be impossible for anyone to dispute or corroborate their reports as an eyewitness. Peary relentlessly ordered back one after another of the white men of his party; Cook brutally and heartlessly refused to allow Franke to accompany him even to the shores of the Polar Sea. The finger of suspicion points alike to both.

Let us see what Cook says in the text of My Attainment of the Pole, as to the time he claims to have spent at "the pole." As he devotes 18 pages to his stay at his farthest north, it is impossible to quote his full account here; I shall therefore touch only on those points which are of the most interest as tending to prove or disprove his claim.

In his first brief dispatch, in his first detailed account, and in his complete newspaper story, as well as in Hampton's Magazine and in My Attainment of the Pole, Cook gives the date of his arrival at "the pole" as April 21, 1908. I give in parallel columns his statement as taken from My Attainment of the Pole, and a quotation from his letter to Capt. Bernier, of which, as I have already stated, I have a photographic copy of Dr. Cook's own handwriting:

[From My Attainment of the Pole:]	[From Cook's Letter to Bernier:]
The day was April 21, 1908.	The pole was reached on April 22, 1908.

One may say this is a typographical error in one case or the other, but, if so, it is not in the book, for Cook makes that statement wherever he lectures and in all of his printed accounts. The figures in the letter can not be a typographical error, for the letter is in Cook's own handwriting, and the figures "22" are very plain and distinct. Cook says in his book that his "observations," etc., are "exact copy from original field papers." If true, his original field papers must show the date as April 21, 1908. Why did Cook, writing from Upernavik to Capt. Bernier, when every detail of the trip must have been fresh in his mind, give a different date for his attainment of the pole than he gave in his later accounts? Did he discover, after his letter to Capt. Bernier was sent, that his observations as he had them figured out, would be right for April 21, but would not be right for April 22? We find it as difficult to follow the psychological processes by which Cook arrived at this change of figures and dates, as we do to determine why he wrote in this same letter to Capt. Bernier that "Crocker Land was sighted," and a few weeks later discovered that he never saw that nonexistent land at all!

On pages 290 and 291 of "My Attainment of the Pole," Cook says:

> Geographically, there was here but one direction. It was south on every line of the dial of longitude. *But the compass, pointing to the magnetic pole along the ninety-seventh meridian,* was as useful as ever. (To avoid statements easily misunderstood, all our directions about the pole will be given as taken from the compass, and without reference to the geographer's anomally of its being south in every direction.)

Why Cook should have assumed that the compass pointed directly to the magnetic pole from the point which he called the North Pole, when he had made no observations for compass variation, is a point which he does not explain.

Several pages of My Attainment of the Pole are used in a description of Cook's measurements of shadows, by which method he claims to have determined—to his own satisfaction, at least—that he had reached 90° north, for at only two places on the globe does the shadow of a given object measure the same for a period of 24 hours; that is, at the North Pole and at the South Pole.

Cook reports that their shadows were first noted after the long winter night on March 3, 1908, and on page 303 he says:

> And now, right here, I want you to consider carefully with me one thing which made me feel sure that we had reached the pole. This is the subject of shadows—our own shadows on the snow-covered ice. A seemingly unimportant phenomenon which had often been a subject of discussion and so commonplace that I only rarely referred to it in my notebooks, our own shadows on the snow-cushioned ice had told of northward movement, and ultimately proved to my satisfaction that the pole had been reached.

On page 305 he says:

> The shadows of midnight and those of midday were the same.

I quote thus freely from Cook's story of his shadow observations, because he presents this shadow measurement as his supreme argument to prove that he reached the pole. This, like the rest of his story, rests on his unsupported word, for he gives no photograph of his shadow circle, merely a series of conventional diagrams which a schoolboy could draw with but little effort. This argument has been enlarged on by many of Cook's ardent supporters, who claim that since Cook does not state in his book that he used these shadow measurements while en route from Svartevaeg, as a means to determine his latitude, but that it was merely a more or less pleasurable incident of the day's journey; and that he finally reached a point where—as he says—the shadow was of equal length throughout 24 hours, this shadow measurement as recorded by Cook is a silent witness and strong, unpremeditated proof that Cook actually reached the North Pole on April 21, 1908. That this argument is weak, and that the so-called proof *was* premeditated, is shown by the fact that Cook *does* state in his book that he ascertained his position en route by measuring the shadows at various times. I quote again from page 20 of My Attainment of the Pole:

> Besides taking observations, which, as I shall explain in due course in my narrative, can not be adequate, I also ascertained what I believed to be *my approximate position at the boreal center and en route* by measuring the shadows each hour of the long day.

This statement of Cook's dissipates the theory that he did not use the measurement of the shadows en route as a means to determine his latitude; that the measurement of the shadows at the pole was an afterthought with him and was used to verify his position *only* at the pole.

Furthermore, it is an easy matter for a man even but slightly versed in nautical calculations to figure out the approximate length of the shadow of any given object with the sun at a given altitude. Cook only gives his shadow measurements on the days when observations for latitude are reported and when the altitude of the sun was obtained. But it was not necessary for him to have been at the reported positions in order to know the altitude of the sun at a given point, or the length of the shadow of a given object, which in his case was the 6-foot tent pole. With the American Practical Navigator and the American Ephemeris and Nautical Almanac the latitude observations could be made for any stated date, and the approximate shadow measurements of a 6-foot pole could be made in New York as accurately as at any given place on the Polar Sea. The fact that a person does not have to be at the latitude indicated in order to produce mathematically correct figures of an astronomical observation was brought out at the Peary hearings before the Naval Committee in 1910–11, when Prof. Gannett, of the National Geographic Society, was examined by a member of the House Naval Committee.

> Mr. ROBERTS. I assume that the observations which he [Peary] presented, the astronomical observations, were mathematically correct, and that it all depends upon whether he ever took those observations at the spot he says he took them, doesn't it, because he might sit down in Washington and make those observations and claim to have made them at the pole or in the vicinity of the pole; so it is the personal equation after all?
>
> Mr. GREGG. Could he have done it at 130 miles from the pole—made entries and observations?
>
> Mr. ROBERTS. In other words, could he have gone out of sight behind an iceberg or promontory and faked this thing?
>
> Mr. GREGG. Could *you* have made one, Professor?
>
> Mr. GANNETT. *I think I could.*

We have Mr. Gannett's word before the House Committee on Naval Affairs, therefore, that Peary's observations could have been made in Washington or New York; and if Peary's, why not Cook's? I do not say that they were thus made, but that they could have been.

Aside from the fact that nautical observations can be computed in New York as easily as on the Polar Sea, and that approximate shadow measurements can likewise be computed by anyone skilled in mathematics, we are confronted with the fact that when Cook first returned, although his claimed "original field papers" show the results of various shadow measurements, and he devotes several pages in his book to a discussion of the shadow proof of his attainment of the pole, he makes no mention of this system of verifying his position at the pole in any authoritative, printed narrative until more than a year after his return from the North. We could not expect him to go into details of this nature in his first brief cabled story, but in his complete newspaper story, of which his book is merely an enlargement, he makes no mention whatever of the interest which he and his Eskimos took in their shadows or of any shadow measurements. His first published authoritative account of his "shadow proof" is given in Hampton's Magazine for January, 1911, more than a year after his return from the North. If any note was made of his shadow observations in the material submitted to the University of Copenhagen, Cook does not so state. On page 245 he does say:

> I rested my case at Copenhagen on a report, the *original notes* giving the brief tabulations of the day's doings and the complete set of reduced observations.

His story of the shadow measurements as published in Hampton's Magazine differs from his book in minor details, as, for instance, in Hampton's Magazine for February, 1911, he says:

> On *April 22d* we moved southward, pitched the silk tent, and *after midnight* made a second series of observations. Then we started on the return journey.

In My Attainment of the Pole, Cook says that he arrived at the North Pole on April 21, and on page 296 tells the story of the second camp:

> At 6 o'clock, or six hours after our arrival at local noon, I arose, went out of the igloo, and took a double set of observations. Returning, I did some figuring, lay down on my bag, and at 10 o'clock, or four hours later, leaving Ah-we-lah to guard the camp and dogs,

E-tuk-i-shook joined me to make a camp about 4 miles to the magnetic south.

And on page 307 he says:

Although I had measured our shadows at times on the northward march, at the pole these shadow notations were observed with the same care as the measured altitude of the sun by the sextant. A series was made on April 22, after E-tuk-i-shook and I had left Ah-we-lah in charge of our first camp at the pole. We made a little circle for our feet in the snow. E-tuk-i-shook stood in the foot circle. At midnight the first line was cut in the snow to the end of his shadow, and then I struck a deep hole with the ice ax. Every hour a similar line was drawn out from his foot. At the end of twenty-four hours, with the help of *Ah-we-lah*, a circle was circumscribed along the points, which marked the end of the shadow for each hour.

In Hampton's Magazine Cook says that the shadow measurements were all made before the second camp was established; in "My Attainment of the Pole," he says that they were all made at the second camp. However, we do not have to compare the book with the magazine to find innumerable discrepancies in Cook's story. In the account of the shadow measurements, which I have just quoted, we find that Cook, with the Eskimo, E-tuk-i-shook, went 4 miles toward the magnetic south to make observations, leaving Ah-we-lah to guard the camp and the dogs. Nevertheless, at the end of the time of making the shadow observations, "with the help of *Ah-we-lah*" (who was 4 miles away guarding the camp and the dogs), a circle was made!

Again, Cook leaves us in doubt as to the date of his arrival at and departure from the place he called the pole. He claims throughout the book to have arrived at that point on April 21, and on page 284 he says of the beginning of their last march northward:

Midnight of April 21 had just passed.

By the context and by his notes we see that in this statement he unquestionably meant the hour of midnight between April 20 and April 21. On page 296 Cook says:

At 6 o'clock, or six hours after our arrival, at local noon, I arose, went out of the igloo, and took a double set of observations. * * * Four hours later, leaving Ah-we-lah to guard the camp and dogs, E-tuk-i-shook joined me to make a camp about 4 miles to the magnetic south, * * * We erected the tent not quite two hours later, in time for a midnight observation. These sextant readings of the sun's altitude were continued for the next 24 hours.

Evidently the midnight here mentioned was the hour between April 21 and April 22, or, as Cook must have called it in order to conform with his previous designation of midnight, "Midnight of April 22." In other words, if the hour between April 20 and April 21 was "midnight of April 21" (as Cook terms it on page 284), the midnight next following must have been "Midnight of April 22." On page 301, however, Cook says:

The set of observations given here, taken every six hours, from noon on April 21 to midnight of April 22, 1908, fixed our position with reasonable certainty.

Again on page 310:

After a *midnight observation—of April 22*—we returned to camp. All the scientific work being finished, we began hastily to make final preparations for departure.

This is inconsistent, for if the time of Cook's arrival at the pole was a few hours after midnight of April 21, as Cook says on page 284, and they were there until two more midnight hours had passed, the last one must have been "Midnight of April 23" instead of "Midnight of April 22," as Cook calls it on page 310. The typographical error theory does not account for these discrepancies since the same discrepancy occurs in each of the three editions of "My Attainment of the Pole." Therefore, from his own statement, Cook leaves us in doubt as to whether he arrived at the place he called the pole on April 21 or April 22, and whether he left the place he called the pole on April 22 or April 23, or even April 24.

Even if we accept this as a mere typographical error in one instance or the other, we still are forced to admit that Cook is badly tangled in his various accounts of his movements at his farthest north. His "Notes," which he claims are an "exact copy from original field papers," give an altogether different version from that given in the text of his book—a version so different that the variances can not be considered "immaterial." In his notes, Cook says:

April 21, 1908. Miles covered, 13½. 1 a. m. to 9 a. m. Observations noon: 89° 59′ 45″; ped. 14. Camp; sleep in tent short time; after observations advance; pitch tent; (also) made camp—snow—prepared for two rounds of observations. Temp. 37.7°; bar., 29.83. So tired and weary! How we need a rest! *12 night.* Sun seems as high as at noon, but in reality is a little higher, owing to its spiral ascent.
April 22, 1908. Moved camp 4 m. magnetic S.

Therefore, in his notes, Cook says that he remained at his first polar camp until *after midnight* of the day he arrived at the place he called the pole, and if he arrived there (as he claims) on April 21, he did not move his camp four miles to the magnetic south until April 22. His notes for April 22 continue:

Made four observations for altitude: S. at noon, W. at 6, N. at 12 m. (midnight), E. at 6 a. m. (Made a series of observations for the sun's altitude, 2 on the 21st at the first camp, 4 on the 22d at W. M. (probably meant for "S. M.," or South Magnetic) camp, and another midnight 22-23. Before we left deposited tube).

Hence, in his notes, Cook does not make his statements correspond, in regard to his observations, for he says on April 22, as I have just quoted:

Made a series of observations for the sun's altitude, 2 on the 21st at the first camp, 4 on the 22d at W. M. (S. M.) camp, and another midnight 22–23.

These account for the seven successive observations which Cook mentions on page 302; but, although he carefully gives the time of the four observations taken on April 22 at his second camp, the time as he gives it does not correspond with the time which he gives on page 302, which he says is also "taken from my field notes." In fact, none of the details of his story fit together properly.

In the text of his book Cook says on page 284:

We all were lifted to the paradise of winners as we stepped over the snows of a destiny for which we had risked life and willingly suffered the tortures of an icy hell. Constantly and carefully I watched my instruments in recording this final reach. Nearer and nearer they recorded our approach. Step by step, my heart filled with a strange rapture of conquest. At last we step over colored fields of sparkle, climbing walls of purple and gold—finally, under skies of crystal blue, with flaming clouds of glory, we touch the mark. We are at the top of the world. The flag is flung to the frigid breezes of the North Pole.

After describing at some length his thoughts and sensations, on pages 287–288, Cook says:

We had reached our destination. The prize of an international marathon was ours. Pinning the Stars and Stripes to a tent pole, I asserted the achievement in the name of the 90,000,000 of countrymen who swear fealty to that flag. My mental intoxication did not interfere with the routine work which was now necessary. Having reached the goal, it was imperative that all scientific observations be made as carefully as possible and as quickly as possible. To the taking of these I set myself at once. The day was April 21, 1908. It was local noon.

Several sextant observations gave a latitude a few seconds below 90°, which, because of unknown refraction and uncertain accuracy of time, was placed at 90°. (Other observations on the next day gave similar results, although we shifted camp 4 miles toward the magnetic south.)

Cook then describes the taking of his observations; the color of the sky; the ice field where they camped; the phenomenon of no longitude; the building of the igloo; the drying of clothes and the puzzled questions of the Eskimos; the feeding of the dogs; and then on page 295 he says:

We withdrew to the inside of the dome of snow blocks, pulled in a block to close the doors, spread out our bags as beds on the platform of leveled snow, pulled off boots and trousers, and slipped half-length into the bristling reindeer furs.

He next describes the preparation of their meal and adds:

In comfortable berths of snow we tried to sleep, turning with the earth on its northern axis. But sleep for me was impossible. At 6 o'clock, or six hours after our arrival at local noon, I arose, went out of the igloo and took a double set of observations. * * * At 10 o'clock or four hours later, leaving Ah-we-lah to guard the camp and dogs, E-tuk-i-shook joined me to make a tent camp about 4 miles to the magnetic south. * * * We erected the tent not quite two hours later, in time for a midnight observation. These sextant readings of the sun's altitude were continued for the next 24 hours.

The quotations which I have just made are from Cook's story as related in the text of My Attainment of the Pole. Now let us see how it compares with his notes published in the appendix:

[From text of narrative.]	[From notes in appendix.]
Arrived at "Polar Camp" at *noon, April 21, 1908.*	Arrived at 89° 59′ 45″ at 9 a. m., April 21, 1908.
Made noon observation and *retired to igloo.*	Made noon observation, and *advanced short distance,* and made *"Polar Camp."*
Rested in igloo.	Rested in igloo.
Made observations (*6 p. m.*).	Noted meteorological conditions at *midnight* (*"12, night"*), April 21–22.
Moved camp 4 miles magnetic south, *10 p. m., April 21.*	Moved camp 4 miles magnetic south, *morning April 22.*
Made observations *midnight* (Apr. 21–22) *first* at new camp.	Made first observation at the new camp at *noon, April 22.*
Made observations *6 a. m.* (second at new camp), April 22.	Made second observation at new camp, 6 p. m., April 22.
Made third observation at *noon, April 22.*	Made third observation at new camp *midnight* (Apr. 22–23).
Made fourth observation at new camp, *6 p. m., April 22.*	Made fourth observation at new camp 6 a m. "following morning" (which must have been Apr. 23).
Made fifth observation at midnight (Apr. 22–23).	Returned to old camp some time after 6 a. m., April 23.
Returned to old camp about midnight of April 22–23.	

In the parallel columns which I have given Cook's notes state that he made a short advance in position *after* his noon observation of April 21, while the text of his book mentions only the

camp at 89° 59′ 45″ and the camp 4 miles toward the magnetic south. The times of the observations made at the south magnetic camp as given in Cook's notes do not correspond with the times of the observations as given in the text. I find in this discrepancy a partial explanation of Cook's statement in his letter to Capt. Bernier that the pole was reached on April 22, while all of his other statements assert that the pole was reached on April 21. At all events, his observations at the place he called the pole were made for April 21 and 22, and some time between the date that the letter to Bernier was written from Upernavik and the time that the first message was sent from Lerwick, Cook discovered that observations computed for April 21 and 22 would not fit April 22, the date which he had given to Bernier as the time of his polar attainment. To change the date of his arrival at "the pole" was an easier matter than it would have been to recompute his "observations" to make them fit April 22 and 23; therefore the date was changed. This seems a plausible explanation for the discrepancy in Cook's dates as given to Capt. Bernier, and as later given to the world.

Again, on pages 301–302, Cook says:

The set of observations given here, taken every six hours from noon on April 21 to midnight on April 22, 1908, fixed our position with reasonable certainty.

Seven successive observations, taken every six hours. (Apr. 21 and 22, 1908.)

[Taken from my field notes.]

April 21, 1908, 12 o'clock noon.
April 21, 1908, 6 p. m. (same camp). Moved camp 4 miles magnetic south.
April 21–22, 12 o'clock (midnight).
April 22, 6 a. m., 12 o'clock (noon), 6 p. m.
April 22–23, 12 o'clock (midnight).

And in his notes for April 22, 1908, Cook writes in parentheses:

Made a series of observations for the sun's altitude—two on the 21st at the first camp, four on the 22d at W. M. Camp, and another midnight 22–23. Before we left deposited tube.

This seems like an attempt to make his notes correspond with the text of his story, or vice versa—an apparent afterthought.

Strangely enough, Cook makes no mention of his shadow measurements in his notes at his "pole," though he writes of far less important items, such as "the drying of furs," "so tired and weary," "how we need a rest," and so forth. The only mention of a shadow measurement at the "polar camp" is the single measurement of April 21, which Cook records in his notes as "Shadow of 6 foot-pole, 28 feet." This is preceded by the words, "From other observation papers," and therefore seems not to have been a part of Cook's original notes.

We therefore see that Cook tells two entirely different stories of his discovery or attainment of the place he called the North Pole. These stories are irreconcilable. We can not account for the differences between them by the hackneyed excuse of typographical errors, for each story is amplified in a manner which, if the other story were not also told and amplified, would give the other a semblance of truth. Cook, however, gives his readers an opportunity to choose the story which seems to each individual the more plausible of the two.

Cook's last reported act at the place he called the pole was to deposit a note, which he claims to have written on April 21, in a metallic tube and bury it in the ice. Opposite page 312 in the first and second editions of his book, and opposite page 333 of the third edition is found a photographic copy of this note. To quote Cook's own words:

The following is an exact copy of the *original* note, which is reproduced photographically on another page.

Like Peary, Cook does not say how this "photographic copy" of the "original note" was obtained; possibly the notes were photographed by their respective authors at the time they were written, though this is not probable; possibly carbon copies were made and preserved, and the photographs made later from the copies; however that may be, the fact remains that in a little notebook in the Library of Congress is what purports to be "Extracts from Commander Peary's Personal Diary of his Trip to the North Pole," which extracts include a photographic copy of the note Peary left at his North Pole; and, as I have just stated, Cook's My Attainment of the Pole contains a photographic copy of the "original note" left by Cook at *his* North Pole. The printed copy, which Cook gives on page 313 of My Attainment of the Pole is not, as he calls it, an "exact copy of the original note, which is reproduced photographically on another page." For the sake of comparison only, and not because the matter is of vital importance, I give herewith a really exact copy of Cook's "photographic reproduction" and of his "exact copy":

[Cook's "exact (?) copy."]

COPY OF NOTE IN TUBE.

April 21—at the North Pole

Accompanied by the Eskimo boys Ah-we-lah and E-tuk-i-shuk I reached at noon to-day 90° N. a spot on the polar sea 520 miles north of Svartevoeg. We were 35 days en route. Hope to return to-morrow on a line slightly west of the northward track.

New land was discovered along the 102 M. between 84 and 85. The ice proved fairly good, with few open leads, hard snow, and little pressure trouble. We are in good health, and have food for forty days. This, with the meat of the dogs to be sacrificed, will keep us alive for fifty or sixty days.

This note is deposited with a small American flag in a metallic tube on the drifting ice.

Its return will be appreciated, to the International Bureau of Polar Research at the Royal Observatory, Uccle, Belgium.

FREDERICK A. COOK.

[Cook's "photographic reproduction."]

COPY OF NOTE IN TUBE.

Apr. 21, *1908* at the North Pole

Accompanied by the *Eskimos* boys Ahwelah and Etukishuk I reached *up* noon to-day 90 N. a spot on the *Pole Star* 520 miles N. of Svartevoeg. We were 35 days en route. hope to return to-morrow on a line slightly west of the northward track.

New Land was discovered along the 102-M. between 84 & 85. The ice proved fairly good with few open leads, hard snow and little *pressing* trouble.

We are in good health and have food for 40 days. This with the *many* of the dogs to be sacrificed, *with* keep us alive for 50 or 60 days.

The water is deposited with a small Am. flag in a metallic tube on the drifting ice.

Its return will be appreciated to the International Bureau of Polar Research at the Royal Observatory, Uccle, Belgium.

FREDERICK A. COOK.

As I have said before, the differences in these two copies are slight, and indicate nothing more than that the writer's mind was wandering a little when the "photographically reproduced" note was written. The most interesting feature of these two copies is in the one "photographically reproduced," when Cook makes the statement which is interesting—if true—that he had "reached a point 90° north on the Pole Star!" Not content with the assertion that he had reached a point more or less directly *under* that heavenly body, he "reached up" to a "point on the Polar Star!" Shade of Sir John Franklin, take notice! This is an achievement beyond *your* wildest dreams! No typographical error about that, either, for it is "photographically reproduced" of Cook's own handwriting.

Seriously, however, one statement in this note is worthy of attention. Cook says:

We are in good health and have food for 40 days. This with the many (or meat) of the dogs to be sacrificed with (will) keep us alive for 50 or 60 days.

This note purports to be written on April 21. Ten days earlier, on April 11, Cook wrote in the text of his book:

Nearly half of our food allowance had been used. Our dog teams were much reduced in numbers.

Cook says that he left Svartevaeg on March 18 with supplies for 80 days. Twenty-five days later he says:

Nearly half our food allowance had been used.

Now, on April 21, he has still food for 40 days, in addition to the dogs to be sacrificed.

I have always contended, and still contend, that if Cook really started with the amount of food supplies and the number of dogs which he says he had when he left Svartevaeg, his food supply was ample for 80 days, the length of time for which he planned his outfit. It is his conflicting stories as to the amount of food used in a given time and the amount he had left on the return to land which leaves one in doubt as to the amount he really took with him and the distance he really traveled with that supply.

The depositing of this note in the brass tube and placing it on the ice was apparently the last task performed at the place Cook called the North Pole. Then the start was made for land. The time of starting on the return is doubtful. In his notes Dr. Cook says:

Date, April 23, 1908. Miles covered, 20. Start for home. *12.30 to noon.* Fairly clear—ice smooth, but many new crevasses. Temp., −41°. Course for 100 mer.

Since they traveled from *12.30 to noon*, the "12.30" must mean the half hour after midnight. But in the text of My Attainment of the Pole, Cook writes:

At the place where E-tuk-i-shook and I camped, *four miles south* of where I had left Ah-we-lah with the dogs, only two big hummocks were in sight. There were more spaces of open water than at our first camp. After a midnight observation—of April 22—we returned to camp. When the dogs saw us approaching in the distance, they rose, and a chorus of howls rang over the regions of the pole—regions where dogs had never howled before. All the scientific work being finished, we began hastily to make final preparations for departure.

Cook refers to his south magnetic or second camp, on page 296:

At 10 o'clock, leaving Ah-we-lah to guard the camp and dogs, E-tuk-i-shook joined me to make a tent camp about 4 miles to the magnetic south. Placing our tent, bags, and camp equipment on a sled, we pushed it over the ice field, crossed a narrow lead sheeted with young ice, and moved on to another field which seemed to have much

greater dimensions We erected the tent, not quite two hours later, in time for a midnight observation.

We see, therefore, that the trip from the main camp to the south magnetic camp required about two hours, or, as Cook says, "not quite two hours." Yet at midnight of April 22–23 he made an observation at this south magnetic camp, then Cook and E-tuk-i-shook placed their tent, bags, and camp equipment and instruments on the sled and pushed it back to the main camp, where the dogs greeted them with howls. Cook next deposited the note in the brass tube, and the tube in the ice, and then began hastily to make final preparation for departure. Cook says on page 310:

I could get no sensation of novelty as we pitched our last belongings on the sleds.

All preparations made, they started homeward, as Cook says in his notes, at 12.30 a. m., or half an hour after midnight in the morning of April 23. In other words, he made an astronomical observation at midnight, then loaded his sled, and with E-tuk-i-shook traveled a distance of 4 miles, which required nearly two hours to cover two days previously; "made final preparations for departure" at the main camp, "pitched our last belongings on the sleds," and left the pole in half an hour from the time Cook made his astronomical observation at the south magnetic camp. In only 30 minutes Cook made astronomical observations, packed instruments and other belongings on sled, walked 4 miles pushing loaded sled, buried brass tube with note, made final preparations, loaded sleds, and finally started on the homeward trip. Snappy work, Doctor!

Cook's story of his return occupies almost as much space in his book as his story of the entire journey from Gloucester to the place he calls the pole. On pages 315–316 he says:

With few glances backward we continued the homeward run in haste, crossing many new crevasses and bound on a course along the one hundredth meridian. With correct reasoning all former expeditions had planned to return to land and a secure line of retreat by May 1. We could not hope to do this until *early in June.*

Cook's northward journey occupied only 35 days from Svartevaeg, including delays. He left his "polar camp" half an hour after midnight of April 22–23. A like period of 35 days on the return would have brought him to land on May 27 instead of "the early part of June." Just why he could not hope to get to land by this time instead of the early part of June he does not say.

The first part of the return journey was uneventful, and Cook says, "Progress was satisfactory." On page 318 he says:

Compass in hand, my lonely march ahead of the sledges continued day by day.

On April 23 when Cook claims to have started on his return journey—which, figured by his northward trip, should have occupied only 35 days—he says that he had food for 40 days, which, with the meat of the dogs to be sacrificed, would keep them alive for 50 or 60 days, yet with progress satisfactory and only seven days of the return journey behind him Cook says on pages 319–320:

Under fair conditions there was barely food enough to reach land, and even short delays might seriously jeopardize our return. * * * Our steady diet of pemmican, tea, and biscuits was not entirely satisfactory. We longed for enough to give a real filling sense, but *the daily ration had to be slightly reduced* rather than increased.

Shortly after May 6, when only 14 days of the return journey had elapsed, we are told on pages 323 and 324 that—

Our food supply was noticeably decreasing. * * * *We were living on a half ration of food,* and daily becoming weaker.

Therefore, starting with food for 40 days, and making satisfactory progress, we find Cook and his men after two weeks only, "living on a half ration of food!"

The first observation on the return journey was made on April 30, and Cook gives the results in his notes:

Date, April 30, 1908. Miles covered, 15. Midnight to 8 a. m. Ped. registered 121 miles from pole; camp by D. R. 87° 59′: 100 observations, 88° 1′: 97° 42′ (longitude). Course half point more W. Temperature —34°. Start more westerly.

As I have quoted from the text of the book, Cook said his pedometer showed 121 miles from the pole, while his observations gave him a mileage traveled of 119 miles. His observations also showed that as he traveled along the homeward trail he had drifted more than 2° to the east of his chosen meridian, the one hundredth. At the eighty-eighth parallel of latitude this meant that Cook was about 5 miles east of the one hundredth meridian of longitude, along which he wished to travel. With an easterly drift of about 3 miles per day in that region, the only wonder is that Cook was not a good deal more than 5 miles farther east than he desired, especially since he took no observations for compass variation.

From April 30 to May 24 Cook's notes show much sameness. Three days of that time, May 6, May 11, and May 22, he reports that he was obliged to remain in camp on account of bad weather conditions. On May 7 he reports:

May 7, 1908: Miles covered, 10; 8 a. m. to 3 p. m. Wind detestable; ice bad; life a torture; sky persistently obscured; no observations; *pedometer out of order; only time to gauge our distance.*

On May 24 another observation was made, more than three weeks after the previous one, and more than two weeks after Cook reports his pedometer out of order and "only time to gauge our distance." This observation gave Cook's latitude as 84° 2′, longitude 97° 3′. This position is 358 miles from the pole, while Cook's dead reckoning placed him at 361 miles from the pole. Therefore, if we are to believe his story, he had traveled an air-line distance of 358 miles, making only one observation en route, with a pedometer out of order and "only time to gauge his distance" making detours for open water, through thick weather, with heavy drift and "detestable wind," had made 358 miles in 32 days (three of which were spent in camp, so that his actual traveling time was 29 days) or about 12⅓ miles per day, and at the end of 32 days his observations show a difference of only 3 miles between his dead reckoning and his nautical observations. Great, indeed, is the faith of anyone who can accept as true this remarkable statement.

If we follow Cook's return route as outlined on the map opposite page 284 of My Attainment of the Pole, we find that he claims to have crossed the eighty-fifth parallel on the one hundredth meridian of longitude. At latitude 85° north a degree of longitude measures only 5¼ miles; therefore, when he crossed the eighty-fifth parallel of latitude, Cook was only 10½ miles away from the place where Cook says Bradley Land is located. In his notes for May 24 Cook says:

May 24, 1908. * * * Short clearing at noon; the first clear midday sky for a long time; west still in haze. Water sky west and southwest. No land in sight, though the boys saw the land later, when I was asleep. Ice much broken. 84° 02′–97° 03′.

When Cook passed Bradley Land on his way north he claims to have been directly opposite and about 35 miles east of it. On his homeward journey, when he crossed the eighty-fifth parallel, he was only between 10 and 11 miles to the east of it, but he claims that it was obscured by mist. Now, at the eighty-fourth parallel he says—

No land in sight, though the boys saw the land later, when I was asleep.

If Cook really believed that Bradley Land exists, it seems strange that he did not plan his homeward course over a route that would take him directly to the coast of Bradley Land, for on page 316 he says:

To me the most important reason (for following the one hundredth meridian) was an eager desire to ascertain what might be discovered on a new trail farther west.

And on page 317:

We hoped to get near enough to the new lands to explore a part of the coast.

His planned return along the one hundredth meridian was inconsistent for two reasons: According to his story, he already knew from his northward journey that nothing lay between the ninety-fifth longitudinal meridian and Bradley Land, therefore his "eager desire to ascertain what might be discovered on a new trail farther west" would not be gratified by traveling on the one hundredth meridian, since Bradley Land lay along the one hundred and second meridian.

If he really wished to get near enough to the new lands to "explore a part of the coast," why did he not plan his course to take in a part of that coast, instead of traveling to the east of it, when he knew that the easterly drift would probably carry him still farther away from it? If he had laid his course along the one hundred and second meridian, on which he says Bradley Land is located, and had allowed for the easterly drift, he would have touched the northern extremity of Bradley Land, where he could have left a cairn to prove to later explorers that he really discovered the land. If he had encountered open water along the coast, he would have had only about 10½ miles to negotiate to reach the one hundredth meridian; and if the easterly drift was increasing, a route along the one hundred and second meridian would have made it an easier matter to follow a new western trail than was possible by starting from the pole on the one hundredth meridian.

This argument, of course, is based on the untenable theory that Cook really did follow any meridian or group of meridians to 90° north and return.

In his notes for May 29 Cook says:

May 29, 1908. Miles covered, 11; 11.30 p. m. to 9.30 a. m. As we came here the water sky in the southwest to which we had aimed, gradually working west, led to a wide open lead, extending from north to south, and almost before knowing it, in the general plan of the ice arrangement, we found ourselves to the west of this lead. Temperature

rose to zero. Ice much broken; air thick; light vague; impossible to see irregularities. Food, three-fourths rations; and straight course for Nansen Sound.

According to Cook's dead reckoning, he found this lead as he crossed the eighty-third parallel, and, as he says in his notes, he found himself to the *east* of this lead. In the text of the book, however, he tells a different story (p. 327):

Here he says that a course was set for Nansen Sound, when they crossed the *eighty-fourth* parallel, mentions the increase in temperature, the better progress, and then adds:

As we crossed the eighty-third parallel we found ourselves to the *west* of a large lead, extending slightly west of south. Compelled to follow the line of least resistance, a southerly course was set along the ice division.

Apparently there is a typographical error here, as to the side of the lead—east or west—which they were compelled to follow. I assume that it was the west side.

This is the only reference which Cook makes on the homeward journey to any lead which might be the "big lead." But if this is the big lead it has now changed its direction and trends north and south instead of east and west as it did when Cook claims to have crossed it on his northern trip.

After the observation which he claims to have made at the eighty-fourth parallel on May 24 Cook reports that he was unable to get another observation until June 13, a period of 20 days. For this length of time he claims to have traveled *without* knowing his position. When, on June 13, he finally obtained an observation, he says on page 328:

We had been carried astray by the ocean drift. We had moved with the entire mass that covered the polar waters. I took observations. They gave latitude 79° 32′ and longitude 101° 22′.

On page 329 he continues:

We were in Crown Prince Gustav Sea. To the east were the low mountains and high valleys of Axel Heiberg Land, along the farther side of which was our prearranged line of retreat, with liberal caches of good things and with big game everywhere. But we were effectually barred from this. Between us and the land lay 50 miles of small crushed ice and impassable lines of open water. We had no good reason to expect any kind of subsistence along the west coast of Axel Heiberg Land. We had been on three-fourths rations for three weeks, and there remained only half rations for another 10 days.

On page 329, June 13, Cook says:

We had been on three-fourths rations for three weeks—

which makes the beginning of his three-fourths ration fall on May 24.

In his notes he places the beginning of his three-fourths ration on May 29 instead of May 24, and in the text of his book directly after May 6 (p. 324), he says:

We were living on a half ration of food and daily becoming weaker.

Therefore, on May 6, when only 14 days of the 40 days for which they had food had passed, Cook started on half rations; on May 24, when he found by observations—as he says—that he was still some 160 miles away from land, he started on half rations; on May 29, when estimated by his dead reckoning, he was on the eighty-third parallel and had about 100 miles to get to land, he raised the ration to three-quarters. This is only one of many inconsistencies shown in Cook's book relative to his food supply.

In his notes for June 13 Cook reports:

June 13, 1908: Miles covered, 14. 10 to 8 a. m. Fog cleared first time since last observation. (May 24 was the date of his "last observation.") Land in sight south and east. Heiberg and Ringnes Land; water sky; small ice; brash and drift eastward. We have been carried adrift far to the south and west, and examination of ice eastward proves that all is small ice and open water. Heiberg Island is impossible to us. What is our fate? *Food and fuel is about exhausted, though we still have 10 bony dogs.* Upon these and our little pemmican we can possibly survive for 20 days. In the meantime we must go somewhere. To the south is our only hope.

Again Cook's food supply comes to the front as a matter of interest. Starting from Svartevaeg on March 18 (as he claims) with full supplies for 80 days, he is obliged to go on half rations about May 6 (p. 324), when he had been away from land only 50 days. This is his story on pages 323–324 of My Attainment of the Pole.

Forgetting this story for the moment, he says on June 13 (p. 329):

We had been on three-fourths rations for three weeks—

Or, if this story is the true one, he was obliged to go on three-fourths rations when he had been away from land for only 67 days. Yet again, in his notes for May 29, he reports going on three-fourths rations. This when he had been away from land only 73 days.

Finally, on June 13, in his notes, he writes:

We still have 10 bony dogs. Upon those and our little pemmican we can possibly survive for 20 days.

When arranging his polar trip, Cook planned his food supply and his dog teams with the idea of bringing only 6 dogs to land on the return trip and using the other 20 as food for the survivors; yet we find him on June 13, eight days after the time for which his supplies were apportioned had expired, with *ten* dogs instead of six, and with an amount of pemmican which he does not specify, but which more than a month later he describes as "four cans of pemmican." As each can contained 6 pounds of pemmican, we can see that if the party was near starvation at the time they reached land on June 14, it was not for lack of food, as they had 10 dogs and 24 pounds of pemmican in their possession, although they were nine days later than they had expected to be in returning to land. These discrepancies neither prove nor disprove Cook's attainment of the pole, but are of interest as tending to show the lack of accuracy and consistent detail conspicuous throughout the book; and as a chain is no stronger than its weakest link, so the *many* weak and broken links in the chain of Cook's narrative show the impossibility of his attainment of the North Pole.

Cook's description of the place where he found himself on June 13 seems to have been made from hazy recollections of a map rather than from personal observation. On pages 329–330 of My Attainment of the Pole he says:

The land to the south was nearer. Due south there was a wide gap which we took to be Hassel Sound. On each side there was a low, ice-sheeted island beyond the larger islands which Sverdrup had named Ellef Ringnes Land and Amund Ringnes Land. The ice southward was tolerably good and the drift was south-southeast.

A careful study of the maps, both Government printed and privately published, fails to reveal any low islands north of Ellef Ringnes Land and Amund Ringnes Land, nor does Cook's own map, shown on page 285 of his book, chart any. The phraseology of this paragraph is such as to leave the reader in doubt as to the place where Cook locates these islands; that is, whether he saw the "low ice-sheeted islands" first and Ellef Ringnes Land and Amund Ringnes Land beyond them, or Ellef Ringnes Land and Amund Ringnes Land first and the "low ice-sheeted islands" beyond these two larger bodies of land. But, as I have already stated, no smaller islands are charted north of Amund Ringnes Land and Ellef Ringnes Land; therefore Cook from his position at 79° 32′ must have "seen" a distance of more than 100 miles as the crow flies, across polar ice and intervening lands with mountains along their southern coasts, and from his vantage point on sea level descried the two "low ice-sheeted islands" of North Cornwall and King Christian Land lying on the farther side of the above-mentioned lands. This brings to mind a similar experience of Peary's, who, in his book, Nearest the Pole, states that he "saw" his Jesup Land" from the heights of Ellesmere Land at a time when he was on board of his boat engaged in hunting walrus and assembling his party of Eskimos in the region of region of Smith Sound. Birds of a feather!

Cook's published notes end with his entry of June 13, and from that time we have only the text of his narrative on which to base our opinion of the authenticity of his story. On page 577, Cook says:

June 14, and thereafter to September 1, all notes were briefly jotted down in another diary—a collection of loose leaves in which the observations of the return were made. This diary was left with the instruments at Etah with Mr. Whitney. The data, however, had been rewritten at Cape Sparbo, so that the notes had served their purpose and were of no further value when no pretentious publication was anticipated.

Without condoning in any degree Peary's brutality and selfish meanness in refusing to transport Cook's records and instruments from Etah to New York, an act which can not be too strongly condemned, I still call attention to Cook's statement on page 577 of his own book that these data which were left at Etah "had been rewritten at Cape Sparbo, so that the notes had served their purpose and were of no further value." And, again, in referring to the material which was left at Etah with Whitney, and that which Cook retained in his own possession, he says, on page 498:

I had with me all the important data, such as is usually given in a traveler's narrative.

Therefore the cry that Cook's valuable material was left with Whitney, and owing to Peary's unmanly refusal to allow Whitney to bring it to New York, was left at Etah and lost, seems in the light of Cook's own statement to be exaggerated.

On page 330, Cook says:

In the hope that some young seals might be seen we moved into Hassel Sound toward the eastern island. To satisfy our immediate pangs of hunger was our most important mission. The march on June 14 was easy, with a bright warm sun and a temperature but little under the freezing point. In a known position, on good ice, and with land rising before us, we were for a brief period happy and strong, even with empty stomachs.

Cook does not explain why their empty stomachs were not filled with one of the "10 bony dogs" which they brought back to land, when their original plan called for the return of only six; neither does he say why they were at the point of starva-

tion, with a considerable amount of pemmican still in their possession, for, as he had four cans left more than a month later, he must surely have had sufficient in his possession on June 14 to satisfy the immediate pangs of hunger, especially when he was, as he says: "In a known position, on good ice, and with land rising before us."

Cook and his Eskimos reached their first point of land, as nearly as can be estimated from Cook's story (which gives no date), on June 14. It is impossible to say just where this land was, for Cook describes it as a "little island" and leaves us in doubt as to its location.

The remainder of the book is filled with a series of exciting adventures which have no bearing on Cook's polar attainment, and only serve to show how inextricably truth and fiction are intermingled in the narrative.

Shortly after reaching land a dog was killed and eaten, and on June 16—as nearly as we can arrive at a date from Cook's vague story—a bear was killed. Two of the remaining dogs deserted the party, leaving Cook with seven.

From June 16 to July 1 (pp. 334–342), 13 days, Cook reports killing the bear just mentioned, "other bears," ducks, seals, and three white caribou—and yet before July 4 the three men "began to feel the craving pain of short rations"! Cook says that he then set his course for Lancaster Sound, where he hoped to find a whaler in July or August. On July 7 he deserted the seven remaining dogs and continued their journey in a canvas boat. One can not help but contrast this leaving of the faithful animals to a possible horrible death by starvation with Nansen's action in like circumstances, when Nansen killed Johansen's dog and Johansen killed Nansen's dog, rather than leave the faithful beasts to a lingering death.

Cook found no whaler, as he had hoped, in Lancaster Sound, and after various adventures decided to return to Cape Sparbo to spend the winter of 1908–9. He described the building of an underground winter hut, the hunting of walrus, musk oxen, and other game for food and fuel, the repairing and manufacture of clothing from the skins of animals, and the manner in which the long winter night was spent. With plenty of food and fuel their lives were at no time during the winter in danger from starvation or freezing. On pages 416 and 417 Cook says:

My most important duty was the preparation of my notes and observations for publication. This would afford useful occupation and save months of time afterwards. But I had no paper. My three note books were full, and there remained only a small pad of prescription blanks and two miniature memorandum books. I resolved, however, to try to work out the outline of my narrative in chapters in these. When the skeleton of the book was ready, I was surprised to find how much could be crowded on a few small pages. In all, 150,000 words were written.

In this manner the winter passed, and Cook reports that on February 18, 1908 (apparently a typographical error) the reconstructed sledge was loaded for the home run to Annoatok. This was just one day short of a year from the time that Cook claims he started for the pole.

Provisions were taken for 30 days, in which time Cook hoped to reach Annoatok. Progress was slow, and on page 429 Cook says:

In all of our polar march we had seen no ice which offered so much hardship as did this so near home shores. At the end of 35 days of almost ceaseless toil we managed to reach Cape Faraday. Our food was gone; we had seen no living thing for a month.

As Cook says he started with provisions for only 30 days, which would take him to March 19, it is natural that their food was gone at the end of 35 days. But the 35 days which he mentions would take him to March 24, while on pages 431–432 he relates at some length the killing of a bear on March 20, just 31 days from the time he claims to have started from Cape Sparbo with food for 30 days. On page 432 Cook says:

We skinned the animal and devoured the warm, steaming flesh. Here were food and fuel in abundance. With the success of this encounter we could sit down and live comfortably for a month. But we did not sit down. Greenland was in sight. When more eating was impossible we began to move for home shores, dragging a sled overloaded with the life-saving prize. * * * For 10 days we fought against unending obstacles of snow and ice. Our supply of bear meat gave out several days before we reached Cape Sabine. When we got there starvation again confronted us.

Allowing a day for feasting after they killed the bear and accepting Cook's date of March 20 as the date of the bear hunt, the 10 days' trip just mentioned would have brought Cook and his men to Cape Sabine on March 31. A notable feature of this incident is Cook's statement that the bear furnished them with so much food that they could "sit down and live comfortably for a month," and yet after 10 days he writes that this month's supply of food was exhausted "several days before they reached Cape Sabine."

At Cape Sabine an old seal was found which had been cached there by E-tuk-i-shook's father. This decayed seal served as their food until they reached Annoatok. Cook does not give the date of his arrival at Annoatok in My Attainment of the Pole, but in his first brief story to the New York Herald he says:

The Greenland shores were reached on April 15. Here we were greeted by Harry Whitney and an anxious group of Eskimo friends.

Pages 451 to 566 of My Attainment of the Pole relates the story of Cook's journey from Annoatok to Upernavik, thence to Copenhagen, and finally to New York, and devotes much space to the various phases of the so-called "polar controversy." An analysis of the book is incomplete without reference to these features. I shall therefore touch briefly on some of the more important points.

Cook remained a few days at Annoatok with Harry Whitney, and his account of Whitney's experiences in the Arctic differs markedly from Whitney's own story. I give in parallel columns a few of these discrepancies to illustrate my statement:

[From Cook's My Attainment of the Pole, p. 445.]

Murphy and Pritchard, the paid traders, fixed themselves cosily in my camp. Mr. Whitney *had been invited as a guest* to stay and hunt for his own pleasure. The party lived for a year *at my expense*, but the lot of Whitney was very hard as an invited guest, a privilege for which I was told he had paid Mr. Peary $2,000 or more.

With no food and no adequate clothing of his own he was dependent on the dictates of Murphy to supply him. As time went on the night with its awful cold advanced. Murphy gathered in all the furs and *absolutely prohibited Whitney from getting suitable furs for winter clothing*. He therefore shivered throughout the long winter in his sheepskin shooting outfit.

[From Whitney's Hunting with the Eskimos, pp. 41, 51, 66.]

Suddenly I decided to be put ashore for a year's big game hunting under the shadow of the pole. This seemed especially feasible, as a cache of provisions was to be left at Etah and another at Annoatok. *I expressed my desire to Mr. Peary, who very readily and considerately granted my request to be permitted to remain.*

Kulutinguah's kooner (woman) Tongwe set about immediately the *Erik* was gone to make my winter clothes, and presently my kuletar (coat) and nannookers (trousers) the former made of reindeer skin, the latter of bear skin, were ready, *and I found them very warm and well fitting indeed.*

Advantage was taken of our enforced stay at Etah to have Eskimo women make hare-skin stockings and other necessary clothing for me.

Cook also says that "His (Whitney's) ambition for a hunting trip was frustrated because it interfered with Murphy's plans for trading in skins," while in Whitney's own book Whitney relates in an interesting manner several hunting trips which he took in company with the Eskimos. In another instance Cook contradicts his own story in regard to the treatment which Mr. Whitney received at the hands of Peary's men:

[From p. 445 of My Attainment of the Pole.]

The worst and most brutal treatment was the almost inconceivable cruelty of his not allowing Mr. Whitney enough food for a period of months, not even of my supplies.

[From p. 437 of My Attainment of the Pole.]

Mr. Whitney offered me unreservedly the hospitality of my own camp. He instructed Pritchard to prepare meal after meal of every possible dish that our empty stomachs had craved for a year.

The quotation from page 437 does not read as though Mr. Whitney had insufficient supplies on hand, to whomsoever they may have belonged.

As Cook was in a hurry to return to civilization, he decided to undertake the trip of something like 700 miles from Annoatok to Upernavik, hoping to connect with a European ship and reach New York in July. On pages 449 and 450 Cook says:

Mr. Whitney expected the *Erik* to arrive to take him south in the following August. The journey from Etah to Upernavik is about 700 miles, a journey as long and nearly as difficult as the journey to the North Pole. I knew it involved difficulties and risks. * * * Mr. Whitney, in view of these dangers, offered to take care of my instruments, notebook, and flag, and take them south on his ship. The instruments had served their purpose. The corrections, notes, and other data were also no longer needed. In the box which I gave to Mr. Whitney were packed [long list of instruments]. Besides these were left other instruments used about the relief station. There were papers giving instrumental corrections, readings, comparisons, and other notes; a small diary containing some direct field readings and meteorological data. By special request of Mr. Whitney, I also left my flag. In addition I placed in Mr. Whitney's charge several big cases of clothing and supplies which Mrs. Cook had sent, also ethnological collections, furs, and geological specimens.

Rudolph Franke, in A German's Experience in the Far North, says, on page 186:

Peary explained to me that I could go home on board of the *Erik*, but it would be necessary for me to give him all of the supplies in Annoatok and Etah, as well as the cached narwhal and walrus ivory in Norke Nuna besides the boxes which he would have brought here (to Etah) at once for me to turn over to him.

Since all of Cook's property was thus turned over to Peary by Franke, and as Cook and his two Eskimo companions arrived at Annoatok with absolutely nothing, it is impossible to say where Cook obtained the "ethnological collections, furs, and geological specimens" which he claims to have left in Whitney's care.

On pages 499–500 Cook repeats his statement relative to his action in leaving his instruments and other material with Whitney. He gives the list of instruments which he enumerates on page 450, and adds as on page 450 also:

> Other instruments used about stations were also left. With these were papers giving some instrumental corrections, readings and comparisons, and other occasional notes, and a small diary, mostly loose leaves, containing some direct field reading of instruments and meteorological data. These took up very little space.

If these corrections were important and "took up very little space," why did Cook not carry them with him? He says, "In view of the dangers of the trip to Upernavik"; but if he really feared the dangers as much as this would imply, why did he not leave his entire data with Whitney to insure—as he claims to have believed—their safe return to the world? If he had perished on the journey from Annoatok to Upernavik, all the material in his possession would have also been lost. Why was he so much more afraid to risk these instrumental corrections and direct readings on the journey to Upernavik than he was the rest of his notes and records, especially when, as he says, the corrections and direct readings "took up but very little space"? Cook's real reason for leaving this material with Whitney seems to be given on page 450, when he says that it had served its purpose and was no longer needed, and the later hue and cry about its being invaluable proof of his achievement was but a mere excuse for the unsatisfactory and unconvincing nature of his data.

On pages 416–417 of My Attainment of the Pole, in his description of the manner in which the long winter night of 1908–9 was spent at Cape Sparbo, Cook says:

> My most important duty was *the preparation of my notes and observations for publication.* This would afford useful occupation and save months of time afterwards. * * * *In this way my entire book and several articles were written.*

That this material was not that which was left with Harry Whitney is evidenced by Cook's account of his stay at Upernavik, with Gov. Kraul, page 450 of his book:

> I remained with him (Gov. Kraul) a month, putting the finishing touches on my narrative, on which I had done much work at Cape Sparbo. *My notes and papers* were scattered about.

Cook's return to civilization and his reception in Copenhagen and New York are matters of world record and do not require comment here.

In regard to the controversial material which Cook presents in his book, I shall only say that since Peary's so-called Arctic discoveries have been officially discredited by United States officials of the Navy and of the Coast and Geodetic Survey, it is unnecessary to recount Cook's charges against him, especially since Cook, in an attempt to bolster up his own story, upholds Peary on two of the points on which he is finally discredited, namely, Peary's fictitious Crocker Land and Peary's faked trip to the North Pole. Of Crocker Land, Cook says on page 559:

> Peary's Eskimo companions of a former trip positively deny Peary's claimed discovery of Crocker Land. I prefer to believe that Crocker Land does deserve a place on the map.

This "preference" is not at all strange when we consider that Cook wrote to Capt. Bernier that "Crocker Land was sighted" by himself.

Of the North Pole, Cook says (p. 559):

> Peary's last Eskimo companions say that he did not reach the pole. But I prefer to credit his claim.

Again, this preference is natural, for the only corroborative evidence that Cook has of his own polar trip—in fact the *only* evidence—is Peary's description so similar to his own. When, therefore, Peary's claim to polar attainment was proven foundationless, Cook's claim was likewise set a tottering, and a careful analysis of the information presented in his book demolishes it altogether.

To recapitulate, What evidence does Cook offer to support his claim to the attainment or discovery of the North Pole?

His letter to me of August 8, 1916, which I have quoted in full, says:

> On the whole, My Attainment of the Pole contains all the evidence to prove that I reached the North Pole on April 21, 1908.

This book contains:

1. Cook's daily notes.
2. His observations.
3. States of what his "corroborative evidence" consists.
4. His detailed narrative.

Referring to these items separately, I find that Cook's observations are so faulty and so obviously "doctored" that if they prove anything at all they prove that they were not made at the times and places where they purport to have been made.

His "corroborative evidence" is Peary's story, which has been proven false in every vital particular; therefore it is valueless to Cook as "corroborative evidence."

His daily notes show many inconsistencies and discrepancies which can not be argued away by the "typographical error" theory.

His notes do not correspond with his detailed narrative, which he claims was written from his notes.

Finally, this book on which Cook says he is content to rest his claim, and which he says contains every scrap of paper and every isolated fact, was first written at Cape Sparbo—according to Cook's statement—when time was abundant, and every event of the journey from the time of departure from Annoatok until the arrival at Cape Sparbo must have been fresh in the author's memory and mind. Cook also says that his observations were figured out and reduced at Cape Sparbo.

The finishing touches were written on the narrative during the month spent with Gov. Kraul at Upernavik, when again leisure time was abundant and before the vivid memory of the various events and incidents was dulled by time and the distractions of civilization.

A portion of Cook's narrative was rewritten at the Gramatan Inn, Bronxville, N. Y., for the Copenhagen University. The report of the Copenhagen committee, in reference to this portion of Cook's material submitted to it, says:

> The report of travels is in all essentials the same as the one that was published in the New York Herald during September and October of this year (1909).

A year later Cook's material was rewritten for Hampton's Magazine, the narrative of his journey appearing in the January, 1911, number of that magazine. Cook's entire book was published in its complete form and first edition early in 1911. The second edition was published in 1912, and the third edition in 1913. Cook has therefore made, according to his own statements, six revisions of his material, hence its inconsistencies and contradictions are not the result of too hurried work or lack of time for careful revision.

After a careful, analytical reading of Cook's book, in which he says that—

> I am now presenting every scrap of paper and every isolated fact (p. 245)—

and, further, that—

> Herein, with due afterthought and the better perspective afforded by time, the rough field notes, the disconnected daily tabulations, and the records of instrumental observations, every fact, every optical and mental impression, has been reexamined and rearranged to make a concise record (p. VII).

remembering that the material contained in this book has been revised by Cook six times, and that as late as August 8, 1916, in a letter to me Dr. Cook wrote:

> I will be glad to rest my case in Congress on the evidence presented by the official record as printed in my book. * * * On the whole, My Attainment of the Pole contains *all the evidence* to prove that I reached the North Pole on April 21, 1908—

is it possible for anyone who gives this matter any thought or study at all to believe that Dr. Cook ever attained or remotely approached the North Pole?

Inland Waterways from Official Viewpoints.

EXTENSION OF REMARKS

OF

HON. J. HAMPTON MOORE,

OF PENNSYLVANIA,

Thursday, December 21, 1916.

Mr. MOORE of Pennsylvania. Mr. Speaker, during the recent heavy storms along the Atlantic coast no less than three large vessels were driven upon the Barnegat Shoals off the coast of New Jersey in one week. One of these vessels was the Army transport *Sumner*, from which the passengers were taken by the Coast Guard, and which was finally abandoned by the crew. It is not contended that an inside waterway behind the shoals of Barnegat, connecting the North and South by way of Norfolk, Baltimore, Philadelphia, and New York, would have prevented any one of the marine disasters referred to, but they do tend to point out the dangers of the outside course and to emphasize the wisdom of having an inside passage for such commercial and strategic uses as it might be required to serve. Having urged the connection of the Delaware and Chesapeake Bays by an adequate inside waterway upon many other occasions, I shall not myself enlarge upon that topic at this time. What I wish to do is to lay before the House two very important and appropriate utterances by high officials in the service of the United States, who have given careful study to the inland waterway problem. Both of these expressions were delivered

before the recent convention of the National Rivers and Harbors Congress in Washington.

That of Admiral William S. Benson, Chief of Naval Operations, United States Navy, comes with all the experience and study of a naval officer whom this Government has placed in high and responsible station. It is a sailor's opinion upon one of the great problems of efficiency and preparedness. The other expression comes from Brig. Gen. William M. Black, Chief of Engineers of the United States Army, than whom no man is more directly informed upon the project of connecting up the waterways along the Atlantic coast for commercial as well as for military purposes.

ADDRESS OF ADMIRAL BENSON.

[Delivered before the Thirteenth Annual Convention of the National Rivers and Harbors Congress, Washington, D. C., Dec. 6, 1916.]

The address of Admiral Benson was as follows:

THE RELATION OF INLAND WATERWAYS TO NAVAL EFFICIENCY.

"Mr. President, ladies, and gentlemen, I appreciate very much the introductory remarks of the presiding officer. One of our accomplishments is not to make speeches; consequently, I shall try to tell you in a plain, sailor way some of the few ideas that I have collected. I am particularly glad to have the opportunity to take part in this distinguished gathering for the very important work that you are engaged in.

"One reason, I suppose, that the Navy has not taken a more active interest in inland waterways is largely due to the sailor's natural abhorrence of the land—particularly of the bottom—and, of course, for many years we had no vessels that would by any means be called upon to use inland waterways to any great extent; but, as you know, the motive power of vessels has changed from sail to steam and electricity and the internal-explosion engine, and their methods of getting about have so increased that we have a great many vessels, undoubtedly, connected with the naval service which can and should use the inland waterways extensively.

"The question of the development of the inland waterways and its relation to the Navy naturally divides itself into two parts: First, I might say that part that would permit a use of the canals by battleships or vessels of the largest tonnage; the other, that would permit of the use of the smaller crafts, such as submarines and torpedo-boat destroyers. The division of points where battleships would be desirable and where the others would be desirable is a natural division. Of course, we of the Navy in our studies of strategy naturally hope and assume that our Navy will be strong enough to keep the enemy from our coasts. That is our aim, and that is another reason why some officers do not take the same interest in inland waterways; we do not like to contemplate even the possibility that our vessels would ever have to resort to harbor protection. Our aim is to go out and meet the enemy and prevent his ever even approaching our shores. [Applause.]

"Notwithstanding this idea, we feel, or at least I do, that we should leave nothing to chance, we should be prepared even for all kinds of combinations; because, as I study the situation, and if you have carefully followed the events of recent years, you will find as I have that in all wars diplomacy, or national combinations, play a very important part; and our country is particularly vulnerable to this form of attack, because we occupy a whole continent. We occupy the whole continent and we have shores all around us; so you will naturally see how easily a combination of nationalities could be worked up so as to present a very hard problem for us to meet.

"For this reason it is barely possible that the time may come—though we sincerely hope that it will not—when it might be necessary for our vessels to be in harbors and move from one to the other. Our coasts might be assailed by an overwhelming naval force before we could prepare ourselves fully to repel it. That being the case, you will easily understand what an advantage it would be if we could move our ships from one part of our coasts to another. For instance, if the fleet was mobilized in Hampton Roads and we had a canal connecting that waterway with Delaware Bay, our fleet, or portions of it, could move from Hampton Roads to Delaware Bay. Again, if we had a canal leading from Delaware Bay into New York Bay, we could move on to New York, and so on; provided we had the proper depth of water through Hell Gate, we could move on still farther with our battleships.

"You will readily understand that in order to offset our advantage in the way of such canals the enemy would be compelled to have four times the force that he would otherwise have to have in order to prevent ships coming out and attacking him successfully. That seems to be so obvious that it needs no discussion whatever. [Applause.] But regardless of the fact this condition might never obtain, the question of sending supplies from one point to another is of very vital importance to the Navy. We have navy yards and gun factories, for instance, here in Washington. At the Naval Gun Foundry here nearly all our guns for the Navy are constructed. They are proved down here at the proving grounds on the Potomac River, a few miles below. Practically all of our powder that we use in those guns is made down here at Indianhead, about 14 miles below the city. A great many of the projectiles we use are made here on the Potomac River.

"In addition to that, we have at Norfolk one of our principal naval stations. Thus you see that in case we were building ships on the Delaware River—and there has been a wonderful development in the shipbuilding industry there recently, and also a great development of the Philadelphia Navy Yard, and a greater development is bound to come in the near future—we might want to send our guns, or we might want to send powder or various munitions of war from over in this immediate vicinity or from Norfolk to Philadelphia; and a small enemy cruiser hovering off the coast might be able to prevent our doing so unless we had a system of communication along the inside route that would allow us to send these munitions of war where needed. The same thing would be true with regard to communicating through from Delaware Bay to New York City, and it is also desirable to continue the same system of deeper inland waterways along the entire eastern coast.

"It may not be known to you that for some years now we have been supplying our naval stations along this eastern coast with coal for their use from colliers, because it was impracticable to get the coal carried in the ordinary way; so the Navy colliers had to supply the navy yards with coal sufficient to run them.

"While a great deal has been said about the possibility of tying up the railroads by strikes or otherwise that would prevent the full use of them, admitting that the railroads are fully equipped and that the Government has full control of them and can use them to the fullest extent in time of war, even then the railroads would not and could not possibly answer the demands that would be made upon them. [Applause.] Even now I am told that the Pennsylvania Railroad has placed an embargo on certain bulky freight that they can not handle properly, and I believe that most of the railroads would be very glad to have the most of the bulky freight that is handled carried by water transportation rather than by rail.

"Now, all of our manufacturing interests making munitions of war along the eastern coast might be very seriously hampered for want of coal or proper fuel for carrying on their work; and the railroads would be used for transporting men, soldiers, and so forth, and the ordinary equipment that goes with them.

"Another proposition that has been brought to our minds in studying the question as to how best to be prepared for all eventualities is the question of munitions of war that might be manufactured in Pittsburgh or in the Pittsburgh district, and in the event that the railroads could not handle it we would be simply tied up unless we could send it down the Ohio River, down the Mississippi, and out through the Gulf, and in that way finally get it to the eastern coast where it would be needed. That, of course, would furnish another strong reason for so arranging that these important things would not be exposed to the possibilities of storm as well as the attacks of the enemy along the coast and on the way up.

"Now, as I said in the beginning, we have a great number of small craft, and our coast is so formed that its defense must necessarily depend very largely on the submarines and the smaller craft; and in order to utilize what we have to the fullest extent there should be some means of moving this craft from one part of the coast to the other.

"Our national means of defense, particularly from Key West north, would be through our inland waterways by our submarines. Not that the submarines are not able to go outside, for they are, and even our coast submarines are able to go to sea and cruise a hundred miles off shore successfully. They can go even farther; but what I refer to is the fact that they want to be protected. We do not want them exposed to the attacks of the enemy on the outside in case we desire to move them from one point of the coast to another, or in order that they may go out from various openings and attack the enemy. So you can readily see the tremendous advantage that improved inland waterways would be to the Navy in the event of war in moving submarines and destroyers through the inland waterways.

"Of course, anything that helps commerce helps the Navy; anything that helps the Navy helps commerce; and whatever helps both helps the country. [Applause.]

"There is one feature of the development of the inland waterways that has impressed me very deeply in my study of it, and I would presume to suggest it to you gentlemen who have given this subject more careful thought; that is the study of the map of our country, and particularly the eastern part of it, and you will see a complete network of rivers leading down to the coast.

"The Vice President referred to the question of river and harbor appropriations, and so forth. I remember making this suggestion to the chairman of the committee some years ago. Instead of trying to develop every harbor along the coast to accommodate the biggest ship that travels the sea, the idea that occurred to me was to determine upon the outlets that would be most desirable to carry our commerce across the sea or bring it in at those points, and build there the proper facilities for handling the trade that would be carried on there, and then along the whole coast have a channel for the vessels that were going to use it so that they might use it with ease and freedom.

"I think if these various rivers, waterways, and so forth, leading from the coast into the interior of the agricultural part of the country were cleared up and developed, that they might be used by barges and floats carrying the products of the country down to the main channel and then right along the coast so that they would be protected from the stress of weather and from the seas, and so forth; then seagoing vessels could come in and take those products wherever they were intended to be sent. It seems to me that if such a system would be carried out with scientific care the results would be excellent, because my observation in traveling about the world has been that our harbors here—and I say this with all due respect and patriotism—I think our harbors and channels here are about the crudest things in the world. [Applause.] Too little attention has been paid to them. When I say "attention" I mean scientific attention, for the system has not been developed and the details have not been looked after, so that really we have no first-class harbor in the United States. [Applause.] I have given the matter a great deal of thought after having traveled practically all over the world and having visited the ports of the Mediterranean as well as other foreign ports.

"Even the distinguished gentleman from Canada has told you what they are doing up there, right next door to us. I would like to make this as strong as I can, because, as I say, I have seen the other harbors and ports of the world, and I think we have not really a first-class harbor. I do not mean simply as to depth of water, but we have not scientifically constructed and developed our harbors and channels, our line buoys, docks, and so forth, in order to handle the business for which we should use them. We have not a first-class place of that kind in the United States. [Applause.] I know that this is a little foreign to the subject assigned me, but I thought it might not be amiss to mention here at this time.

"In a general way, that is about all that I can say in regard to the relations of the Navy to the inland waterways; but it seems to me that the few remarks that I have made make it very apparent that any proper development of our inland waterways will be of great value to our Navy, because if we had those canals, particularly the ones that I have mentioned between the Chesapeake and the Delaware, between the Delaware River and New York, and the vitally important development through Hell Gate, in order that our fleet might assemble in Long Island Sound and move in either direction, those things are of all-vital importance to the Navy, and, of course, would be of the greatest interest to the commercial world.

"As we go south from Norfolk nature has provided a channel for inland waterways, although it is very true that it is in many places shallow and needs improvement, but with the exception of a hundred miles on the North Carolina coast between Norfolk and Georgetown, S. C., there is practically an inland waterway all the way from Norfolk to Key West. As you know, on the east coast of Florida there is the so-called East Florida Canal all the way from Key West up to Jacksonville. I had an opportunity to go over that canal about the time that it was being completed. Of course, it is entirely too shallow, so far as its use by the Navy is concerned, because in order to make the canals of use to the Navy for our smaller craft they should be at least 16 feet in depth and the locks should be at least 325 feet long and 35 feet wide; but it seems to me that the building of locks would be ill-advised, because there are few of the canals that we ought to dig on the east coast that should have locks in them.

"I thought I would just tabulate a few figures here in regard to the approximate distances between points on the Atlantic Coast by the inside and outside routes, respectively:

Between—	Approximate distances.	
	By inside route.	By outside route.
CAPE COD CANAL.		
Boston Lightship—Brentons Reef	82	236
Boston Lightship—Sandy Hook	231	339
Boston Lightship—Hampton Roads	501	546
Race Point, Cape Cod—Race Rock, Long Island Sound	98	228
CHESAPEAKE & DELAWARE CANAL.		
Philadelphia Navy Yard—Hampton Roads	212	252
Delaware Bay entrance—Chesapeake Bay entrance	245	135
NORFOLK-BEAUFORT WATERWAY.		
Norfolk Navy Yard—Beaufort Inlet	158	231
Chesapeake Bay Entrance—Charleston entrance	397	378
Hampton Roads—Key West	888	914
CANAL ACROSS NORTHERN FLORIDA.		
Charleston—Pensacola	719	1,030
Diamond Shoals Lightship—Galveston	1,264	1,529
SYSTEM OF INTRACOASTAL WATERWAYS, BOSTONTO THE RIO GRANDE.		
Boston Lightship—Delaware entrance	381	426
Boston Lightship—Chesapeake entrance	511	523
Boston Lightship—Key West	1,474	1,370
Boston Lightship—Galveston	1,977	2,116
New York—League Island	80	235
New York—Delaware entrance	165	148
New York—Hampton Roads	290	281
New York—Charleston	706	627
New York—Key West	1,265	1,138
Hampton Roads—Charleston	414	415
Hampton Roads—Key West	975	914
Hampton Roads—Pensacola	891	1,375

"Now, on the question of that canal across Florida, that is another point. Whereas that would not be of material interest to the Navy, it would be of tremendous interest to the commercial world; in case that we should by any possibility have our fleet, or a portion of it, confined in the Gulf of Mexico, it would give us an outlet in case we had a canal across the northern part of Florida. We have found, however, by actual calculation, as to most of these distances, that it costs about the same to go around outside in the use of fuel as it would to pay toll going through a canal; and in addition to that you have the danger of exposure on the outside and the possibility of collision in fogs, and so forth, along our eastern coast.

"There is another point that I would like to mention which is deduced from my own experience, and that is the very meager provision that is made for our seafaring people along the coast. I do not think that the proper facilities are given for our seafaring people along our coasts. I see no reason why they should not have such facilities. The coasts should be divided into areas of at least 25 or 50 miles, in such a way that in any kind of weather and under any conditions, night or day, there would be no time when a man might not be able to find his way from one port to another without wearing himself out physically and running a great risk of the loss of the ship that he commands, and of having to withstand a great many other hardships that the seafaring people of our country have to put up with. There is no reason why a system of that kind should not be worked out; the fact that it has not already been done is but another evidence of the crudity of our system. That is another idea that I hope to work out some of these days; but just at present my duties are of such a nature that it is impossible for me to work out the details, and I simply offer this as a suggestion. Our country has been niggardly in providing for the welfare of our seafaring community. They are out off the shore, left entirely to themselves; I think it opportune at this time, when so much is being done for our commercial interests, and so much capital is being put into the question of shipbuilding, that these men should receive attention. [Applause.] I am very glad to have had the opportunity to make this suggestion; and I shall keep the matter in mind and hope some day to work out a definite scheme.

"I wish to repeat again my appreciation of the opportunity you have given me to say what I have. [Applause.]"

GEN. BLACK'S OBSERVATIONS.

[Delivered before the thirteenth annual convention of the National Rivers and Harbors Congress, Washington, D. C., Dec. 7, 1916.]

The address of Brig. Gen. Black, giving an Army viewpoint of inland waterways, was as follows:

SOME OBSERVATIONS ON WATER TRANSPORTATION.

"Mr. President, ladies and gentlemen, I had hoped to have a finished address for you this afternoon, but apparently a

large section of the United States has decided to come to Washington at this time. They have all visited the War Department, with the result that I did not have the time I had hoped to have in getting ready for you some thoughts on this subject, which is now such a pressing one for us all.

"To my mind, we have hardly any need of greater importance to society in general than the need for better transportation facilities—transportation facilities which will, at the least cost, transfer from the point of production, no matter where in the world, to the point of consumption, no matter where in the world. [Applause.]

"This 'high cost of living,' of which we all complain, is not altogether a bad thing when you come to consider it. I think it may be safely said that it is, after all, in certain of its aspects, a measure of the growth of civilization. Naturally we all want to live well—and by living well I mean living decently, properly nourished, properly clad—and necessarily there is a greater demand for the things that go toward that. That greater demand then requires increased production, and, unless satisfied, necessarily carries with it increase of price.

"Now, there is no place in the world, no place in our great broad country, which does not or can not produce something—be it the product of the mine, the product of the forest, of agriculture, or of manufacturing—more cheaply than can be done at any other point. Therefore, true economy and efficiency in the national conduct of affairs would have the thing produced at the point of least cost, and then have distribution made in the manner that is least expensive, and in that way the interests of all will be best served.

"We have witnessed a tremendous growth of the railways in our country, and we have seen, with that growth, in many sections a diminution of water traffic; yet these two means of transportation are not antagonistic at all. In all the older sections of the country the enlightened heads of railroad companies recognize that water transportation is an economical thing for them [applause]; for it permits an excess of coarse or low-grade freight, which they can not carry except at a loss, but which they must carry if presented, to be disposed of in another way, thus making possible the handling by their lines of a larger amount of a better paying class of traffic.

"This was particularly impressed upon me some few years ago when I was asked to form a project for a deep-water canal between New York Harbor and the Delaware River. It became necessary to secure the cooperation of the officials of the Pennsylvania Railroad Co., and to get information from them, because some of their lines had to be changed. It was with fear and trembling that I went before the president of the road, thinking that he might take the old view, which we think all railroad people have but which the more enlightened of them do not have. Instead of his holding that attitude, I was received in a most delightful manner. The company put itself out, and was at no small expense, in order to furnish me the information that I wanted, and to send its engineers to go over the line that we had selected for the changed route for the railroad; and they said, 'We hope that you will be able to get this canal through. It will save us the building and operating of another freight line between New York and Philadelphia, which we do not want to undertake; it will be a decided economy for us if this canal is put through.'

"So there is ample room, as well as the utmost need, for the development of all routes of transportation, be they by rail or by water.

"Now, there have been a number of reasons for the decline of water traffic, and for its apparent inability, in certain cases, to compete with the railways. These are almost invariably from causes which can be removed; and I want to invite the attention of this convention briefly to some of them, because it is certainly useless for us, or for anyone, to advocate an immense investment of the people's money in the improvement of waterways unless those waterways are economically useful—and they are only economical where used. To-day I think it is the duty of all citizens, especially those interested in waterway development, to try and see how such waterways can be usefully employed.

"On the Mississippi River we have an improved waterway, of ample depth and sufficient width, and open the year round, from St. Louis to New Orleans; but it is only just within the last year or two that that waterway has begun again to be used, and used in a rational way.

"In passing down the Mississippi from St. Louis to New Orleans two weeks ago we left St. Louis one morning early. The same day a barge load of freight left St. Louis. All the way down the Mississippi River we saw that barge load at intervals. Finally we reached New Orleans, and the barge load of freight got there at exactly the same time. That freight, thus carried down the Mississippi, was first collected from the warehouses of the shippers, then taken to the water front, put on the barge, carried down the river, unloaded, and delivered at the warehouses of the consignees; and the total cost was 80 per cent of the rail rate. I saw a telegram that had been received from one end of the line from certain people who had been asked to investigate the condition of this freight when it arrived; and the telegram stated that they had never seen a consignment of freight, carried in that or any other way, arrive in better condition. [Applause.] Later I saw the manager of the barge line, and he told me that, although this enterprise of theirs is but a new one and as yet is little known, it is to-day making money. [Applause.] Such a development when started is bound to go on. I feel quite confident that within the next few years we will find a great and legitimate growth of commerce on the Mississippi. [Applause.]

"Now, take the cost of transportation. You have heard that spoken of many times. I am going to say just a few words on that. The cheapest transportation in the whole world is probably by the great tramp steamers of the seas; but the next cheapest is on the steamers on the Great Lakes, where iron ore is transported and delivered at a cost of from seven-tenths to eight-tenths mill per ton-mile. On the Ohio and Mississippi Rivers those great coal fleets, returning empty and so earning nothing on the return journey, can carry their coal at a rate of six-tenths mill per ton-mile. The maximum cost of carrying coal in this way would probably be about 1 mill per ton-mile, whereas the lowest known rail rates on coal are 2½ mills per ton-mile, or just two and one-half times the amount of its maximum cost by water. So that anyone who really goes into the subject carefully will see that there is an absolute need for both rail and water facilities; that, even in the poorest districts of our country traversed by the greatest arteries of water transportation that we have, the Mississippi River system or the Hudson River system or the others, parallel railroad lines flourish, and they both have a full use for their means of transportation. [Applause.]

"I myself have lived on the Hudson long enough to remember the fleets going up and down on it in the earlier days. When the Hudson River Railroad was built the people thought that that would mean the killing of the Hudson River traffic. It did not in the least. Then another line of railroad was built on the west shore, and yet to-day you will find an enormous freight traffic on the Hudson River paralleled by these two railroads. And if you happen to go up to Albany or to New York City late in the fall you will see a singular thing that looks rather anomalous. You remember those great night boats that are built to carry a thousand passengers and are necessarily extremely expensive, both as to cost of upkeep, interest on the money invested, and tremendous operating expense; yet you will find those boats keep in operation when there are not 50 passengers traveling, their expenses being paid for entirely by the freight. I never yet have been able to find out what the cost of carrying freight between New York and Albany by water is. That seems to be kept secret. But it must be a very well-paying business or they could not afford to run those boats under such conditions.

"Again, another advantage of this water transportation is that the merchant or manufacturer of Albany finds he can load his goods on the boat in the evening with the certainty of their being delivered at their destination in New York on the following day, whereas if the same articles had been sent between New York and Albany or between Troy and New York City by railway delivery would not be expected within three days, due to difficulties at the terminals. Those advantages will always remain with the water.

"On the other hand, anyone of the great traveling public who is in a hurry never thinks of going by water unless he can do it while he would be sleeping, and so use the time that otherwise might be considered lost.

"Now, there are vast portions of the country which can not be reached by water transportation, so that the two systems should be looked upon as supplementing one another [prolonged applause], and not as destructive competitors. I feel sure that in the near future such will be the case, for the railways everywhere will take the position which I have told you had been taken by the Pennsylvania Railroad in the instance I gave you. They will encourage in every way possible the formation of water-transportation lines.

"Now, let me go to another phase of this same question that has been talked about a great deal; that is, the 'pork barrel.' You know that the improvements of waterways are made by appropriations by the Federal Government, and no appropriation bill has been passed recently without a great cry all over the country about 'pork.' Doubtless you have heard all the phases of this, yet there are certain things that perhaps are not thoroughly comprehended.

"In our country, as you know, the will of the people is absolutely supreme. It is a very rare thing indeed that any legislation has its inception in Congress; almost invariably it is first brought about by the expressed wish of the people. The Members of Congress show in every one of their actions that they do what the people want them to do. Now, consider almost any stream the improvement of which is desired. The people of that locality feel that it is a benefit to them individually; they feel an interest in that stream which they can not by any possibility get up for a waterway at a distance, no matter how important. It will be quite impossible to convince the people, for instance, on the Upper Cape Fear River—who are just like all the rest of us—that they would derive more benefit from the deepening of the New York Harbor than they would by getting increased facilities on the Cape Fear River. It can be proved mathematically that the returns to the people of the United States at large would probably be greater in the case of the New York Harbor than in the other case, but that does not appeal. The things that appeal are the things that hit you personally and directly. Each one of you will mend a leak in his own roof long before he would give $10 to mend a leak in the roof of the town hall, so that we must expect that this local interest is going to have tremendous weight in all cases.

"Now we have a vast amount of territory, and we have but a relatively small amount available from the annual income of the Government out of which these improvements are made. This makes the sum to be expended annually spread out very thin indeed. It makes it necessary to carry on the work of improvement sometimes in an uneconomical way, the money not being wasted, but not being applied as economically as it would be were the appropriations larger.

"What are our legislators to do? Each man of them is pressed by the people who elect him, whom he represents, and whose will he must carry out, to have local things looked after and local improvements made. Take that through the entire country, and it is perfectly evident that it is necessary, and will be as long as we are under popular Government, to pay attention to local interests and to see that this money is distributed, in a measure, territorially. No matter how good theoretic consideration you show for a single investment, or the putting of all the appropriation in any one improvement, be it New York Harbor, be it San Francisco, be it the Mississippi, the people simply will not have it so; and as long as they will not have it so, it can not be.

"There are certain things about our popular Government which may be considered drawbacks, if you will; but we know there are so many great and glorious things about it that we love it with all the drawbacks. [Applause.] But we must see the drawbacks, and it is perfect nonsense to expect that altruism shall be carried so far that any section will be found perfectly willing to give up the things it thinks it needs, for the time being, on the ground that another section needs the money more. The people say, 'It is our money that you are spending. We all give to it, and we must all get a return.'

"Under those circumstances it seems to me that if we are going to get the great advance that is needed in our work, if we are going to have the great sums that are required, for example, for the Mississippi River improvement and the Missouri River improvement, another financial policy must be adopted. We must remember that, as I will tell you later, the questions of floods and of river improvement are so tied together that they can not be separated. We must also remember that in flood control and in the movement for transportation by water, we can not expect necessary work to be carried through, and carried through properly, so long as we adhere to the policy of making all of our betterments out of our income. [Applause.]

"How long do you suppose it would have taken the Pennsylvania Railroad, for example, to have abolished grade crossings between New York and Washington if they had simply put down the tracks and said, 'We must wait until we can take so much from our annual income to complete the work'? The work would not have been done. There is no great manufacturing or business corporation in the world that ever attempts to carry on business in that way, and it is quite right that they should not. The proper method is a very simple one, and it is a perfectly well-known one. Money is borrowed, and can be borrowed economically as long as the resulting annual returns are greater than the interest on the investment, plus the necessary withdrawals for a sinking fund. In such cases the work is carried through in the most economical manner possible and the bonds are finally paid. Until we get some such system with our great public works in the United States we never will get much further ahead. [Applause.]

"You can talk, gentlemen, about investigations just as much as you please; there is no possible way—and I have studied the matter very carefully—in which you can get away from the fact that each section of the country is interested in its own part, although all are bound together. All of its means of water transportation form one system of many component parts, yet it is a dream to think that any one part of the system of our country is going to be developed throughout while the other parts wait. They will not wait. So that the more you investigate, the greater is the machinery and delay and the more you mark time. These elaborate investigations that are called for may be very attractive in theory but they rarely have practical value sufficient to compensate for the delays they cause. If on the Mississippi River a bend is being cut off and a valuable plantation injured, I do not think that the people of the Mississippi Valley are willing to wait for five years until a comprehensive investigation has been made and the conditions of all of the Mississippi River and its affluents have been carefully considered and reported on. Conditions are apt to change in that time; so that, as far as I can see, this criticism of our legislators for making the appropriations is an unwarranted criticism. [Applause.] They take all possible care—as stated to you frequently before, there is no bill that passes through Congress which has more careful scrutiny or more care devoted to its composition than the river and harbor bill. [Applause.]

"Now there is one thing which it is absolutely essential to do, and that is to see that no improvement shall be recommended to Congress for consideration unless the most careful scrutiny shows it to be an economical investment of the people's money. If you have a certain amount of money to invest you go to your banker or your broker, and you say, 'I have so much money; I want to invest it; now will you kindly advise me what is a good investment?' He will probably tell you at least fifty or sixty different things in which the money can be invested—maybe thousands of things. You ask him, 'Do you recommend these?' And he will say, 'They are all good investments.' 'But do they bring the same returns?' 'No; this one is 5 per cent, this other may be 20 per cent; but they are all perfectly good investments.' A 5 per cent investment, however, that brings back a return at home looks a good deal better to an ordinary man than a 20 per cent investment of which somebody somewhere else is going to get the greater part of the direct benefit. Therefore it is utterly impossible to frame a river and harbor bill and put into it only those improvements that will bring the biggest returns to the people. [Applause.]

"You have to consider local claims; and the utmost that can be done, I think, is to see that no improvement of any kind is recommended unless it is a good investment, unless the returns to the people annually are equal to, or greater than, the interest on the money invested plus cost of maintenance. If that be so it is a good investment. It may not be so good as another, but it is a good investment, and is a proper one to put the people's money into. As I stated, being what we are, with local interests that must be looked after, perhaps frequently the money is not placed where it will do the most good to the greatest number, but nevertheless it will do good, though only scattered good, to all of our people. [Applause.]

"Now, when the improvement of a stream is under consideration, after an examination and survey has been ordered by the Congress, the local engineer forms a project, he estimates the cost, he finds that to obtain such a depth and width the money that must be expended will be so much; and that for a greater depth and for a greater width it will be so much; then he balances the returns to the people for these varying depths and widths with the cost of construction and of maintenance, and he forms a judgment, after getting all the information that he can of the benefits to be received, as to which of these different plans will yield the better return to the Government for the people's money, and he recommends that plan. That again is looked at from the same standpoint by the division engineer, then by the board of review, then by the Chief of Engineers, and then finally by Congress.

"However, these projects for improvements differ materially in themselves. If you take a river bearing a large amount of silt, or a river flowing through an alluvial valley, you have one problem to consider; if you take one flowing through a bed with rocky banks, or banks which are fixed, you have quite another problem to consider. In the first case, each flood which passes down erodes the banks and causes a change in the direction of the current, causes a change in the channel position, and may cause disaster by cutting a new channel completely, perhaps throwing a city away from its means of support, the river, or transferring a farm from one State into another. In making a project for a stream of that kind, then, the effect of floods must be carefully considered and the project for the improve-

ment of the river must include the consideration of flood control; the two go together. If you pass down the Mississippi you will see that at this place a bank revetment is being placed to protect a levee; at another point, a levee is being placed to hold the bank where it is revetted. The two are completely interlocked; they can not be separated without disaster.

"On the other hand, if you take a river like the Hudson, you make your project for its improvement with the certain knowledge that the bank that is here to-day will not be some place else to-morrow, that the flood which comes will injure property but will not worry you in your improvement of the river. In that case the problem of flood control is quite a different one, it is there simply a question of the protection of property. Then there are streams which present another aspect of this flood-control question; those where unintentional injury is done by municipalities, by the people themselves, and sometimes by the State, in increasing the height of floods.

"For example, take the Hudson River, with which you are all familiar. You remember that the upper river, which is quite subject to floods, flows through a comparatively narrow valley, with foothills, it may be, from one-half to a quarter of a mile or less back of the low-water river banks; and that at times the flood water rises over all this valley—floods it all. So long as such a valley is not very much cultivated or not very much populated, the floods go off without doing damage. Albany, you remember, lies at a point where the hill is quite close to the bank of the river, and the lower part of Albany always has been subject to floods to a greater or lesser extent. Immediately below Albany the valley widens out, and in the old days, before anything was done there, there was a very wide extent of land that was always under water during floods, with the channel flowing down through the middle. Gradually this land has been reclaimed, and the floods no longer can expand there. There is no trouble there, but the contraction backs up the water, and Albany to-day is more subject to floods than it ever was before, not because the floods are worse at all, for the quantity of water flows just the same as it always did, but because the water can not get away as rapidly.

"So in the valley of the Ohio, you remember those disastrous floods of a few years ago. It is not so much a question of more water as it is of the restriction of the flood channel by bridges improperly placed, and by other causes, such as the building of warehouses and the reclaiming and raising of land, thus giving less room for the waters to spread, and therefore increasing the flood height above. These are the problems which are involved in questions of flood control in nonalluvial or non-silt bearing streams.

"Take the flood conditions of the Mississippi River; you know there are a lot of anomalies about them. I do not know whether you are interested or not in technical questions; but for a long time it was very hard for me to take in two facts there—one, that the flood crest moves faster than do the waters that form the flood. I will let you work that out yourselves; I have never been able to work out a good explanation of it, but the flood proceeds in advance of the waters that form it. This is due to wave action.

"The other fact that is difficult for me to understand is why, when the Mississippi River rises 40 feet in a flood, it is not 40 feet deeper than it was before it rose. As a matter of fact, it is not; the bottom comes up, you know, almost as fast as the top does, because there is a great amount of silt that is being carried down in suspension and in bottom waves.

"Now consider the question of the regulation of such a river in order to secure a good low-water channel. The flood comes, and not only is the site of the channel drowned out by the water, but it is covered up and flooded by the silt; then, as the water falls, the river cuts a new channel. The idea of our regulation work out there is to compel that new channel to be cut in the same site that the old channel occupied; and the object of the levees, apart entirely from the fact of protecting the country behind from overflow, is to provide the means to bring the river back to its old channel and prevent the forming of cut-offs. I have gone into this to some length to show you a few of the problems that enter into the formation of these projects and which must be considered in all of their economic aspects before being recommended to the Congress.

"When you are forming a project for the improvement of a stream for navigation purposes, there are two general considerations that must be looked into. One case is where railroad transportation is not available for the country to be served; the second case is where railroad transportation is available. You have heard a great deal about the enormous commerce on the Missouri River, on the Red River, and on the Arkansas. In the old days, when commerce had to be moved to the headwaters of those rivers and there was no possible way of getting it there excepting by ox team or by boat, a charge of $50 a ton was not at all too much and navigation naturally flourished. It was the only way they had to move it, the cost was almost immaterial, and navigators took any impediments that came, any risk that came, for it paid them to do so.

"Then came the railroad and gave a more rapid means of transportation at less cost, and naturally the boats that required a $50-per-ton rate had to stop operating. It is all very simple. To-day such conditions rarely occur; there are few streams which serve territory not reached by other means of transportation. On these few streams one can still afford to run boats at a considerable cost, because the materials must be moved; it pays better to endure high freight charges than not to move the goods at all and not get your produce to market. So on a stream of that kind it is possible to make a provision for what might be termed an inadequate waterway; that is, a waterway which can not be navigated economically. In one sense it is economical, because it is the only means of transportation that you have; in another sense it is not economical, but you can afford to run a boat in a stream of that kind because you can charge freight rates which would be out of the question on a stream paralleled by railroads. That is one consideration that must be kept in mind. On the other hand, where you are going to improve a stream that has railroad competition, you must improve it in such a way that it can be navigated and freight carried on it at less cost than when the freight is moved by rail, and thus a totally different set of conditions come into the equation. So these two cases must be had in mind when the project for improvement is made.

"Where there is railroad transportation available, even with some excessive wagon haul to the station, water transportation is really not economical and will not flourish unless freight can be carried by water at about 20 to 25 per cent less than rail rates. Now, that is easy to do where you have proper facilities, because the ordinary rail rate is about 7½ mills per ton-mile.

"Some of the reasons why at times water transportation costs more I will give you in a few moments, but, gentlemen, one of the difficulties that we find as engineers, upon whom the Congress has placed the responsibility of stating whether such an investment of the people's money is a reasonable and profitable one, arises from another cause. Again and again there has been brought before us and insistently urged upon our attention by communities the necessity for the improvement of a river, when investigation showed that those same people never expected to move 1 pound of freight upon that river—not 1 pound. What they were after was a competitive freight rate. I feel, and I think that is the feeling of almost all the officers of our corps, that that is not a proper investment of the people's money; that if any point requires a lower rate it should not secure it by the very expensive means of improving a river; that that low rate can be and should be obtained in another way; so that, where we find that the object sought by the improvement is simply to secure competitive freight rates, it is very rarely that an officer of the Corps of Engineers will recommend that project as a proper one.

"Now, if we take the cost of water transportation, it is shown in a number of cases that about 50 per cent of the fixed charges of operation are for the pay and subsistence of the crew. In reducing this cost of operation, and therefore lowering the rates that have to be charged for freight carried, the first thing to scrutinize will be that 50 per cent. This item can be reduced most quickly and naturally by having the crew employed a shorter time for the same voyage carrying the same amount of freight, and that simply means increased speed.

"The fact has been placed before you again and again that in the small canals of Germany and France an enormous amount of traffic is carried, and carried profitably. Wages are less there. We can not afford to make as small a waterway as they can there, for the reason that the speed with which a boat can be moved is dependent up to a certain point on the size of the channel, other things being equal and directly dependent thereon, as I will show you later. With the low wages abroad a speed of 2½ miles an hour might be a paying investment, whereas with us the pay of the crew and the subsistence of the crew for a longer time make such low speed unprofitable. That is one of the things that is sometimes lost sight of in the plans of our transportation companies.

"From my own investigation I am quite convinced that if there be rail competition, bulky freight, in order to be profitably carried at a less cost than by rail, should be moved at a rate of about 4 miles an hour, and package freight must be moved at a rate of 6 miles per hour, or over. If you get under those figures water transportation generally becomes a nonpaying undertaking.

"Now, in order that this speed can be obtained, and attained economically, the boat must be modeled for the stream in which

it is to work. I can cite you an example of citizens who in a most public-spirited manner, desiring to get for their city the benefits of water transportation, subscribed their money in large sums. They bought a steamboat from someone. The steamboat was too big for the stream. She did not draw too much water, but a boat is not fitted for a stream simply because she can float in it; other things must be considered. The boat was too cumbersome, it was not suited for the stream, and so it proved to be a nonpaying investment. The boat was thrown into the scrap heap, and it would be pretty hard to convince those citizens that water transportation is cheaper than rail. It was their own error. They had not looked into the matter properly.

"Again, take for instance the Narrows of Lake Champlain; while you have there plenty of water, and in most cases quite a good width of channel, boats large enough to pay can not run through; and the reason is because of the crooks in that channel, the bends being so short that the boats can not negotiate them. Instead of running a tow of 8 or 10 boats, they have to cut their tow down to one or two in order to get around those bends. That is also the case on some of our southern rivers and in some of our smaller canals in the South, where you can not run a boat and make it pay expenses, because the channel is so crooked that the speed is cut down too much, and you never can make such channels through routes. So that in getting a boat for river transportation the condition of the river itself must be carefully studied, and the boat when purchased must be the kind best suited for that particular stream. You must get your boat not too big for your stream. That is a mistake often made.

"Another thing that must be given careful thought is the equipment of your boat. The railroads show that 0.066 pound fuel is expended per ton-mile of freight transported and 2.5 days' labor per 100,000 ton-miles. The Great Lakes carriers expend 0.029 pound of fuel per ton-mile, with 0.9 day's labor per 100,000 ton-miles. So it is perfectly evident why lake traffic is cheaper and more profitable than by rail for the same distance. Then again, for an Ohio River towboat pushing a large tow, which it can do in that very broad stream, and carrying an enormous amount of freight with a minimum crew, the figures were 0.021 pound of fuel per ton-mile and 1.31 days' labor per 100,000 ton-miles.

"At the same time that those figures were arrived at an investigation was made of the cost of running a Mississippi River boat of the old kind, stopping at any place that a man wanted a stop made. They used to run the railroads that way, but they do so no longer. It was found that for a Mississippi River packet there had to be expended 1.129 pounds of coal per ton-mile of freight transported and 65.64 days' labor per 100,000 ton-miles. Is it any great wonder that this type of navigation on the Mississippi has died out, has become obsolete? It is out of date; it was bound to go, and there is no hope of its ever being revived. But, as I told you, right on that same Mississippi, by another system, by means of boats adapted to the river, with economical management, men are to-day carrying freight and making a profit at rates that are 80 per cent of the railroad rates for exactly the same service. That traffic is bound to increase, and I am sure that the Mississippi again, and in the near future, will become one of the very important through routes of commerce. [Applause.]

"Now, to show you what the influence of depth is on a stream—am I taking too much time? [The speaker was told by the chair to go ahead.] A few years ago we made an experiment with one of those magnificent steamers on the Hudson River, a steamer that makes 22 miles an hour opposite West Point in the deep and broad channel there. When she enters the reach above Hudson she has to go much more slowly. Her owners assisted in some experiments. When she was drawing 9.5 to 10 feet of water in a channel with a depth of 14 feet we found that she attained a speed of 9.1 miles per hour by an expenditure of 350 engine horsepower. We then had her use all the horsepower she could, and she developed 730 horsepower, with the result that the speed was increased to 9.48 miles per hour, an increase of less than one-half mile per hour. By doubling her energy, by doubling the amount of fuel and power expended, she was only able to increase her speed less than one-half mile per hour.

"Now, you will find that to be the case in every restricted channel. A short time ago some gentleman in New York desired to establish a barge line on the new canal. They wanted to use large-sized barges for freight, and for passengers, if necessary, and they wanted to get a speed of 10 miles per hour. They sent a model here to Washington and had tests made in the naval testing tank. I do not know whether you have seen this tank. It would be a most interesting thing for the members of this congress to look at. They took a model of their boat there and prepared a channel that was comparable exactly to the width and the depth of the barge canal, and while moving this model through the tank at different speeds they noted the amount of horsepower required to pull it. They noted the speeds that were made at different expenditures of power. A speed of from 2 to 4 miles was made with almost no difference in expenditure of power. Then it rose rather rapidly to 6 miles. When they came to a rate of 10 miles the power required was almost infinite; in other words, it was impossible to run a boat of that size at 10 miles an hour on the New York State Barge Canal, although there was plenty of width for it to get through and plenty of water to float it.

"These things are not always sufficiently taken into consideration. For each channel width and depth there is an economical size of boat. Those of you who run automobiles know that there is a speed for each machine at which it will cover the greatest distance with a given expenditure of gasoline. If you go slower it costs you more in gasoline. If you go faster it costs you more in gasoline. Each steamboat has an economical speed for the channel through which it goes, and there again comes the necessity of considering your boat with respect to the channel which is to carry it.

"Now, the effect of channel resistance is felt at a great depth. I suppose you know that torpedo destroyers, drawing about 16 feet of water and running at the rate of 30 to 35 miles an hour, are obliged to have water over 60 feet deep before they can develop their full speed. If they get into shallower water than that the boat can not develop her speed. That seems difficult to believe, but it is so. The effect is felt throughout all that depth. The movements of water caused by a ship are most complex and are felt for a long distance from the sides of the ship. Once when going up the St. Johns River on a Clyde steamer, just ahead of us was a towboat with two schooners in tow. We were passing through a rather narrow channel. As we passed the last boat, the one behind, I found her forging ahead along with our steamer, with the line entirely slack. It took us some time to pass her, because she stuck right by us. We came up to the second one, and the same thing occurred. The effects are very marked.

"I remember an anecdote, which I believe to be perfectly true, of an instance that occurred a few years ago. One of our naval officers who had been engaged in making tests down here at the tank, studying this movement of water caused by the passage of a ship, happened to be on a great trans-Atlantic liner going to England. They were passing through a rather narrow channel, and a smaller English cruiser tried to pass them running on parallel lines. This officer turned to a man alongside of him and said, 'Unless our experiments are all wrong, that ship must now turn and ram us,' which she immediately proceeded to do. The occurrence was considered very mysterious, and the captain of the cruiser was court-martialed for bad seamanship, but he had nothing to do with it—the ship was completely out of his control.

"For New York Harbor they investigated the width of channel necessary to insure safe passage of two vessels, and they found that the smaller should be at a distance away from the larger ship at least equal to one-half the length of the larger. All these movements of the water are created by the power that you put in your boat. Again, if you pass through a canal, you remember that there is seen along the bank a depression of the water surface which gradually grows deeper toward the stern, then finally there is a large wave following the boat, all of which again calls for an expenditure of power. In a very narrow channel your boat is traveling up hill the whole of the time. In a channel of small dimensions she has to consume the power necessary to lift her weight up the hill caused by her own action. In this circumstance is to be found one of the reasons for the limitation of speed in a narrow channel and the reason why you can not, no matter with what expenditure of power, exceed a given speed for each boat in any one channel.

"There must be a certain amount of water beneath the keel of the boat. You remember the very common saying among seamen that the boat 'smells the bank'; she sheers off from it before she touches the bank; yet again and again you have seen the attempt made to load a boat down to the full depth of water. Because a channel has 6 feet of water it is thought the boat can be loaded to a depth of 6 feet. The probabilities are that the boat would actually be operated more cheaply by carrying less cargo and running on a draft of 4 feet.

"Then, again, the matter of area of cross section of channel comes in. In European canals the practice has been to make the width of the canal three to five times the cross section of the boat. They can stand low speeds there; they pay. We

can not stand low speeds here; they will not pay. We have to have our minimum cross section at least seven times that of the boat, and probably more.

"These are very interesting things that have not been brought sufficiently to the attention of the people interested in navigation. There are some things that are quite obscure, a number of questions that we can not answer. However, some years ago the United States authorized the formation of a towboat board, and they, after careful investigation, submitted a report. Experiments are still in progress, and we hope in another year to be able to say not only what is the best size and model for an ordinary towboat, and also what the best equipment is; whether a radial or feathering stern wheel is better; if a propeller is preferable, whether in tunnel or not; and what type of engine is best for boats of certain types nd speeds. These experiments are being carried on, and, as I say, we hope we may be able to give out some valuable information in the course of another year.

"Another thing that we are doing, right in Washington, is experimenting in the Navy model-testing tank, in channels of certain depth with models of certain drafts, to determine the relation of the channel width and depth to the retardation of the boat. We want to learn, in other words, what is the best size of boat for a stream of a given size. The result of those experiments will be made public, I hope, before very long. You see these problems in regard to river improvement are rather involved. You have to consider, as I have shown you, the character and amount of traffic that the streams are to bear before any project for improvement can be made economically, and you must consider, also, whether or not the transportation on this waterway is, or is not, to compete with rail transportation.

"There is no use in recommending too small an improvement. Very often the small improvement, costing little money and resulting in restricted channel dimensions, will be a nonpaying investment, whereas a channel of greater width and depth with greater expenditure of money would make ample returns to the United States. We who have gotten on in years remember that a few years ago there was a perfect craze over the entire United States for the building of narrow-gauge roads because they were cheaper. There is scarcely one of those narrow-gauge roads in operation now; they were cheaper to build, but they did not pay to operate. Those that did run for a while have been abandoned and their places are now taken by the regular standard-gauge system. In the same way, we must provide for our waterways a sufficient channel width and depth; and it is my own opinion, which may or may not be thoroughly well founded, that if water transportation is to compete with rail there must be a minimum depth of 6 feet, and if you get below that I do not think your boats can compete; you will not be able to carry your freight cheaply enough. With that minimum depth of 6 feet you must have ample width. Excepting where it is necessary to serve a country not otherwise provided for, I do not think it worth while to recommend a less improvement.

"Now, it is an undoubted fact that, with properly designed and properly operated boats and properly designed terminals, the cost of water transportation is less than the cost of rail transportation; and as I have shown you, in almost all cases more rapid as well. I was in Los Angeles a few years ago when a ship came in from New York via the Panama Canal, and I found her loaded with package freight of all kinds. I said, 'How does this pay you people here in Los Angeles when the distance by water is so much greater—how can you do it?' 'Why,' they said, 'not only does it cost us less to bring it by water, and not only does the freight arrive in better condition, but also the time of delivery is no greater, because of the delays in the movement of everything but exceptionally fast freight or passenger trains.' Rail transportation of freight is not rapid; there seem to be enormous delays at various points on the way, not unwarrantable, perhaps, but still delays. So the old idea that rail transportation is much quicker than water transportation is more or less fallacious.

"A short time ago I read a book called 'Socialized Germany,' by Frederic C. Howe, which I found extremely interesting. He wrote one or two chapters on the subject of transportation in Germany. He does not deal altogether with that. He tells about the German improvement in cities, their management of cities, and so on. The chapters on rail and water transportation are extremely interesting; they show how in Germany both the railways and the waterways are paying very good interest to the State; how they work together noncompetitively so as to bring about the greatest good to the entire people, and how both are availed of to the extent almost of their capacity. Those of you who are interested I think will find those chapters very interesting reading.

"The future of water transportation is assured. [Applause.] I will give you just one example. You have heard something said about the decline of the coal traffic on our western rivers. Here are some figures which have just come to hand. On the Monongahela River the tonnage has actually doubled within the last 15 years. [Applause.] To-day it amounts to 12,700,000 tons. In addition to that, letters are on file in the Engineer Department from prominent manufacturing firms along the Monongahela and Allegheny Rivers in the vicinity of Pittsburgh, which show that they have already ordered towboats and barges which, within five years, will increase this tonnage by 70 per cent, and that about one-half of this increase will probably come within the next 18 months.

"We have examples before us, everywhere, of the advantage of properly conducted waterway transportation. I think it is best for us in each case to study what would be the proper method of conducting transportation on each of the waterways in which we are interested, and to put into it the same amount of brains, the same amount of trouble, and if necessary the same amount of money as a railroad always does in bettering its equipment and lessening its cost of operation.

"I thank you very much. [Applause.]"

The Postal System and the Telephone in Washington.

EXTENSION OF REMARKS
OF
HON. DAVID J. LEWIS,
OF MARYLAND,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, December 21, 1916.

Enlarger of the common life.
Carrier of news and knowledge.
Instrument of trade and industry.
Messenger of sympathy and love.
Servant of parted friends.
Consoler of the lonely.
Bond of the scattered family.
—WOODROW WILSON.

Mr. LEWIS. Mr. Speaker, I mean to address the House briefly on Washington postal conditions as compared with cities in this and other countries.

Scene I. I take you to an average town in Germany and introduce you to the postmaster. You go into his office. It is the express office, the telegraph office, the telephone office, all in one. He shows you his wire system. It converges to one line of poles in the street, carrying the telegraph-telephone wires. The toll telephone wire is also the telegraph wire, and you can use it for both purposes at the same moment. The German postmaster uses all the five fingers of the postal hand, the express package up to 110 pounds, the savings bank, the letter, the telegraphic and the telephonic agencies of communication. Unity, efficiency, economy, and an annual surplus of $22,000,000 is the result.

The above picture is true not only of Germany, but of all leading countries, Austria, Belgium, Denmark, France, Great Britain, Hungary, Italy, Japan, Norway, Netherlands, Russia, Sweden, Switzerland, and New Zealand; and in 1910 the gross profits from their postal—that is, their mail, express, telegraph, and telephone activities—amounted to $124,335,217, or 20 per cent of their gross receipts. (1)

Scene II. We go now to my home town and we meet the American postmaster. It would be a misnomer to call him a postmaster in other countries, for his functions have been divided among strangers. Looking from the post-office window he shows you their rudimentary fragments. You see on one corner the office of Wells-Fargo, on another the Adams, farther down street the American and the National express offices. And even in the field of communication, sacred to the postal system under the Constitution, what do you see? Well, all still in sight, you see the separate offices of the Western Union and the presumptuously named "Postal" Telegraph Cos., all vying with each other and the express companies in a prodigious waste of the postal resources. When Alexander G. Bell found he could talk over a wire the news was cabled to Europe, and the Postal Telegraph engineers soon found they could use the telegraph wires for telephoning and telegraphing at the same moment, and so in Europe you see only one line of poles for both. But on the Maryland roads, the glory of the Union, you see three lines of poles—the Western Union, the Postal Telegraph (neither render-

ing any telephone service), and the pole lines of the Bell system, a better telegraph structure than either telegraph company's, yet it is rendering no public telegraph service whatever. Three pole lines! yes; even a fourth, for sometimes the pole line of a "competing" telephone company stalks into the phantasmagoria. Waste, waste, a perfect carnival of waste of overhead, of men, of material, of capital, of managerial and executive labor.

Now, some one is paying this egregious bill of waste. Who? Your constituents and mine, of course. Let us see how the bill is collected. Through their rates, of course. Let us take first the telegraph rates.

Telegraph rates. (2)

Distance in miles	150	250	700	3,000
Europe, average	$0.12	$0.12	$0.12	[1]$0.24
United States	$0.25	$0.30	$0.50	$1.00

[1] Australia and Russia.

Before the parcel post we had the highest parcel rates. We still have the highest telegraph rates; they run, as you see, from two to four times as high as with postal systems for the same distance. The effect of these rates is that they choke off about four-fifths of our natural telegraphic correspondence. New Zealand, with our wage and price levels, and with a 12-cent rate, shows nine telegrams per capita, the United States but (1.15) one per capita. And yet with the same letter rates we send 101 letters per capita, and the New Zealander, our closest rival, sends 93. But we rank thirteenth, not first, among the telegraph users of the world. (3)

The Chicago & Milwaukee Telegraph Co. used to have a rate of 10 cents, and later of 15 cents, for 10 words. The profits were not fairly remunerative for private capital, about 3 per cent, as I recall. In 1910 the rate was raised to 25 cents. In 1909 the telegrams numbered 103,248; they fell to 57,689 in 1910, while the working cost per telegram rose from 14 to 24 cents. (4) Low rates high utilization, high rates low utilization. Low utilization, high cost per unit of production, high utilization low cost per unit of production. It is only common sense.

This low telegraphic patronage means an average operating cost of 50 cents per telegram to the American company, while the Australian postal telegram is handled at a cost of 27 cents.[1]

Gentlemen, now look at the telephone, the toll or long-distance rates. They run from three to seven times as high as the postal telephone rates of other countries. (4) Here is a statement of the average rates for nine countries on the Continent of Europe:

Distance in miles	100	300	400	500	700
Continental rate	$0.20	$0.37	$0.39	$0.46	$0.53
Bell rate	$0.60	$1.80	$2.40	$3.00	$4.20

That is, for 100 miles we pay three times, for 300 miles five times, for 400 miles six times, and for 700 miles eight times the rate on the Continent of Europe for a three-minute conversation.

Mr. Speaker, I am obliged to make a seemingly sensational statement about these long-distance rates. It costs the American as much to ship his long-distance conversation over the wires, mile for mile, as it costs him to ship a ton of freight over the rails. The railroads get, on the average, 7 mills a mile for moving the ton of freight. The telephone system charges 6 mills a mile for carrying the three-minute conversation. Gentlemen can realize how weighty their conversations sometimes are. They weigh about a ton on the long-distance wires.

SOCIAL RESULTS.

Mr. Speaker, what is the consequence of these abnormal rates? Well, sir, it is to reduce the traffic to a point as abnormally low as they are high. Combining the telegrams and long-distance messages we find that other countries use the wire for such purposes from two to four times as often as we. While Denmark shows 17 such messages per capita and New Zealand 12, we show less than 5. While we rank first in the use of the letter—101 per capita—we stand but fifth in the combined use of telegrams and long-distance messages—the highest rates and the lowest service rendered among the nations. This is the penalty our Nation pays for permitting a half dozen private monopolies to squat on the postal domain. (5)

These investors and their great captains of industrial finance should withdraw from the postal field. They should go into the true fields of private finance, into the productive industries, where their talents and their capital might be rewarded with the highest and not the lowest service to mankind.

[1] What our people do not fully understand is that the postal function in the hands of a private monopoly is seldom actually efficient, and judged by the amount of service rendered per dollar expended, our telegraph and telephone monopolies are grossly uneconomical. The average telegraph employee in New Zealand handles 3,980 telegrams yearly, the American only 2,933, or 36 per cent advantage to the postal agency. (9) The Norwegian postal telephone employee averages 118,500 calls, the Bell employee 65,265, while our own postal system stands at the head of the list with 60,651 mail pieces per employee. (10)

THE WASHINGTON TELEPHONE.

Mr. Speaker, there are from seventy to eighty thousand independent homes in the District of Columbia. Only 20,000 of these have telephones. And yet communication is the most primary requirement of the human being. This was the reason, sir, the Constitution assigned the function of organized communication to the Post Office Department. It alone can have the motive to make that communication so cheap as to be susceptible of common and universal use, a use as wide as the needs of man. There is a road to every man's house, there ought to be a phone, along with the water pipe and the sewer, on the inside. In the United States this communicating ideal can be easily realized through the Postal Department.

While other nations, the older ones, may be slow to realize this ideal, we have twice the social wealth (over $2,000 per capita), and the popular distribution of current wealth is probably more evenly realized in Washington than in any other city. Still, three out of four homes are disinherited of this great necessity in communication. Why? Because of prohibitive telephone tariffs, just as with the telegram now and formerly with the parcel.

It costs the business man in Washington $156 for 5,400 calls, about 15 per day. He can get an unlimited service in Berlin and Paris both together for $120, and the London, Stockholm, and Auckland (New Zealand) unlimited rates combined are but $141.32. (11) In 1914 the average cost of the local call in Washington was 4¼ cents, or $4.21 per 100. In Buffalo it was four-fifths of a cent, or 79 cents per 100. The Washington rate held down the use of the phone to an average of 823 calls per annum, while in Buffalo the low rate gave a utilization of 2,709 calls. The system of measured-service rates in use in Washington locked up the phone and condemned it to about one-third of its natural use. Indeed, 32,442 subscribers, having limited service, used their phones an average of only 586 calls that year. Now, look at the following table; observe how the number of calls falls as the rate rises and rises as the rate falls:

Telephone data.

Cities.	Cents per call.	Calls per phone.	Phones per employee.	Calls per employee.	Size of plant.	Invoice per phone.
New York City (m)	4.45	962	.....	.....	451,829	$109.00
Brooklyn (n)	4.21	875	.....	.....	152,678	145.00
Washington [1]	4.21	823	[2] 52.0	[3] 45,215	51,361	116.00
Baltimore [4]	3.53	993	.....	.....	43,000	134.00
New York Telephone Co. [5]	3.24	996	38.0	40,000	[6] 1,003,593	148.00
Philadelphia (Ind.) [7]	2.21	1,456	42.4	61,800	34,556	[8] 347.00
Chicago (Bell) [7]	2.00	1,622	41.7	67,600	[9] 504,124	116.00
Pittsburgh (Ind.) [7]	1.52	2,002	30.5	61,757	14,478	[8] 450.00
Cleveland (Bell) [7]	1.48	2,016	39.1	78,808	70,920	127.00
Pacific Telephone Co. [7]	1.45	1,928	41.6	80,280	[9] 527,400	177.00
Indianapolis (Ind.) [7]	1.14	2,239	48.0	107,752	14,490	188.00
Spokane (Bell) [7]	1.08	2,169	43.9	95,300	23,333	136.00
Kansas City (Ind.) [7]	1.06	3,375	41.9	141,465	36,092	173.00
Rochester (Ind.) [7]	1.04	2,940	50.5	149,071	15,308	146.00
Plattsburg (Ind.) [7]	0.94	2,090	37.4	80,861	10,580	155.00
Buffalo (Ind.) [3]	0.85	2,709	35.1	95,205	40,561	180.00
Chicago, Automatic [7]	0.79	[9] 1,275	111.0	141,381	17,867	([10])
Louisville (Ind.) [7]	0.69	4,040	40.6	164,163	21,128	183.00

[1] Data for 1914, report to Utilities Commission. Later reports do not give the number of completed messages, but only those originated.
[2] Number employees computed from 1914 report (as 972).
[3] Minus deductions for depreciation. Correct figure near $120 per phone.
[4] Data 1910, the latest for city alone; case before Public Service Commission.
[5] Data 1914, New York Public Service Commission.
[6] Includes large area and many distinct plants.
[7] Data 1915, Interstate Commerce Commission.
[8] Probably does not represent actual investment.
[9] Low utilization probably due to competing phones in same offices.
[10] Data not reported.

Now, look at the third column, the number of phones handled per employee, and look at the last column, giving the investment per phone. Look at Rochester all columns, then compare with Washington. Do you observe that the rate per call in Washington does not appear to relate to the cost of the plant or to the number of employees necessary in conducting it? Washington and New York, with the lowest investments per phone, have the highest average rates and about the same number of calls per phone. And do you notice that the working product of the employees, the number of calls per employee per annum, generally falls as the rates rise and rises to a maximum as the rates fall? What it all means is that high rates, again, mean idle plant and an equal waste of the force expended by the working personnel.

The 823 calls in Washington produced about $34.60 revenue. To give 2,500 calls per phone, about good normal, the rates would

have to be reduced. To what? Well, according to the experience of these cities—and they do not differ from postal telephone cities—a rate of 1 cent a call will bring a utilization around 2,500 per annum. High rate, low utilization. Low rate, high utilization. If you need $34 per phone, a measured service working out about 4 cents a call will be required. If you need to collect $30 per phone, which would pay about 8 per cent in Washington, a reasonable rate for private capital, then about 3½ cents a call and 900 calls per year respond. And this is probably about the average rate on the number of "completed" calls since the tariffs were reduced in 1916. But if you need to get only $21 per telephone, on the average, paying 3 per cent interest, then 1 cent a call and about 2,500 calls per year would be the likely result in a city of this size, according to the experience available.

A responsible telephone manufacturing and construction company, through its engineers, has submitted to the authorities a statement showing what it would cost the postal system to operate the Washington telephone system. It would cost $29.51 per phone, which would include interest at 3 per cent and depreciation. They advise a tariff of $12 per annum including 600 free calls, and 2 cents per added call. As the system increases under these low tariffs to 100,000 phones, about the proportional number in Stockholm, Sweden, the cost per phone, they say, would be $18.66, and the message rate could be made a cent a call, the $12 annual tariff to include 1,200 calls. The utilization at 2 cents a call would not likely fall below 1,500, and at 1 cent a call not below 2,200 calls in a city like Washington. At a dollar a month few homes would be denied a telephone.

The bill contains a feature not actually essential to the postal experiment itself. It is a low farm to kitchen and kitchen to farm rate, available within 50 miles of the Capital, but only for the purchase of farm products. The night rate, when the toll wires are practically idle, is put at 2 cents for the first 10 miles, and 1 cent for each added 10 miles, and the day rate doubled, with 50 per cent additions for overtime on the three minute conversation.

The farmer could telephone his list of products and prices to "Postal information" and the housewife be directed thus to the farmer actually having, and desiring to sell, the supplies in demand. The mail will not do; a conversation is needed for these retail transactions, and with the telephone conversation available, the parcel post would do the rest. Why should not the city consumer be given the use of this obvious public facility to secure the necessaries of life at their first cost, and with their first smell? The rate, while low in America, is about the same as in use with postal systems in Europe, and the president of the Bell Co., Mr. Vail, has declared that his company could give "rates more or less equal" to those in Europe.

Why not make the experiment of a postal telephone? And where better than in Washington? The Government is the greatest patron, paying about $100,000 a year, or about half the necessary interest charge. It would insure complete control of its communications in safeguarding its executive and military affairs at the seat of government. The postal chiefs would be here to settle the problems arising in the light of direct experience, and Congress could observe directly too with what success the experiment is conducted. There will be a postal surplus by July 1 of some ten millions. The Washington telephone system is set at less than $7,000,000. This surplus represents the profits of the parcel post, the youngest member of the postal family. Why not use the gold thus brought in in introducing an even more useful servant to the people?

GENERAL NOTE.

The following numeral notes refer to Hearing on the Postalization of the Telephone, January, 1915, before House Committee on Post Offices, testimony of Hon. DAVID J. LEWIS: (1) p. 90; (2) p. 11; (3) p. 12; (4) pp. 15, 16; (5) p. 85; (6) p. 12; (7) p. 25; (8) p. 13; (9) p. 36; (10) p. 38; (11) p. 23.

(5) The propensity of high rates for killing the potential traffic is also illustrated in our recent experience. Before the parcel post, in 1912, the express companies carried 318,000,000 parcels, about three per capita only, while the number in Switzerland is 10 per capita. Well, in 1915 the companies carried 288,000,000 pieces, and the parcel post carried 400,000,000 pieces, counting only those of a pound and up. In passing be it noted that the postal parcel cost for handling only 5 cents and the express parcel cost slightly over 24 cents, excluding railway pay in both cases. The parcel traffic of the country doubled with the advent of the parcel post, jumping from three to seven hundred millions of parcels. And what does that mean? It means that the denial of the parcel function to the post office has killed half of the parcel traffic for generations. The express company was doing less than a half man's work. It is even so, but worse, in the field of telegraphic correspondence. The telegraphs are doing not a quarter man's work. Their rates permit us to send about 120,000,000 telegrams a year. We should send 500,000,000 postal telegrams at the rates and according to the experience of Australia, a country resembling ours in area, in wage, and in price levels. And this means, simply, that we are denied our right to communicate by telegraph. (6)

Vocational Education.

EXTENSION OF REMARKS
OF
HON. ROBERT L. DOUGHTON,
OF NORTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, January 2, 1917.

Mr. DOUGHTON. Mr. Speaker, in my judgment no more important matter has been or will be considered by this Congress than the bill (S. 703) now pending, which provides for cooperation on the part of the National Government with the States in providing a system of vocational education.

The principal defect in our educational system to-day is its aimlessness. When the student has finished the ordinary literary course in our schools and colleges he is yet unfitted for any special service, and if he can command the means must go in search of some institution where he can be taught the things which he should have had the opportunity of learning earlier. He often finds much he has learned is of no practical value to him in his work, and in order to succeed he must seek new avenues of information. The purpose of this bill is to prevent such waste in our educational system by furnishing to those desiring vocational training the means of accomplishing that purpose.

In recent years there has been a remarkable change in the educational policies of many States. The demand for special training in agricultural pursuits, the trades, and industries has become much greater than can be provided by the institutions that have undertaken to give this class of training. The keen competition along all lines has made special training necessary, in order that the workingman may advance above the class of menial servants. Labor has become wonderfully organized in the industries and is now recognized as never before in this country; but the lack of facilities for the training of the laborer is responsible for a great army of the untrained and dissatisfied whose condition in life is the cause of much unwholesome agitation that is forever disturbing the people. There was a time when it was generally considered that the laboring man could make little use of an education; that education was useful only in the professions and as a means of culture to those who could afford to obtain it. The majority of the people did not aspire to more than a knowledge of the bare rudiments of an education. They chose the occupation of agriculture, served apprenticeships in the trades, or took up lines of work in which no special training was required. Success came only to those who acquired special training in some manner or got an advantage in some other way.

Unfortunately it is true that the scant education obtained by the majority of the people under existing conditions is of little value to them in their daily occupations, and especially is this true as to agriculture. Until the recent tendency to provide special vocational courses in some of the institutions of learning, even those who obtained a good general education were little better fitted to earn a living than those who were illiterate. Technical schools, correspondence courses, and special courses in colleges and universities have been provided in an effort to remedy these conditions, but these means are inadequate to meet the increasing need and demand for special training.

The masses are unable to take advantage of what has been provided in this manner. More than three-fourths of our people are forced to take up some work as a means of support without any vocational training whatever. Less than one-half of the children who enter school remain beyond the fifth grade, and most of them quit school to go to work. Few of them get special training later, because there is no provision for combining their training with their work. Only 10 per cent remain in school long enough to get through high school, and those who do so are little better prepared for a definite line of work than those are who drop out earlier, because the education they receive is not along lines that can be utilized in their occupations. Only 15 per cent of the boys and girls continue in school beyond the age of 16. This means that 85 per cent of our people are following some occupation without special training, unless, perchance, they have found some other way of obtaining it than through the public schools. How much better it would be if, when these children are forced to leave school because they can not afford to continue longer or because they must go to work to contribute to their own support, a plan were in operation whereby they could obtain special training for the work they are best adapted by nature to perform and their

development be continued rather than abandoned. This bill meets this condition by providing for part-time courses and night schools.

The States have recognized the great need of aiding the vast army of untrained workers who leave the schools every year to enter the shops and farms without special training. Instead of the old system of three or four months of public school in the year in the rural sections, a few private preparatory schools, a university, and a few denominational colleges, prepared only to give literary courses to a limited number of people, we now have public graded schools nine months in the year in many localities, which are made possible by special local taxes voted by the people to supplement the inadequate fund available from the State. Vocational courses have been provided in many colleges and universities, and agricultural and mechanical colleges are provided in the States, in which a small percentage of the people may obtain special training. Public high schools giving free instruction have been provided in many communities to help the young people to reach the higher institutions.

In connection with these free high schools there are to be found a few farm-life schools in which the boys are taught practical methods in farming and the girls are taught something of home economics and domestic science. Teacher-training schools have also been provided in a small way. All of this indicates the growing need and public recognition of the demand for special training for the many who otherwise must go through life unfitted for any special work.

But the States and local communities are unable to equip and maintain vocational schools within the reach of all and at the same time train the necessary teachers and pay them adequate salaries. But the States can take advantage of the liberal terms of cooperation with the National Government as provided in this bill, and many of them are now prepared to do this. This bill places within their reach a goal long sought by the leaders in education in the States, but which has seemed to them almost impossible of attainment. They have made an effort and have done much good already in this line of education, but to bring the means of such training within the reach of all is a task beyond the power of the States to perform. The chief trouble has been to give to the people generally what has been provided, but with the National Government cooperating with the States plans can be devised by the time the maximum appropriations are available under this bill whereby every boy and girl in the land who needs and desires to be trained for a life work can do so without heaping upon their shoulders a burden of debt; and, in fact, they ought to be able to contribute something to their support while receiving this training. No mind can conceive of the great saving this will be to the country materially as well as in the contentment, well-being, and happiness of its citizens, which is at the foundation of national prosperity, security, and patriotism. Much has been said and done and much money expended on the various programs of conservation that have been promulgated in recent years, and this is well; but we, as a nation, have overlooked so far one of the greatest causes of national waste—the waste of the undeveloped talent of the untrained youth of our land who are, by no fault of their own, pushed down into the lower stratum of society where they have no chance to win in life's battles.

The labor problem has always been a source of vexation, and it will be forever unless something is done that is worth while to help make the laborer satisfied with his chance in life. Education of the type that has been emphasized in this country is not the panacea for all ills of society, as some would have us think, but I believe that if the Government provides means for increasing the earning capacity of the majority of the wage earners of this country and thereby makes a contribution to their well-being we will then have taken a long step toward a solution of the labor trouble. This will be striking at the root of the matter and removing the cause of unrest. I do not subscribe to the theory that in order to keep the workingman satisfied he must be kept in ignorance and darkness. The trained workman finds little difficulty in obtaining a just reward for his labor, but the untrained man can not obtain as much in return for his effort as he feels that he should have. Consequently his sense of injustice is forever asserting itself in one form or another. Give him a fair chance by helping him to develop and utilize the talent he possesses and he will show his appreciation by being a better citizen and making his contribution in return to the national welfare and strength. This bill when enacted into law will add further importance and recognition to labor, which will have an effect in the mind and heart of the man who toils daily, but feels that he is fighting life's battles alone and unassisted. It will not deteriorate or minimize the importance of cultural education, but, on the other hand, will utilize the fundamental learning now given to our children, but which is almost entirely lost when they go to work with their hands, as most of them must do. Instead of their education being entirely foreign to the work they must follow in life, let it become a part of their work. The result will be greater efficiency all along the line, and the effect upon our social and economic life will be wholesome.

Those European countries that have done their duty in this respect have found cause to be thankful for their foresight. It is stated in the report on this bill that in the little German kingdom of Bavaria, with a population only a little greater than New York City, there are more trade schools than are to be found in all the United States. In Munich alone there are more than in 12 of the largest cities of our country. Can we doubt that this has had a great part in bringing about the wonderful efficiency of that country in peace as well as in war? There can be no doubt that the wonderful solidarity and almost superhuman strength of the German nation is due in no small measure to the fact that for generations that country has offered vocational training to every German citizen who could profit by it in his life work.

From the standpoint of agriculture, it is alarming to know that in hundreds of the rural counties in the United States the population is growing less every year. In several hundred such counties the population is now less than it was 25 years ago. Happily, the revival of interest in farming in the last few years and the demonstration of the fact that intelligence properly directed in that occupation brings as good returns as in any other, has in a measure stopped this abnormal drift of untrained workers from the farms to the industrial centers. But many who owned small farms have made this change, which has been on a larger scale than one would think without investigation. However much they may have suffered by the change, they will not return to the farms until they know that a better opportunity is there for them. Their changing in such large numbers from the farms to the factories has been unfortunate in that it has swollen the ranks of the untrained army of consumers and has reduced the number of producers. This has had its effect in contributing to the high cost of living, which is bound to increase to all in proportion to the number who cease to be producers and become consumers. If a plan can be devised to make agricultural pursuits more profitable and attractive to that class who have abandoned it because they despaired of success and have taken up other work for which they are little, if any, better prepared, it is evident that the tendency to go back to agriculture would be a great factor toward restoring the balance between supply and demand.

In conclusion, I desire to say that to have been a member of the Committee on Education and to have had a part in framing this bill, which I hope and believe will soon become a law, will ever be remembered by me as one of the most pleasant incidents of my public career.

Vocational Education.

EXTENSION OF REMARKS

OF

HON. S. D. FESS,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, January 2, 1917.

Mr. FESS. Mr. Speaker, in the early part of this session I addressed the House upon the provisions of the bill (S. 703) now before us. At that time I did not enter upon the principles of vocational education so much as the details of the bill. I then promised myself and the House at some future date I would set out in extenso the importance of national aid to vocational education.

It is all but a universal opinion that vocational education is of vast importance to State and Nation. As the country grows older the importance intensifies. In Europe, where the bread-and-butter issue is commanding the front of the stage, education for efficient employment is of prime importance. In this country, so young and so prodigal of resource, the importance of conservation and development of our natural as well as national resources is not yet commanding. But the time is now at hand when that feature demands attention.

As the scale of resource falls or lowers, that of efficient labor must rise. The supply must keep pace with demand. If demand continues to increase, both by the growth of population and the multiplicity of our tastes, the supply must likewise increase

either by an increase of resource or by an augmentation of finished product from the given resource by efficient labor and scientific methods of production. In agriculture we can not hope to indefinitely increase our acreage. It will soon be a fixed sum. We have some swamps to reclaim, some deserts to irrigate, and some mountain slopes to command, but the limit will soon be reached. On the other hand, our population is striding by the millions, our tastes are increasing with our abilities, and our demands are multiplyng with equal pace. The problem is not to increase the acreage but to make the acre produce double, treble, or quadruple what it now produces. That is the work of brain, of scientific application of efficient methods of production. The farmer must be a trained agriculturist. This is one phase of vocational training.

Vocational training has also the greater value of preventing the waste of human energy. As I said when I addressed the House before, our chief concern here so far as labor is concerned is with three classes, all too frequent among our youth of to-day:

(1) The unemployed, or the army of idle children; (2) the improperly employed, where misfits are observed; and (3) the imperfectly employed, where energy capable is stunted by lack of direction.

All of these sources supply a total loss of useful product of labor that is frightful. Vocational education will help to correct these errors and close up these leaks to human energy.

In the old days the youth was usually apprenticed to learn a trade. While there was some good in it, it grew into disfavor more or less. Its value was therefore largely lost by an unfriendly public attitude because of a sort of involuntary servitude it permitted. Vocational education must do in a better way what in other days was accomplished by that system. Labor must produce in the mind of the laborer a feeling of self-respect and dignity. It must find a way to dignify the work of the hands without the seeming odor of an involuntary service of a period of time. Every man who has observed the problem knows the trained worker will discount wonderfully the untrained. This fact is as it should be, just as brain accomplishment should be everywhere and always recognized. The added product of his hands is not the chief advantage, but the attitude of mind of the worker toward his work where his handicraft reflects intelligent direction of a citizen among you is the main accomplishment. As industry grows, the demands for efficient workers increase. These demands call for an organized system of vocational education for its supply.

In these days of high cost of living the solution will not come by resolutions in Congress, nor debates on economic subjects, but by increasing the supply of what the populace demands and is willing to pay for. As labor is the chief element of cost, the problem is to increase the day's output without multiplying hours of work or numbers of laborers, but by trained efficiency the product of the hand. This is a chief field of vocational education. When we reflect that we are in competition with the world, a part of which is girding itself with the most efficient workers by making out of every citizen a trained laborer, it is not too much to say our standing as a nation will depend upon our methods of meeting that competition.

These foregoing grounds for this sort of education are generally economic. There are other and far-reaching grounds. One object of legislation on this subject would be to democratize our education. While at the open door of the public school as at no other place in our great country we see the manifestation of democracy, since side by side stand the child of the rich and the child of the poor, yet there is not an equal opportunity for each, as the one rests on what is provided by a provident hand and the other must depend upon the fortuitous chance of employment of his talents. While I admit that it would be practically impossible to distinguish the rich pupil from his poor seat mate, there is a difference. The large per cent of the poor class leave the school at an early age, and their only hope of self-support—his training for life—is gone. Any system of education that will enable the youth of 12 or 14 years who stands by the side of his better-favored classmate to continue a preparation that will enable him by his ability to do to continue by his side until, perchance, he steps above him, as would most probably occur, will help to democratize the Nation to the everlasting good of all concerned. This feature of necessity to work for wages at an early day, as is so apparent in multitudes of homes in our country, necessitates the inauguration of the part-time and evening-school system. I discussed this phase of vocational education in the early part of the session and need not, therefore, repeat it here at this time. Suffice it to say it is probably the greatest single step in modern education.

One of the cardinal principles of a wise system of education is to "learn to do by doing." This was held as a maxim in educational philosophy. Vocational education emphasizes this principle. by demanding an articulate association of practice with theory. It even says that the two must be so treated as the one is but a demonstration of the other. The all-day school should see to it that fully one-half of the time should be spent in the field if it is agricultural education or the shop if industrial or the home if home economics education. This working phase of education tends not only to dignify the hand, but it humanizes it, and democratizes the worker. This in time will tend to give to the element of utility the same rank as to the cultural. It, on the other hand, will not magnify the devotee of culture who too frequently qualifies himself as one who needs not work over the artisan who has chosen to dignify his training in the accomplishment of his hand. This will act as a leveler to eliminate the foolish demarcation of society in which the artisan is sharply differentiated from the artist, with no especial mark of his art. This achievement is in the line of democratizing American life. This new standard of recognition among one's fellows will not only tend to disquiet the prejudices, but it will erect new standards of living to the plane of self-respect to rest upon what one achieves, rather than the accident of family name, birth, or fortune. Vocational education should have these general effects, which make its results national from the very outset.

There are those who think that vocational training should be left to the States. It is argued that it is not a national question. Mr. Speaker, I have stated the general grounds for this new step in our education, and I feel sure every ground argues it a national import. There are States in this Union in which this education would be important but which could not successfully alone carry it on, due to the already overburden of caring for general education. There are States with such widely varying resources that an education to develop them would be a national asset. Labor is so volatile, so mobile that a worker trained in one State is quite likely to devote his energies in other States. A very large per cent of our citizens live in communities other than those in which they were born. In other words, burdens required to train a worker may not be compensated by that worker remaining in the State which assumed the burdens; he may operate in various States; his service is national and his training should be assisted by the Nation. The problem of vocational training frequently takes on a national phase, not only in its comprehensiveness, but in its character. The size of the problem is commensurate with the national importance of its proper solution.

While education of the youth has ever been looked upon as an important problem, it is properly magnified when the General Government thinks well enough of it not only to support it as a State asset, but to assist the States in producing the maximum result. The Bureau of Education has never been given the rank here in our country that it has in Europe, especially in Germany, where it is of prime importance and rank. This step advances toward that recognition and should be applauded by all as a step forward in a most important matter.

Vocational education invites a field of expert study and investigation. We have the rarest facilities here in the various Government agencies to conduct these investigations. They can not be made by the States. They can be and should be made by the Nation. In this way the problem can be studied not only as a national one, but in all its relations to the various States, with their varied conditions.

The problem is peculiarly national, and while the Nation will not supersede the State in its school system, it must assist the State to reach the results needed and only possible through national assistance.

Mr. Speaker, most naturally since education has always been strictly held a State matter, the question at once arises, Is the proposed national aid constitutional? We now and then hear a criticism of our system on the ground that America has no educational system. True, as a Nation we have no national educational system. However, we have 48 State systems quite generally uniform, but sufficiently varied to suit localities. We will never have an obliteration of State lines. This bill is written on the basis to make no interference whatever with the States. It supplies aid to be applied by the States when minimum requirements are met by them. It therefore will be strictly within the purview of the Constitution. It is supported by various precedents of former national aid to education within the States. The various State colleges for mechanical and agricultural training, commonly known as the land-grant colleges, were established by national aid. To be exact, there are 68 such institutions within the States of the United States, and they very largely supply the expert training for the teaching of kindred subjects in the various parts of the country. Either associated or separate normal schools have received and

expended the funds derived from at least a million and a half acres for the preparation of teachers for those secondary schools which teach home economics, elementary agriculture, and manual training.

This Federal aid has not been confined to work in the recitation, or to be more specific for classroom instruction, but has extended to research, experimental, and field demonstration work. Only just recently the Congress provided for adult agricultural extension work through the Smith-Lever bill. Even these activities do not comprehend the sum of Federal activities in education in the States. Millions of dollars have been appropriated and expended through various bureaus and divisions of the Government for collection and dissemination of useful information which in a very specific way augments the sum of useful knowledge of the teachers and pupils. The work of the present Agricultural Department is a vast organization at a mammoth annual cost to carry on the work of popular education in agriculture on a large scale. In the 60 years since President Buchanan vetoed the first bill creating the State agricultural and mechanical college on the ground that it would tend to induce the State to lean upon the Federal Government for educational facilities, there has been some opposition to persist. However, Buchanan's fear was not justified, because for every dollar the Federal Government gave the State spent more. In 1911 the proportion was 1 to 4. During these years there have been passed 42 acts in all providing Federal assistance. The total national grants, taken from Monroe's Cyclopedia of Education, I here append:

Grant and purpose.	Acres granted.	Fund derived from sales.	Probable future income.[1]	Total income.
1. For common schools:				
Sections for schools	81,064,300	[1] 103,000,000	[1] 410,000,000	[1] 513,000,000
Saline grants	900,000	1,000,000		1,000,000
Five per cent of land sales		7,187,316	7,000,000	14,000,000
Surplus revenue		14,000,000		14,000,000
Internal improvement act	5,000,000	6,000,000	8,000,000	14,000,000
Swamp-land grants	45,000,000	15,000,000	2,000,000	17,000,000
Forest reserve per cent		1,000,000	[1] 25,000,000	26,000,000
Total	131,964,300	147,187,316	452,000,000	[2] 599,000,000
2. Aid for higher education:				
University grants	3,407,643	5,000,000	27,500,000	32,500,000
Land-grant colleges—				
Grants of land	11,367,832	13,736,178	25,000,000	39,000,000
Experiment station grants		14,000,000	[1] 30,000,000	44,000,000
Laws 1890 and 1907		23,920,000	[1] 62,500,000	86,420,000
Total	14,775,475	56,656,178	145,000,000	[2] 200,920,000
3. Grants for other types of schools:				
Normal schools	1,500,000	2,500,000	17,500,000	20,000,000
Deaf, dumb, and blind	560,000		5,600,000	5,600,000
Reform schools	500,000		5,000,000	5,000,000
Total	2,560,000	2,500,000	28,100,000	30,600,000
4. Summary of grants	149,299,775	206,343,494	[2] 725,100,000	[2] 829,520,000

[1] Calculated for 20 years from 1911 at present rate of increase.
[2] These totals are not the correct sums of the items, but are given as shown in the work cited.

In the light of what has already been done few people will question our constitutional right to extend Federal aid to vocational education.

In the former grants it will be noted the aid was confined to such work as is usually done after the secondary education had been supplied by the State. This proposed grant looks to the youth of 14 to 18 who should be in school. Of the 4,500,000 pupils of that age now in the country fully half of them leave school before they reach 14. It is the character of citizenship these delinquents will make if not provided with the instruments of good citizens that invokes the interest and concern of the Government. If those necessary elements are wanting, it is a proper function of this Government to supply them. For after all every dollar expended by either State or Nation for education must be justified by the promise of a better citizenship, since the chief business of government is to promote a higher rank of citizenship.

Seeking the justification of the enactment of the present bill, which looks to an annual Federal expenditure of $7,000,000 when the sum shall have reached the maximum, I see at least a half dozen good reasons. While vocational training is generally desired and its merits recognized the States have not and probably most of them can not successfully carry it on unaided. In no State are there many such schools and not well equipped and but few teachers. Trained teachers are essential, and no State has either the needed corps nor the character of training modern industrial life demands. Without Federal aid it will not have. The financial burden of properly conducting either the actual vocational school or the training school for teachers is too heavy with requirements for general education for a State to meet it. If the National Government assists, it will magnify the importance of the education. It will stimulate the State to meet a standard that the Nation will suggest. The mobility of our population indicated by the large per cent of it which lives in places other than where born and the great diversity of our requirements in the various States make this a National rather than a State problem.

The inauguration and successful development of the system demand the cooperation of the General Government with its limitless facilities for making studies and investigations of the entire problem, which is large enough to enlist the Nation's best energies. These studies are important, as suggested by the Federal Commission on Vocational Education.

Mr. Speaker, I here insert the statement of the commission that the Members may refresh their minds upon the vast range of investigations such a system of education invites:

1. A study of the movement for vocational education in other countries which will, with constant reference to the similarities or differences between their conditions and our own, furnish this country with an authoritative estimate of the causes lying behind the movement, the progress and tendencies of the work, the efficiency of different types of schools and their adaptation to American conditions and needs, and the educational, social, and economic results.

2. A study of the different types of vocational schools of all kinds which are in operation in this country, interpreting their courses of study and methods of instruction, in terms of their adaptation to the aim of the school, and the conditions to which they are to be adjusted.

3. A study of the efficiency, not only of the different types of schools but of all the vocational schools of the country, as measured by the success of their students.

4. Full information each year as to the progress of vocational education in this country, bringing up to date the statistics concerning schools already established, and calling attention to changes and tendencies, while at the same time laying particular emphasis upon new schools and new experiments and devices.

5. Information concerning such things as buildings, equipment, cost of instruction, supplies, and courses and methods of instruction, which will furnish first-hand knowledge to those desiring to establish new schools.

Information for agricultural education: The Government has already done much to promote agricultural education through the Department of Agriculture. Large appropriations have been given, which the department has applied in making studies, investigations, and experiments concerning agriculture and agricultural processes, and the resulting information has not only been of use to the farmer but also to the agricultural schools in their courses of study.

Knowledge of agriculture is much more wildly disseminated than knowledge of other vocational processes. On some phases of agriculture exhaustive work has been done. These studies and investigations should be continued, to furnish materials for a more scientific agriculture, and their scope should be broadened to meet the needs of a wider range of persons in farm life.

Much of the work already done has been of a highly scientific character. This work should not be neglected, but it should be supplemented by studies of the simpler processes applicable to the more common and every-day problems of the farmer.

It is highly important that, from the great mass of data at hand and from data to be collected from further studies, more direct application be made to the use of the material in giving instruction in agriculture.

Information for home-economics education: Several of the Federal departments and bureaus have already made numerous valuable studies affording information useful in the development of home-economics education. A large part of this study has been along the line of foods—their preparation, composition, and nutritive values—and along the line of the construction, sanitation, and equipment of the farm home.

These studies have not only been of use in the country districts but they have been of wide value to schools and colleges for their courses of instruction in home economics. The results have been productive of so much good that the work should be enlarged and extended with a view to placing training for the maintenance and care of the home on a scientific basis. Aside from studies which directly benefit the individual home maker, there is great need of larger and more detailed information regarding vocations which are based on a knowledge of home economics—callings such as those of the dietician, the institutional manager, the matron, the lunch-room or tea-room manager, the professional cook, and other similar occupations.

The problem of home-economics training for the great mass of girls who spend their early years as wage earners in stores, shops, and factories is also one for serious consideration and investigation, and one that has as yet hardly been touched, although it is perhaps more important and far-reaching than any other. Especially needed are such studies as those relating to the purchase and care of clothing, the conservation of health and the maintenance of efficiency through proper food and exercise, the planning of personal and household budgets, the proper sanitation and ventilation of home and workroom surroundings. Such studies as these and many others will be greatly needed in the development of part-time education for girls who are already at work and would also be highly valuable in developing courses in home economics for young housekeepers who have not had the opportunity for such training in our schools.

While approving of every possible means of extending the more scientific studies and research for the development of home economics, the commission feels that the particular need at the present time is for material which will reach down to the average girl who goes neither to high school nor to college, but upon whose training for the care of a home and family the future welfare of society will largely depend.

Information for commercial education: What has been said before of the need of wider knowledge for agriculture and for industries is equally true in general as to commerce for the purposes of commercial education. Among the many questions concerning which the country should have information for use in the training of commercial workers the following have been suggested:

Supply and demand for trained commercial workers.

Distribution of commercial workers.

Selection and placement of commercial workers.

Descriptive analysis of the world of commercial pursuits in the broad lines of employment, such as banking, accounting, business management, executive service, salesmanship, and ordinary clerical work.

Descriptive analysis of each one of these lines of employment into specific occupations and of each occupation into such important factors as source of supply of commercial workers; prevailing salaries; demands upon the worker as to general and commercial education; opportunities offered for training for higher responsibility; next position in regular order; how far previous experience prepares for the next position; the additional school training necessary as proper preparation for advancement.

The changing conditions of commerce, which bring changing requirements upon the commercial workers in any line of commercial employment.

The requirements upon commercial workers in dealing with foreign commerce.

The number and classes of foreign commercial schools of different types.

Information for trade and industrial education: We now furnish a large amount of information to aid the farmer in meeting his problems. It is just as necessary that the Government should supply knowledge for the better preparation of human labor in industry as that it should furnish information concerning soil fertility, fertilizers, pests, insects, and the best methods of farm organization for the farmer.

There is a great and pressing need for an analysis of our industries as the first step in forwarding an intelligent program for the training of industrial workers. We need an intensive study of the requirements upon wage earners in the specific occupations into which each industry is divided. Not until this is done will it be possible to know in an accurate and comprehensive way the particular kinds of training which any group of workers should have or how that training can best be given.

Among other helps for industrial education, we need such things as the following:

To analyze the industries into their branches or occupations.

To ascertain what the worker in each of these occupations needs in skill and knowledge.

To learn how far this skill and knowledge can be obtained in regular work in the occupation.

To know what use is made of apprenticeship, cooperative, and trade agreement plans for the training of workers in any industry.

To know what the industry fails to give in the way of skill and knowledge that the worker needs for thorough efficiency.

To learn what the school can do in this connection.

To make careful reports from time to time, showing the progress, present conditions, problems, and tendencies throughout the country of the movement for industrial education.

To secure timely knowledge of pronounced changes in industrial processes, materials, and organizations which affect the proper education of workers to meet trade requirements.

There are many other questions that should be answered, of which the following are examples:

What is the preferred age for beginners in any given industry in this country?

What are the upper and lower limits as to the age of the efficient worker in any given occupation?

What are the upper and lower limits as to the wage received?

What are the sources of supply for workers in a given occupation?

What are the physical requirements upon the worker in a given occupation, such as strength, endurance, quickness, deftness, fineness of sight, accuracy?

How long does it usually take to train a worker for a given occupation?

What are the occupations within an industry to which a worker may advance?

How far does the work of his present occupation prepare the worker to meet the requirements of the new one?

What is the supply and demand for workers in the various industries and occupations?

In which industries and occupations is there the greatest opportunity at the present, or any given time, for desirable employment?

Only with such knowledge will it be possible to place industrial education in this country upon an intelligent basis. Only when we have learned these things will we be able to standardize the requirements for teachers, develop proper courses of study and correct methods of teaching, and measure the efficiency of the schools in terms of what their students are able to achieve. Some agency able to cope with the problem must assist the States in this task.

The need is as great for information concerning trade and industry for use in preparing workers to manufacture goods as it is for information concerning agriculture for use in the training of farmers. The high degree of specialization in industry, the complex character of both our manufacturing processes and industrial organization, and the rapid and pronounced changes in our manufacturing life make the need for such a survey particularly urgent. In a nation-wide attempt to educate our wage earners, such intensive surveys of all kinds of occupations present a field for national service by Government agencies as large and important as it is indispensable and difficult.

It is not possible to rely upon individual employers for the information necessary for a program of industrial education national in its scope. Individual employers have had little or no experience in dealing with such problems in the large, and they would, of course, be inclined to look at it only from the standpoint of their own limited interest and outlook. Furthermore, to attempt the work in this way would result only in a piecemeal job. Each manufacturer would naturally find out things which might be of general use, but would employ them only for his own benefit. This would obviously result in a large duplication of effort. Even if the investigations of individual manufacturers were well made, there would be no opportunity for comparing results. Furthermore, there could not be the widespread publicity necessary to make such results available to everybody having the same questions to face.

Neither could the task be adequately accomplished through national organizations of employers. Such organizations have had little if any experience in doing this work. There are, comparatively speaking, few great national organizations of employers which are equipped to undertake such a task. The present interests of such organizations would not induce them to take the time or money necessary. There are, moreover, certain grave differences between employers and employees regarding certain matters in industrial training, and these differences might easily prove a handicap to either national labor organizations or national associations of employers if either attempted to handle this matter.

This method of getting information through special interests would require a long time, even if it could be successfully accomplished in the end. It would mean piecemeal and irregular studies with disconnected results and the absence not only of a country-wide and unbiased point of view and method of approach but also of the publicity which would be of the greatest benefit to all concerned.

The States can not deal individually with this matter: No State is adequately equipped to handle it; no State has had any considerable experience, at least, with this kind of investigation; no State has even made a beginning in such work, nor could any State possibly have the necessary nation-wide point of view. Furthermore, a study of this kind by the States acting separately would be open to practically all the objections given above.

The work must be done by the National Government: The training of our workers is a national question. It requires a national outlook to approach it properly. The National Government is the one unbiased agency for the task, and the only one capable of making comprehensive studies, which will be useful everywhere. Both States and individuals would have confidence in the work performed and the information disseminated by the Federal Government.

Mr. Speaker, having but recently discussed the details of the bill now before us, I need not here repeat what I then said. Suffice it to say that we in this bill confine Federal aid to but two activities: First, the part payment of salaries in agricultural, trade, industrial, and home economic teaching and supervision, and, secondly, to the training of teachers for this work.

To the first activity we devote as an initial expenditure $1,000,000 the first year, $500,000 to agricultural and $500,000 to trade, industrial, and home economics teaching. This is increased $250,000 per year for the two kinds of teaching until 1923, when each sum will reach $2,000,000, then an annual increase of $500,000 until 1925, when each sum will reach the maximum of $3,000,000, totaling in the two fields of teaching the maximum of $6,000,000 per annum for payment of salaries. For the training of teachers the initial sum is $500,000, and the maximum of $1,000,000 is reached three years later. This makes an application of $7,000,000 annually by the Federal Government to be matched by the States with a like sum. When fully in operation the minimum investment by both Nation and State will be $14,000,000. In the light of former national assistance we may predict an increase by the States of from two to three times this amount.

At first it was thought the apportionment should be made in accordance with the needs based upon per cent of illiteracy of the States. This was not favorably regarded. It would have at once raised the question of gratuitous assistance rather than cooperative help. It was decided to make the State's quota for agricultural purposes on the basis its agricultural population holds to the total agricultural population of the Nation. Likewise was the apportionment made for trade and industrial education. The pork-barrel element was obviated by requiring each State to meet the Federal Government halfway. Once set this plan on foot, and if a good thing the States will prove it.

This plan of apportionment would give some States a very small sum for one or the other purpose. Delaware, for example, would get only $1,050 for agricultural work. The commission, believing such small sums would be but waste, fixed a $5,000 minimum up to 1923 and $10,000 thereafter for each State for agriculture, also for trade and industrial, also for training of teachers. This provision was indorsed by the committee as a wise step. These minimum sums will require additional appropriations; the sums are set out in the bill. As this specific feature is of importance to each Member of the Congress I will here set out the several amounts that each State will receive as reported by the President's Vocational Commission. It will be observed that 16 States will come in for this additional help in agriculture, and 24 in trade and industrial subjects, to make up the first allotment of $5,000, and 8 States for agriculture and 9 States in trade, and so forth, to make up the final minimum of $10,000. Seventeen States will come in for minimum help in the training of teachers.

The permanent additional appropriation will be:

Salaries for agricultural teaching	$33,500
Salaries for trade and industrial teaching	54,500
Training of all these classes	88,400
Total additional appropriation	176,400

Table showing amounts which each State would receive for the salaries of teachers, supervisors, or directors of agricultural subjects under the proposals of the commission.

[Allotments in proportion to the total rural population according to the last preceding United States census. Each State is guaranteed not less than $5,000 for each year prior to the close of the fiscal year 1921–22, and not less than $10,000 for each year thereafter.][1]

State.	Rural population.		Allotment, 1915–16.	Maximum allotment, 1923–24.	Special allotment to guarantee $5,000 to each State in 1915–16.[2]	Special allotment to guarantee $10,000 to each State in 1922–23.[2][3]

The bill creates a Federal board to have charge of the entire field. This was regarded as the most important feature of this legislation. It received most careful consideration. There were many suggestions on this board. The President's commission suggested a board made up of members of the Cabinet. This was a compromise. The Senate proposed an ex officio board made up of the Cabinet members, much after the commission's recommendation. Under this board a second board of specialists, representative in character, seven in number, with salaries from $5,000 to $7,000, is provided. It also provided an advisory board, without compensation save expenses, limited to $10 per day in addition to traveling expenses, and service limited to 30 days per year. The Senate provides an ex officio board without additional salary, a board of specialists with salaries, and an advisory board without compensation. The House proposes a board of five members, the chairman of which is the Commissioner of Education, and four associate members, to be appointed by the President, with a salary of $5,000, with powers to appoint other boards of specialists in case of need. The board is to be active and to cooperate with the executive heads. Other suggestions were made that the board should consist of five in number, to receive $7,500 salary, and the various activities to be expressly represented on the board, such as education, agriculture, labor, commerce, and manufacture. Still another suggestion was made that the board should consist of six in number, with the Secretary of Interior as ex officio member and the Commissioner of Education and four associate members to be appointed by the President as the active board. This would be similar to the Federal Reserve Board. Its chief claim was to connect up the work of the board with the Government department in charge. Still another suggestion was a board of seven, to consist of three ex officio members—Secretaries of Agriculture, Commerce, and Labor—and the Commissioner of Education, with three associate members to be appointed by the President. It was generally agreed that the work would demand a body of leaders of substantial ability.

An additional annual appropriation of $200,000 is required for administration work, to be used by the Federal board to carry on the needed investigations provided for in the requirements of the bill. These investigations are to be made in cooperation with the various departments of the Federal Government so far as is practical. This provision is mandatory in the House bill, but permissive in the Senate bill. This is to insure against neglect of any department of vocational training.

The bill requires the application of the funds to be made by the various States in order to preserve the State control of its education. However, the Government provides against a waste of funds in the hands of the State authority. To safeguard the funds, the bill makes minimum requirements which must be met in order that the State may secure the aid. The State must by legislative act create a State board if no such board exists or designate a board to consist of not less than three persons who shall have charge of the application of the funds. This board must submit its plans showing the kinds of vocational education it proposes, the kinds of schools and equipment, courses of study, methods of teaching, qualifications of teachers, and so forth, and in agricultural education plans for supervision and similar facts in trade, industrial, and home economics education. These plans must meet the approval of the Federal board before the grant is made. The State board is required to make an annual report to the Federal board by the 1st of September. This report must cover the work done in the State and receipts and expenditures of money under this act. The State is under obligation to apply the money as designated, and must, as a necessary condition for the receipt of any Federal aid, bear all the expense required to supply the necessary supplemental education for the prevocational requirement. No part of the cost thereof shall come out of the appropriations herein authorized. Not more than 60 per cent nor less than 20 per cent can be used for training teachers for either subject. Some States are generally agricultural, while others are industrial. This provision permits a State to provide training according to its needs under limits.

The conditions the commission laid down as necessary to secure the funds, and which were separately specified for the different classes of teachers and supervisors, are as follows: First, grants are limited to schools supported and controlled by the public. The importance of this provision appears at once. It would not do to apply funds either to a private or purely denominational institution of learning. However good their work, Federal aid must be limited to such as are supported by public taxation. The education must be less than college grade. There is no wish to duplicate the work so well done already. That of college grade is amply cared for already, and the imperative need to-day is in the lower grades where it will insure the greatest good to the greatest number. The aid must be limited to pupils of 14 and over. It is well established that a child should not attempt to enter upon vocational work at an earlier period. It would be much better if the minimum could be increased, and it would be were it not that to reach the pupil who most needs this training it will be necessary to apply it before he leaves school. The compulsory laws of the States quite generally make 14 the compulsory school age. Hence, at this age we witness a veritable exodus from the schoolroom, which suggests a woeful ignorance of our parents on the value of public-school education.

This leads to the next condition, which requires the grant for such persons who have either entered upon or are about to enter upon some useful employment. Federal grants are herein confined to vocational education, and must not be used to give supplemental general education as a foundation of useful employment for which the vocational training is intended. This general education is one of the minimum requirements of the States which must be met by the States as a condition to secure the Federal grant. This act declares "that the amount expended for the maintenance of such education in any school," and so forth, "shall be not less annually than the amount fixed by the State board as the minimum, with the approval of the Federal board," and so forth.

The teachers contemplated in this act shall have such qualifications as shall be fixed by the State boards, by and with the approval of the Federal board. The law reads, "that the teachers," and so forth, "shall have at least the minimum qualifications determined by the State," and so forth. This requirement is essential to insure a high grade of teaching and supervision in the vocational field, that the best use may be made of the expenditure of public money. While the State fixes the qualifications they must meet the approval of the Government.

There are additional requirements specified to insure against waste of public funds. To make sure that the theoretical will not be divorced from the practical, the appropriation shall extend to field or shop work as well as recitation work. It goes to supervisors and directors in the agricultural fields, as well as to teachers. The State board must furnish the plant and equipment, which must be approved by the Federal board as the minimum requirement in such State for such pursuit. With the approval of the Federal board the State board will set up minimum requirements of such plant and equipment. The Federal board will not publish what the standard shall be, as the various States so widely differ that latitude should be allowed so that a flexible rule can be made applicable, but always under control of the Federal board. Every State should be required to expend a minimum amount, as an earnest of its sincerity to make a proper use of the Federal funds it secures. This sum must be large enough to insure against a frittering of the school fund granted by the Nation. While that sum can not be fixed, since all States are not alike, yet what it is must be left with the approval of the Federal board. The foregoing requirements, in connection with that other condition that the State must meet the Federal Government dollar for dollar, insure against a misuse of the national funds.

In legislation looking to an inauguration of trade, industrial, and home economics education by Federal aid, specific items

should be constantly kept in mind. As in the field of agricultural education the plant and its equipment meeting the requirements of the Federal board must be provided by the State. Wide differences among the States would suggest a flexible rule as to minimum requirements. The amount to be expended should be made large enough to insure against a waste of funds. This may not be the same in every State. Consequently, it will be left to the approval of the Federal board. The education must include demonstration work as well as classroom work, so the work in the shop is but the practical application of the principle learned in the classroom. As in agriculture, it was suggested the demonstration work should be at least six months in the year, so in trade and industry it should be at least half the year in shop work in the all-day schools which by the provisions of this bill must run nine months in the year and at least 30 hours per week throughout the year. In the part-time school, to which the bill makes special provision, the minimum would most probably be on classroom work and should not be less than 144 hours per year. That is just one-half the time required by the State of Pennsylvania where 8 hours per week, or 288 hours per year, are required. It is generally conceded that at least one-third of the funds to be granted should go to the part-time school. That proportion is made obligatory in this bill and is but a suggestion of the importance of the step in modern education. This would catch that array of pupils dropping out of school just at the age—the adolescent period—when direction is of greatest importance. At the age from 14 to 18 a youth is neither prepared to choose a vocation nor to follow one after choosing it. His future demands intelligent guidance by an influential teacher at that period above all others. The part-time schools to advantage by this act must fall under the minimum requirements fixed for the State by the State upon Federal approval as in case of all-day schools.

Mr. Speaker, this bill provides for three types of schools—the all-day school, the part-time school, and the evening school. All these types have been attempted in some of our cities, especially in Cincinnati; also in some States, as Pennsylvania. The all-day school is especially needed for the youth from 14 to 16. The introduction of vocational training in the all-day school will without a doubt hold thousands of our youths in the school which without such opportunity would leave it. This is borne out in the cities which have tried the experiment. Such training will doubtless save thousands of our future citizens from the life of an idler to that of useful employment. It will also help to close up the "blind alley" which begins nowhere and ends nowhere. The good effect upon our citizenship of such preparation can not well be estimated.

To insure the best results in the all-day school, the bill provides grants will be limited to those schools which will devote at least half the time to practice work on a productive or useful basis. Here the minimum is applied to the shop or field work rather than the classroom work; that is, the practice work is to carry out in handwork the principles taught in the recitation room, that there may be a rational connection between theory of classroom and practice of everyday life. It also provides that all-day schools should continue nine months in the year of 30 hours per week. The bill does not fix the number of years to be employed. Experience would indicate it should extend over a period of at least two years.

Mr. Speaker, it would seem the public would have a right to expect specific results to follow such all-day schools. It would most certainly, in the first place, increase the time in school of our children, who all must admit leave school too soon to become persistent object lessons of somebody's neglect. It will, in the second place, induce a wiser choice of vocation, both from an increase of intelligence and opportunity to detect aptitudes. It thus would help to avoid the round peg driven into the square hole. It would, in the third place, certainly insure greater success in the certain increase of respectability in the worker through the sense of greater skill in doing the thing at hand. It would thus assist the artisan to become the artist in the everyday work of life. By the time he leaves the all-day school to go to work his added stimulus will most certainly induce him to embrace the advantage of the part-time school to continue his preparation for a better position by promotion assured through added advancement in his ability to do. This fourth consideration is one of the great virtues of the part-time or continuation schools, and the all-day school, properly conducted, ought to lead to this most laudable ambition.

Mr. Speaker, as I said before on another occasion in this House, I look upon the part-time school as the most important step in modern education. When we can make practicable the plan of allowing boys or girls who are forced out of school to work for wages to so divide the time that they can study a part of the time and work for wages the other part and so connect the two that the one will be but an application in practice in the shop of the principles studied in the schoolroom, we have hit upon a solution of a great problem—efficiency in workmanship. Not only that solution, but these schools ought to insure a better social and civic result in the lives of the future citizens that pass through them. They also should increase the industrial intelligence of the workers as well as skill in performance and thus insure advancement in the trades. They will multiply our skilled workers by reducing the ranks of the bunglers and lessen the social and industrial unrest so apparent to-day, due largely to lack of interest in work because of small intelligence exercised by the worker. The general scope of a system of such education will comprehend a plan of promotion in a given trade or industry and thus keep before the eyes of the worker the goal to be reached by him who will pay the price. Courses so suited to juveniles that with their growth new occupations may open, will be an important feature of such a system of training when outlined by those charged with this work; such courses where the general advancement does not depend wholly upon skill of trade, but also upon increased civic and moral intelligence, will be provided that the civic and moral may have proper emphasis in the vocational activities of a community. Home economic courses for girls to make them effective in industry have received general attention throughout the country. In this bill some assistance will be granted as it is now proposed.

Mr. Speaker, there is no ambition that takes deeper hold upon the youth of our land than that to be self-supporting—in the common parlance, to be one's own boss. In thousands of cases this aspiration is fed upon the fear growing out of unhappy situations that point to a life of want because of the total absence of any promise from home which may be and frequently is entirely helpless to give the needed assistance. The great mass of the race comes into the world with no endowment save brain and brawn. The brain must be developed, the hand trained; if the home can not, nor will not, the Nation must, to insure against the needs of public charity.

It would be tragical to know the number of cases where the youth's future is blighted because the exigencies of the home force him out of school into some kind of work for a pittance. These exigencies are not of his making, and may be due to the needless shortcomings of the home. At that age the average youth, inexperienced and untutored, is most likely to embrace the opportunity to work as a welcome escape from a more unpleasant task—that of attending school, which too frequently is looked upon as a bore. He is too young to know what is before him, and his parents are often too neglectful, if not too ignorant, to know the almost certain results. The desire of the youth to get out of school, added to the willingness of the parent to collect his wage, permits an army of future American citizens to turn out of the way of a useful, as well as influential, position in the community to enter the road which leads into the "blind alleys" of life. This inevitable fruit of ignorance is the basis of compulsory-education legislation which all the States have enacted. Just what proportion of these unfortunates go out from necessity rather than choice we can not say, but this we know: Children leave school just so soon as the legal age is reached, and by the consent of the parents. But it is safe to assert that did a way open to continue an education by attending school part of the time and working for wages the other part, the period of training would not only be lengthened but the ranks of failures would become smaller, and the "blind alleys" less crowded. With the increase of school tenure will come the enlargement of vision of the pupil. Whatever be the number of pupils who leave school because of no taste for it, the part-time school will greatly increase the number who desire a training, and will multiply manyfold the number of youth who will become self-supporting in the struggle for a life of usefulness. It will place into the hands of the worthy and needy the instruments of applied thinking and will thus insure against the necessity of public charity. With our increasing complicated society the struggle of life will most surely increase in rigidity. For the untrained there is small hope. For the well-prepared the future holds great opportunities.

To the youth we love to say, "There are two ways open to you. You may choose which you will enter. The one leads to what the world will call success; the other to what it calls failure." A better figure would be: "There is a road that leads to success. It is open to him who fits himself to travel it. It closes to no one who chooses to meet the requirements to complete the journey. The one who chooses to continue in the way must make the necessary preparation and stand ready to take on the required equipment. That must come from such training as is required to do well the thing that the

world demands must be done. The better the training the better the deed."

The inspiration of all education is achievement. It is held aloft as the goal of all effort. It is easily the most distinguishing mark of the century in which we live. It sometimes is seen in this and sometimes in that field of endeavor. The world worships a victor. He becomes the star in every field of contest. Nothing succeeds like success. Our error has been in the past to confine the effort within the field of the professional. That field is overworked, while others are yet unentered. It must extend to the triumphs of the hand as well as brain. While making a life is a standard lifted higher than making a living, yet there is little life where there is no livelihood. On the other hand, making a living is but a condition to making a life.

Mr. Speaker, there is no tragedy quite so great as the failure of a human being. Likewise, there is no accomplishment quite equal to the assurance of the success of a human life. The nation that equips its youth with all the tools with which to work confers the greatest possible boon upon the future generations. Ours has done well in both the secondary education, and technical training in college and university. But up to date it has not emphasized that range of activity that looks to success in vocation as it has in profession.

Here is a bill which looks to the inauguration of such training in every State of the Union, be it agricultural, industrial, or both. It is written in the conviction that however much we may have done for those who will tread the higher levels of world accomplishments, we have but barely opened the way for that greater group who must remain on the lower levels to quietly tread the common road on which the mass of mankind will be found. The bill does not hope to lead from the lower to the higher levels so much as to enable those on the lower levels to acquit themselves with equal honor. It is written in the conviction that after all the real test of success is to be found in the life and spirit the worker puts into his work. Not so much the thing that is done as the way in which it is done will be the measure. For often in the final testing of the worth of a life the man or woman whose work reflects the consecration of brain and heart and hand, though his name be unknown outside of the smallest circle of his community because of the character of the work or the habits of the worker, will more truly meet the standard of real success than he whose achievements of tongue or pen may have commanded the plaudits of the world.

This legislation, Mr. Speaker, aims to reach that great mass of our citizenship which is unmoved by our present system and by the offer of the self-help which comes from proper education and training of head and hand to insure a gradual elevation from the lower to the higher levels of mankind, without compelling a change from vocation to profession. We are not so foolish as to claim everything for it. It can not be a cure-all for all the ills to which our body politic is heir. We do not hope by legislation to abolish thriftlessness, to eliminate indolence, to inhibit failure, or to banish poverty. These we will have with us always. But we do propose to make it easier to succeed and more difficult to fail. We propose here to open the road and point the way. When that is assured something worth while will have been accomplished. Whatever else may be the function of government, the materialization of the potentialities of her collective citizenship must ever be one of the chief concerns as well as supreme functions of national sovereignty.

Zone Postal System for Newspapers and Magazines.

EXTENSION OF REMARKS

OF

HON. CHARLES H. RANDALL,

OF CALIFORNIA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, January 2, 1917.

Mr. RANDALL. Mr. Speaker, I do not know whether you would call it magnanimous hospitality or magnificent liberality, but whatever it is Uncle Sam goes the limit when he deals with the publishers of newspapers and magazines.

From the official report of the Third Assistant Postmaster General we learn that 1,202,470,676 pounds of newspapers and magazines were mailed during the last fiscal year, and that this was an increase of 93,000,000 pounds over the previous year, in spite of the high price of paper.

It will be interesting to speculate on what a billion pounds may mean in understandable terms. If the paper used in producing the newspapers and magazines handled by the post office last year should be loaded into freight cars to the capacity of 30,000 pounds each, 40,000 cars would be required to contain it. If these carloads of paper were made up in one train, that train would be 288 miles long; or if these cars were made up in trains of 30 cars each, 1,333 trains would be required to move this paper. If we should lease one of the tracks of the New York Central Railway from New York to Chicago, and were permitted to dispatch four trains daily between those cities, that would represent exactly the tonnage and distance transportation which the Post Office Department is giving to the periodical publishers of this country every day in the year.

And most amazing of all, this transportation does not bring a single cent of revenue to the Government. Many people think the periodical publishers pay 1 cent per pound for transportation of their product. They do not.

HIGHLY SPECIALIZED SERVICE.

The Post Office Department's assumption of mail transportation burdens for the people is only an incident in its vast special service organization. No organization ever existed which performed such a highly specialized and personal service as the post office does. It goes nine times daily to the top of the highest building in New York City in order to leave on the desk of a Wall Street broker or a life-insurance agent the very latest letter or paper which may have arrived in the mails for that person.

This service is given alike to the letter which pays 80 cents a pound in postage and to the periodical which pays 1 cent per pound. This service begins as soon as the letter or periodical is mailed at the initial office. In the case of second-class matter, which pays a service revenue of 1 cent per pound, a demonstration of the cost may be made by using the Ladies' Home Journal as an illustration. This publication weighs an average of 1 pound per copy, and when mailed at Philadelphia the publisher pays 1 cent toward the cost of delivering it to the subscriber, no matter where located in the United States or its island possessions. The first act is distribution by railway postal clerks on the mail trains. It is true that the publishers make up and label many sacks direct to the city in which the subscriber lives, if it happens that enough subscribers live in that city to require a sack. But this is only a fraction of the whole. The towns of Podunk, Ind.; Clarksville, Mo.; Mannville, Ill.; and Scotland Neck, N. C., and 50,000 other post offices require the attention of the clerks on the train, and in some cases these papers will be handled two or three times by railway postal clerks before their destination is reached.

When the carrier finally begins the last leg of the service, namely, delivering to the home of the subscriber, here is the financial puzzle for the Post Office Department, in its effort to maintain a self-supporting basis. The Ladies' Home Journal weighs 1 pound per copy. Fifty copies have arrived for the city district served by carrier No. 13. Each carrier serves 500 homes in thickly settled cities. One copy of the Ladies' Home Journal goes into every tenth home on the average. Carrier No. 13 has 50 copies for his route. They weigh 50 pounds, quite enough of a load for the day. He must travel over the entire route to deliver the 50 journals, because the subscribers are scattered.

Here is the net result of his day's work financially: The Post Office Department received 50 cents in postage, or 1 cent per pound, and paid the carrier $3.50 for his salary. Net loss on 50 copies of the Ladies' Home Journal, $3. No; this is not the net loss. There was the handling by the railway postal clerks and the post office clerks. Then, too, the Post Office Department paid the railroads for transportation, and nothing is in sight to pay it with.

You ask, how does the post office survive such practice? Well, the Ladies' Home Journal comes but once a month. The other 29 days can be devoted to recuperation. On other days the carrier can deliver 500 letters, weighing 12½ pounds, on which a revenue of $10 has been collected.

I do not mean to select the Ladies' Home Journal as the greatest offender, because it is about the least.

Weighing 1 pound, it requires only one delivery for a pound, at a revenue of 1 cent per delivery. Take on the other extreme the Appeal to Reason, or the Menace, and many others of about that size. Nearly 20 copies are required to weigh 1 pound, and the postage is only 1 cent on the 20 copies. The carrier must then visit 20 homes for 1 cent, or if he has 50 copies for his route the Government gets 2½ cents for his day's work, whereas the Ladies' Home Journal pays 50 cents for a day's work. In other terms, publications of equal size with the Appeal to Reason and the Menace are now delivered

to their subscribers at a cost to the publisher of only 2½ cents per year, if published weekly, and for nearly two years for 1 cent, if published monthly. Under the bill now proposed they will pay 7½ cents per year, if published weekly, and less than 2 cents per year, if published monthly.

While it is less unprofitable to deliver the Ladies' Home Journal at 1 cent per delivery than it is to deliver the other papers for one-twentieth of a cent, in the aggregate the publishers of the Ladies' Home Journal—the Curtis Publishing Co., with three publications of national circulation—are responsible for a net loss annually to the Post Office Department of nearly $5,000,000 on the delivery and transportation of their periodicals in the mails. According to the testimony of this company their cost for drayage alone between freight stations in Philadelphia and its pressrooms, and thence to the post office, is $70,000 per year. Yet this vast quantity of printed matter is transported in the United States mails an average distance of 1,000 miles without one cent of revenue to the Government, and with a further large deficiency in the cost of sorting and delivery in post offices, on trains, and at destination by city letter carriers and rural mail carriers.

The Curtis Publishing Co. paid $681,000 last year as postage on 68,100,000 pounds of its three publications—the Ladies' Home Journal, Saturday Evening Post, and Country Gentleman. According to the testimony given before the Hughes Commission on Second Class Postal Rates, the cost of this service is slightly above 8 cents per pound, leaving a net loss of 7 cents per pound on all second-class matter handled. At this rate the Government's net loss on the matter carried for the Curtis Publishing Co. was $4,767,000 last year. At the same rate the total net loss on all second-class matter handled last year was $84,172,947.32.

If the rates are increased as proposed in the zone bill the Curtis Publishing Co. will pay 3 cents per pound, as its publications are carried an average of 1,000 miles. At this rate the loss to the Government on that company's publications will still be $3,405,000, which seems to be quite a sufficient contribution to make to the circulation of that firm's admittedly high-grade periodicals.

On the other hand, the burden would not seem to be a serious one for the publications to bear. The advertising rate, for instance, of the Saturday Evening Post is $4,500 per page, with a much higher rate for cover pages. This is the rate for a single issue only. The advertising rate of the Ladies' Home Journal is very much higher. The Saturday Evening Post carries from 18 to 30 pages of advertising. Placing the average at 24 pages, it is seen that a single week's issue produces an advertising revenue of $108,000, or $5,616,000 per annum for the one publication. The company now pays only $681,000 postage annually on all its publications. It is apparent that a raise to three times that amount, or $2,043,000, could be easily borne from the advertising revenues of just one of its publications, with a handsome net sum of $3,573,000 left over. If the subscription price of these periodicals barely pays the cost of production then with a net advertising revenue from the Saturday Evening Post of above three million, and many more millions added from its other publications, we may easily dispossess ourselves of the fear that the Curtis Publishing Co. will feel the pinch of poverty when the postal rates are raised.

This a somewhat extended illustration of the effect of increased rates in the case of three publications, which it is true are among the most profitable published. But among the 29,000 publications entered as second-class matter very few publish advertising matter in as small proportion to the reading matter as the Curtis publications. Many magazines are actually two-thirds or three-fourths advertising matter. To say that an increase of the postal rate will in any manner cripple them is utterly ridiculous, as is pointed out in the illustrations already given. It is true there are publications which are unprofitable, and a breeze, no matter how gentle, may extinguish the spark of life. But these publications are weak in spite of a Government which is prodigal in its liberality and not because of postal burdens. A periodical which will die because the Government chooses not to continue to transport it at a direct loss of 7 cents per pound, but decides to reduce the loss to 5 cents per pound, is about ready for the grave anyway.

COMPARISON OF POSTAL RATES AND RESULTS.

All matter carried in the mail belongs to one of four classes, namely, first, second, third, and fourth.

First-class matter includes letters, postal cards, and sealed matter. The postage rate, except for postal cards, is 2 cents for each ounce or fraction. This is apparently 32 cents per pound, but in practice the first-class matter pays an average revenue of 80 to 90 cents per pound. This is because the average weight of all letters in the mail is 40 to 45 letters per pound. Postal cards pay the Government $1.68 per pound, because 168 cards weigh 1 pound. The sales of postal cards last year were $10,784,307; of 2-cent stamps and 2-cent stamped envelopes issued to postmasters, $168,758,936.74. From these sales it may be safely estimated that first-class matter produced a total revenue of $180,000,000. At 80 cents per pound, the number of pounds of first-class matter handled was 225,000,000.

Second-class matter includes periodicals, admitted under certain regulations, and the postage collected thereon is a flat rate of 1 cent per pound. In practice there is no deviation from the technical rate, and this class of matter produces a revenue of 1 cent per pound and no more. However, local newspapers published in towns where there is no City Delivery Service are delivered postage free within the county of publication at points where carrier service is not given. Last year 1,202,470,676 pounds of second-class matter were mailed, and the postage collected was $11,383,530.02.

Comparing results roughly between first and second class matter mailed last year, first class produced $180,000,000, while second class produced $11,000,000. The weight of first-class matter mailed was 225,000,000 pounds, while the weight of second class was 1,200,000,000 pounds. Second-class matter produced a little over 6 per cent of the revenue supplied by first-class matter, but required service for more than five times as much tonnage.

If third and fourth class matter produce enough revenue to pay its way, then we must conclude that the 100,000,000 people in this country who write the letters and pay 2 cents each are contributing quite strongly to the 29,000 periodical publishers in order to make the Post Office Department come out even at the end of the year.

Third-class matter includes miscellaneous printed matter generally and bears a minimum rate of 8 cents per pound. That is to say, while the technical rate is 1 cent for each 2 ounces or fraction, in practice millions of circulars are mailed which weigh very much less than 2 ounces each, yet require a 1-cent stamp. Therefore, while every pound of this matter would produce a minimum revenue of 8 cents, in practice this class of matter probably yields 10 or 12 cents per pound.

Fourth-class matter comprises merchandise of all kinds generally, and the maximum rate collected is 16 cents per pound. Parcels weighing 4 ounces or less require 1 cent for each ounce or fraction. Parcels weighing 8 ounces or less containing books, seeds, or plants require 1 cent for each 2 ounces or fraction. Parcels weighing more than 8 ounces take the parcel-post pound rates, according to distance. The lowest fourth-class rate (parcel post) is upon a package weighing 50 pounds for delivery in the city where mailed, the postage being 30 cents; the highest fourth-class rate (parcel post) is upon a 1-pound package going to the eighth zone (over 1,800 miles), the postage rate being 12 cents.

REDUCING THE HIGH COST OF LIVING.

More important than any other feature of postal rates is the progressive development of the parcel post. As a means of bringing producer and consumer closer together and thus reducing the ever-increasing cost of living, the newspaper and magazine publisher ought to bear his fair share in order that parcel-post rates may be reduced. Foodstuffs may be properly classed as a lower grade product than the newspaper editor and magazine writer gives us through the medium of the printing press. Yet under the present law it costs 44 cents to post a 20-pound crate of bread or vegetables or case of eggs 151 miles to a single customer, while at the same time the Saturday Evening Post may mail 20 pounds of its papers 3,000 miles for 20 cents, and have them delivered to 40 different homes without any addition to the 20 cents which it expended at the initial post office. The conditions ought to be reversed. The high-cost-of-living problem will never be solved by the parcel post until its rates are reduced and its service made universal. So long as newspaper and magazine rates remain as they are now, with millions of pounds being added yearly to the load, so long must we give up hope of a popularized parcel post.

PROPOSED ACT TO ESTABLISH ZONE RATES OF POSTAGE ON NEWSPAPERS AND MAGAZINES.

"*Be it enacted, etc.*, That all newspapers, magazines, and other publications regularly admitted to the mails as matter of the second class shall hereafter be subject to the following rates of postage, the zone system now applying to parcel-post matter to be adapted also to second-class matter:

"Local, first, second, and third zone (under 300 miles), 1 cent per pound.

"Fourth zone (300 to 600 miles), 2 cents per pound.

"Fifth zone (600 to 1,000 miles), 3 cents per pound.

"Sixth zone (1,000 to 1,400 miles), 4 cents per pound.

"Seventh zone (1,400 to 1,800 miles), 5 cents per pound.

"Eighth zone (over 1,800 miles), 6 cents per pound:

"*Provided*, That free-in-county circulation provided by law shall continue as at present: *And provided further*, That the Postmaster General shall have authority to require publishers to separate or 'make up' to zones or in such manner as he may direct all matter of the second class when offered for mailing."

What, briefly stated, are some of the arguments in favor of this measure? Admittedly periodical literature, the second-class mail, is carried at a mere fraction of cost of service rendered it, a fact clearly shown, not only by the reports of many commissions, but also indicated by the following brief statement of facts:

With an annual expense account now aggregating over $300,000,000, though periodical literature is nearly five-eights of the mail, it is paying some $11,000,000 only of the expense account. It is practically just five times as much in amount as the first-class (letter) mail, yet the latter pays about $180,000,000 of the revenue.

Service rendered the second class costs over $80,000,000 yearly in excess of the $11,000,000 of revenue it contributes, while of the receipts from letter mail nearly one-half is net profit to the Government. And it is this profit on letter mail which takes care of the tremendous deficit occasioned by handling second-class matter so cheaply. The profit on the one provides for the subsidy on the other.

The injustice, which is at the expense of one class of mail, tremendously overtaxed in order to permit the Government to subsidize another class, has finally reached such proportions that renewed demands for a readjustment of rates can no longer be ignored. A brief ocular demonstration will show the situation.

First-class receipts, $190,000,000 yearly.

Second-class receipts, $11,000,000 yearly.

First-class tonnage, 225,000,000 pounds yearly.

Second-class tonnage, 1,200,000,000 pounds yearly.

In attempting to rectify the situation it very obviously appears that a small daily or weekly newspaper or other journal, the buik of whose circulation gets delivery within a few miles, or at most a score or two of miles from place of origination, costs the department no such expense as does the circulation of a big national magazine sent from a large publishing center to the remotest ends of the country with long haul, several expensive changes of route, and ultimate single copy handling for individual delivery to residents along the postal routes of every city, town, and rural letter carrier in the land.

Moreover, the local publisher suffers serious loss of revenue through diversion of advertising patronage to the columns of these big national periodicals, and right here occurs one of the most flagrant iniquities of the operation of the flat-rate law, fixing the carriage of periodicals at a mere fraction of the average cost of service.

If ever the ruinous results of a law were patent, they are patent here; if ever a law worked in the interest of big business, it is working here; if ever a law encouraged the trampling out of small competitors, it is this law.

That in the abnormally rapid development of second-class mail the law has tended to bring about centralization—in other words, to make the large larger and the small smaller—is indicated by the fact that of the vast volume of second-class mail carried each year, five cities produce nearly 50 per cent of the enormous total, 50 post offices originate 80 per cent, the remaining 20 per cent being scattered among 11,000 offices, and there remain more than 45,000 offices which do not originate a single pound of this favored class.

Now, the only valid argument that has ever been propounded in favor of a lower-than-cost rate on second-class mail exists in connection with the small local journals, which do give quickly the news of the day to a near-by clientele which it would be impossible to reach so promptly in any other way. These small local journals are, therefore, truly "educational," but no such argument applies to the monthly magazines, with circulations of half a million copies, printed two or more weeks and written four weeks ahead of issuance. Their news can obviously no longer be new. As for such other educational value as they collectively may possess, these "weeds of literature," which many of them are, hold the unenviable position in the community of having displaced good literature by killing the book production of the country. The national magazine is enabled to do this, since it floats as a veritable printing-press island and ocean, a small body of literature entirely surrounded by advertising. As another simile, it is a giant Zeppelin of advertising hot air floating a small car of "near" literature.

The bill as drawn is designed to remove gross abuses which exist in the administration of postal affairs. It should assist in preventing the distant publi[illegible]r from invading with such bludgeon-like blows the field of the local man. At least the Government should not pay the prize fighter's railroad fare when he goes to attack the peaceful countryside.

Again, unless and until there is enacted a zone-system advance in carriage of that portion of the second-class mail which receives longest haul, the expense will year after year mount higher and higher without a corresponding increase in receipts.

During the years since the pound-rate law was enacted the volume has grown from only 40,000,000 pounds in 1875 to over 1,200,000,000 pounds of second-class mail carried last year.

Mr. William Jennings Bryan once said:

The Supreme Court has described unjust taxation as larceny in the form of law. If one citizen is compelled by law to pay $10 for support of the Government where he ought to pay only $5, and under the same law a neighbor is permitted to pay $5 where he should pay $10 the law which causes this inequality simply transfers $5 from one man's pocket to the other's.

If every time any customer of the post office desiring 500 letter stamps, instead of paying the Government $10 therefor had to pay the post office $5, which would cover the cost of the service he gets, and send a draft for the other $5 to the Periodical Publishers' Association, there would be insistent outcries going up to Congress from every hamlet in the country for a readjustment of the rates; but exactly this is being done, only indirectly, in the unjust overtaxation for service rendered the letter mail and subsidy granted the periodical mail.

In conclusion, if reduction from 2 cents for the ordinary letter to 1 cent, the cost of service, can not be made in full at present on account of fear of a large falling off in revenue; at least two steps can and should be taken at once, namely, enact a 1-cent "drop" letter rate and simultaneously a first advance on that portion of the second-class mail that requires most expensive service.

EDUCATIONAL OBJECT ONLY PARTLY ATTAINED.

The Hughes commission on second-class mail matter, of which Charles E. Hughes was chairman, submitted in its report of 1912 the following comment:

The original object in placing on second-class matter a rate far below that on any other class of mail was to encourage the dissemination of news and of current literature of educational value. This object has been only in part attained. The low rate has helped to stimulate an enormous mass of periodicals, many of which are of little utility for the cause of popular education. Others are of excellent quality, but the experience of the post office has shown the impossibility of making a satisfactory test based upon literary or educational values. To attempt to do so would be to set up a censorship of the press. Of necessity the words of the statute—"devoted to literature, the sciences, arts, or some special industry"—must have a broad interpretation. A "legitimate list of subscribers" has been insisted upon as an indication that a periodical is desired by the public, but this, while useful in excluding extreme cases, has not worked quite as was intended; and premiums, prizes, and various inducements are largely offered to stimulate a demand. The statute expressly excludes not only publications intended primarily for advertising purposes, but also those designed for circulation at nominal rates; yet those with the largest circulation are often sold at rates that do not nearly cover the cost; and, in fact, one of the objections to imposing a special rate on advertisements was that these permitted periodicals to be supplied to the public at much less than cost.

Thus the educational purpose has been accomplished only in part; it is wholly impracticable to make a low rate for publications with a considerable educational value and a higher rate for the rest; and under the actual working of the law large business enterprises, which are maintained by the commercial advantages they offer as advertising media, receive the benefit of a rate so low as to amount to a subvention by the Government.

In these circumstances there would seem to be no reason why there should be such a wide difference between rate and cost, and it is the judgment of the commission that there should be an increase in the charge for second-class mail, in order that a more equitable adjustment may be made.

MANY POSTMASTERS GENERAL POINT TO ENORMOUS LOSSES ON SECOND-CLASS MATTER.

On many occasions the Postmasters General in their annual reports have commented upon the increase in the volume of second-class matter and upon the disparity between the cost of transporting and handling it in the mails and the amount received as postage.

Postmaster General Bissell in 1894 estimated the cost of transporting all mail matter at 8 cents a pound approximately and, applying this to second-class matter paid at the pound rate, calculated a loss in transportation alone of nearly $17,000,000. Postmaster General Wilson and Postmaster General Gary made their calculations in a similar way. In 1901 Postmaster General Smith reported that the Government paid not less than 5 cents a pound for transportation of second-class matter and at least 2 cents a pound for handling. Postmaster General Payne in 1902 considered the cost of the delivery of periodicals to be 4 cents a pound. In 1905 Postmaster General Cortelyou estimated the cost of the service for all mail matter at between 5 and 8 cents a pound, and added that if it cost the Government as much as 5 cents a pound for second-class matter, paid at the pound rate and free in county, the loss at that time was about $27,000,000.

In view of the lack of definite knowledge as to the actual cost of second-class matter, Congress, by the act of June 26, 1906, directed the Postmaster General to require a record from July 1 to December 31, 1906, of all second-class mail matter received for free distribution and also at the 1-cent-a-pound rate, "so as to show the weights in pounds, respectively by classes, of daily newspapers, weekly and other than daily newspapers, magazines, scientific periodicals, educational periodicals, religious periodicals, trade-journal periodicals, agricultural periodicals, miscellaneous periodicals, and sample copies."

The matter was placed in charge of the Second Assistant Postmaster General and was under the immediate supervision of a departmental committee, and under date of May 1, 1908, the Postmaster General submitted to Congress a report of the records which had been kept and of the computations based thereon.

Availing itself of these statistics, the department undertook an analysis of all operating expenses in order to assign them to the different classes of mail matter according to the service performed. By order of October 17, 1908, this undertaking was confided by Postmaster General Meyer to a committee in the department, which was continued by Postmaster General Hitchcock. The work was completed in the following year and was submitted to the Postmaster General under date of November 1, 1909. The report purported to show the cost of transporting and handling the several classes of mail matter, and of conducting the registry, money-order, and special-delivery services for the fiscal year 1908.

According to the calculations of the department, second-class mail matter cost the Government over 9 cents a pound for transportion and handling, causing a loss per pound of over 8 cents, and in his annual report for 1909, the Postmaster General reviewed various suggestions for increase of revenue.

DAILY PRESS ASSOCIATION INDORSES ZONE SYSTEM.

The members of the Inland Daily Press Association, comprising 94 daily papers in Michigan, Indiana, Kentucky, Illinois, Missouri, Wisconsin, Iowa, and Minnesota, recently adopted the following resolution:

We, the members of the Inland Daily Press Association, in convention assembly, this 18th day of March, 1913, hereby protest against the various estimates and statements that have been made relative to the cost of handling and carrying second-class mail matter. We believe they are misleading and do not properly express the cost of such mail matter as is paid for.

We protest against any increase in the rate of carrying second-class mail matter short distances.

We believe the zone system, as applied to the parcel post, is the proper way of charging for the handling and transportation of bulky mail of all kinds and that the same system should be applied to the handling and transportation of second-class mail matter, the charges for which should be based on the relative distances of carriage.

We urge Congress in readjusting postal rates to do so on the principle of the zone system.

(Signed) FRANK E. NOYES,
D. W. GRANDON,
J. L. STURTEVANT,
Committee.

UNSELFISH PUBLISHERS INDORSE HIGHER RATES.

[New York Times.]

The New York Times of February 14, 1913, contained an editorial indorsing the Postmaster General's recommendation for an advance in rates and stating that this advance should be more than he recommended, namely, to full cost of service not only for the advertising pages, but for the entire periodical.

[Milwaukee Sentinel.]

Magazine publishers have been crying out against the proposed increase of their ridiculously low cent-a-pound postal rates as an "unjust, discriminatory, and confiscatory tax." What rot! The proposed raise is not a tax, but a legitimate business demand for reimbursement for services rendered. As the second-class matter now stands, there is an unjust discrimination in favor of these periodicals, which other users of the mails have to make up for. All are paying too much letter postage because of the big annual deficit caused by the special privilege.

[New York Independent.]

I may be a minority of one, but I am not going to oppose the proposal to make magazines pay their share of the expenses of running the Post Office Department. I shall be glad to see the day when the people have the opportunity to send all their letters under a 1-cent stamp. I don't think there is any progress in this direction when the magazines are giving their short hauls to the express companies at a profitable rate and their long hauls to Uncle Sam at an unprofitable rate. Special privilege is contrary to the spirit of this Government, and as a magazine publisher I ask no special privilege. The people for their own correspondence have the first claim on the mails.

[National Hardware Bulletin.]

The recommendation that the rate be raised on magazines is reasonable; our only criticism is that it is not high enough; the rate should, in full justice, cover the actual cost of carriage.

[Fort Wayne (Ind.) News.]

OPPOSE 1-CENT POSTAGE.

The Saturday Evening Post is strenuously opposed to penny postage, and with a lordly wave of its lily hand dismisses the matter with the following pronouncement:

"We never open a day's mail without being informed that there is a tremendous popular demand for something. If we believed all the letters and circulars, we should have to imagine the entire population of the United States assembled in perpetual mass meeting, formulating demands, but we do not believe them.

"For instance, we do not believe there is any popular demand for 1-cent letter postage. Why should there be? If letter postage were cut in half, it would be necessary to increase rates on other classes of mail."

Quite a ponderous argument, to be sure, but one calculated to impress the average reader as fallacious and moreover written to protect a thoroughly selfish interest. The declaration that penny postage means necessarily the increase of postage on other classes of matter is but evidence of the fact that every man who now pays 2 cents to carry his letter through the mails is helping to pay a privilege for some one else. It is notorious that the many millions which the Government nets on letter postage are eaten up by the preferential rate given to periodicals. Thus the Saturday Evening Post, with its boasted circulation of over 2,000,000 copies, pays 1 cent a pound to handle matter which costs Uncle Sam 9 cents to handle.

[Mill Supplies, Chicago, Ill.]

The editor of this trade magazine expresses himself as heartily in favor of periodicals paying the cost of transportation if by so doing letter postage may be reduced from 2 cents to 1 cent.

[Steel and Iron, Cleveland, Ohio.]

If first-class mail produces large profit over cost of service, and if second class causes great loss, and it seems needful, therefore, that rates on second class should be increased in order to permit reduction in letter postage, we stand entirely willing to pay such increase, and we feel that all periodical publishers should advocate this needful advance and cease opposing it on the ground that it is not a subsidy.

ONE TRADE-PAPER CORPORATION CAUSES HALF-MILLION DOLLAR LOSS TO POST OFFICE.

Fifteen trade papers listed below are owned by a single corporation. They are published primarily for advertising purposes, as will be seen by comparing the number of pages of advertising and reading matter published in each. The combined subscription and advertising revenue of these papers is about four and one-half million dollars annually, and they pay the Post Office Department but $70,823 as postage upon their entire product:

Publication.	Circulation as per their own statement.	Weight per copy.	Pages reading matter.	Pages advertising.	Subscription per year.	Advertising rates, one page, one issue.	Advertising receipts, one issue, about—	Advertising receipts, one year, about—	Receipts from subscriptions, one year, about—	Pounds mailed per year about—	They pay Post Office Department per year about—	Cost to Post Office Department per year about[1]—	Loss to Post Office Department about[1]—

[1] They pay at the rate of 1 cent per pound.

[2] These figures are based on the recent statement of Hon. Joseph Stewart, Second Assistant Postmaster General, that the cost to the department was 8 cents a pound on second-class matter.

An officer of the company owning the above periodicals admitted during a hearing before the House Committee on Post Offices and Post Roads, held in Washington, D. C., Feb. 9 and 10, 1914, that 2 of these periodicals, viz, Automobile and Motor Age, with a nominal capitalization of $30,000, made a profit in 1913 of $40,000 and that the last time they were sold $1,000,000 was paid for them.

Volume of second-class mail at various dates.

	Pounds.
For 1875 (first year law was operative) only	40,000,000
For 1880	61,000,000
For 1890	204,000,000
For 1900	450,000,000
For 1910	873,000,000
For 1916	1,202,470,676

AVERAGE LENGTH OF HAUL OF SECOND-CLASS MATTER.

The following table shows the average haul of the various publications, ascertained in pursuance of the act of June 26, 1906, authorizing a special weighing of the mails for the purpose of obtaining information in regard to second-class publications:

	Average haul (miles).
Daily newspapers	255.75
Weekly and other than daily newspapers	490.13
Scientific periodicals	793.62
Educational periodicals	644.27
Religious periodicals	599.27
Trade-journal periodicals	707.11
Agricultural periodicals	525.49
Magazines	920.79
Miscellaneous periodicals	990.53

Election Frauds in the Tenth North Carolina District.

EXTENSION OF REMARKS
OF
HON. JAMES J. BRITT,
OF NORTH CAROLINA,
IN THE HOUSE OF REPRESENTATIVES,

Tuesday, January 2, 1917.

Mr. BRITT. Mr. Speaker, I desire to have printed in the RECORD a public statement made by me on December 24 last and printed in the Greensboro (N. C.) Daily News of that date on the result of the recent congressional election in my district. The statement, with certain modifications and additions, is as follows:

"WASHINGTON, D. C., *December 23, 1916.*

"Congressman JAMES J. BRITT, of the tenth North Carolina district, who on Tuesday last lost his certificate of election at the hands of the North Carolina State Board of Canvassers, following an adverse opinion of the supreme court, on being asked to-day for a statement of his views of the present status of the case replied as follows:

"'I have not read the opinion of the court and therefore decline to make any comment whatever upon it at this time; but I am quite willing to give my views as to the action of the Buncombe County board of canvassers and as to Mr. Weaver's recent statement in the Daily News.

"'Yes; I have read the so-called statement of Mr. Weaver,' said the Congressman, 'and if there remains a doubt in the mind of any man familiar with the facts of the case, as to whether I was clearly, honestly, and fairly elected, this puerile and evasive effusion ought to dispel that doubt. Throughout the whole interview we see the shifting, halting, and nebulous plea of an advocate who knows that he is wrong. His recklessness of statement is equaled only by his weakness of argument.

"'He first undertakes the burden of denying the requirement of our North Carolina State election law that all ballots shall be marked, a requirement that is a part of his own legislative handiwork, a provision of our primary law of 1915. This is one of those pieces of "constructive legislation" of which he boasted in the late campaign. But he now denies the paternity of his own legislative offspring because it has failed to win him a seat in Congress.

"'Section 32 of this "constructive" statute says:

"'Opposite the name of each candidate on the general ticket to be voted for at the general election shall be a small square, and a vote for any candidate shall be indicated by making a cross mark (×) in such square.

"'Could language be stronger, or more explicit, or more mandatory than the words "shall be"? If words mean anything at all, these words mean that there is but one legal ballot under our law, and that is a marked ballot. Unfortunately for Mr. Weaver, there is no provision for the counting of unmarked ballots if one doesn't chance to receive enough marked ballots to elect him to an office.

"'He rushes to the defense of the attorney general, and says that although that official has held that all congressional ballots should be marked he, nevertheless, has not said that unmarked ballots would be illegal. Of course, he has not. Nobody ever said that he had. For him to say so would be superfluous, if not foolish. When the attorney general says that the law requires the ballots to be marked he means that in order for them to be legal they must be marked. The legal requirement that they shall be marked implies that they will be illegal if not marked. Being the chief law officer of the State, it is the attorney general's duty to construe the law when called upon. It is the duty of the State board of elections to prescribe, print, and distribute the congressional ballots, and that board asked the attorney general to advise it whether congressional ballots, although containing but a single name, should have a cross mark in the square at the left of the name, as is required in the case of ballots having several names. He held that they should, and his opinion, by its legal force, made the marking of congressional ballots a duty required by law. These tickets were printed by the State board of elections and distributed through the several county boards of election to the poll holders, a body composed of the registrar and two judges of election in each precinct.

"'On each ticket was printed the words, "To vote this ticket, make a cross mark (×) in the square." It should be borne in mind that the election law had been made by the political party to which Mr. Weaver belongs; that an attorney general of his party had construed it; that a State board of elections, a majority of whom are of his party, had prescribed the tickets; that they had been distributed through county boards of election, a majority of whom are members of his party; and that the ballots had been voted at the polls under the supervision of poll holders, a majority of whom are also members of his party. Thus from the making of the law to the last act of its administration everything had been under the control of his own party. He was at every stage in the hands of his own political friends, and I ask whether he should now be heard to complain of their treatment? It is like a child complaining of its father. On the other hand, I was obliged to take the law as made, construed, and administered by my political adversaries, with no alternative as to its acceptance or rejection. Believing that the law as made by Democrats and construed by

Democratic officials meant what it said, and that all congressional ballots must be marked, I instructed my friends throughout the district that they must be marked in order to be valid, and that if not marked they would be thrown out. As a result no Republican poll holder or voter had the least hesitancy as to what should be done with unmarked ballots mistakenly put in the box for me, and they were accordingly everywhere rejected and thrown out. This was also the view of the law held by Mr. Weaver himself, and by Mr. D. S. Elias, his campaign manager, the latter not only holding that the ballots must be marked, but actually marking them before sending them to the poll holders.

"'In view of all this, ought Mr. Weaver now to complain if any member of his party failed to mark his ballot at the polls? Having had absolute control of the ballots from the beginning to the end, and having compelled my supporters to mark their ballots, ought he now be permitted to reverse the law of the State, a law made by his own party, in order to gain a few votes and thus get a seat in Congress which he could not win fairly at the polls?

"'Does he not know that this whole thing is grossly wrong and immoral? That it is nothing but an unlawful attempt by election officials and politicians to take an unconscionable advantage of me? He says he is for fair play. Is this fair play? Or has he of late been so busy inventing "amended and supplemental" devices that he has not had time to resolve questions of political ethics?

"'Mr. Weaver challenges me to show that he was not elected. I accept the challenge cheerfully, but, so far as he himself is concerned, it needs neither proof nor demonstration, for he knows that he was not elected. Nor is there any doubt in the mind of any person familiar with the facts. It is nothing more nor less than a case of willful, deliberate, and unlawful taking away. Blackstone calls this larceny. In making this open charge I am careful not to include the Democratic Party generally. Far from it. They are honest men, and 95 per cent of them disapprove this outrage and are as indignant at it as the Republicans. Many of them voted for me, and are by these unlawful acts wronged as well as the Republicans.

"'But let me make it clear just how I was elected and how he was not elected. Outside of Buncombe County no official question has as yet been raised as to the regularity of the vote, the returns from those counties having been canvassed and certified, and, therefore, according to Mr. Weaver's contention, incapable of being lawfully reopened. In those 12 counties I received a total majority of 301 votes over Mr. Weaver. In Buncombe County, as shown by the original and only lawful returns, I received 4,037 votes and he 4,325 votes, giving him a majority of 288 in that county, which was offset by my majority of 301 outside of Buncombe County, with 13 votes left as a clear majority for me in the district.

"'By this vote I was clearly, honestly, and legally elected; but as soon as it was known that my majority was only 13, although as counted and returned by Democratic election officials, the Buncombe County canvassing board, which met on November 9, began to adjourn from day to day on various pretexts, while Mr. Weaver's managers scoured the precincts of that county in search of so-called unmarked ballots, ballots which had not been counted but had been destroyed, if, indeed, they had ever existed. After adjournments from time to time, and without any real cause whatever, the law requiring them to count and certify the vote forthwith, they finally struck upon the idea of making so-called "amended and supplemental" reports from 5 of the 28 precincts in Buncombe County. But before making such "amended and supplemental" returns they first made a thorough canvass of the county to ascertain in what precincts it was reported Mr. Weaver had an apparent majority of such unmarked ballots, but carefully avoided making any additional returns in those precincts where it was understood that I had received a majority of such unmarked ballots.

"'In 5 precincts they claimed to have found that a total of 27 unmarked ballots had been cast for Mr. Weaver and only 6 for me, which 27 votes they now added to his vote, and also arbitrarily added 1 to his vote in Asheville precinct No. 1, giving him an apparent total majority of 310 in Buncombe County instead of 288, what he had actually received, thereby wiping out my majority of 13 and giving him a majority of 9. But note that these so-called "amended and supplemental" returns were made only from those precincts where it was claimed that Mr. Weaver had received a majority of the unmarked ballots, while none were made from those precincts where it was clearly proved that a majority of the unmarked ballots had been cast for me. To be specific, they claimed that at Asheville precinct No. 2, Mr. Weaver had received 5 unmarked ballots and I had received 1; at Asheville No. 6, he had received 7 unmarked ballots and I had received 2; at Lower Hominy, he had received 6 unmarked ballots and I had received none; at West Asheville, he had received 5 unmarked ballots, and I had received 2; and at Hazel, he had received 4 unmarked ballots and I had received 1; giving him a total of 27 unmarked ballots. But why were no amended returns made from the precincts where I had received a majority of the unmarked ballots? It was proved by uncontradicted affidavits that at Beaverdam, I had received 5 unmarked ballots and he had received none; at Asheville No. 1, I had received 2 unmarked ballots and he had received 1; at Leicester No. 1, I had received 3 unmarked ballots and he had received none; at Swannanoa, I had received 1 unmarked ballot and he had received none; while at Biltmore, we had each received 1 unmarked ballot; making a total of 21 unmarked ballots admittedly cast for me, including the 6 reported in the amended returns.

"'Now, note that in not one of the precincts named would it be of any advantage to Mr. Weaver to have "amended and supplemental" returns made, and consequently none were made. Now, since it is admitted that I received 21 unmarked ballots in Buncombe County and claimed that Mr. Weaver received 27, if the 21 unmarked ballots had all been counted for me, my vote would have been raised to 4,058, and his, counting the 1 vote arbitrarily added in Asheville precinct No. 1, to 4,352, giving him a majority of 295 in Buncombe County as against my majority of 301 outside of Buncombe County, by which I was clearly elected by a majority of 6 votes in the district. So, if equal returns are made, I am elected by a majority of 13, if only the marked ballots are counted, and by a majority of 6 if both marked and unmarked ballots are counted.

"'Now, although these unmarked ballots are illegal, and not in fact ballots at all, nevertheless, if the canvassing board of Buncombe County returns them as ballots for Mr. Weaver, then by the same token they should be returned as ballots for me, and especially since Judge Adams admitted from the bench that the testimony by which my unmarked ballots were proved was uncontradicted. When asked why they did not return unmarked ballots for me, they said that it was not their business but my business. But I was not a member of the canvassing board and had no voice whatever in the returning and counting. It was their duty to return all the votes impartially for both sides.

"'In making these so-called "amended and supplemental" returns there were no official meetings, either called or stated, of the registrar and judges in these five precincts, the Republican judges having no notice whatever of such meetings, and not being present or participating, the so-called returns being made by the Democratic judges only, and as individuals, meeting here and there incidentally and informally for that purpose. Three of these so-called returns were made eight days after the election, and it is not known when the other two were made, as they were not dated at all. They came to full life only at the time the Buncombe County canvassing board made its final count. Although I earnestly demanded it, the board refused to tell at whose instance the amended reports had been made. At each of these five precincts the poll holders, both Democrats and Republicans, had at the close of the election on November 7 and before the votes were counted unanimously agreed that all unmarked ballots cast for any office whatever were illegal and should be thrown out, and they were consequently thrown out and destroyed, no question ever being raised as to any other office, although the vote in some instances was so close that the result would have been changed had the unmarked ballots been counted.

"'This is how I was elected and how Mr. Weaver was not elected. It is so manifestly a fraud that a wayfaring man, though a fool, can not fail to see it. It is nothing more nor less than a case where one has a thing of value coveted by another, where the other has the power to take it, and actually does take it.

"'But Mr. Weaver says the action of the Buncombe County board of canvassers is above reproach and that it is being unjustly attacked. His next friend, Mr. Silas G. Bernard, says the same, with the exception that his conscience compels him to admit that they might have returned my unmarked ballots. Let us examine a few of its acts and omissions, and see whether it stands officially blameless.

"'It adjourned its sessions from day to day on the pretext of waiting for the official congressional returns, when such official returns were already before it. Was this a proper official act?

"'It held by its action that the original returns before it on the 9th day of November were sufficient to proceed with the count of the vote for all other offices, but not sufficient to proceed with the count for Congress, the returns being the same in each case. Was this a candid, fair, and impartial official act?

"'Its chairman arbitrarily adjourned the meeting on November 11 without even the form of a motion, and refused to hear

my counsel make a motion in my behalf. Was this a becoming official act?

"'It went behind the official returns that were before it, the returns made by the only lawful precinct poll holders, and accepted unofficial returns made either at the suggestion of my opponent or of some one on his behalf. Was this a lawful official act?

"'When it declared its determination to include unmarked ballots in its count, which ballots were unlawful, I demanded of it in open session that similar votes cast for me be counted. It solemnly promised in open session that these votes would be counted, but afterwards refused either to return, count, or consider them. Was this an honorable official act?

"'The law says that the board shall canvass the votes "in the presence of such electors as choose to attend," but this board, in utter disregard of the law, held secret sessions behind locked doors with my opponent's managers, no Republicans being admitted, except such as forced open the doors. Were these honorable official acts?

"'Under the pretense of waiting for official returns the board adjourned from day to day to gather unofficial returns. Was this an honorable official act?

"'It went outside of the lawful returns and counted 27 unmarked ballots for Zebulon Weaver, thereby changing my actual majority of 13 into an apparent majority of 9 for him, but the same board refused to count 21 similar ballots for me, which, if counted, would have elected me by a majortiy of 6 votes. Was this an honorable official act?

"'One of its members declared on the streets of Asheville that it made no difference who had received a majority of the votes, the board was going to give the certificate to Mr. Weaver. Was this an honorable official declaration?

"'A member of the board who was registrar at Beaverdam precinct, where 5 unmarked ballots had been cast for me, was asked why he didn't make "supplemental returns" and report those votes, and replied that "that was Mr. Britt's business"; that he was looking after the politics of the situation. Was this an honorable official declaration?

"'The chairman of the board during the pendency of the mandamus proceedings was reminded that the board should not forget that it was under the orders of the court, whereupon he replied that the board would pay no attention to the writ of mandamus; that they would run the business to suit themselves. Was this an honorable official declaration?

"'During their sessions the board was in constant secret communication with the Democratic county chairman, but never advised with the Republican county chairman. Was this impartial and honorable official behavior for a semiofficial body?

"'When the board at its meeting on November 11 refused to permit my attorney to make a motion, one of my friends asked that note be made of that fact; whereupon the chairman, B. L. Lyda, replied, "I don't care a damn what you note." Was this honorable official conduct?

"'I was denied by the board the right even to enter a protest against its high-handed proceedings. Was this a square deal?

"'If, as Mr. Silas G. Bernard, Mr. Weaver's next friend, admits, there were in Buncombe County 10 unmarked ballots for Mr. Weaver and 14 for me that the board did not return, was their failure to make complete returns an honorable official act?

"'It was the duty of the board to make faithful return of all the votes cast in Buncombe County. If it was its duty to obtain "amended and supplemental" returns from 5 precincts in the county, was it not its duty to obtain "amended and supplemental" returns from the other 23 precincts in the county, the conditions being similar? Was its failure to do this an honorable official act?

"'Our law requires the vote to be canvassed in the most public way, "in the presence of such electors as choose to attend"; yet when I demanded to know at whose suggestion the unlawful returns had been made, Mr. Weaver's lawyers immediately objected, and the chairman of the board instantly sustained the objection. Was this an honorable official act?

"'Instead of requiring daily minutes of its proceedings to be made and read, showing just what was done at each meeting, the board waited until it had completed its work and then had a narrative written up and read justifying its unlawful acts. Was this honorable official conduct?

"'Mr. Weaver knows that every act and movement of this board had the appearance of a purpose to so manipulate the vote of Buncombe County as to defeat my election to Congress and elect him to that position.

"'Did not he, and others for him, continually advise with the board and direct its proceedings with a view of obtaining the results which were finally found?

"'Does not Mr. Weaver know that it has been proved by undisputed sworn testimony that in each of the 5 precincts from which the so-called "amended and supplemental" returns were made the poll holders had unanimously held before counting the vote on election day that all unmarked ballots must be thrown out? If this is so, was it an honorable official act for the Buncombe County board of canvassers to defeat that purpose? Was it right for Mr. Weaver, or anyone for him, to advise it?

"'Immediately after the election, and when it was clear that I had been elected by a small majority, one of Mr. Weaver's friends informed a party leader in another county that "unless he could send up a few more votes BRITT was elected," to which his friend replied that "he was sorry, but the returns had already been made."

"'Another message advised a fellow worker that "BRITT was elected," and that they "would either have to throw out a few BRITT votes or throw in a few for Weaver."

"'Yet another message told a friend in a distant county that the majority in his county was too small; that it must be made larger, and advised that a certain precinct must be thrown out, and that "we will back you up."

"All these declarations will be proved at the proper time and by indisputable testimony. They show clearly a fixed, deliberate, and understood purpose to wrest from me, by unlawful means, the office to which I had been elected by the people of my district.

"'Is the ancient command, "Thou shalt not steal," to be so "amended and supplemented" as to read, "Thou shalt not steal, except as to a few votes, and then only when it is necessary to splice out an election to Congress"?

"'Mr. Weaver's flourish about the Wall Street money, which he intimates was used in my district is too childish and absurd to provoke more than a smile. Neither he nor anyone else believes it. Unfortunately for me, I have no friends in the prosperous precincts of Wall Street. I wonder how he would like to tell us about the enormous amount of National, State, and local funds said to have been used in his own behalf in the district? The mention of Wall Street brings to my mind two facts which I have long observed. The first is that Wall Street is always the punching bag of croakers and demagogues; and the second is that when a man has done, or is about to do, some shameless and outrageous thing, he usually rails against Wall Street in order to divert attention from the enormity of his own wrongdoing.

"'Mr. Weaver was not elected to Congress, and he knows it; I was elected, and he knows it. By means unlawful and by methods high-handed he will, for a while, become a Representative in name, but not of right. He will get a brief commission, but there will be a day of reckoning. Conscience has its courts, and its judgments are terrible. The people, too, will abide their day. He will go about the Nation's Capital vexed with the consciousness that he is holding a place rightfully belonging to another; that he is receiving emoluments not his own; that he has attained his ends through a defeated popular will. God has not given to any man years long enough to live down the shame of a wrong so grievous.'"

Attacking the Oklawaha.

EXTENSION OF REMARKS

OF

HON. FRANK CLARK,

OF FLORIDA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, January 3, 1917.

Mr. CLARK of Florida. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include the following article:

[From the Leesburg (Fla.) Commercial, Dec. 29, 1916.]

ATTACKING THE OKLAWAHA.

For the first time in the history of the American Nation the extreme Southland has come into its own as a portion of the geographic nation. The country finally realized and acknowledged by recognition that the Southern States are important, equally important with the more northern members of the Union.

It is true that this recognition was never given until the South had sent into the Senate and the House of Representatives so many men of force and ability that the recognition was literally choked from the unwilling throats of those who had long done all the shouting and all the planning and had reaped all the harvests.

For ages the waterways of the South have carried their cargoes of commerce under the greatest difficulties. The channels have remained

as nature left them or have become filled with driftwood and débris. Of late years a few dollars have been expended in expediting commerce on these rivers, while the northern streams have been nurtured and cared for until their shores have been lined with large towns and cities, with fine productive farms and with industries, all because water transportation placed the products within reach of markets at a price that paid the producer or the manufacturer.

Now that the South is coming somewhat into its own, now that the waters of the South are being offered to the attention of the Nation and the same care of them requested that northern streams have enjoyed for many years, there has arisen a cry of "Pork." What was legitimate in Ohio is pronounced by the man from Ohio, Mr. Burton, to be a steal in Florida. And Mr. Burton, remember, was the man who handled all these appropriations for many, many years. What was the "general welfare" in Wisconsin has become, in Florida, "crooked" if we take the word of Congressman JAMES A. FREAR. But Mr. FREAR is from Wisconsin and to those who are near enough to see the development of his cry of crookedness his purist pleas are grotesque.

THE GROTESQUE MR. FREAR.

That word "grotesque" is peculiarly applicable to the stand Mr. FREAR has taken on the subject of river and harbor improvement. Being a member of that committee, it would be supposed that he is competent to speak and write upon the subject of the improvement of rivers and harbors. But he is grotesquely incompetent. Either that, or he is deliberately unreliable.

In attacking the Oklawaha, Mr. FREAR uses the CONGRESSIONAL RECORD in which to work off the billingsgate that his mind can piece together from a vocabularly that is somewhat limited. When the reader has waded through the mass of words with which the Congressman from Wisconsin pretends to have presented the subject of the Oklawaha, he has no more conception of what and where the Oklawaha River is than he had before. In fact, if he had a hazy idea of the location and some of the reasons why the river is susceptible of profitable improvement, he has lost that idea entirely before he reaches the end of the pages in which the oft-repeated bit of "crooked" doggerel holds a high place.

In all that long speech of Mr. FREAR'S there is not one correct statement that even suggests a reason for discouraging the improvement of the Oklawaha. There are more untruths—glaring and bald—than there are direct statements bearing on the subject in hand. Throughout the harangue there appears the most positive evidence that Mr. FREAR has absolutely no knowledge whatever of the Oklawaha River. He doesn't know where it rises and he doesn't know through what kind of country it flows. He makes no attempt to inform himself. He does not meet the arguments advanced by the supporters of the project. For Mr. FREAR statements of fact do not exist. They are not obstacles to his verbal vaulting from the veriest pit of ignorance—whether real or assumed it does not matter—to the smug summit of complacent assurance.

HIS COLLEAGUES DISCOUNT HIM.

Because of these things, so apparent to the least observant of those who come into daily contact with him, Mr. FREAR is discounted by his colleagues on the floor of the House. Realizing that these speeches would be delivered to empty desks, the gentleman from Wisconsin rarely asks that his hardier efforts be heard. He merely asks "leave to print." These so-called speeches, then, are never heard by his colleagues. If they did hear them they would laugh and remark that "it is only FREAR," and they would not take the trouble to attempt to correct the glaring inaccuracies. It would not be worth while.

Yet great newspapers, presumably edited sanely and with unusual wisdom, gloat over this monstrosity in the CONGRESSIONAL RECORD. They make gospel of the words that informed men would consider so foolish as to be beyond attempting to reconstruct into either wisdom or truth. They quote from manufactured tables that are at direct variance with Government statistics. These editors either prefer to be misled or they lack the energy and the perspicacity to consult the official figures and the officially stamped facts. They, like Mr. FREAR, can not be excused for their ignorance, whether it be real or pretended. If it is real, they have no business in the chairs they occupy. If pretended, the same judgment may be passed with the added odium of a less decent reason.

Least of all should the Washington Times, one of the Munsey publications, a newspaper printed within a few minutes' walk of the Capitol, be misled by Mr. FREAR, of Wisconsin. That paper is able to learn whether such matters are actually brought before the House or through courtesy permitted to be placed in the RECORD for the benefit of the Member's constituents, who might otherwise think him of small importance in Washington. That paper knows that the matter placed in the CONGRESSIONAL RECORD under "leave to print" is proofread for typographical errors but never for libel or untruth. There is no censor except the conscience of the Member to whom is given the leave to print, and sometimes the liberality of this censor is as wide as the sunrise in the Arctics.

ATTITUDE OF THE TIMES.

Here is an editorial from the Washington Times of Tuesday, last week. It happened that the public-buildings bill was the target this time. Mr. FREAR plays no favorites. Any measure that gives him a chance to wave the red shirt and play up to his Wisconsin constituents who, having what they want, now assume the "dog in the manger" mein, is grist for his mill. And he mills and mouths and gets "leave to print." Then alleged reputable newspapers chortle and "pass the buck." They know nothing, neither do they seek for knowledge. Happy they! So here is the comment of the Times:

"Can nobody head off this FREAR person—FREAR, of Wisconsin? He blew into Washington on the wings of a political nor'wester a few years ago and started making trouble for the rivers and harbors appropriations. In a little while he had the graft aspect of that particular measure so thoroughly understood that he turned, like Alexander, to the contemplation of new pastures. He saw the possibilities of the public-building bill, and went after it. The other day he printed in a neat, attractive form in the RECORD an attack upon it.

"This Frear speech ought to be in the hands of everybody of that archaic school that considered economy a virtue and extravagance, at least, a questionable habit. Perhaps there are 19 or 20 people left in the land who frankly esteem waste a wrong; there may be as many others of the impression that waste is questionable. For these few old-fashioned souls the Frear speech on public buildings will be delightful reading. Prayerful contemplation of it might even convert one or two others to the view that there is some excuse for the narrow and visionless notion that profligacy may have a relationship to deficits.

"It has always been assumed that at least pork was nonsectional; universal, abandoned, democratic. But it seems not. If FREAR is truthful, Wyoming has lost caste as the headquarters of congressional largesse. In the olden days of Aldrichism and appropriations Wyoming was pretty apt to get what it wanted, because it controlled so many appropriations. But those days have passed, and Sun Dance gives way to Ogechee, or whatever is that Seminole name of the Everglades town with a public building, a postmaster, and a pensioner. It seems that Florida has been hogging the pork.

"It might be possible to view with satisfaction this spectacle of Illinois—home of the Meat Trust and Roger Sullivan and South Clark Street and other symbols of cussedness—getting the hooks, if it were not for Florida that gets the bunks. But with painful remembrance of the skyscraping rates for which the innocent traveler is soaked in the Florida winter headquarters, who shall contend that the State needs charity from the Uncle of us all? Take it away from Illinois if you will, but at least give it to bleeding Kansas or idealistic California or darkest Arkansaw, with the accent on the "w." To give it to those Florida highwaymen merely because FRANK CLARK is a good fellow and DUNCAN FLETCHER mixes well—that is too strong. We love her oranges, but her lemons are too sour."

FREAR'S MISINFORMATION BAG.

But to return to FREAR and his attacks upon the Oklawaha and other waterway-improvement projects, we must review a few of his statements. For instance, he holds up his hands in horror, figuratively speaking, at the dreadful waste of three-quarters of a million dollars upon a few hundred swamp dwellers along the banks of a crooked river (the Oklawaha). By intimation and innuendo that are fairly cunning, he leaves the impression that no need for water transportation can ever exist along this river and that the number of people who would be served would not be sufficient to keep a motor boat busy or buy gasoline for it. He quotes from the census figures of 1900 or of 1890—not having these ancient figures at hand we can not be exact in this—and says Ocala, the largest town along the Oklawaha, has a population of about 2,600. He never heard of Leesburg and Eustis and Tavares and Mount Dora. They were not on the map he studied at night school. We surmise he got his education at night school, because whenever his memory does unearth some isolated fact it is a dark fact. Nothing cheerful can exist with Mr. FREAR. He is not a sunny creature. You've seen these people. They don't stay in Florida. They always go back North and spread stories of high hotel rates. Sometimes they write for the magazines.

Mr. FREAR also gives some startling information about the Kissimmee River, in which JOE SEARS has an interest. Probably basing his statistics upon the meager fact that Mr. SEARS is from Kissimmee and is interested in improving the river of the same name, FREAR says that the only town of any size at all on the Kissimmee River is the little village of Kissimmee, population 1,752. The only things wrong with these statements are two: One is that Kissimmee is farther from the Kissimmee River than FREAR could walk in three days. The other is in the census report. Yet it is on such wild and imaginative statements as these that FREAR bases his statistical tables he sprinkles so plentifully through the pages of the RECORD. They lend an air of truth where there is no truth. For FREAR they take the place of both fact and logic. And, to the shame of his dupes, newspapers like the Washington Times, the South-hating Chicago Tribune, the New York Times, and others, FREAR gets away with such witches' tales.

Embargo on Print, Book, and Linen Paper, Pulp and Its Products.

EXTENSION OF REMARKS

OF

HON. CHARLES H. DILLON,

OF SOUTH DAKOTA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, January 2, 1917.

Mr. DILLON. Mr. Speaker, on July 7, 1916, I introduced House bill 16852 for the purpose of laying an embargo upon print, book, and linen paper, pulp and its products. This bill gives the President power and authority to raise the embargo when, in his judgment, the price charged the domestic consumer for the product becomes fair and just. It also gives the President, within a period of two years, the authority to reestablish the embargo when, in his judgment, the prices charged become unfair and unjust to the consuming public.

On April 26, 1916, under a Senate resolution the Federal Trade Commission was authorized to make an investigation concerning the high cost of print paper. For eight months the commission has been carrying on this investigation. During all this time the prices have continued to soar and no legislation is yet in sight.

The paper industry of the United States is now in a flourishing condition, yet I am satisfied it has not always been so. It is claimed that the paper-manufacturing industries have for many years been undergoing a period of stagnation, which, they say, was caused by placing finished paper on the free list, and because Canada has prohibited the exportation to the United States of all wood pulp from the Crown lands, which constitutes 75 per cent of the wood pulp of Canada.

The Federal Trade Commission, on November 4, 1916, gave to the public a statement showing—

Recent renewals of contracts have ranged from $3 to $3.50 f. o. b. mill, and market prices have been reported as high $10 delivered. Sell-

ing expenses * * * were lower in the first half of 1916 than in 1915, and profits per ton were higher. * * * The rate of profit for 19 United States companies in 1915 averaged 5.92 per cent, as compared with 9.34 per cent for 15 companies in the first half of 1916. * * * The quantity available for domestic consumption in 1916 (first half) was 17 per cent greater than in the first half of 1915, and 9 per cent greater than in the second half of that year.

The statement has frequently been made in the press that two years ago paper could be purchased for $1.95 per hundred that now in some cases has been sold as high as $10 per hundred. It is stated by the press of the country that during the first four months of 1915 our exports of print paper amounted to 5,000,000 pounds, while for the first four months of 1916 they amounted to 35,000,000 pounds, and that the United States exported to France from July 1, 1915, to June 1, 1916, 2,282 tons of print paper, while for a number of years previous none at all was exported.

The paper mills claim that there is a shortage, yet this shortage does not prevent them from exporting a vast tonnage to the European countries, because a large portion of the paper formerly sold on the domestic market is now finding its way to the high-priced European market.

The newspapers of the country are to be commended for their efforts on lines of economy, such as saving of waste paper, reduction of number of pages, reduction of size of paper, and the use of small type. Many a struggling paper has been forced to increase its rates in order to avoid bankruptcy.

The Federal Trade Commission has been devoting much time to an effort to have the large papers relinquish a percentage of the paper they have under contract for the year 1917, so that the large concerns may give up some 5 per cent of their contracts in order to supply the needs of the small customer. This is well enough, but it does not bring a permanent relief nor solve the problems now confronting us.

During the eight months of investigation the Federal Trade Commission has accomplished little, if anything, toward bringing out the facts. While the investigation goes on the price of news print continues on its upward march. The commission is too slow. If it is to justify its existence, it should speed up and get the facts. Stop wasting time on immaterial and nonessential matters. The essential fact is whether there is a combination in restraint of trade among the paper mills.

We have ample time to urge the big dealers to surrender a portion of their contracts for paper to the little dealers. This commission should have reported on the essential facts within 60 days, so that needed legislation might follow.

I am impressed that we have too many investigations. The modern method of killing legislation is to keep up a continual investigating process. If there is a probability of a combination in restraint of trade existing, the Judiciary Department of the Government ought to make an investigation through the Federal grand jury. Activity in the Judiciary Department will do more in one week than the Federal Trade Commission will do in a year.

I want to urge upon the membership of the House the necessity for legislation on this subject. The only legislation that will reach this situation is the passage of the embargo bill or resolution. The European countries are in various ways protecting their people by embargoes, while we have hesitated to use these remedies for the protection of our own people. We investigate and then investigate some more and then peacefully put to sleep the subject investigated without doing anything.

The Government should protect its citizens in every possible way against unfair competition, monopolies, and combinations. The duty of Congress is to legislate for the common good, for the welfare of our citizens. If charges are extortionate, if combinations in restraint of trade exist, if domestic trade has been abandoned in the interest of the foreigner, then why hesitate to act upon conditions that are rapidly becoming intolerable? In the interest of the people the established factories should not be allowed to inflict unnecessary and unusual injury and hardship upon the public. I can see no injustice in placing an embargo upon articles in trade where a conspiracy to force up the price exists.

For the public interest I am appending as a portion of my remarks two communications from the Federal Trade Commission:

FEDERAL TRADE COMMISSION,
Washington, September 1, 1916.

Hon. C. H. DILLON,
House of Representatives, Washington, D. C.

MY DEAR CONGRESSMAN: Replying to your letter of August 31, 1916, it will be some weeks yet before the commission's report on the news print situation will be presented to Congress. A mass of information has been collected by field agents from news-print manufacturers, paper jobbers, and newspaper publishers, which is now being worked up in the office as rapidly as possible.

Under date of August 29, 1916, the commission addressed a letter to each member of the News Print Manufacturers' Association suggesting several remedial measures that might be taken to prevent the suspension of newspapers not protected by contracts. A copy of this communication is inclosed for your informatin.

Very truly, yours,

FEDERAL TRADE COMMISSION,
By D. A. MORROW, *Acting Secretary.*

—

AUGUST 29, 1916.

Mr. G. F. STEELE,
Secretary, News Print Manufacturers' Association,
18 East Forty-first Street, New York, N. Y.

DEAR SIR: While the commission's print-paper investigation is not yet completed, the information already collected shows that a large number of the smaller daily and weekly newspapers are paying from 4 to 8 cents a pound for their news-print paper in comparison with a price of from 2 to 3 cents at the beginning of the year. These papers either do not buy on contract or when their contracts have expired have been unable to renew them. Reports of the increasing shortage of paper have made these publishers fearful lest they be forced to suspend publication because of the failure of their paper supply or the prohibitive price which they may be compelled to pay. As is readily appreciated, they can not shift the increasing burden of paper cost to their advertisers or their subscribers as readily as the larger city dailies.

These smaller papers perform a most useful service in their respective localities and it would be a national calamity if they were forced to suspend. It would also be a serious blow to the news-print industry, for while their individual tonnages are small, in the aggregate they amount to a considerable proportion of the total consumption.

If conditions in the industry are to become as serious this fall as trade reports indicate, it occurs to the commission that the news-print manufacturers, as an association, might adopt such measures as would prevent the possible suspension of these unprotected newspapers. In order to stimulate discussion of such remedial measures, therefore, the commission takes the liberty of propounding the following inquiries:

What steps has your association taken or can it take to insure newspaper publishers not protected by contracts that they will be supplied with paper at a reasonable price?

What steps has your association taken or can it take to restrain by legitimate means any of its members or any of the middlemen handling news-print paper from charging unreasonable and prohibitive prices, especially for current or market sales?

What steps has your association taken or can it take to bring about the operation of your mills each alternate Sunday or for an extra shift every Sunday or to transfer machines to news-print paper that are now operating on other grades until the output of paper is sufficient to prevent the possible suspension of any of the newspapers unprotected by contracts?

In regard to the first inquiry, would it not be possible for your association to make a public announcement that every newspaper publisher will be taken care of, and, if necessary, create a protective committee whose duty it shall be to see that all publishers, regardless of contracts, shall be kept supplied with a fair share of the paper manufactured? Such action on your part would do much to allay the panic conditions now existing.

In regard to the second inquiry, would it not be advisable for the executive committee of your association to confer with every manufacturer and every important jobber selling news print with the view of obtaining cooperative action to prevent the charging of unreasonable and prohibitive prices and to restore confidence among the publishers?

In regard to the third inquiry, could not negotiations be immediately taken up with the officials of the labor unions to obtain their consent to work each alternate Sunday or for one extra shift each Sunday for the next two or three months, or would not the temporary curtailment of some other grades of paper in order to increase the output of news print result in less hardship than to allow the shortage of the latter to continue? The additional output of paper obtainable by adopting either or both of these plans would be sufficient to keep a large number of the smaller papers supplied?

Reports indicate that the newspaper publishers are making serious efforts to cut down waste and curtail consumption, and it is the purpose of this inquiry to ascertain whether the news-print manufacturers can not do more than they have already done to increase the supply and insure the equitable distribution of news-print paper. This is a situation, if it is as serious as reported, that calls for patriotic action by all parties concerned. Will you, therefore, give these suggestions your immediate and serious consideration and let the commission have the reply of your association at the earliest possible moment?

A copy of this letter is being sent to each member of your association and is also being given out to the press.

Yours, very truly,

FEDERAL TRADE COMMISSION,
By L. L. BRACKEN, *Secretary.*

Waste in Public Expenditures.

EXTENSION OF REMARKS

OF

HON. WILLIAM P. BORLAND,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, January 3, 1917.

Mr. BORLAND. Mr. Speaker, should not Uncle Sam run his business in a businesslike manner? Could any business man hope to escape bankruptcy if he ran his business in a similar manner? I insert herewith some interesting comment from a leading journal on a recent attempt of mine to reform an abuse in the public service in Washington:

[From the Dallas Democrat, Dec. 30, 1916.]

WORDS OF WISDOM ON WICKEDLY WASTEFUL WAYS.

WILLIAM PATTERSON BORLAND represents the Kansas City district in the Congress at Washington. He is a lawyer and has published a text-

book on the Law of Wills and Administrations. He has been in the Congress for several years. Recently he spoke as follows from his place in the House:

"Among the principles of sound philosophy that are attributed to Thomas Jefferson is the statement that public expenditures ought to be honestly and economically made, that labor might be lightly burdened. I confess the first time I read that statement of Jefferson's I was entirely at a loss to understand the significance of the latter clause, 'that labor might be lightly burdened,' for in Jefferson's day it was the apparently accepted theory that property was the mainstay of the Nation and not labor. But a wider experience of public affairs and more thought on the subject convinces us that, after all, there is no source of national revenue or national strength but the product of useful toil. While we may for a brief period make any government subsist on taxation, or even on confiscation of accumulations of property, yet unless that property is renewed by the exercise of useful toil there comes a short and certain end to the resources of the government. No government has ever lived or ever can live by simple taxation or confiscation of the accumulations of property. In the last analysis the final resource for the life of every nation is the productive labor of its citizens. There is no justification for a single dollar of expense which is not reflected in an economical administration of the Government or in the promotion of the industrial life of the Nation. There is no money in our Federal Treasury that does not belong to the people. There is no magic means of getting money out of the blue sky, nor is there any way under the law of economics of taxing the foreigner. Every dollar in the Federal Treasury, or that ever will be in the Federal Treasury, comes out of the pockets of the American producer, and we should approach the expenditures of our Government with that fundamental principle in mind."

Those are wise words. They ought to be given the widest possible circulation. Every newspaper in Texas should find room for them. We need an awakening along this line. Government is getting to be a grievous burden. Unless a halt is called Government will come to be an unmitigated evil. Are the people indifferent to their own interests? Here is what the Baltimore platform said:

"We denounce the profligate waste of the money wrung from the people by oppressive taxation through the lavish appropriations of recent Republican Congresses, which have kept taxes high and reduced the purchasing power of the people's toil. We demand a return to that simplicity and economy which befits a democratic Government, and a reduction in the number of useless officers, the salaries of which drain the substance of the people."

How has that pledge been kept? The largest expenditures in the history of the Government! An increase in the number of useless officers!

Just 20 years ago Grover Cleveland, closing his final annual message to the Congress, said:

"In concluding this communication, its last words shall be an appeal to the Congress for the most rigid economy in the expenditure of the money it holds in trust for the people. The way to perplexing extravagance is easy, but a return to frugality is difficult. When, however, it is considered that those who bear the burdens of taxation have no guaranty of honest care save in the fidelity of their public servants, the duty of all possible retrenchment is plainly manifest."

The total expenditures of the Government in that year were $465,000,000. Now we are facing a budget of $1,600,000,000.

Mr. BORLAND'S concluding statement ought to be taught in the public schools from Maine to California:

"Every dollar in the Federal Treasury, or that ever will be in the Federal Treasury, comes out of the pockets of the American producer." (Waco Times-Herald.)

The Dallas Democrat indorses every word thus spoken by Congressman BORLAND and every word thus written and printed by Editor Robinson. What is above pleaded for should be the solemn guiding policy of every public official who in any way has to do with the expenditure of the money of the people. It should not be limited to national affairs. Every Commonwealth in the American Union should take it as precept and example in public affairs. And its application should not be limited to the Nation and the States. Every county and municipality should heed, study, and observe it. And what would be good public policy in this regard could surely be profitable precept and practice in private policy. Every household should abandon riotous, luxurious folly, and extravagance, and substitute therefor simple frugality, thrift, and economy.

And what Representative BORLAND advocated in the American Congress should be echoed by every member of the Texas Legislature at the approaching sessions of the lawmakers of the Commonwealth. If this shall be done the total of appropriations in the next revenue bills will not exceed $15,000,000, instead of the $18,000,000 voted from the taxpayers of the State by the thirty-fourth legislature.

Remember the words of wisdom written by Thomas Jefferson, "Public expenditures ought to be honestly and economically made, that labor might be lightly burdened."

J. C. MCNEALUS.

The speech from which the foregoing extract was taken related to a specific case of waste of the public money. It called attention to the fact that the 30,000 Government clerks in the executive departments in Washington worked only seven hours a day instead of a standard business day of eight hours; that they had also an undue number of special holidays and leaves of absence; that civil-service employees outside of Washington worked eight hours a day as a minimum, and sometimes longer, and were accorded no such special privileges. This discrimination or favoritism requires the employment of an unnecessarily large number of clerks to transact the public business in Washington. It results in the expenditure of an excessive sum in the mere machinery of administration. The army of clerks in Washington is increasing like a swarm of locusts to eat up the substance of the taxpayers. The pay roll of the Federal Government is now $50,000,000 a year in the District of Columbia alone. Ten per cent of this, or $5,000,000, is a conservative estimate of the amount of this waste.

If eight hours for a day's labor is fair for the taxpayer, it is fair for the tax eater. If the farmers and business men throughout the country who are not afraid to work at least eight hours a day to pay the taxes that support the Government are advised of the truth, they will insist that these public employees—those who are supported by the Government—shall give an honest and standard day's work. This abuse has been going on for years, until it has become a "vested wrong." Retrenchment is a matter of specific reform, and here is one upon which all intelligent business men can agree.

Our Outlook After Thirty Months of War.

EXTENSION OF REMARKS

OF

HON. WILLIAM S. BENNET,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, January 2, 1917.

Mr. BENNET. Mr. Speaker, by leave of the House I extend my remarks by printing the speech delivered by the Hon. S. D. FESS on New Year's Day at the open house of the Young Men's Christian Association in Philadelphia. The speech is as follows:

[Address of Hon. S. D. FESS, at open house, New Year's Day, 1917, Young Men's Christian Association, Philadelphia, Pa.]

OUR OUTLOOK AFTER 30 MONTHS OF WAR.

Mr. Chairman Smalty, members of the Young Men's Christian Association, ladies, and gentlemen: Just 30 years ago I made my first visit to the city of "Brotherly Love." It was on the occasion of an international convention of the Young Men's Christian Association, held in this city, to which I came as a delegate to represent a college association in one of the Ohio universities. I there and then received my deepest impression of the great possibilities of the movement. One of the famous speakers at the closing session—it was John Wanamaker—said a movement that can enlist the brain, the heart, and the pocketbook is sure to succeed.

I have made many trips to this city since that time. I come to-day in response to your committee to address you on the theme, "The United States in the eyes of the world"; or, "Our outlook after 30 months of war."

This theme is suggested most probably because of the mighty movements of world affairs and the most recent occurrence of our Nation in connection therewith. Not until yesterday, when the entente powers formally rejected the proposal of the central powers for a conference, had we any definite information of the purpose of either side to close up all channels of diplomacy, including neutral as well as belligerent powers, to continue the test of arms to reach final terms. While the reply of the entente is a formal rejection of all overtures, it does not necessarily prevent the central powers from stating to the world their terms of peace. The world will deplore the attitude of either side that will needlessly continue this world horror. It will have little sympathy for those who insist that the war must continue until one or the other side is crushed. That will mean most probably the slow death by bleeding of the best of all nations. Whatever may be thought of the wisdom or unwisdom of our Nation taking steps to bring the warring people into a conference, I feel that any movement on our part that would lead the way to stop the blood letting will be welcome both to neutral and belligerent powers. Whatever of evil there is in the contest, there is some merit. If we can induce the conference we may hope to conserve the good in each and eliminate the bad in both. Such a consummation will give an honored place to the great Republic in the eyes of the world.

Two years ago, after the war had been in progress for five months, I addressed a large concourse of people in western Pennsylvania on the situation involved by the world tragedy. At that time our chief concern was a study of causes and a speculation as to results. On that occasion, among other things, I said:

The cause can not be located in the capital of Bosnia. It did not occur on June 28, 1914. It was not a difference between Austria and Serbia. It was not the assassination of Archduke Ferdinand and his consort. That was but an incident, and the acute difference between the two countries was but an occasion. The war reverts to causes of vastly larger significance. It is the world struggle, or the first phase of it, predicted by scholars and statesmen in the last century. It possesses many elements—industrial, commercial, political, religious, and, especially, racial. To this must be added the personal, which is but temporary. While the Balkan question is of nearest significance and the eastern question of equal importance, the future course of events will most certainly prove that the real cause is found in the fear aroused by the growing and aggressive influence of Russia.

When Bonaparte, at the beginning of the last century, with a half million soldiers invaded Russia and invested Moscow, and was com-

pelled to retrace his steps with less than 50,000 troops, all that was left out of the entire army not lost either by death or capture, he announced to the world a coming final struggle, not between the Latin and Anglo-Saxon, as heretofore prophesied, but between the Anglo-Saxon and the Cossack. While his generation regarded this announcement as an effusion from a brain that was jaded by defeat, later generations realized the significance of the statement. Russia in the Crimea, in the Balkans, in Poland and Finland, and in the Far East are but comments.

If the Tsars have had an ambition some day to rule this planet, they have thus far moved in the right direction. Behold that wonderful country, with an area of one-sixth of the inhabitable globe, and not a foot of territory detached. Starting from the Baltic on the West, one may travel toward the rising sun a distance of 7,500 miles to the eastern ocean without leaving Russian territory; then, starting in the frozen seas of the north, he may travel in the direction of the glacier's movement a distance of 2,500 miles and still be on Russian soil. Within this vast area will be found a population of 172,000,000 people, the most prolific in the world. Vast as is this territorial domain, the actual boundary lines do not measure the Russian power. Its sphere of influence over countries not Russian must be considered. Its power is felt in the Danubian Provinces and the Balkan States, most of which are peopled by Slavs. It has already covered all of Turkestan, Afghanistan, Baluchistan, Pamir, and is now extending over Persia. This mighty empire has financed the railroad building in Persia, and over these fingers of steel she touches the southern waters on the English line of commerce from the Orient to the Occident. This influence already impinges upon England in India and in recent times has threatened China. These ominous movements were not without contests. The advance to the Black Sea produced the Crimean War, while her activities in that region saw numerous Balkan uprisings. Her advance eastward was checked by the war with Japan, while her activities in the region of Tibet called forth the English expedition headed by Younghusband. Our own country was most aroused over the great eastern question during the Boxer uprising in China, which offered a pretense to Russia and other countries for the partition of China. It is not too much to say that the integrity of the Celestial Empire is due to our own country's decisive stand.

This empire expansion may not mean land hunger; it may express Russia's method of fulfilling the decree of her greatest mind—"a nation to become a world power must take her position upon the sea." While Russia in area is larger than either North or South America, while it is many times larger than all Europe, and while in resources it has the promise of being the greatest food producer on earth, as well as the richest in mineral wealth, yet its entire ocean trade is but a bagatelle as compared with the trade in the port of the city of New York. Russia's western outlet through the Baltic is next to no outlet at all. She is virtually closed out from the west. Her fight to get to the Black Sea was long and fierce; and while she won the fight to keep a fleet on that sea, the struggle ended in a virtually closed sea. The Crimean War promised her an outlet until Italy, England, and France joined Turkey and denied Russia the right to take her fleet out of the Black Sea. Turkey's position in Europe is due to the friendly assistance of Italy, England, and France, who are dominant in the Mediterranean, neither of which is willing to see Russia in a position of influence in the Mediterranean. Russia, closed out of the middle sea, will take care that the countries between her and the open sea shall not become provinces of her rivals, especially when the intervening countries are of the Slavic race.

As Gortchikoff pointed to the importance of an outlet into the Mediterranean, so Witte pointed to the possibility, as well as the importance, of an outlet to the Pacific. The fulfillment of this purpose saw the governmental construction of the Trans-Siberian Railroad to connect the Occident with the Orient. This completed enterprise was not a commercial success, since its eastern terminus, Vladivostok, was a winter port, icebound for half the year. When Japan, at the close of the war with China, demanded from China an indemnity of $180,000,000 or concessions in Manchuria, and when China, unable to pay the indemnity, agreed to make the concessions, Russia proposed to assist China in the payment, and, in turn, in due time secured concessions in the East Chinese Railroad from Harbin to Port Arthur, which supplied the indispensable summer port in the Orient.

Differences growing out of this transaction led Japan finally to demand Russia to withdraw troops from this portion of China. Troops of all other countries had been withdrawn after the Boxer episode. Russia's failure to do this is the occasion for Japan's bombardment of Port Arthur and the Russo-Japanese War. Russia was again denied an ocean outlet for the time at least. No one will seriously doubt the ability of this "giant of the North" to go to the sea in her own good time. With Russia in control of an overland route from the Orient to the Occident, England sees a commercial rival which will test her supremacy in the world of trade. The English policy for at least 100 years past is to be and remain the world's carrier of commerce. She has the ships, the coaling stations, the open ports, the cables, and all that enter into a great sea power. Her ships if placed side by side would reach 14 miles. Gibraltar, the most heavily fortified citadel on earth, commands the occidental terminus, while Hongkong, the most heavily fortified citadel in Pacific waters, is at the oriental terminus of what promises to be the greatest trade route of the world. Between them are coaling stations at convenient distances. This line of 13,500 miles, and which requires at least 51 days of sailing for the rapid freighters, is but a cordon of English stations in English waters or waters open to these boats. A great freighter en route with bunkers filled with coal would be at its own coaling station before its coal would be exhausted.

On the other hand, the Russian overland route will require but 17 days to cover it, or almost one-third the time required over the water route. No one will doubt which route the mails will take, or the small packages, the parcel post. The only question will be whether the freight will take the shorter route. It will be a question of rates. Can Russia with a Government-owned railroad compete with England?

These parallel trade routes controlled by the two rivals have new significance when studied in the light of Russia's impinging on China and India, her extension of influence over Persia to the South Sea, and her activities in the Balkan region as well as on the western borders. The question at once arises what means the line-up of the parties in the present war. England has always heretofore stood with Turkey against Russia. Without England's influence Turkey long ago would have been driven out of Europe. Commercially this was expected, but religiously it was unnatural. To-day England is with Russia against Turkey. The significance of this is yet to appear. It would seem from every point of contact England should be with Germany against Russia, but not so. This reversal of the course of history and self-interest causes thoughtful students to predict a contest between Russia and England in case this war ends with defeat for Germany. They assert if Germany ceases to be a bulwark against Russian aggression in the west, England must make the contest. Few thoughtful people, students of world politics, will deny the strength of this assertion, otherwise history has no lesson for the future.

While it is generally accepted that in case of an entente victory Russia will be given Constantinople and an outlet through the Dardanelles, to students of the far eastern and near eastern questions, in the light of 100 years of history, such a consummation is too remote to warrant any great degree of confidence. In the face of a most probable future conflict suggested by what has been the dominant spirit of the past century, it is difficult to believe that England has greater dangers from military Germany than from reactionary Russia.

One year ago I had the honor to respond to a second request to discuss before the same audience our diplomatic relations with the warring nations, due to the inauguration of the starvation policy of the great belligerents—Germany's submarine warfare in apparent total oblivion of our rights upon the sea, on the one hand, and England's introduction of orders in council to totally supersede, as it appears, all international agreements, on the other. I then pointed out the danger that our intensity against the submarine policy must not lead us to overlook the more dangerous possibilities to our future to grow out of less serious offenses. The submarine policy must fail by the force of public opinion, but subtle invasion of neutral rights once surrendered is an unwilling concession most difficult to correct. Germany's offense extending to the loss of life was most poignant. England's incursions limited to restrictions of property rights were apt to be ignored by us, because the offense itself was not so serious. Herein was to be found one of our greatest dangers. It produces an impression that we place a money value in the form of damage upon neutral rights upon the sea. This is dangerous.

The real danger to a nation is never measured by the actual loss of a measurable value, but rather by a surrender of a principle of national honor. As was said back in 1776, when the rights of the Colonies were ignored and it was proposed to so arrange the schedules that tea with the British tax levied could be purchased at less cost than heretofore without the tax, "Not pence, but principle, is our contention."

Among other features I then discussed was the inevitable bitterness our policy as a neutral would produce among both belligerents. Neutrality is never agreeable to a belligerent except that brand which squints in its favor. Our refusal to violate The Hague conference, especially the seventh article, permitting a belligerent to purchase munitions in a neutral market, but naturally incensed the populace if not official Germany. That was not so much because American munitions were sold to the allies as because Germany could not deliver similar purchases. I then pointed out why our Nation could not place an embargo on such purchases; first, because it was largely our insistence as a nonmilitary country that the right was officially recognized, and, secondly, we necessarily must avoid the fatal results of a policy to close neutral markets to our own Government in case we might become involved in war. We had still another source of foreign dissatisfaction.

Our insistence that our problems with either belligerent must be adjusted without reference to the quarrel with the other, as well as our well-defined duty to insist upon no interference within our borders on behalf of either belligerent, added to the bitterness against us. On the other hand, our duty to hold all nations to a strict regard for our rights upon the sea and our refusal to permit any country to dictate our international policy has induced a patrimonious regard toward us that to say the least is short of national insult. Our refusal to take kindly to such policy induces a pronounced bitterness against us in the charge that we are mere money grabbers.

Both sides from the beginning have played their cards to convince us that neither was at fault in the outset, and both persist that each is fighting for its national existence. My emphasis one year ago was placed upon the serious outcome of a policy of repudiation of international law and practice by orders in council.

Speaking upon the dangers of these aggressions upon our rights one year ago in the House of Representatives, I said, among other things:

The blockade may be used as a discrimination against not only our rights but against our immediate future, for if Great Britain can shut us out of the markets of Scandinavia and Denmark and Holland, which we emphatically deny, she can not blockade those coasts, even though we agree that it is a continuous voyage, unless she blockades the coasts against her own vessels [applause], for a blockade must extend to all vessels of all countries alike. And if Great Britain could extend her blockade to these vessels alone she could herself buy the article we otherwise would sell to neutral countries and then reship it at her own

price to the same countries. In this way she fixes the price she pays to us and also the price she receives from them. Such monopoly on the sea is monstrous. These lines which are daily tightening upon the world's sea-borne commerce are ominous to any man who has watched the movement of this country the last year, especially in the light of the past.

* * * * * * *

Again, a blockade must be effectual to be valid. This is why we paid no attention to Germany's order of February 18 declaring the waters about Great Britain a war zone. You can not blockade a coast by an invisible fence of submarines. Germany never called it a blockade for that reason. It would have meant nothing under international law.

Is England's blockade effective? We say no. Our country has already notified her that it is "illegal, ineffectual, and indefensible."

She admits it is not effectual when she refuses us to sell to neutrals on the ground that the goods reach Germany. If they do, it is conclusive of the ineffectual character of her blockade and can not be valid against neutrals.

CONTRABAND.

Contraband is both absolute and conditional. Absolute contraband can be seized when it is shipped to enemy countries, whether direct or indirect. That is, if we were shipping absolute contraband, like shells, powder, cannon, and so on, to Germany, and shipping it through the neutral countries, that could be seized and confiscated wherever found, because it is reaching Germany indirectly. But this must be limited to absolute contraband. It can not extend to conditional contraband. Conditional contraband covers foodstuffs, clothing, mules, drugs, automobiles, and such articles that may or may not be used by the army, and can not be seized when consigned to neutral ports, nor to even belligerent ports when for the use of the civilian population. But Great Britain has decreed that conditional contraband shipped to a neutral country is seizable, and thereby she has eliminated the difference between conditional and absolute contraband, so that there is no discrimination whatever any more. In this method of order in council she has by the extension of contraband really blockaded not only the enemy but neutral coasts before she issued blockade orders.

I will submit for the RECORD tables of vessels, specifying the goods reaching neutral coasts, that have been seized by Great Britain, and I will submit 155 cases of it, and I will also show you where Great Britain, from March 11 to June 17, required 271 vessels to stop at a certain port, a port of her own call, and that were required to do it because she said so. She does not only say what we may ship, but where we may ship and what route we must take, and at the greatest cost.

FREE SHIPS; FREE GOODS.

That is not the only thing. Enemy's goods under neutral flags, if free goods, must be protected. I do not say contraband; certainly not. I refer to enemy free goods. Here are dyes, that can neither be regarded conditional nor absolute contraband, manufactured by Germany. We need them in this country. We have heard what Mr. Metz has said upon the subject. We have received resolution after resolution from firms asking that these goods be released. Why are they not released? What has become of the long-established rule that neutral flags cover enemy goods not contraband? On March 15, 1915, by orders in council Great Britain made this ruling, the most far-reaching of all her rulings, in which she says that any goods of the enemy found on neutral vessels—for example, dyes of Germany on American vessels—will be seized, taken into port, and, if not requisitioned, etc. This same order in council is not limited to goods going to or from Germany, but extends to every vessel on her way to any port other than a German port carrying goods either of enemy property or destined to enemy use. It also extends to all neutral vessels destined to neutral ports that carry goods of enemy origin. This order forbids this country purchasing any goods whatsoever from Germany, no matter what the suffering produced by their want, except upon her permission.

What else has she said in that orders of council of March 15, 1915? Any neutral goods, contraband or noncontraband, found under enemy flags will be seized. What has become of the law that free goods mean a free sea? If it is enemy goods, in enemy vessels, nobody has a question. If it is absolute contraband, under neutral vessels, nobody has a question unless that contraband was going to a neutral country to be applied for its own use. But that is not all.

THE "WILHELMINA" A TEST CASE.

Here is the vessel *Wilhelmina*, loaded with foodstuffs and consigned to a Mr. Green, an American citizen. Mr. Green accompanies the vessel to Germany. Great Britain says foodstuffs on the *Wilhelmina* are contraband, because it is conditional. In substance she says, "If you send it to Germany, we will seize it, whether it is to be given directly to the armed forces or to the German people, because under a decree of Germany all foodstuffs to reach Germany will be applied by the German Government." The German Government said to us, and we to Great Britain, that this decree does not apply to any goods that go to municipalities, for the order did not cover municipalities. Yet Great Britain seized the *Wilhelmina* because loaded with foodstuffs consigned not to the German Government nor a German citizen but to an American citizen to see that it went to the civil population. This seizure is made in spite of Britain's position in 1898, cited at the outset of my address, and in the face of our well-known position. In 1904, when Russia wanted to so treat foodstuffs, our own John Hay said, "Articles like coal, cotton, and provisions, though ordinarily innocent, are capable of warlike use, are not subject to capture and confiscation unless shown by evidence to be actually destined for the military or naval forces of a belligerent." How does this comport with the *Wilhelmina?* What has taken place since this seizure? No goods, conditional contraband or free, are admitted into any of the central countries.

You ask me, "What are you going to do about it?" I will tell you what I might be willing to do. We may be driven to it here, not because it is our wish or desire, but as a measure to compel respect for our rights, and that is, if Great Britain will not respect our rights as defined in law, I am about ready to vote now to stop all the munitions of war going to her. This at least would raise the question why it is right to sell her weapons of death and wrong to sell the noncombatants of Germany bread for life. [Applause.]

I would not stop munitions to aid Germany. Farthest from it, for I fear the military spirit of that great country. And while I fear the spirit of militaristic Germany, I also fear the navalism of Great Britain as I feel it now on the sea. I would not vote an embargo on behalf of or against any belligerent, but we may be driven to do it to compel respect for us upon the seas.

In closing my remarks on that occasion I said:

I am not belligerent. I think, my friends, that all that it is necessary for this country to do in order that our rights will be respected from every quarter is to make it clear that we are not taking the position of my friend from Massachusetts [Mr. GARDNER], an ally of any one of the countries, but that we are here in the American Congress, the legislative body of the first great Republic of the earth, and we are here speaking not for any belligerent, taking sides with no one of the contestants, speaking not for the North, the South, the East, or the West, nor for German-Americans or Anglo-Americans, but as American citizens we shall cease our bitter partisanship toward individual nations and shall suppress the foolish prejudices that I hear so frequently, both in public and private, and raise our voice not for any section or for any particular element of our electorate, but for America, for America's rights on sea and land, for her nobility of purpose as a friend and well-wisher of all the countries now in the throes of war, then we will compel the recognition of our rights in all quarters and by all nations, belligerent or neutral.

This afternoon I am here in response to your invitation to discuss the outlook as it appears after 30 months of warfare, or "The United States in the eyes of the world." While much that is said is speculative, yet there are specific facts known to all which may be used for each of you to draw your own conclusions.

The war has now involved the fifteenth nation, comprising all of Europe save the small nations of Switzerland, Norway, Sweden, Holland, Denmark, and Spain. These warring countries comprise more than three-fourths of the world's population. It has called to the colors considerably over 30,000,000 soldiers, including the flower of the Old World. The first two years of the war totaled a loss of men in the field, killed and wounded, the staggering number of over 18,000,000. The War Study Society, of Copenhagen, issued a bulletin August 1, 1916, from which the following figures are taken:

Direct losses of human life during two years of war.

	Dead.	Wounded.	Dead and wounded.	Invalids.
Austria-Hungary	718,000	1,777,000	2,495,000	533,000
Belgium	50,000	110,000	160,000	33,000
Bulgaria	25,000	60,000	85,000	18,000
England	205,000	512,000	717,000	154,300
France	885,000	2,115,000	3,000,000	634,000
Germany	885,500	2,116,300	3,001,800	634,900
Italy	105,000	245,000	350,000	73,500
Russia	1,498,000	3,820,000	5,318,000	1,140,000
Serbia	110,000	140,000	250,000	42,000
Turkey	150,000	350,000	500,000	105,000
Total	4,631,500	11,245,300	15,876,800	3,373,700

Comparison with earlier wars.

	Duration in days.	Number of dead.	Dead per day.	Proportional numbers.
1790–1815	9,000	2,100,000	235	3.7
1854–1856	730	785,000	1,075	17.0
1859	41	45,000	1,100	17.4
1864	135	3,500	26	.4
1866	40	45,000	1,125	17.8
1870–71	210	184,000	875	13.9
1899–1902	995	9,800	10	.2
1904–5	548	160,000	292	4.6
1912–13	238	462,000	1,950	30.9
1914–1916	731	4,631,500	6,336	100.0

The society takes up in detail each country, as follows:

AUSTRIA-HUNGARY.

The computations are based on general casualty losses made public at the beginning of the war. From August 13 to September 14, 1914, lists of casualties among officers were published; also during the period from September 20, 1914, to October 10, 1915, since which time no more lists have been issued. The total number of lists published was 244. The results were deduced by applying the averages from known statistics in other countries; for instance, in Germany for 23 months of war there were 28 dead soldiers for each dead officer, 40 wounded soldiers for 1 wounded officer, 40 dead for 100 wounded. Applying this ratio to Austria-Hungary, the losses of the Austro-Hungarian Army during the first year of the war would be:

	Officers.	Men.	Total.
Dead	14,850	416,000	43,850
Wounded	26,000	1,040,000	1,066,000
Prisoners			763,000

Regarding the second year of the war, the calculations are based on averages, with the following results:

Austro-Hungarian losses second year of war (Aug. 1, 1915, to Aug. 1, 1916).

	Officers.	Soldiers.	Total.
Dead	9,904	277,300	287,204
Wounded	17,340	693,600	710,940
Prisoners	.....	.....	387,000
Total	27,244	970,900	1,385,144

Austro-Hungarian losses during two years of war.

	Officers.	Soldiers.	Total.
Dead	24,754	693,300	718,054
Wounded	43,340	1,733,600	1,776,940
Prisoners	.....	.....	1,150,000
Total	68,094	2,426,900	3,644,994

The estimates for the second year of the war do not include the missing nor the sick; hence the figures above are considerably less than the figures heretofore given by the countries hostile to Austria-Hungary. Russian statements regarding Austria-Hungary up to the end of February, 1916—19 months of the war—computed 723,200 dead, 2,692,100 sick and wounded, and 809,000 prisoners, making for the two years of war 913,512 dead, 3,400,296 sick and wounded.

The society estimates that the losses of Austria-Hungary in the first two years of the war are, in round numbers: Minimum total dead, 718,000; maximum total dead, 913,512; sick and wounded, minimum, 533,000; maximum, 1,000,000.

Compared with wars waged by Austria-Hungary in the second half of the last century, the following shows the relative losses:

	Dead.	Wounded.	Total.
1859	5,400	26,000	31,400
1866	10,994	29,304	40,298
1914-1916	718,000	533,000	1,251,000

BRITISH ARMY LOSSES.

Fourteen statements of losses of the British Army appeared to January 27, 1916, when they ceased, and from these averages the following totals are arrived at (Aug. 4, 1914, to Aug. 21, 1915):

Statement in House of Commons.

	Officers.	Noncommissioned officers and men.
Killed and died of wounds	4,965	7,992
Wounded	9,973	241,086
Missing	1,501	53,466
Total	16,439	365,544
Grand total	.....	381,983

The number of prisoners from the British Army, as reported up to June 1, 1916, were as follows: In Germany, 32,000; in Turkey, 17,827; in Bulgaria, 449. Lord Newton stated in the House of Commons on May 31, 1916, that 1,318 of the 25,621 prisoners of the army then in Germany had died—a death rate of 5.14 per cent. The ravages of disease among the soldiers in the Dardanelles is evident by the official report, showing that between April 25 and December 11, 1915, 96,683 were taken to the hospital, while the dead and wounded amounted to 112,991.

This large percentage of sickness was due to epidemics of typhus; there were 28,500 cases out of a total of 78,200 between April and October, 1915. The absolute losses, including the killed, missing, wounded, and sick, who will not return to the front, from the beginning of the war to January 9, 1916, in the English Army, is figured at 410,722, being 74 per cent of the total losses as reported up to January 9, 1916, which aggregated 549,467. Of the 410,722 total losses, 128,138 were killed or died of wounds.

BRITISH NAVY LOSSES.

The total of losses in the British Navy, as reported before the Jutland battle on May 31, 1916, was 12,160, of which 10,517 were killed or died of wounds. The losses in the Jutland battle were 6,617, which brings the total losses of the British Navy up to the middle of June, 1916, to 18,777, of whom 16,983 were killed and wounded.

From the preceding figures—the losses being based upon official reports and established averages—the total losses for the British Army and Navy in the two years are computed at 808,463, of which 34,360 were officers. The absolute losses were, in killed and permanently wounded during the two years, 359,725. This total compares with the Crimean and Boer wars, as follows:

	Total army.	Killed and died of wounds.	Wounded.
Two years, present war	2,000,000	188,464	512,465
Crimean war	97,864	4,602	18,283
Boer war	250,000	5,774	22,829

LOSSES OF FRANCE.

Only approximate estimates of the French losses can be arrived at, as casualty lists are not published and official statements regarding the number of killed and wounded are not given. Some reliable figures, however, are computed from statistics of certain organizations related to the army.

It is known that from September 15 to November 30, 1914, 490,000 wounded were treated at the different hospitals, of which 54.5 per cent returned to the front; only 2.48 per cent died; 17 per cent remained at the hospitals and are computed as permanently lost.

The French Relief Society officially stated that up to June, 1915 (10 months of the war), the killed, wounded, missing, and prisoners of the French aggregated 1,400,000. From other information and meager reports, the War Study Society arrives at the following losses for the two years of the war:

FRENCH LOSSES IN TWO YEARS OF THE WAR.

Killed	885,000
Wounded	2,115,000
Invalided	634,000

Comparison with former wars.

	Killed.	Wounded.	Total.
1859	2,536	17,054	19,590
1870-71	138,871	137,626	276,497
1914-1916	885,000	2,115,000	3,000,000

GERMANY'S WAR LOSSES.

The losses of Germany are computed from the casualty lists published by the minister of war. Up to July 1, 1916, 1,032 such lists had been issued, containing 13,178 pages, averaging 262.3 casualties per page, but these included certain percentages of corrections and duplications, so the actual bases are figured at 225.8 per page, which would bring the total published losses from the beginning of the war to the 1st of July, 1916 (23 months), to 2,975,592. These lists, however, do not indicate the time at which the losses were sustained; but from the reports it is estimated that the casualty lists up to the twenty-third month of the war only covered the period to May 15, 1916. Maintaining the same average for the six weeks, the total up to the 15th of May, 1916 (21½ months of the war), would be 3,012,637; and according to the above computations, of these the dead number 771,308, 26.3 per cent; seriously wounded, 447,177, 15.2 per cent; slightly wounded, 1,395,146, 47.4 per cent; prisoners, 327,148, 11.1 per cent.

From all the data and averages the society estimates that the total German losses during the first two years of the war were as follows:

Dead	885,500
Slightly wounded	1,602,900
Severely wounded	513,400
Prisoners—about	400,000

As compared with the losses of the Franco-Prussian War:

Dead	280,000
Wounded	101,000

LOSSES OF ITALY.

The Italian Government does not publish figures, and results can only be computed from partial reports and averages. The Austrian general staff on November 31, 1915, asserted that six months of the war had cost Italy a half million men. The German Kölnische Zeitung, in May, stated that the first 12 months of the war had cost Italy 3,000 dead officers. The Army and Navy Gazette, April 22, 1916, reported the total Italian losses at 25,000 a month. From these reports and others the Italian losses for the first 14 months of the war are computed as follows:

Killed	105,000
Wounded	245,000
Prisoners	55,000

LOSSES OF RUSSIA.

The losses of Russia are computed from estimates, with deductions, from fragmentary reports. No official figures are available. It is known from hospital reports that during the first 6 months of the war the sick and wounded amounted to 1,200,000, and unofficial figures show that during 18 months of the war the sick and wounded reached 3,953,000, of whom 1,048,000 were sick. The Russian Government has issued 185 lists of killed, but these official lists were not always available. Based upon the most reliable data and reports, the following estimates are arrived at:

Russian losses in first 2 years of the war (officers and men).

Losses in fighting	7,235,000
Losses in sick	1,362,000
Total losses	8,597,000
Military losses	5,181,000
Killed	1,171,000
Died of wounds	244,000
Died of sickness	82,000
Wounded	3,820,000
Prisoners, estimated	2,000,000

Russian losses in previous wars.

	Killed and died of wounds.	Wounded.
Crimean War	72,000	.....
Russo-Turkish War	36,000	118,000
Russo-Japanese War	34,000	141,000

BALKAN STATES AND BELGIUM.

No official information of the losses of the Balkan States and Turkey is procurable, but based upon the available data and reports the following results are arrived at by the society:

The war losses of the Balkan States and Turkey up to Aug. 1, 1916.

	Dead.	Wounded.	Invalids (approximated).	Died from illness.
Bulgaria	25,000	60,000	18,000	.....
Serbia	60,000	140,000	42,000	50,000
Turkey	150,000	350,000	105,000	.....
Total	235,000	550,000	165,000	.....

No official information of the losses of Belgium is procurable, but from reports the total losses of the Belgians in the first two years of the war are put at 247,000, of whom 47,000 are killed, 160,000 wounded, and 40,000 prisoners.

THE APPALLING TOTALS.

All of the above figures, as stated, the first two years of the war. At this writing (Nov. 15, 1916) three and one-half months more have elapsed, or 14½ per cent of additional time. These three and one-half months have been the bloodiest since the outbreak of the war, particularly among the French, Germans, Austrians, Italians, Russians, and British, while a new element has entered into the contest—Roumania. It is a conservative computation to add, in order to reach a grand total of losses up to November 15, 1916, 16⅔ per cent to the above figures; indeed, in the cases of France, England, Germany, Russia, Austria, and Italy from 20 to 25 per cent might safely be added. The adding of 16⅔ per cent would bring the total dead on November 15, 1916, into the neighborhood of 5,600,000, and would show the wounded to be in excess of 13,000,000.

The cost in money is equally bewildering. England's recent vote of $2,000,000,000 additional bonds runs up her increased public bonded indebtedness since the war to the bewildering figure of $18,410,000,000, while the total for the 15 nations it is estimated will reach at least $75,000,000,000. The interest charge upon the war debt of these countries will be greater than their total budget before the war. The enormity of this condition can best be viewed when we are reminded that our own public debt is somewhat less than $1,000,000,000—to be exact $971,562,590. To meet the staggering interest charge, to say nothing of the principal, will not only tax the statesmen called upon to make provision, but at best it must entail a burden upon the people unknown in civilized nations. Will repudiation be the result on the ground that no other choice is left? The recent warning of the Federal Reserve Board against further investment in foreign loans is significant. No wonder your great superintendent of public instruction, your own Dr. Schaefer, recently said "whatever Europe is fighting for she will win but four things—graves, cripples, debts, and taxes." Already, even before the paying has begun, British taxes are reaching 50 per cent of incomes. We refer to England since more is known of that country than any of the belligerents.

To-night our chief concern is what is to be expected at the close of the war. The staggering losses in men and money indicate it can not indefinitely continue. Bonar Law, in referring to the recent loan, declared the daily outlay for Britain, which had reached $28,550,000, could not continue without limit. That outlay means over $1,000,000 per hour for every waking and sleeping hour of the day. The war has gone far enough to demonstrate certain facts. This frightful cost in money and life must end, and, it would appear, within a demonstrable time. How it will end no man can tell. What changes must be made no one can state. It would be a bold man who would venture a statement of a possible result in the remapping of Europe. What news filters through the censor's scissors is so vague, if not so colored, that the public has become disgusted. It is not at all certain that many changes will take place, since military results so far do not warrant any definite predictions.

First. Neither side can have much hope of completely crushing the other. Both enjoy advantages, but neither sufficient to warrant ardent hope of their sympathizers. Germany, the highest type of the modern militarist, has proved her value both in the field and in the laboratory. To her 68,000,000 population when the war opened she has added at least 50,000,000 more, and has immensely increased her security against a campaign of starvation. Whatever hope might have been entertained in the earlier part of the struggle, little is now held by either side. Most certainly there has nothing occurred that would assure to the entente powers that advantage which at an earlier stage played a large part in their plans.

As Germany is the best type of the militarist, England is the best type of the navalist. The one's superiority on the land is equally matched by the other's superiority on the sea. Even so, Germany at Verdun proved her limitations in offensive operations, as the allies did in Gallipoli and now on the Somme. Such relative powers can not hope to reach decisive tests, save those of attrition, which require time for final results. In that case internal dissension is almost sure to defeat the power that is responsible for such tactics.

While the test of arms is being waged distinctive forces are impressing the nations. The socializing of the industries is one of the most prominent of all the marked results of the war. In Germany advanced steps had been taken before the war. The war but increased it. Note the drift in the entente powers. In England it is stated about 4,000,000 men were called to the colors.

One of the earliest and greatest problems confronting the country was to mobilize the industries to serve the needs of the fighting nation. Men and munitions immediately forthcoming were imperative. More men at the front meant less in the munition plants. Lloyd George began his work of mobilizing the labor of England; some in the trenches and others in the munition plants. What industries were not converted into munition plants were largely filled by women. Women were also employed in a limited number in some of the munition works. The Quarterly Review reported last April that there were at least 1,000,000 women thus employed at good wages with more or less satisfactory service. This situation will insure England an industrial problem at the close of the war. When the men return from the ranks to find their places filled by others most reluctant to relinquish their profitable employment there will appear the country's greatest problem of unemployment. The abnormal standard of expenditure will have produced a degree of extravagance that will prove a national problem to avoid a widespread suffering inevitable when the war inflation is past. It has been suggested in high circles that the Government continue for a time after the war to employ under Government direction the soldiers displaced by the call to arms.

Then, again, the campaign for the world's markets, which have long served England, and which had given her the rank of mistress of the sea, and which under the reign of modern scientific efficiency was being threatened by Germany before the war, will probably be renewed with new vigor, with a possible advantage for Germany. There is no country which has so thoroughly enlisted the scientist, the research worker, the expert in intensive production as has Germany. To-day she has at work perhaps 3,000,000 prisoners at about 8 cents per day to produce the goods which will be marketed when the war closes. These do not include the noncombatants, about which we have recently heard so much. These prisoners are under the best trained experts in the arts of industry. They are at work in the fields, in the shops, in the mines, in the mills, at the forges, at the looms, at the lathes, at the spindles, producing and storing billions of dollars' worth of goods to be disposed of in the world's great markets. To-day the chief energy of all nations is destructive; when the war ends it will be constructive. Now it is debt making, then it will be debt paying. Markets for selling will be sought rather than markets for buying.

While it is true that conferences have been held by both the belligerents, and especially the allies, and agreements have been proposed to capture by a system of boycott or black list, or both, the markets, it will not be overlooked that markets are not controlled by resolution, but by the laws of trade, at which all can work and in which the best equipped will lead. England sees in Germany a dangerous competitor.

This socializing of industries in England does not end with the industries, but extends to every phase of European life. In the case of the entente powers, as well as the central, the sum total of national energy is devoted to effectiveness in war. The productive agencies of land and sea are converted to that one purpose. The commercial as well as the defensive navies are so mobilized as not only to safeguard the nations' needs in the present war, but to insure a monopolization of the over-seas trade after the war. These steps are modifying the character of government. The stress of war has driven the entente powers to adopt the close corporation to centralize authority of action in order to meet the superior effectiveness of the central operations due to the unity of action under German direction. The world thus views one of the most democratic governments of history under the complete dictatorship of Lloyd George at the head of a small council of four associates of his own choosing, with plenary power to command the destiny of the mighty Empire. This figure emerging from the masses holds within his grasp the greatest powers yet intrusted to an individual. Just what is to be the permanent results of such consummation is yet to be seen.

H. G. Wells, commenting upon the immediate social result of the war upon English life and activity, said: "The ships, the railways, the coal and metal supply, the great metal industries, much engineering, and most agriculture will be more or less completely under collective ownership; the owner will be less of a controller and more of a creditor; he will be a rentier or annuitant. The importance of the financial and promoter will have diminished relatively to the importance of adminis-

trative official. "In due time," said he, "we shall tour about in State-manufactured automobiles upon State-built roads. We shall live in houses equipped with a national factory electric light installation, and upon every turn we shall be using and consuming the products of nationalized industry."

This is a most significant statement, and in the light of the world trend, apparent upon every side, we may well study its impression inevitable upon our own people and our form of government.

To be sure, the Socialist hails it as the beginning of an organization of the proletariat, who he claims will take possession of all power simply because he is in the majority, since in every country those who have not are invariably greater in number than those who have. We will abolish the energy that produces grades of success and all live off of the Government.

While we view this play of world forces in a life-and-death contest, most naturally we are most concerned about its general effect upon this Nation. There is small danger of our country becoming involved if we but respect real neutrality. Our serious moments will be when the war has ended. During its continuance no country wishes us to be against her and none can hope for us to be with her. The central powers are not in position to more than harass us, no matter what might be their desire or pretended provocation. The entente powers would not provoke trouble because of their dependence upon our markets both for munitions and war supplies and the vast amount of American securities held by them, all of which would be canceled in case of war. What either thus far has done has been with the conviction that we will be tolerable. The moment it is made clear that we will not permit these violations they will cease. The industrial situation is important.

These countries have already met a balance of trade in our favor of over $4,000,000,000. This is very largely war demands, most of which will cease upon the restoration of peace. To avoid such operations from draining Europe of gold and threatening the entire financial fabric by an inevitable paper basis, they have attempted to (1) mobilize the American securities by offering a premium in their exchange for British consols. Up to date, of the estimated $6,000,000,000 of such securities held in England, there are probably $2,000,000,000 of them deposited with American bankers to care for the balances which the enormous war demands have produced. This figure is probably near the limit. These countries can not hope to induce holders to exchange such gilt-edged securities for less valuable, even at a premium. These countries have also floated about $1,502,000,000 of foreign loans here, which, together, make $3,500,000,000 cared for without demanding gold. These two sources leave about one-half billion to be met by actual shipments of gold. Already, thanks to the "war brides," we have in store the largest stock of gold ever collected by any Government. The present problem of Europe is to avoid more gold leaving Europe, and her immediate future problem will be to secure a return of the necessary redemption fund. Herein lies one of our chief problems. We must avoid permitting such an outflow as to endanger our requirements for redemption. When the war is over the central nations will have stored vast amounts of goods, much of them from the cheapest of labor, to be sold not so much in European markets but in American markets. The stimuli for such sales will be to take steps to stop further debt on the one hand and to secure funds with which to reduce the present debt on the other. This first object will necessitate a discontinuance of further purchases from abroad by a greater home production. The second will be reached by disposing of the stores of goods already manufactured and an added campaign for enlarged sales of the future products of an intensified industrial activity due to war. When America meets this new form of competition she will realize as never before the needs of wise legislation to safeguard both her capital and labor. The first injurious results here to be felt will be the inevitable displacement of American investments and American labor. The next serious result will be the turning of the balances against us and the inevitable flow of gold to Europe, which, if not impeded beyond a certain volume, will endanger our entire money system as now built, with gold as the basis of redemption.

There is some variety of opinions as to the immediate effect of the closing of the war upon our industrial activities. The opinion is expressed by such leaders as Schwab and Henry Clews that the business momentum of the country due to the war is sufficiently strong to carry the country well on to a year or eighteen months. However, this opinion is not universally shared, while on the other hand the most rational view of that inevitable event is, with the closing of the war, the bottom falls out of our business enterprises. The period of reconstruction will be trying.

It is a mooted question what effect the war will have upon European immigration into this country. There are those who think the burdens of taxes to care for the debt will be so heavy that it will induce a new class of immigration—that is, the well-to-do whose property will be drawn upon at frightful rates. Many thinkers believe that the immigration will also include the laboring classes who will seek better situations. This conviction that our labor market will be seriously affected is one of the determinants for the passage of the immigration law by the Senate by an almost unanimous vote.

Most naturally Christian America asks whether civilization has entirely broken down. The ancient prophecy for which the world anxiously awaited and toward which "all creation moved" seems but mockery in the glare of war's ravages.

The only qualifying feature is the spontaneous response of the American heart to the cry of the helpless as expressed in the millions of treasure which flowed to the stricken populace to be distributed to Europe's noncombatant population by the Red Cross and other various associations for amelioration. It is also expressed in our efforts as a people in an unofficial capacity to mollify war's inhuman methods on behalf of humanity. It certainly will emphasize the need of a new way of adjustment, however, so long as the present policy of either militarism or navalism continues. This country can not allow impulse of heart to overcome judgment of head.

True, the world's great powers in a life-and-death struggle will create a demand upon our capacity for production in order to supply war's needs, such as is unknown in the history of commerce; a consummation foretold at the opening of the war.

While in a business sense our Nation profits in becoming the commercial necessity of Europe, our coffers overflowing, yet no one would be so foolhardy as either to boast over our gains, nor so ignorant as not to foresee results to follow. The war has emphasized in the American mind both the possibilities of the policy of militarism so well displayed in Germany and the policy of navalism so well displayed in England. Thoughtful students are fearful of both. America can never take on the system of the former because it must ever be foreign to our tastes. The latter will offer some explanation. It is inconveivable that the United States, rich in its resources beyond compare, located with a water front to every great country on earth, endowed with an incomparable ability in industrial organization, and a skill of labor yet unknown in the world; that a country thus located, and thus endowed, will be willing to remain an insular people, to permit other nations to deliver its products, with the power to dictate what can be carried, to whom it can be delivered, in what vessels it may be conveyed, and what routes it must take, at what points it must call, and so forth; that such a policy will be pursued by this country indefinitely is simply unthinkable. There is no more certain fact of the future than that this country will build a merchant marine. She will not submit to dependence upon a competitor to deliver her goods at terms fixed by the deliverer. Long before we reach the stage of carrying our own goods we will have become a competitor if not a rival of the mistress of the sea. For example, it is announced by the officials of the International Mercantile Marine Co. that four new liners, larger and faster than the *Mauretania* and the *Lusitania*, will soon be constructed for the American line.

Whether there is any item of concern in such consummation may be interpreted by what has occurred. When Columbus discovered the New World Portugal was the leading maritime power and had control of the seas. After years of conflict she gave place to Spain, who controlled the seas until her primacy was challenged by England. The famous defeat of the Spanish armada was the determining factor in the decadence of Spain upon the sea and the rise of the new power of Britain. The most persistent of all sea contests were those between the conqueror of the sovereigns of Hispaniola and the growing power of the heirs of Charlemagne. From 1688 to 1815, that period of 127 years from the English revolution to the defeat of Napoleon at Waterloo, not less than 12 wars took place between these contestants and during which time 54 years of actual fighting determined the issue in favor of Britain. From the close of the Napoleonic wars no step has been omitted by Britain to insure the permanent rule of the waves. It expresses itself in a dual form, first a commercial navy sufficient to carry the sea-borne commerce of the world, and secondly, a fighting squadron, both defensive and offensive, equal to any two other nations or double any one.

This undisputed title of the high seas for 100 years has produced more or less arrogance of the superior toward the inferior powers. The naval program of Germany in recent

years in connection with her growing influence in the markets of the world is not a small element in the present contest. It is not an exaggeration of the real situation to assert that any nation that offers a challenge in this rivalry will meet with militant suggestions. The great neutral Republic will not be an exception, I fear. If evidence of it were necessary most certainly it has been presented in the last 30 months in the most arrogant treatment of international agreements under the new rôle of orders in council. It will be the height of credulity for this Nation to expect her growth in sea influence to be welcomed by the great maritime power. Our destiny points to that increased influence, and I have no doubt that it will bring with it its contests. We will become a sea power. We have already taken certain steps, whether wise or otherwise. That is America's goal.

Ladies and gentlemen, with that point in view, speaking as but one Congressman and one who feels a responsibility for his vote, I have been compelled to vote for an increase of both the Army and especially the Navy. I think I can confidently assert as one distinctive result of the war, the conviction of self-respect as a growing world power with the problems it entails not only invites but demands that our ability to command must be commensurate with our responsibility to do.

This prospect upon the sea is but suggestive that another sea power on the Pacific may afford some degree of friction. The ambitions of Japan are both laudable and significant. America's influence in modernizing the Empire of the Rising Sun invited problems of adjustment growing out of the potent differences in living standards of the peoples of the Orient and the Occident. America in Japan was but a precursor of Japan in America. This gave rise to an international problem that is cumulative. We have certain stipulated agreements in treaty obligations between the two countries. The full enjoyment of rights claimed under these treaties may have been obstructed by certain State legislation. These State restrictions have become acute at times. Both the school and land questions as well as immigration are more or less ominous. Japan looks to the Federal Government to enforce treaty rights. The State insists upon protection in its own rights over matters wholly of State authority. This at once produces an oriental problem. It is a source of some concern. Whatever be the ulterior purpose of Japan looking to a position among the family of great powers, her militant movement commensurate with her commercial growth must not be overlooked by the country within whose borders lies the prize sought by the ambitious world powers.

Then, again, ladies and gentlemen, whatever may be the unnamed outrages below our southern border, and whatever may be our relations to that unhappy country, the real American problem in Mexico will come when the war in Europe closes. England owns near $500,000,000 worth of property in that country, much of which has been destroyed. So likewise in the case of Germany and France. These foreign investments were made upon invitation from official Mexico. These countries had recognized Huerta as the responsible head and protector of Mexican and foreign citizens and interests. It is well known that we aided at least in driving this recognized head from Mexico. It is not a stretch of credulity to believe that these countries at the close of the war will give us the alternative to either pay up or allow them to collect. If we choose the former, the matter may be settled. If we should permit the latter, we thereby surrender the Monroe doctrine. The first alternative will be national humiliation. The second is simply unthinkable, as we will not invite to our very doors a European problem. In either case it means a problem of national honor to be adjusted at a time when the world seems out of joint, and the test of battle is the chosen method of settlement.

Whatever notions we may have had on the question of armament—and I have yearned for the day when they would be discontinued—yet under the present order of things we must not rest in a fool's paradise in the belief that by some strange providence our safety is assured so long as we make sure we are unable to defend ourselves. I have no doubt that the country will demand military training in the schools, a thing I have not favored, I admit, more from sentiment than judgment.

This leads at once to the probable international results. It must be apparent that the heavy burdens of modern military equipment must have an end somewhere. The frightful war proves that preparation for defense will not prevent war. Indeed many think it the cause of it. There are many suggestions on substitutes for armament.

One is a League to Enforce Peace, where the armament would be limited. This proposition is receiving much attention and favorable comment. It is backed by men of great name and fame in many countries. Recently men high in authority in the warring nations have spoken quite favorably of it as a plan to insure peace. These include both the German chancellor, Hollweg, and England's great statesman, Earl Grey.

Another is the plan of arbitration. Of course, this has the fatal element of resting upon voluntary action of nations, with nothing to enforce the findings. All the warring countries had such treaties before the war.

Still another proposal is the Federation of the World. This possibility was suggested by Tennyson, but was regarded as a mere effusion of the dreamer. It was not proposed as a means to avoid armament, but as a positive proof of the evolution of the brotherhood of man and the fatherhood of God. Years later the philosophic historian saw the consummation as the result of economic forces then at play. John Fiske declared these forces would compel the common council of nations because of the interdependence of the family of nations. One nation is favored with an abundance of certain necessary supplies on the one hand and endangered with total want of other equally necessary articles; while other nations possess those things wanting by the first, but are helpless in those possessed in abundance by the second. The economic forces are so interwoven to-day that the world's business has become every nation's concern.

The United States is perhaps the most fortunately endowed of all nations. We could, if necessary, live independent of the rest of the world, but to do so would mean a deprivation of much of the modern conveniences now quite universal in usage. This situation is not so true of any other great nation. Isolation would be hurtful to all and hurtful to none. The present situation of blazing bayonets is designed for national defense. It is a frightful price to pay for a result that is not assured, as the holocaust of Europe demonstrates. There is no hope of a voluntary abandonment of the régime unless a safe substitute can be offered. Is it too Utopian to assert that a world federation upon the plan of the American Government is such a substitute? Our country's boundaries inclose a cosmopolitan population, representing all nations, with their variety of ideas and ideals. Within its boundaries is the greatest diversity of resource, destined not only to diversify occupations but also interests so widely different that they touch almost every point of the compass. The century of evolution of the American Nation has demonstrated the workable system of double sovereignty, National and State, in which the former is supreme in all matters pertaining to the Nation at large and the State in all matters pertaining to the State alone. True, the adjustment of the national and local powers has been a constant theme of disputation, and once provoked the clash of arms, only to prove the value of the system. The American system is stronger to-day than ever before, and may be justly pointed out as the ultimate form of government in which all the world may enter as one supreme order for the world. If ever such a movement was justified, this present carnage would indicate the time is now at hand.

My fellow citizens, 30 months of war has demonstrated the futility of the test of arms to settle disputes. While modern armament is ostensibly provided for the purpose of national defense—and thus far its only real success has been confined to that character of warfare—its function in war is offense to the extent of extermination. The highest reach in modern discovery and invention, whether in library or laboratory, is now devoted to measures of destruction. But in the present European situation there is small promise that either side can do more than defend in the final result. This is why the world is convinced that the countries that can weather the longest strain will finally win. This fact, which must be apparent to all concerned, will undoubtedly play some part in the decision of the allies upon their attitude toward the recent overtures of the central powers for peace. While the news from Petrograd and Paris is a decisive rejection of all peace suggestions, the world looks to England, the real responsible power, for the real answer. I have had confidence that England will not flatly reject the overtures. It is my conviction that a way will be opened for negotiations. I firmly believe that the sense of the fighting nations will compel them to keep open every avenue for honorable peace. It seems to me that we may see the beginning of the end. While it is true that Germany proposed no terms of peace, she does open the way. She at least gives the entente powers opportunity to either state the terms or, at least, to call on Germany to do so. This would permit the central powers, in case the terms were not acceptable, to detail counter terms. While up to date no terms have been stated by either side, the way is not entirely closed by either side. It might also open the way for the United States to tender its good offices, having already made it plain to all the powers that we have more than a humanitarian interest in its cessation. While all suggestions of what will take place must be speculative, I think we may

justifiably hope that the light is about to break and the stage may soon be expected when the new problem will face our country—the readjustment of the world of industry demanded by this frightful war, a problem the solution of which, in my humble judgment, will try the best of our statesmen. To that solution all of our citizens should lend their best efforts. I thank you and bid you good-by.

Diversion of Water From Niagara River.

EXTENSION OF REMARKS
OF
HON. CYRUS CLINE,
OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, January 4, 1917.

Mr. CLINE. Mr. Speaker, under permission given to me to extend my remarks in the RECORD upon this resolution, I desire to say that I am in favor of passing the resolution as amended to make the time limit March 4, 1917, instead of July 1, 1917. This amendment should be made for two reasons. First, because the pressure for the demand for more power by the manufacturing interests of Niagara Falls should be relieved by permitting more diversion, and, for a second reason, that the effect of the passage of the resolution will be to enact permanent legislation governing the diversion of water from Niagara River for power purposes.

The Committee on Foreign Affairs has had the subject of water diversion above the Falls at Niagara under consideration for nearly six years. It has taken volumes of testimony upon the questions whether the Federal Government had the authority to say how much water should be diverted, to whom, and under what conditions, and whether its authority over the same should be complete; or whether the State of New York had the authority to control the diversion; and what rights, by virtue of the legislation of the State of New York, existed in the power companies that should be recognized by the Federal Government or the State of New York. None of those questions are involved in the temporary permits for more diversion of water than is now permitted by the Secretary of War. Under the treaty negotiated by Great Britain and the United States promulgated in 1910 it was provided that the Canadian Government should be permitted to divert 36,000 cubic feet of water per second and the Federal Government 20,000 cubic feet per second. The power companies on the American side at Niagara Falls are now using 15,600 cubic feet per second. Strong opposition has been manifested against a diversion of more water than the 15,600 cubic feet per second on the ground that it would affect injuriously the scenic beauty of Niagara Falls. Since the development of power at Niagara great manufacturing institutions have grown up at Niagara Falls. The city of Buffalo, street railways, manufacturing plants in Buffalo, and the smaller cities within a radius of 40 miles from Niagara Falls are supplied with hydroelectric power for heating and lighting purposes from water diverted from Niagara River at Niagara Falls. Numerous industries, involving the expenditure of many millions of dollars and the employment of thousands of men, are dependent upon power for their operation and employment. Formerly, under what is known as the Burton Act, we imported from Canada 180,000 horsepower. At least 75,000 horsepower has been withdrawn from importation by the Canadian Government. That withdrawal increased the demand upon the American companies manufacturing power on our side at the Falls.

The importance of maintaining the manufacturing interests with sufficient power is illustrated by the fact that there is scarcely a large manufacturing institution in the United States that does not use some of the products created at Niagara Falls. Very many of these products are manufactured exclusively by the industries located there. Recently I received a letter from F. A. J. Fitzgerald, president of the American Electrochemical Society, showing what products are exclusively produced by hydroelectric power at Niagara. I incorporate this letter as a part of my remarks.

AMERICAN ELECTROCHEMICAL SOCIETY,
Niagara Falls, N. Y., July 20, 1916.

The Hon. CYRUS CLINE,
House of Representatives, Washington, D. C.

DEAR SIR: It has been suggested that you would like a record of the American industries dependent upon Niagara hydroelectric power.

The following products are made in America only at Niagara Falls, viz:

Ferrosilicon, a necessary alloy in steel and steel castings.
Ferrotitanium, used in the manufacture of steel.
Cuprotitanium, used in the manufacture of copper and bronze castings.
Ferrochromium, essential in the manufacture of armor plate, automobile steels, dies, etc.
Carborundum and alundum, especially essential in all metal-working industries, such as automobiles, locomotives, firearms, cash registers, agricultural implements, etc., and used more or less in about all manufacturing processes.
Metallic silicon.
Metallic sodium.
Peroxide of sodium, bleaching of goods, collars, etc.
Artificial graphite, fundamental requisite of the production of caustic and chlorine.
Electrolytic bichromate of sodium.
Sodium, basis for sodium cyanide, essential in gold and silver mining.
Caustic potash, used in the manufacture of soap, oil refining, and other processes.
Liquid chlorine, used for the sterilization of water and manufacture of dyes.

The major portion, or a large percentage of each, of the following products within the United States are made exclusively at Niagara Falls:

Phosphorus, essential ingredient of matches.
Caustic soda, used in the manufacture of soap, oil refining, and other processes.
Bleaching powder, for treatment of paper and cloth and purposes of disinfection.
Chlorate of potash, necessary for matches, gunpowder, dyes, and colors.

There are, of course, a large number of other articles manufactured at Niagara Falls using Niagara power, and there are innumerable industries, both at Niagara Falls and Buffalo, using Niagara power for ordinary manufacturing purposes. In this subdivision the following articles at Niagara Falls are made in a large way by the use of hydroelectric power:

Aluminum, pulp and paper, silver-plated ware, carbons, and electric batteries.

It is possible that since the outbreak of the war the enormous demand for some of the items indicated in the first class, especially those heretofore imported, may have caused them to be manufactured in other parts of the United States, but such manufacture elsewhere may be considered merely temporary and is almost certain to be discontinued when the war ends.

Very truly, yours, FRANCIS A. J. FITZGERALD,
President.

It is very desirable that legislation fixing the rights and powers of the companies at Niagara be enacted at this present session. The temporary use of at least a portion of the 4,400 cubic feet of water per second, being the amount in excess of the 15,600 now used up to the limitation of the treaty, should be permitted only during the interim between now and March 4, 1917. The Committee on Foreign Affairs, which has had this matter under consideration, is anxious that permanent legislation be enacted before that date.

Suggestions on How to Increase Our Foreign Trade.

EXTENSION OF REMARKS
OF
HON. HENRY I. EMERSON,
OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Friday, January 5, 1917.

Mr. EMERSON. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include a resolution adopted by the Cleveland Chamber of Commerce, which contains some very good suggestions on how to increase our foreign trade.

The resolution is as follows:

The committee on foreign trade having made a careful study of the probable effect upon the foreign trade of the United States growing out of the economic conferences and proposed trade alliances between various foreign Governments, respectfully submits the following statement in regard to the matter, with recommendations as to the action which the Cleveland Chamber of Commerce should take in regard thereto.

It is the opinion of the committee on foreign trade that at the termination of hostilities with Europe there will develop an era of competition which will be unprecedented in the world's history. From all indications, in order to meet this competition, many nations will almost completely revise their present tariffs in such a manner as to practically exclude the products of some countries from their markets, establish high protective tariffs for others, preferential tariffs for a few, and undoubtedly most-favored-nation clauses, which will enable certain countries to secure preferences of the greatest economic value. Therefore if the United States is to hold its own in the keen competition which will follow the termination of the present war our Government must make favorable commercial treaties with foreign countries.

In view of these conditions your committee strongly urge that the Cleveland Chamber of Commerce take the initiative and draw up suitable resolutions embodying the following:

"First. The United States Tariff Commission, which was authorized at the last session of Congress, should be composed not only of tariff experts but should also include at least one representative business man who has had practical experience in foreign trade, a representative of the banking interests of the country engaged in foreign trade, and one or more representatives who have had considerable diplomatic experience, the entire commission to be appointed from a strictly nonpartisan point of view.

"Second. Make such reciprocal agreements with Latin American countries as will enable the United States to obtain its rightful share of the trade in those markets.

"Third. Make such tariff agreements with European countries and Canada as will permit our manufacturers to obtain at least equal rights in their markets with those of other countries and to protect our interests at all times without discrimination.

"Fourth. Steps should immediately be taken to reach a mutual trade understanding with the Government of Russia in order that products of the two countries may be exchanged under the most favorable terms to each. At the present time there is no commercial treaty between the United States and Russia, and in view of the great importance of Russia as a market for American goods prompt action should be taken to negotiate a treaty with the Russian Government which will enable American manufacturers to introduce their goods in that country under the most favorable terms which it is possible to obtain.

"Fifth. That the United States Tariff Commission as soon as formed provide means for restricing, by tariffs or otherwise, the importation into the United States of any goods which will affect the firm establishment of new industries which have, through necessity, been built and financed during the progress of the present war."

Your committee recommends that copies of this resolution be submitted to the Chamber of Commerce of the United States of America with the request that it be referred to the proper committee for consideration and action; also that your committee be authorized to send copies of this resolution to other commercial bodies in the United States in an effort to obtain their full cooperation in endeavoring to have the above recommendations put into effect.

COMMITTEE ON FOREIGN TRADE.

DECEMBER 11, 1916.

Diversion of Water From Niagara River.

EXTENSION OF REMARKS

OF

HON. GEORGE HUDDLESTON,

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, January 4, 1917.

Mr. HUDDLESTON. Mr. Speaker, under the subject of cooperation the United States may be said to be one of the most conservative among the civilized countries. We seem to be mortally afraid of public or community ownership even of natural monopolies and public utilities. By a singular coincidence this fear is more widespread among our big financial interests—those who benefit most by private ownership of such things.

So lively is the fear of the classes financially interested in public utilities that they maintain a periodical devoted to propaganda against public ownership of them and to arguments against community cooperation and to recounting instances of failure. No city may even undertake to furnish its own water supply but that an active fight is made against the plan, every effort made to discredit it, and the damning epithet that it is "socialistic" is leveled at it.

The opposition to community ownership and development of hydroelectric power is especially active and determined. The great water-power trust, with its powerful affiliated interests, seem determined to wrest the power sites, our last remaining great natural resource, from the hands of the people. They have enlisted support upon various specious pleas from one end of our country to the other, and seem thoroughly determined to secure for their own exclusive enjoyment the benefits of the harnessing of our rivers in modern development.

In every civilized country, community cooperation in the development of water power is far advanced; in every country except our own. Here we continue to rely upon the good old method of turning over the monopoly of diverting water from our streams to private interests, who in turn use it as a profitable means of exploitation.

The greatest water power in America, if not in the world, is at Niagara Falls. The greatest, not the largest. The greatest, because it combines cheapness in development, magnitude in horsepower, and convenience to centers of consumption. If there is a point in the world where hydroelectric power should be developed through some public agency for the public benefit, Niagara Falls is that point. So far as the National Government is concerned, we have granted no rights for diversion at Niagara. The waters are navigable, they constitute an international boundary, and the National Government has over and in them an interest and control which does not exist in the same measure as to inland waters.

The development of power on the American side at Niagara has proceeded for some 20 years by two private companies operating under charters from the State of New York. They have proceeded along the old lines, selling the power perhaps to a few affiliated interests on terms of discriminating favoritism, but they have declined to deal with the general public, having farmed out that privilege to distributing companies. The Aluminum Co. of North America, otherwise known as the Aluminum Trust, is a beneficiary to the extent of at least 75,000 horsepower, and other concerns are perhaps in on the ground floor. The people at Niagara, Buffalo, and other adjoining cities are farmed out to distributing companies. The Buffalo General Electric Co. enjoys the exclusive privilege of distributing Niagara power to the people of Buffalo, and this is done upon oppressive and extortionate terms.

HOW CANADA DOES IT.

On the Canadian side at Niagara, following our example, about 15 years ago the Government granted to the Ontario Power Co., Canadian-Niagara Falls Power Co., and Electrical Development Co. the right to divert water for power purposes, and these concerns started out upon the same general plans which had previously been followed on the American side. However, they have not been permitted to continue in that fashion.

In 1905 the Legislature of Ontario incorporated the Hydroelectric Power Commission as a public cooperative agency, with authority to purchase or generate power and to transmit the same for distribution among Ontario cities and towns at cost. Under this plan 99 communities in Ontario are now being served.

While authorized to construct works for generating power, the Canadian commission considered it proper to respect the investments of the existing generating companies. There were already three companies with generating plants on the Canadian side having quantities of power available for sale, so that the commission, not desiring to interfere with them, followed the course of asking those companies to bid to supply it with power at a price which would protect their bondholders and shareholders. As the result a contract was entered into with the Ontario Power Co. for 100,000 horsepower for 30 years at $9 per horsepower.

The entire 100,000 horsepower was not used at the beginning. It was to be delivered at the bus bar of the company to the commission. The latter constructed transmission lines to various cities as they accepted the plan and the amount of power increased each year until at present, when the entire 100,000 horsepower is being taken. In addition to this the Canadian commission is generating power at Severn, Wasdells, and Eugenia Falls, and has six plants in operation in the "Trent."

The most recent report of the commission to which I have access is for the year ended October 31, 1915, and my facts are taken very largely from it.

The commission is purchasing power at $9 per horsepower from the Ontario Power Co., at Niagara, and is generating it directly at the other points mentioned. It is being transmitted practically all over Ontario, almost every city and town being supplied. The power is sold to the municipalities at cost plus the expenses of the commission and an amortization charge based on a 30-year plan. The municipalities own their own distributing systems and sell the power to consumers substantially at cost.

At the date of the report referred to the commission had assets of $12,900,000, practically all of which consisted of its works. The cities had, together, $17,600,000, consisting of reserves of $3,400,000 and their distributing systems.

The city of Toronto, with a population of 470,000, received power at $14 per annual horsepower and in turn charged consumers 3.9 cents per kilowatt-hour for domestic and 2.8 cents for commercial current. Toronto consumers before the cooperative system was instituted had paid 8 cents for domestic and 12 cents for commercial current. During 1915, in Toronto alone, $1,393,000 was saved to consumers by the cooperative system. Toronto uses 100-watt lamps for street lighting; they cost $8 per annum, figuring 74 cents per capita for street lighting.

The city of Hamilton has 101,000 population. Its power cost is $14 per horsepower. Its 100-watt street lights cost $8 per annum. It sells domestic power at 3.7 cents per kilowatt-hour and commercial power at 1.9 cents. The previous rate was 8 cents, and over $250,000 was saved to its consumers in 1915 alone.

London, with a population of 56,000, pays 55 cents per capita for street lighting. It sells power to domestic users at 2.4 cents and to commercial users at 3 cents. The previous rate was 9 cents per kilowatt-hour. London saved its consumers $263,000 in electric charges in 1915.

Windsor, with a population of 22,000, has a higher rate on account of its great distance from the point of generation. It pays $38 per horsepower for power and distributes it at 4.9 cents per kilowatt-hour to domestic users and 3.9 cents for commercial use. Its previous rate was 12 cents for domestic and 8 cents for commercial use. Windsor street lighting costs $1.39 per capita. During 1915, $35,800 was saved to Windsor users by the cooperative system.

The Canadian commission also supplies electric energy to farmers upon terms so cheap that they use it for thrashing, sawing wood, chopping ensilage, lighting, and other farm purposes. The average cost of current to farmers during 1915 was 5.5 cents per kilowatt-hour.

In 1915 the Canadian commission served 120,000 different users. The lowest cost was 2.4 cents for domestic and 1.9 cents for commercial current. The average cost for all Ontario was 3.9 cents for domestic and 3.1 cents for commercial current. Prior to the beginning of the commission's operations the average cost to these same users was 9.3 cents for domestic and 10.4 cents for commercial power.

The demand for light and power under the just and economical methods of the commission is rapidly increasing. The commission is now installing a new plant at Chippewa and Queenston Heights. They will utilize the water remaining to Canada under the British treaty with an effective head of 305 feet, with the result that 300,000 horsepower additional will be produced.

THE AMERICAN WAY.

On the American side the Niagara Power Co. is diverting water with only a 140-foot head, and is getting, as I am informed, only 11 horsepower per cubic foot. The Hydraulic Power Co. has a 212-foot head and get about 19 horsepower per cubic foot. These concerns at present take 15,600 cubic second-feet and there remains to us under the treaty 4,400 cubic second-feet.

The difference between power cost in Ontario and the prices charged on the American side is shocking. I have been able to learn of no American consumer who gets power for less than $16 per horsepower. This is the rate given to some of the big manufacturing concerns at Niagara. The lowest rate in Buffalo is $22 per horsepower, from which price the charge ranges to as high as $100 per horsepower. Buffalo users not of the favorite class take power upon a sliding scale, upon a basis of 8 cents per kilowatt hour with 1 cent off for prompt payment. This charge is double the charge in Toronto, which is more than three times farther from the point of generation.

I see no reason why we should not learn a lesson from Canada in the generation and distribution of hydroelectric energy. Why should we not have our own public agency to develop the available power at Niagara in the most efficient way, get the most energy we can out of the water we have, and sell it to our people on fair terms? Why should we allow a middleman's profit, or the profit of two or three middlemen, as the case may be?

The Niagara power generating and developing interests and their affiliations ramify through practically every big financial interest in America. Is not the arm of Congress strong enough despite the opposition of these interests to write a just and fair law for the development of Niagara power for the benefit of the people to whom it really belongs? Is it possible that we are to be forced to allow a private profit out of this great natural resource, the property of the people? Is the system so fixed on us that we must continue to allow the masses of the people, middle and small consumers, to be sweated and exploited by the rapacity of those who have fixed themselves at Niagara?

Nitric Acid Should be Made From Coal By-Products.

EXTENSION OF REMARKS

OF

HON. NICHOLAS LONGWORTH,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Friday, January 5, 1917.

Mr. LONGWORTH. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include an interview published recently in the New York Times of Sunday, December 24, 1916, with a very distinguished engineer on the subject of making nitrogen from the air.

The interview is as follows:

NITRIC ACID SHOULD BE MADE FROM COAL BY-PRODUCTS SAYS EXPERT—THOMAS C. CLARKE, WHO HAS BUILT MANY COKE OVENS, SAYS BIG NITROGEN PLANT PROJECTED BY UNITED STATES GOVERNMENT WOULD THEN BE UNNECESSARY.

Does the United States need a hydroelectric plant to produce nitric acid? Congress, acting upon the advice of the naval and military authorities, believes that it does, and has voted a large appropriation for a nitrogen plant to be operated by the Government, but Thomas C. Clarke, an engineer of this city, thinks that the Nation should get its nitric acid by utilizing its coal by-products, a large part of which now goes to waste.

This is especially interesting in view of the recent report that the United States Geological Survey had found that the nitrate deposits in this country were practically worthless for commercial utilization.

"We hear," said Mr. Clarke, "a great deal about the Government conservation of forests and of water power, but at our very door lies the disgraceful waste of the Government itself in using coal for fuel and permitting the much-needed nitrogen to go up in smoke."

Mr. Clarke was moved to say this when a representative of the New York Times called at his office at 111 Broadway and asked for his views in connection with the Government's proposed nitrogen plant, which will cost $20,000,000. He is a member of the American Society of Civil Engineers and of the American Iron and Steel Institute, and was formerly general superintendent of the Lackawanna Iron & Steel Co., in charge of one of the largest by-product coke ovens in the United States, and five blast furnaces. Subsequently Mr. Clarke was supervising engineer for the Deutsche Bank of Berlin, at South Bethlehem, Pa., in the construction of the Lehigh Coke Co.'s ovens, which were built to supply the Bethlehem Steel Co. with coke.

The most important explosives are produced by the nitration of organic compounds, according to Mr. Clarke. The explosives in use today are made by nitrating various bases which, upon being fired, generate gases that expand with sufficient energy either to expel the shell from the gun or cause the shell to burst, as the case may be. Many materials are used as a base for carrying purposes, but in every case, said Mr. Clarke, they must be nitrated. So nitric acid, the medium for carrying out this process, is, in his opinion, all important. Nitric acid during peace times is ordinarily made from Chilean saltpeter, which is the cheapest way of obtaining it; but it can be obtained by direct fixation from the air, using an electric arc. This latter process, Mr. Clarke said, requires such cheap power that the Norwegians are the only ones able to produce it commercially. Another method is by oxidizing into nitric acid the ammonia released from sulphate of ammonia, calcium cyanamide, or some such ammonia-containing compound.

"In war time," Mr. Clarke explained, "securing Chilean saltpeter depends upon the enemy's ability to deprive one of it. In Germany today that source is shut off entirely, and their nitric is secured from direct air fixation and oxidation from ammonia compounds. First, on account of its simplicity, we look for the direct arc process. But commercially this process is possible only where $5 per horsepower-year-power is obtainable, so we must reach the conclusion that it is useless to try to expand along those lines in times of peace. And in war times we can commandeer all our hydroelectric installations and make nitric acid that way, even if it is a little, or even if it is a great deal more expensive.

"Next we come to the calcium cyanamide process, the only process known to me that is in commercial operation to-day on a large scale. This process was invented in Germany and exploited by the Cyanidgesellschaft, formed of German capitalists, who organized in Rome La Societa Generale per la Cyanamid, which took over the patent rights and has since issued the licenses for manufacture in various countries and exercised a general supervision over the development of the industry. In this the Cyanidgesellschaft is—I quote from an American Government bulletin, No. 52—'more or less aided by official action by the German Government, which recognizes that the industry had its origin in the empire and may prove to be of distinct value as a national asset in relieving Germany from dependence upon Chile for its supply of combined nitrogen.'

"In years past we have had to import creosote oils from England to take care of the industry here. In 1913, the last figures that are available, as given by the United States Wood Preservers' Association, this country consumed 108,373,000 gallons, of which 41,700,000 were produced locally and 66,673,000 gallons were imported. This shows that we produce 38 per cent and import 62 per cent. The imports were supplied practically altogether by Germany and Great Britain—Great Britain supplying about four times as much as Germany.

"The United States in 1913 produced practically 31,000,000 tons of pig iron," said Mr. Clarke at the outset. "During that year the world's production was 78,000,000 tons, of which Germany and Great Britain together contributed 29,000,000, leaving 18,000,000 tons distributed over the rest of the world. Yet Germany and Great Britain were the two nations which supplied the missing creosote oils that we needed so badly, although their production of pig iron was 2,000,000 tons less in the aggregate than ours.

"The object in giving these pig-iron figures is simply this: For every ton made an average of a ton of coke is consumed in producing it; this being so, we should have had the creosote oils from 2,600,000 tons of coal necessary to produce 2,000,000 tons of coke over the amount produced in Germany and Great Britain. But to our shame be it said that we are still behind, in spite of the tremendous strides made lately in building by-product coke ovens, as coal is still being coked in nearly 100,000 beehive nonrecovery ovens in the United States.

"When all the by-product ovens now being built in the United States are completed and in operation, this condition will change to a marked extent, but it will still require many years of by-product oven construction to catch up with the lead that Great Britain and Germany have on us.

"With the example set by Europe, which has been developing this industry and encouraging it, with a view to its use in case of war, does it not seem absurd on the part of our Government not to encourage the industry to the best of its ability, if the encouragement only takes the form of passive neglect? Can not we leave the industry alone to expand by its own strength and inherent worth, and not discourage it by active encouragement and the fostering of a rival?

"The evidence seems conclusive that as an emergency measure for war preparation the hydroelectric plant in Tennessee is neither advisable nor necessary, and it can not be completed within a reasonable period of time. If an emergency arises in the near future, it is still evident that the Government must turn to the established hydroelectric stations now in operation, and must also build the plants necessary for the oxidation of ammonia into nitric acid.

"How much better it would be, then, to spend this money, already appropriated, in the building of such plants, to scatter them throughout the country, from the Pacific to the Atlantic and from Canada to the Mexican border, and prepare to convert these ammonia-bearing compounds into nitric acid and to nitrate the bases now available into ammunition.

"Can the United States afford to jeopardize the investment of $130,000,000 in by-product coke ovens, to risk not being able to secure the benzol, toluol, and naphthaline produced from this investment, or to lose the potential 440,000 tons of nitric acid which can be made each year from the product of the ovens? This product represents, when used in connection with benzol and toluol, 725,984,000 pounds of picric acid and 150,000,000 pounds of trinitrotoluol. And, further, can the United States afford to lose the possible control of the dye

crudes market of the world? Can it afford to be placed in a position where the coal-tar derivative drugs, disinfectants, and timber preservatives are made for us in other countries, while by the simple process of keeping its hands off and building its war-measure plants sanely and sensibly it loses no advantage?

"That we are hysterical in our legislation is well known, but it does seem that an industry which can make the United States self-contained in war material should not be ignored. A halt should be called on spending the money appropriated for the nitric-acid plant until clearer thoughts prevail and the situation can be weighed in the balance."

It was suggested that the Government nitrate plant had been termed a "military expediency" measure.

"Let us see," Mr. Clarke said, "if there is not some means which the United States can adopt that will take care of the military situation in its critical aspect, also the farmer and his soil needs, and the by-product coking industry without harming any of the three and, if possible, helping them all. Let the Government put the direct question to the by-product coke-oven industry as to whether, in case of war, the ovens will deliver at a satisfactory price all the sulphate of ammonia, benzol, toluol, and naphthaline that the Government desires. Let the same question be put to those enjoying the benefits of the many hydroelectric installations in this country, and let such steps be taken at the present time to secure sufficient power and apparatus for making up any shortage in the nitric-acid supply that the Government deems it necessary to provide against. After this investigation has been completed, let us then face the situation as it exists, not as we imagine it may be.

"Supposing, although it is highly improbable, that the coke-oven situation and the hydroelectric situation do not furnish sufficient nitric acid for the Government's prospective requirements, there are two methods along logical lines in which these requirements can be secured. One is by specifying, and, if necessary, subsidizing, the users of gas producers, so that a certain percentage could be equipped to use the Mond gas-producer system, whereby, from coal, coke, or peat, over 75 pounds of ammonium sulphate per ton of material gasified may be recovered. The other is to have the Government burn coke instead of coal in its naval vessels, shipyards, military stations, arsenals, and power houses and save the valuable by-products.

"Let the Government set a good example in conservation by building its own by-product plant, using the gas for illuminating purposes and for power, and having its own supply of benzol and toluol for the manufacture of high explosives. It could convert the sulphate of ammonia into nitric acid; and if it had no further use for its tar, that product could be burned under the boilers as fuel.

"To carry this suggestion further, where nitric acid, benzol, toluol, and power are the principal recoveries desired, the Government could use the coke as it is pushed from the ovens in gas producers with Mond recovery, recover the nitrogen still remaining in the coke in the form of sulphate of ammonia—about 75 pounds per ton—and mix the producer gas, amounting to about 150,000 cubic feet of 140 British thermal unit value per ton of coke gasified with the richer gas, amounting to 11,000 cubic feet of 500 British thermal unit value, produced in coking the coal, and use the two, when mixed together for fuel, to produce electric power at a cost so small that even hydroelectric installations could not compete.

"To sum up the situation, which is better, to build your own power plant, which will supply power to a company making electrically produced nitrogen for fertilizer 99½ per cent of the time, or to encourage the by-product coke industry, with its production of necessary bases for the manufacture of explosives, of nitrogen for the farmers' fertilizer, of tar to produce the 3,500 coal-tar derivatives, and, most important of all, to conserve the coal that is now being wastefully coked without the recovery of these valuable by-products?"

"Coke making, said to be spoken of first by the Greek philosopher Theophrastus, born 372 B. C., was also understood by the Chinese in the arts thousands of years ago, but, Mr. Clarke explained, was not of any real value until the nineteenth century. From 1880 to 1890 the first by-product recovery ovens were built on a commercial basis in Europe, but it was not until about 1894 that 40 ovens were built here. During the first 10 years they were not oversuccessful, for they were built after German design and had not been adapted to conditions here; but to-day, according to engineers, they surpass in every way the ovens now being built in Europe.

"In coking coal," Mr. Clarke continued, "the results obtained are coke, ammonia, tar, and gas. These for many years were the only products that the average American coke producer bothered about. The Semet-Solvay Co., of Syracuse, has for many years been recovering the benzol and its homologues, but until the war broke out in Europe this feature of recovery was generally neglected.

"To go back for a moment to sulphate, for every ton of coal coked in by-product ovens in the United States 20 pounds of sulphate of ammonia of a 25 per cent NH_3 value, or its equivalent, is recovered. The NH_3 is the ammonia content—that is, sulphate of ammonia contains 25 per cent of ammonia.

"This sulphate is practically all marketed on a commission basis by one firm of brokers in the United States. It amounted before the war to 115,000 tons in 1910 and in 1914 to 190,000 tons, but with the impetus given to by-product oven building 1917 will see nearly 400,000 tons of sulphate produced. Then why, you ask, do we want to build a hydroelectric plant to help an industry whose tonnage does not exceed 50,000 per annum of 20 per cent NH_3, to the obvious detriment of an industry producing 400,000 tons per annum of 25 per cent NH_3, when in both cases we have to build additional plants to separate ammonia from its compound and oxidize it into nitric acid? Why do we select one spot for our war supply, build a dam, which may be treacherously blown up by dynamite or be bombed by a Zeppelin or aeroplane and rendered useless? The only answer I know is 'military expediency.'

"Fancy building one dam at Muscle Shoals, Tenn., to supply all the nitric acid needed to protect the United States! Fancy betting your national existence on that one dam!

"One aspect of the situation remains to be mentioned. A moment ago we spoke of the various bases which required to be nitrated in order to become an explosive. The bases derived from the destructive distillation of coal are naphthaline phenol, phenol, benzol, toluol, and others. Those more familiar to the public since the war are picric acid, made by nitrating phenol (carbolic acid), and trinitrotoluol, the famous English T. N. T. The amount of phenol recovered from the tar is insufficient to take care of the consumption caused by the enormous number of shells used in modern warfare, so a synthetic phenol is made from benzol.

"We have now developed the remarkable fact that not only do the by-product ovens supply the means of making the nitric acid to nitrate the various bases used in making explosives, but that they supply the bases themselves.

"It is a fair question to ask if the quantities of these bases are adequate. Roughly speaking, 1917 will show a production of 85,000,000 gallons of benzol and about 12,500,000 gallons of toluol. These bases, when nitrated, will make 438,000 tons of picric acid and trinitrotoluol, which is 1,200 tons of high explosives a day.

"Here we are presented with another problem, since not only does this industry supply the much-needed nitric acid, but the necessary toluol and phenol to be nitrated as well. Still we are not satisfied with these results, but want to foster an industry that produces none of these bases. Again one asks why.

"During the distillation of tar the so-called light, middle, and heavy oils come off and we have the first nine dye crudes that by addition and subtraction of various chemicals and by chemical changes make up the 300 dye intermediates, which by further addition and subtraction make the 1,200 different coal-tar derivative dyes now manufactured.

"From the gas and tar we recover the naphthaline of moth ball fame, and which as nitronaphthaline appears in explosives. We recover creosote, the wood preservative and medicine; we compound phenacetine, the fever controller; salicylic acid, which becomes aspirin, that stops the ache in the bones; phenol (carbolic acid), the surgeons' disinfectant; saccharin, the diabetic's sugar substitute; benzaldehyde, the base of perfumes, and benzoic acid, the food preservative. From the pitch we make tar paper, roofing, fuel, road binder, coke, electric insulation, waterproofing, paving filler, carbon electrodes, briquettes, foundry core binder, and paints.

"When we realize that in 1917 there will be over 300,000,000 gallons of tar, or 3,000,000,000 pounds, which is 1,500,000 tons, of which 900,000 tons will become pitch, etc., leaving 600,000 tons for medicines, dyes, disinfectants, and explosives, it seems as though this industry did not need help, and yet, curiously enough, it does, and needs it very badly, if we are to make the United States the source of supply of the world for these industries. It is a sturdy industry in the sense that, though neglected, unhelped, without tariff to subsidize it, it has grown and expanded, but the dyes that should be ours come from Germany; the medicines and disinfectants, in which we should be self-contained, come from Germany—and the industry must have help to put it where it can ship the dye crudes and intermediates, as the Government urges us to do, to Switzerland and England, and, best of all, to Japan and China. We are not getting that help, with a Government-owned hydroelectric plant, built to supply nitrogen to the fertilizer plants, not on a price based on supply and demand, but on a price based on Government-owned horsepower, that will enable the cyanamide manufacturers to supply a comparatively few tons of nitrogen to break that market at will."

Mr. Clarke said it would be worth while to examine the present yields of by-products from a ton of coal and see how sulphate compares with the rest. One ton of coal, he said, yields about 70 per cent of coke, and it costs from 60 to 70 cents a ton to convert it into coke. One ton of coal, he says, will yield as follows:

6,000 cubic feet of surplus gas of 550 B. t. u. value for fuel or illuminating, say, 8 cents per 1,000 cubic feet	$0.48
20 pounds sulphate of ammonia, which has sold for some time past at 3 cents per pound	.60
7 gallons of tar, worth 3 cents per gallon	.21
2¼ gallons of benzol, worth 15 cents per gallon	.375
3 gallons of toluol, worth 15 cents per gallon	.045
	1.710

"These figures show," said Mr. Clarke, "that sulphate of ammonia yields the largest return of any of the by-products, and this one item alone in the balance sheet practically takes care of the conversion cost. The gas is only valued according to the number of British thermal units it contains as compared to coal, or for illuminating purposes, comparing its candlepower value to the method in vogue in making gas in that particular location, so we may say that the gas value is fixed by its composition in direct ratio with the bituminous coal market.

"We all realize now that the building up of the German dye industry till it practically supplied the world's consumption was not entirely due to the desire for monetary gain, but was part of the big scheme of things we now call German efficiency, which has made the war really possible on its present scale. By subsidy and cooperation between German dye makers, bankers, and steamship owners dyes were laid down at such a low cost to the consumer that production in other countries practically ceased.

"The result is that Germany to-day has many ammunition plants scattered through the country, for the dye plant is readily and economically converted to that use, and the bases of the dyes are the same bases used in high explosives. That is what the war taught the world."

Pecan Industry.

EXTENSION OF REMARKS

OF

HON. FRANK PARK,

OF GEORGIA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, January 6, 1917.

Mr. PARK. Mr. Speaker, I ask unanimous consent to extend my remarks by printing in the RECORD information obtained from the Department of Agriculture relating to the pecan industry in 26 States of the United States.

There was no objection.

The letter is as follows:

DEPARTMENT OF AGRICULTURE,
Washington, January 3, 1917.

HON. FRANK PARK,
House of Representatives.

MY DEAR MR. PARK: In reply to yours of December 27, with which you inclose copies of resolutions passed by the National Nut Growers' Association, in annual convention at Jacksonville, Fla., November 24, 1916, urging that in view of the rapidly increasing importance of the pecan industry, this department give more attention to the solution of difficult problems which confront the industry, I would say that the matter has been given very careful consideration in the Bureaus of Plant Industry and Entomology, with your specific suggestions in view.

As a result of this consideration, I beg leave to advise you as follows:

The Bureau of Plant Industry is at present studying certain important cultural and varietal problems, at a cost of approximately $4,000 per annum. It is also investigating diseases affecting the pecan, upon which work about $3,000 is expended.

In the Bureau of Entomology about $4,600 is used in the investigation of insect enemies of the pecan.

While the experience of pecan growers in many parts of the South indicates that pecan production is destined to become one of the most important lines of orchard development in the Southern States, the newness of the undertaking and the wide variety of conditions under which the plantings have been made have brought to light several important difficulties which will need to be overcome before the industry can be regarded as on a stable basis. The specialists of the department have been in touch with the situation and have made effective use of the funds available for such work, but neither the existing appropriations nor the estimates now under consideration make provision for any enlargement of this work.

This is one of the many directions in which the department's work might be extended if the funds were ample. In view of all the conditions, the department was compelled to attempt to keep its estimates down to a reasonable point. If the Congress should determine that the work relating to the pecan industry should be enlarged at this time, the following additions to the estimates would enable the department to extend its work in this field as indicated:

"BUREAU OF PLANT INDUSTRY.

"An increase of $5,000 in the subappropriation 'For the investigation of diseases of orchard and other fruits.'

"This increase would be used specifically to further investigate the various diseases of the pecan due to fungi, bacteria, or physiological causes; to determine under what conditions these respective troubles are most in evidence as connected with varieties, conditions of culture, location, and soil; to develop remedial measures and to test them on a practical scale in orchards and nurseries.

"An increase of $10,000 in the subappropriation 'For the investigation and improvement of fruits and the methods of fruit growing, etc.'

"This increase would be used for investigations and experiments with a view to devising methods of orchard practice through which the yield of orchards of standard varieties of pecans may be brought up to the approximate yield of the most productive trees; to obtain by discovery, breeding, or development trees which will come into profitable bearing at an age two or three years earlier than the present average; to obtain varieties best suited for cultivation in all parts of the country where pecans can be grown, and to discover the by-product uses for shells, hulls, pieces of kernel, etc., which are now largely wasted.

"BUREAU OF ENTOMOLOGY.

"An increase of $5,000 in the subappropriation 'For investigations of insects affecting deciduous fruits, orchards, vineyards, and nuts.'

"This would be used to continue and to enlarge the investigation of insects injurious to the pecan and to test out on a large scale in orchards remedial measures to determine their practicability from the standpoint of cost and efficacy."

In accordance with your request, I am inclosing herewith a memorandum prepared by the Bureau of Plant Industry regarding the pecan industry.

Very truly, yours, D. F. HOUSTON, *Secretary.*

THE PECAN SITUATION.

Nuts occupy a unique position in the list of important horticultural products, in that, with the possible exception of a few other fruits, in the raw condition they alone afford a fairly complete and balanced food for human beings. In comparison with other foods the edible portion of most nuts is very concentrated, being rich in protein and fat and containing little water. The two nuts of greatest importance grown in this country at the present time are the Persian (English) walnut and the pecan. Compared with round steak walnut kernels have been found to contain about one-twentieth as much water, practically the same proportion of protein, four times as much fat, and to have more than three times as great fuel value. Pecans contain about the same proportion of water as do walnuts, but in comparison with steak they contain about two-thirds as much protein, between four and six times as much fat, and have between three and four times as great fuel value. Comparatively speaking, nuts are well supplied with mineral matter, therefore they contain the elements which are essential in building the frame of the body as well as nourishment for the tissues. When used as a component part of the meal and well masticated, nuts are capable of forming a big part in a well-balanced diet.

Nuts are more and more entering into the list of staple foods, not only as a substitute for special classes of foods but to a large extent as substitutes for foods of all classes. There are few sections in the United States suited to agricultural purposes in which some species of nut trees can not successfully be grown.

The one species of nut which now promises soon to surpass in importance any other is the pecan. This nut is a native of America. To some extent it is produced in Mexico, but outside of the North American Continent it is neither native nor under cultivation in any part of the world. Pecan forests and single trees are distributed throughout the rich alluvial river-bottom sections adjacent to the Mississippi River and its tributaries from southeastern Iowa and the Wabash River near Terre Haute, Ind., south to near the Gulf of Mexico and southwest to lower Texas. The native range of the pecan extends into 12 States, and man has carried it into 14 others. In several of these latter States pecan growing has become an important commercial industry, but in the majority it is still in the elementary stages of development.

For home use the pecan has been planted about the residence grounds in the South since the arrival of the first settlers. Commercial planting, however, hardly began before the late eighties. Lack of knowledge regarding the cultural requirements and commercial possibilities of the pecan, lack of financial means, an almost entire lack of market, and other handicaps prevented extensive commercial planting until very recently. Records show that a few fairly large orchards were planted about 1885, but in the main extensive planting dates no further back than the beginning of the present century. A very great majority of the large orchards have been planted since 1905.

It is probable that the greatest impetus given the pecan industry thus far came as a result of the perfecting of machinery for cracking the nuts. Several different types of machines are now in use, having an individual daily capacity for cracking from six to eight hundred pounds of nuts in such a way that approximately 75 per cent of the kernels may be separated from the shells as unbroken halves.

These machines first appeared about 1900. At that time pecans from the forest netted the growers but 2 or 3 cents a pound, and were in demand only to a limited extent at that price. But with the solution of the cracking problem consuming demand increased, and prices received by producers soon rose materially. Since then prices have steadily advanced until now the wild nuts are netting the producer an average of 12 to 15 cents per pound.

In the planted orchards, under favorable conditions of culture, young trees now 8 and 10 years old are averaging 2 or 3 pounds per tree over the entire orchards. At the same age the best parts of the orchards under the most favorable conditions and in favorable years not infrequently produce from 12 to 15 pounds per tree. The average number of trees per acre of the orchards already planted is 20. Twenty trees per acre, each averaging 12 pounds, yield 240 pounds per acre. At 25 cents per pound, a low price for the improved varieties, the gross return would be $60 per acre for what might be called the initial crop.

The pecan is unique in several respects: (1) With practically no improvement as a result of culture and breeding, but taken directly from nature, many of the wild pecans afford an exceedingly desirable product. Unconscious and therefore unsystematic selection and planting of pecan seed about dooryards during a period of less than 200 years has developed varieties of such desirable quality that the nuts successfully compete with other species like the almond and walnut which have been under cultivation for many centuries. (2) Being grown only in this country and in Mexico, the world must to a large extent look to the United States for its supply of these nuts. (3) As a result of the superior merit of this class of pecans and the limited extent to which they are grown, they are now netting the growers in certain districts a value per volume of product ranking them among the highest-priced horticultural products grown on a large scale in this country. Carloads, weighing approximately 36,000 pounds each, were recently (October, 1916,) shipped from the Albany district of southwest Georgia to Chicago brokers at 35 cents a pound, or $12,500 a car. These prices were for pecans of the second class, the firsts bringing still higher prices. (4) With the exception of a few fruits of minor importance, such as the fig, persimmon, and possibly some others whose commercial possibilities are not yet established, no other orchard tree approaches the pecan in promise in the sections and sites best suited to its growing. To a large extent the pecan fills a gap between the range of citrus production in the South and that of the deciduous fruits in the North. (5) The development of the industry has now reached a stage where the pecan promises to become an important money crop in the cotton belt, at a time when the boll weevil is becoming a serious menace to the cotton industry.

SPECIAL PROBLEMS OF CULTURE NOW CONFRONTING THE PECAN GROWERS.

In the evolution of such a tree crop as the pecan, the necessary problems to be solved are: (1) The determination of the extent to which the species will adjust itself to cultivation, and the range of the cultural area within which it will succeed; (2) the selection of the best individual trees or plants from the forest and their propagation as named varieties; (3) the working out of important cultural details such as methods of propagation, the best soils and methods of planting, proper distances between trees, methods of cultivation, etc., all having to do with the care of orchards before attaining the bearing age; (4) the care of mature orchards; (5) the harvesting, handling, and marketing of the crops.

In addition to these, there are other problems which must be taken into account throughout the entire progress of the industry; such, for example, are those of insect pests, fungous diseases, the maintenance of soil fertility, and the growing of other crops in the space between the trees.

Experience has shown that whenever a plant is taken out of its native range and brought under cultivation, new diseases and insect pests and new problems with the old pests are sure to follow. Also, that the larger the number of plants of a single species grouped together, the more concentrated and convenient becomes the food supply for the pests attacking the particular species, and hence the more rapid and certain their multiplication.

Studies by the Department of Agriculture have thus far revealed a total of 12 diseases to which the pecan is subject. These belong to two distinct groups—parasitic and physiological. The former are organic in their nature; that is, they are plants in themselves, of low order, living and multiplying in much the same manner as do plants of higher order, but living upon other plants (hosts) instead of the soil. Six diseases, including some of the most serious, belong to this group. Enumerated, these are:

Pecan scab: Seriously attacking the nuts of some varieties and tender shoots of certain varieties when allowed to grow late in the season.

Nursery leaf blight: Often serious on nursery trees, causing premature defoliation and resulting in stunted growth.

Brown leaf spot: Serious on orchard trees, somewhat like the preceding in that it causes premature defoliation.

Anthracnose: A disease of the nuts; not serious at present.

Mildew: A disease attacking the nuts; not serious at present.

Crown gall: A disease of the tree; not serious at present.

Physiological diseases may result from an unfavorable condition of soil fertility, soil moisture, or climate, or a combination of two or more of these. Five diseases belonging to this group are now known as follows:

Rosette: A very serious tree disease, stunting growth and preventing the bearing of fruit. Perhaps 10 to 20 per cent of all planting is affected.

Black pit: A disease of the nuts; very serious; during the past season (1916) causing great loss in many orchards in the Gulf States and north as far as Tennessee.

Louisiana leaf blight: A disease which is very serious in Louisiana and in Mississippi, frequently causing severe defoliation in August and September.

Die-back: A rather uncommon disease of old trees; therefore not serious.

Frost injury: Common and serious under some conditions.

In addition to these 11 diseases there is one of more recent appearance, the exact cause and origin of which has not yet been worked out. It is known as "Kernel spot." It is becoming increasingly serious. It causes spots to develop on the kernels, which render them bitter and unfit for use.

Among the insects attacking the pecan there are a number which together result in injury to the trunk, limbs, branches, foliage, buds, and the nuts in various stages of development. Among those which commonly are the most serious are:

The pecan leaf case bearer: An insect which causes serious injury by destroying the leaf buds in the spring.

The pecan nut case bearer: An insect closely related to the preceding. It is of serious importance in that, following its attack, large numbers of the young nuts fall to the ground.

The pecan shuck worm: An insect of prime importance, doing great damage by tunneling its way through the hulls of the nuts while immature, thereby causing a high percentage to become defective or to fall to the ground.

The pecan weevil: An insect reported to destroy from 20 to 35 per cent of the crop in some sections by eating out the kernel of the mature nuts.

The twig girdler: A serious pest in some orchards, causing damage by cutting off small branches and causing them to fall to the ground.

In addition to these insect pests, there are several important groups, each representing closely related species, causing similar types of injury, as follows:

Borers: Causing serious injury, or even death, by attacking the trunk, limbs, or branches of the trees.

Caterpillars: which feed on the leaves, sometimes causing complete defoliation to the trees over considerable areas.

Plant lice or aphids (especially two or three species of Phylloxera): Insects which so distort the foliage as to cause it to fall; especially serious with some varieties of pecan trees.

In some sections each of the important steps of development has been experienced by the pecan industry. In the more advanced sections the earlier problems have been passed over; but in no section are any of the important problems altogether solved. In the newest sections it is mainly one of varieties; but in the oldest sections it is one of caring for mature orchards, including the guarding against diseases and insect pests and of handling the crop of nuts; but in the vast area covering the intermediate sections practically the whole set of problems is unsolved.

The contributions of the Department of Agriculture to the solution of pecan problems thus far might be enumerated as follows:

1. A very careful study has been made of the character, merit, and apparent adaptability to the different sections of practically all varieties of pecans thus far named and propagated. Typical specimens of each of these varieties are in a herbarium collection maintained by the department.

2. The cultural methods of individual growers in all parts of the South have been observed and the results noted.

3. A substantial beginning has been made in investigating the pollination problems of pecan varieties and in breeding new varieties.

4. Material aid has been rendered to the industry in assisting it in establishing definite sizes for the pecans marketed.

5. Pecan diseases have been carefully studied, written up, and the descriptions of all but a few of the major diseases have been published.

6. The insects affecting pecans have been under careful study for several years. One publication on the subject has been issued and several more are now in preparation.

7. Nearly all of the practical information relative to pecan growing thus far acquired by the department has been placed at the disposal of the growers. This has been accomplished through departmental bulletins, by correspondence, public addresses, and private interviews.

Up to the present time pecan orcharding has been passing through an experimental stage. Now, however, commercial production is important. The value of the planted orchards runs well up into millions of dollars. The bearing orchards probably represent no more than two-fifths of the total. The production from the cultivated trees has been estimated at 750,000 pounds in 1915 and about the same in 1916. A series of destructive hurricanes swept the Gulf Coast States during these years and caused a reduction of the crop. According to the last census figures the total production of pecans in 1909 was 208.4 per cent greater than that of the census preceding. These figures showed that pecan trees of bearing age were then reported from nearly 38,000 farms, as compared with 24,000 reporting orange and 6,000 reporting grapefruit trees of bearing age. Pecan trees then not of bearing age were reported from 44,000 farms, oranges from 20,000, and grapefruit from but 4,000. Therefore a total of 82,000 farmers were then engaged in growing pecans, 64,000 in growing oranges, and 10,000 in growing grapefruit, or 18,000 more in pecans than in oranges and grapefruit combined. Pecans are of commercial importance in 17 States and of limited importance in 10 others.

No figures are available to show the rate of development in pecan orcharding since the last census was taken in 1910, but the principal development has taken place during this latter period. In the Albany district of southwest Georgia alone, which at the present time is one of the large pecan orchard regions, before entering the city from the north, the railroad passes through several miles of orchards on each side of the track; and again, after leaving the town in going south, great orchards extending for a mile or more in each direction line the track for a distance of from 12 to 15 miles.

The pecan industry is now at a stage at which it should be quite possible to take definite hold of its problems in such way as to bring about the following results:

1. To discover fundamental principles through which the yield of orchards of standard varieties of pecans may be brought up to the approximate yield of the most productive trees; to obtain, by discovery, breeding, or development, trees which will come into profitable bearing at an age two or three years earlier than the present average; to obtain varieties best suited for cultivation in all parts of the country where pecans can be grown, and to discover by-product uses for shells, hulls, pieces of kernel, etc., which are now largely wasted.

2. To further investigate the various diseases of the pecan due to fungi, bacteria, or physiological causes; to determine under what conditions these respective troubles are most in evidence as connected with varieties, conditions of culture, location, and soil; to develop remedial measures and to test them on a practical scale in orchards and nurseries.

3. To continue and to enlarge the investigations of insects injurious to the pecan, and to test out on a large scale in orchards remedial measures to determine their practicability from the standpoint of costs and efficacy.

Memorial Urging the Abolition of the Liquor Traffic in the District of Columbia.

EXTENSION OF REMARKS
OF
HON. WILLIS C. HAWLEY,
OF OREGON,
IN THE HOUSE OF REPRESENTATIVES,

Tuesday, January 9, 1917.

Mr. HAWLEY. Mr. Speaker, I present for the consideration of the House the following telegram from the secretary of state of Oregon, transmitting a memorial adopted by the legislative assembly just convened urging the abolition of the liquor traffic in the District of Columbia:

SALEM, OREG., *January 9, 1916.*

W. C. HAWLEY,
House of Representatives, Washington, D. C.:

The following is transmitted to you by direction of the legislative assembly, senate joint memorial No. 1:

"To the honorable the Senate and House of Representatives of the United States of America in Congress assembled:

"Your memorialists, the Legislative Assembly of the State of Oregon, respectfully represent that—

"'Whereas the District of Columbia is under the governmental jurisdiction of the Congress of the United States and the existence of the open saloon at the Capital of the Nation is a menace to the welfare of all the people and especially to the inhabitants of said District and an evil example to the Nation; and

"'Whereas at least three-fourths of the population of the United States now live in territory where the liquor traffic is prohibited and the growing convictions of mankind are strongly averse to such traffic and the various evils inseparably connected with it; and

"'Whereas our National Capital should be kept free from contaminating influences as far as possible not only for the sake of the inhabitants thereof but as an object lesson to the Nation: Therefore be it

"'*Resolved by the Senate of Oregon (the House of Representatives concurring)*, That the Congress of the United States be, and it is hereby, memorialized speedily to enact such legislation as will abolish the traffic in intoxicating liquors within the District of Columbia.'

"Adopted January 8, 1917.

"GUS C. MOSER, *President of the Senate,*
"R. N. STANFIELD, *Speaker of the House,*
"By BEN W. OLCOTT, *Secretary of State.*"

There is not opportunity at this time to comment upon this vigorous and eloquent memorial further than to say that the people of Oregon at the recent general election voted to abolish the traffic and use of liquors in the State. For several years many of the counties in the State have been dry, and for a year the traffic has been prohibited. The recent vote is the logical conclusion from the experience of the people, under dry laws, that such legislation has increased the welfare and prosperity of the people, the happiness of families, the care and nurture of children, and been productive of every good, while at the same time reducing violations of law and the distress and taxes incident thereto.

The Army on the Border.

EXTENSION OF REMARKS
OF
HON. JOHN M. MORIN,
OF PENNSYLVANIA,
IN THE HOUSE OF REPRESENTATIVES,

Tuesday, January 9, 1917.

Mr. MORIN. Mr. Speaker, in the last few months we have heard much about the service of the National Guard at the border. There have been many things said by way of commendation of their work and aid to their country, and there have been equally as many things said that are derogatory. I would like to call to the attention of my colleagues an article entitled "Where responsibility rests," which appeared in the Greensburg (Pa.) Daily Tribune of January 5, 1917, and was written by its editor in chief, Mr. R. W. Herbert. This is an article that is written by a man who for years has been intensely interested in anything that concerns the National Guard or Regular Army. He has studied conditions, has been a close student of things military and naval, and being a man of unusual culture and attainments, and one of the best editors of my State, his judgment in matters of this kind is to be sought; when he speaks it is with the authority of a man who is entirely fitted to give judgment that is well fortified with facts and fully

worthy of deep consideration. I therefore ask, Mr. Speaker, the privilege of inserting in the RECORD this article:

WHERE RESPONSIBILITY RESTS.

The National Guard of the country, now quitting the Mexican border at short and regular intervals, is not content with the estimate in which it is held by the swivel-chair warriors at Washington.

The guardsmen are modest in their claims for their efficiency and skill. They know that the National Guard as a system is inadequate, but they feel that it is not all wrong. They realize, however, that the unsatisfactory guard system puts the burden of national defense upon the patriotic commands, and enables the coward and shirker to remain at home, or at least out of the danger zone.

That is admittedly one of the most striking defects of the National Guard system. There are others, but none more conspicuous, and universal training would seem to be the cure for that.

The guardsmen, however, argue—and of a right—that the National Guard is a school for soldiers. Intelligent and capable young men through guard training are given freely and effectively many things an officer and a soldier should know. It teaches the young and ambitious men the art of handling men; it compels obedience; it puts into practice a great variety of things which are demanded and absolutely necessary in case of conflict with an enemy.

Even the severest critic of the National Guard as a whole will not contend that the citizen soldier is in any way responsible for whatever confusion attended its recent mobilization on the Mexican border. The General Government has had a part in preparing and fitting the guard for duty. Regular Army officers have at short intervals inspected and controlled the drilling of the guard. These Regular Army officers have at regular intervals inspected and examined the guard equipment. In fact, the management of the guard has been to some extent vested in the General Government. Yet when the President called to the guard of the North it responded with alacrity and a pleasing willingness, only to find that as soldiers they were shabbily equipped for service outside their armories and were not prepared for action beyond a season of camp life.

The States may have been to some extent responsible for the actual condition, but surely it would be only fair to agree that the responsibility was divided between the State and the National Government.

The act under which the guardsmen were hurried to the Mexican border specifically designated them as the second line of defense. It was not the purpose of the Hay bill to make border patrolmen out of the guardsmen unless the first line had crossed the border.

The Hay bill, as a means of meeting conditions in Mexico, also designated the Regular Army as the first line. And what of the Regular Army? Hasn't that system broken down in the most lamentable way? The Department of War may have an abundance of equipment for its accepted first line, but there has been and is now a deplorable lack of soldiers, and soldiers are as necessary as equipment when war threatens. Recruiting for the first line of the Army has been more or less a farce. It is the General Government's farce, too. The pay of soldiers has advanced but $2 a month in 50 years.

Again, what defense is there for a Regular Army system which prevents the President, Commander in Chief of all the armies of this great Nation, from making an appointment in the Army anywhere between a second lieutenant and a major general? The first lieutenants, the captains, the majors, the lieutenant colonels, the colonels, and the brigadiers advance automatically only. For distinguished service, or for any other legitimate reason, the Commander in Chief is empowered to advance a second lieutenant to be a major general, but he has no authority between those positions. If the first lieutenant dies, is removed, or quits his post the second lieutenant moves up and fills the vacancy without official shoving, and so along the whole line to the top command. That surely is a system of "watchful waiting" that has already become tiresome.

The National Guard system may be weak in spots, but it does not have a monopoly of all the military weaknesses in this great country.

The best possible answer to the swivel-chair critics of the National Guard is, "Physician, heal thyself." And the healing process should start promptly.

Development of Water Power From the Waters of Niagara River in the State of New York.

EXTENSION OF REMARKS
OF
HON. CHARLES B. SMITH,
OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, January 9, 1917.

Mr. SMITH of New York. Mr. Speaker, the purpose of the joint resolution is to make temporary provision for supplying the consumers on the New York side of the Niagara River with power which has been taken from them through the action of Canada with respect to the exportation of power generated on the Canadian side of the Falls. Two bills have been introduced and are now being considered by the Committee on Foreign Affairs of the House, which deal in a permanent way with further diversions of water from the Niagara River, both above and below the Falls. The temporary relief provided by the joint resolution is necessary, however, in order that immediate supply may be had by consumers whose power has been taken from them through the withdrawals made by Canada. The amount of power so withdrawn from New York State consumers during the year 1916 is upward of 60,000 horsepower, and I have seen a recent statement issued by the department of inland revenue, Ottawa, advising the companies developing power on the Canadian side that they should be prepared to supply the Hydro-Electric Power Commission of Ontario with 50,000 additional power by April 1, 1917. If this requirement is insisted upon, it means the withdrawal by Canada of this further amount in the early spring of this year, a total withdrawal of 110,000 horsepower within the short space of one year.

Therefore it must at once appear that not only is this temporary provision for the supply of New York State consumers necessary and of vital importance at this time, but that there should be legislation at this session of the Congress which will, within the limitations of the treaty, deal in a permanent way with this important problem.

PENALTY AND COMPENSATION.

The amendment offered to the joint resolution by the gentleman from Illinois [Mr. MANN] is, I am told, in the nature of a penalty. In effect it provides that any permittee shall be required to enter into a contract to pay $100 per annum for each cubic foot of water used—of the 4,400 cubic feet dealt with by the resolution—in case the same is taken by such permittee after March 4, 1917. If this provision is in the nature of a penalty, pure and simple, then I have no objection thereto. If, on the other hand, this provision is one for compensation, or if it is likely to be so construed, then it is objectionable, and I desire to here record my objections thereto, stating briefly my reasons for raising the same.

As I have stated, legislation looking to permanent and much larger relief is now pending, and I trust this legislation will receive the favorable consideration and action of the present Congress. Now, if it is proper and right that compensation should be exacted by the Federal Government for a permit temporarily to divert and use the waters of the Niagara River for power purposes, then it must follow that it will also be right and proper that such exaction be required by any permanent legislation dealing with the diversion of waters from this river for power purposes. Therefore I wish to raise and discuss at this time the whole question of the propriety and legality of any such exaction.

LEGALITY OF COMPENSATION.

Is such an exaction either legal or proper? I maintain that it is not. It will no doubt be conceded that the Federal Government has no proprietary right in the waters of the Niagara River, in the lands underneath the river, or bordering upon the river. This being so, what rights and powers may it legally and properly exercise in the premises?

The Federal Government may exercise its sovereign jurisdiction for the furtherance and preservation of Federal purposes and uses. It may exercise such powers and rights with respect thereto as are delegated to it by the provisions of the Constitution. It can not legally, lawfully, or justly go further. With respect to the Niagara River, this Government has the undoubted right of control in the interest of navigation, and in the interest of protecting or furthering any other Federal purpose arising from the nature and location of this river. But it has no property interest in the thing being dealt with, and therefore has nothing upon which legally to base or impose a toll or tax. The exaction of any compensation in this case would necessarily be in the nature of a tax.

Congress, in the House and the Senate, has already passed upon bills looking to general water-power legislation. In the Senate a bill has been passed known as the Shields bill. When this bill was before that body for consideration an amendment was offered by Senator WALSH, of Montana, providing that the Secretary of War might fix reasonable charges to be paid by the permittee for the use of the waters of navigable streams for water-power purposes. This proposed amendment was debated at length on the 16th of February, 1916, and at the conclusion of the debate a vote was taken on the proposed amendment resulting in its defeat, the number voting in favor thereof being 15, and the number against 36. I believe a few excerpts from the remarks of Senator SHIELDS on that occasion very much in point here and at this time.

RIGHTS OF RIPARIAN OWNERS.

In discussing this proposed amendment offered by Senator WALSH, Senator SHIELDS said:

The States in which the navigable rivers are situated have sovereign power over the beds and waters of navigable rivers, and the States and the riparian proprietors, as the laws of the State in question may provide, have title to and own them. This seems to be settled beyond controversy. The first case coming before the Supreme Court in which the question arose was that of Pollard *v.* Hagan (3 How., p. 212), and the rule then announced has been adhered to ever since. It is there said:

"By the preceding course of reasoning we have arrived at these general conclusions: (1) The shores of navigable waters and the soil under them were not granted to the United States by the Constitution, but were reserved to the States, respectively; (2) the new States have the same rights, sovereignty, and jurisdiction over this subject as the original States; (3) the right of the United States to public lands and the power of Congress to make all needful rules and regulations for

the sale and disposition thereof conferred no power to grant to the plaintiff the lands (tidewater lands) in controversy."

* * * * * * *

The States have such interest that they maintain suits to protect the waters of navigable rivers which flow through their boundaries from pollution, as was held in the case of Missouri *v.* Illinois (185 U. S.), or to prevent an excessive and unlawful use of the waters, as was held in Kansas *v.* Colorado.

* * * * * * *

The States may retain the title to the lands under the waters or grant it to individuals and hold the waters flowing over it in trust for the public. The riparian proprietors may acquire a fee simple title to the bed of the stream if allowed by the laws of the State within which stream flows, but their interest in the waters is only that of usufruct. It is true that the sovereignty and title of the States and individuals in the beds of navigable streams and other waters is in all cases subject to the power of the Congress to control and use them for purposes of navigation, and of the necessity and extent of the control and use required it is the sole and exclusive judge. From its determination there is no appeal. This power springs from that to regulate commerce and is of that class of power defined as the police power. Within the sphere of its control the power of Congress is absolute, unlimited, and paramount.

GOVERNMENT HAS NO PROPRIETARY INTEREST.

The Federal Government, however, has no proprietary interest in navigable rivers and can not interfere with the control and use of them by the States and riparian proprietors, except through the power of Congress to regulate commerce—as applied in this case, to facilitate navigation. The power of Congress is to control the easement of right of way for navigation which the general public has in navigable streams, to which servitude the rights of riparian proprietors must in all cases yield, and the control by the States yield when Congress exercises its higher power of regulation.

* * * * * * *

The United States having no property in navigable streams, the Congress, as its agent, can not constitutionally sell or lease the beds and waters of those streams for any purpose, its power being confined to the control of them for the purpose of navigation. When it attempts to do more, either directly or by coercion of the riparian owner, it is guilty of confiscation of private property.

* * * * * * *

To impose such conditions would be a gross abuse of the police power to regulate transportation upon navigable rivers. Mr. President, I believe it is conceded by everyone that the United States has no proprietary interest in navigable rivers, either in the waters, beds, or banks; that its sole power is one of regulation of the public highways which they constitute, yet under that power it is proposed that Congress shall say to the riparian proprietors:

"You can not use your property, although you do it in such a manner as will not obstruct navigation but materially aid it with your own private capital, unless you pay to the United States a tax to be distributed throughout the whole country."

I can not see anything but a gross oppression in such an exaction.

CONSTITUTIONAL TAX LIMITATIONS.

Charges of this kind can not be sustained as a tax. Congress has no power to levy such a tax. Its power to raise revenue is confined to taxes, duties, imposts, and excises, uniform throughout the United States. These charges can not be made uniform nor apportioned among the States, as the Constitution requires, nor can the power to fix the rate of taxation be delegated.

* * * * * * *

The refusal of Congress to allow the owner of the beds and waters of navigable streams to develop the water power of which their property is susceptible, although, according to plans approved by and under the supervision of the authorities which Congress has given control of navigable rivers, and by means of which will greatly improve and facilitate navigation, is unquestionably a gross and despotic abuse of power.

Upon what principle can the development of the great natural resources of the country for the prosperity and happiness of the people be arbitrarily prohibited solely because the owners of the property will not submit to an unjust exaction? There is no constitutional authority for such arbitrary deprivation of the use of private property. A law which forbids a property owner from using it for a lawful purpose without payment of a charge for which there is no constitutional warrant is as much confiscation as if the property itself is taken.

* * * * * * *

There is another answer to the position taken by the Senator from Montana in the matter of tolls, which seems to me to be conclusive. The United States owns the public lands, the proprietary interest in them, and has a perfect right to sell them, to dispose of them, in the language of the Constitution, and I apprehend that in the greater right to sell is included the right to lease, and if it has the right to lease, of course, it has the right to charge rent. I have not investigated that question fully. It is not one that is germane to this bill, in my opinion, but I would say that it is a sound proposition.

NOTHING TO LEASE, RENT, OR SELL.

In this case the United States has no proprietary interest. It has nothing to rent, nothing to lease, and nothing to sell. The cases are entirely different. There is no analogy; there is no parallel between them.

It is said that Congress could impose conditions when granting permits to riparian proprietors. Certainly Congress has the unlimited power over navigable streams, and it can arbitrarily declare that no structure of any kind shall be placed in any stream without its consent. Such are the provisions of the act of 1899, and it is only on account of that act that it is necessary to have the present legislation. For a hundred years previous to that act dams were built in navigable streams without the consent of Congress, and were only liable to be removed if they constituted obstructions to navigation. But this power was intended solely for the protection of navigation. It was never intended that Congress should exercise it to prohibit riparians from using their property in a lawful manner, unless they should pay a tax not exacted from others for permission to use their property. Congress can impose such conditions, but it would be an indefensible abuse of its power.

I believe the observations of Senator SHIELDS sound and unanswerable, and that his argument with respect to the legality or propriety of a provision requiring compensation applies with equal or greater force to the situation at Niagara. At this point the Federal Government, as I have said, has no proprietary interest. It has nothing to rent, nothing to lease, and nothing to sell. It owns no property upon the use of which it can base a charge, and any toll or compensation imposed or fixed by the Federal Government to be paid by a permittee would be, as pointed out by Senator SHIELDS, an unconstitutional exaction and an exercise of arbitrary power.

INDUSTRY AT A STANDSTILL.

Now, the purpose of this joint resolution and the pending legislation is to give full effect to the treaty between this country and Great Britain proclaimed in May, 1910. Unless this is done, and done speedily, the industries of central and western New York will be seriously crippled, and some of them, at least, ruined.

Canada has been active and zealous in giving full effect to the treaty from the day of its proclamation. Since 1910 development on the Canadian side of the river has more than doubled; on our side of the river, because of the inaction of the Congress, development has remained practically at a standstill. The difference in the attitude of the two Governments in this regard has caused many of our American industries to locate and build plants of immense proportions on the Canadian side. The industrial expansion in Canada by reason thereof has been rapid and has now reached the point where Canada is demanding and requiring that the power heretofore exported into New York State be withdrawn and sold to consumers in Canada.

I know that protests against this action on the part of Canada have been made. Whether these protests are based upon legal rights that have been violated I do not know; but I am reliably informed that Canada's attitude toward these protests is "Let your own Government give full effect to the treaty, and your cause for complaint against us will fall." This, I believe, to be the real crux of the situation. Legislation giving full effect to the treaty should be immediately passed, and it should be such legislation as will invite and encourage capital to make the required investment and at the same time result in the most efficient use of the water used.

At this point I wish to refer briefly to the situation with respect to water-power development wherever Federal control obtains.

Many water powers upon navigable streams where the Federal Government has undoubted jurisdiction for certain purposes have heretofore been developed, and the product of such developments is being disposed of to the great benefit of the communities in proximity thereto. These developments were made there before the Federal Government intervened or assumed control or under licenses which were favorable in their terms and requirements.

For a great many years the States exercised full control over the navigable rivers within their borders and gave authority for the construction of works within such rivers. The first general law by the Congress upon this subject was passed in 1890. Following this is the act of 1899, wherein Congress assumed full and complete control over navigable streams. Later, and in the year 1906, Congress passed another act to regulate the construction of dams across navigable rivers. This act required for such construction the consent of Congress by special act and provided certain conditions upon which the construction could be made. Following this legislation is the act of 1910 entitled an act to amend the former one, but which, in effect, superseded the statute of 1906. This act also required the consent of Congress for the construction of any works in navigable rivers and prescribed certain conditions to be imposed.

DEVELOPMENT WAS STOPPED.

These conditions proved to be of such a harsh and burdensome nature as to be prohibitive of further water-power development in navigable rivers. Among others, this statute imposes two very objectionable provisions, either one of which, in my judgment, is well nigh sufficient to prevent the making of any further water-power development by capital in navigable streams. Under this statute (a) the Secretary of War is authorized to fix and collect for the permit granted various charges; (b) the rights acquired under the act or pursuant to the permit may be arbitrarily forfeited in case the company fails to comply with any of the provisions of the act, and his license or permit may be canceled at will. The effect of this legislation has been absolutely to strangle all water-power development in navigable rivers. I believe I am right in asserting that no water power of any magnitude has been developed

pursuant to a permit issued in accordance with the provisions of the statute of 1910. The development at Keokuk in the Mississippi River was constructed under a special act granting, as I understand it, a permit in perpetuity, while the development at Hales Bar, in the State of Tennessee, has been made under a special act granting a permit for 99 years. In neither of these cases has the Government imposed or exacted any compensation or toll. Other instances might be cited where Federal permits have been granted without the exaction of any compensation as a condition thereof.

It is perhaps worth our while to here consider for a moment the length and breadth and importance of the subject we are dealing with. It is variously estimated that there are from thirty to sixty million horsepower of water-power energy within the United States which under reasonable legislative conditions would be feasible for actual commercial development.

In 1912 Mr. Herbert Knox Smith, then Commissioner of Corporations, made a report in which he estimated the minimum horsepower afforded by all streams of the United States at 32,082,000 and the maximum at 61,678,000. This does not include the power which may be made available by storage. More recently Mr. George Otis Smith, Director of the Geological Survey, made another estimate of the available water power of the United States as 55,000,000 horsepower. I understand this does not deal with power which may be made available by storage. Of the power available, if the minimum of the estimate of Mr. Herbert Knox Smith is taken as a conservative amount, less than one-fifth has been developed and turned to use. Fully 80 per cent thereof is running to waste, while the work which this waste might be doing is being done at the great expense of the coal resources of the country.

WASTE OF NATURAL RESOURCES.

The production of 1 horsepower continuously for 24 hours throughout every day in the year requires the consumption, under the most improved and modern apparatus, of at least 12 tons of coal per annum. At Niagara Falls, on the New York State side, if full effect is given to the treaty and the water is used in the most efficient manner, it is possible to develop in excess of the amount now being developed, at least 400,000 horsepower. That is, if the full 20,000 cubic second-feet allotted by the treaty is allowed to be diverted from above the Falls and this is used most efficiently, there can be generated from these waters at least 150,000 horsepower more than is now being developed; and if the development in the gorge below the Falls is permitted and is made, a further amount of approximately 250,000 horsepower can be produced. To produce 400,000 horsepower by coal would require approximately 5,000,000 tons of coal per annum. To produce the amount of the available undeveloped horsepower of the United States, based on the minimum above stated, would require a coal consumption of 300,000,000 tons. This is more than one-half of the entire annual coal consumption of this country at the present time.

In the interest of real conservation, therefore, such legislation should be enacted as will encourage the development of our vast water-power resources, and thereby conserve from exhaustion our coal resources. This is the turning of waste to usefulness that waste and destruction of the useful may be prevented, or at least postponed.

Now, with respect to further developments of power at Niagara, any provision requiring the payment of compensation will tend to discourage, and I fear prevent, its being made.

What we want at Niagara is legislation which will make possible the development of power within the limitations prescribed by the treaty. We want this legislation to be fair and of such a character that it will invite and encourage capital to make the required investment. We want this legislation to be of such a character as will be fair to the communities where the power is sold and used. We want it of such a character as will keep our own industries on the New York side of the river. We ought not to be humiliated by the spectacle of our own industries moving to the Canadian side of the river because of the more favorable attitude of that government toward them.

COMPANY DRIVEN TO CANADA.

At this point I am constrained to again quote from a speech of Senator SHIELDS, made in the Senate on February 9, 1916, wherein he says:

> We have the water-power resources in this country for the successful and profitable fixation of air nitrogen, and they would be developed for that purpose but for the unfortunate restrictive legislation which some impracticable people, calling themselves conservationists, succeeded in having enacted some years ago. About five or six years since, the Cyanamid Co. of America desired to build a plant of this kind in the State of Alabama, the initial cost to be about two and a half million dollars, provided they could obtain the necessary hydroelectric power. The Congress passed a bill authorizing the Alabama Power Co. to construct a dam in the Coosa River in that State to furnish in part the power needed. It was proposed to construct a dam with all facilities of navigation, at the expense of the company and under plans furnished by the Secretary of War, which would have resulted in making slack-water navigation in that river for a distance of 30 miles, but because the act did not provide for arbitrary Federal control and charges upon the business and property of the company it was vetoed by President Taft. This resulted in the loss to this country of that great industry and the improvement of the Coosa River without any aid from the Treasury of the United States. The Cyanamid Co. built its plant in the Province of Ontario, Canada, where it is now in successful operation, and the farmers of the South are buying its product with the freight charges of 1,000 miles added, whereas had the Alabama Power Co. been permitted to improve its riparian property on the Coosa River they could have had it delivered at their very doors.

BURDENS SHOULD BE UNIFORM.

Therefore, as a matter of policy, apart from its propriety or legality, I believe it unwise that any exaction of compensation should be made. In fact, it seems to me that any such provision could only be justified by such legislation as would make the burden equal with respect to all similar developments in the United States, whether heretofore or hereafter made; that is, everyone in the same class and enjoying the same sort of privilege should be given the same standing under the law. There should be no discrimination. The singling out of one case and subjecting such development to the payment of compensation, while others of a similar character were permitted to exercise and enjoy the same sort of privilege without any payment, would certainly be an unjust and unreasonable discrimination not only against the permittee but against the community in which the power is sold and used. It is manifestly unfair that the citizens of one State should be taxed for the benefit of the Federal Government for a thing which it uses and consumes while the citizens of another State using and consuming the same article under a license from the same authority are not taxed. It is in this case, as in all other cases, the fact that the consumer in the last analysis of things foots the bill. Therefore the exacting of compensation means greater cost to the consumer, for it must not be overlooked that all charges, rents, and taxes upon water-power development go to increase the operating expenses and fixed charges of the company producing the power. Every added burden, therefore, placed upon the development must necessarily go to increase the amount which is to be paid by the ultimate consumer. To single out one community and place such an added burden upon it would be manifestly unjust.

Aside from this, I desire further to point out what may very likely be the result of imposing a toll or tax of any considerable amount upon the right or privilege of developing more power at Niagara, particularly with reference to the situation in the gorge below the Falls, and to the pending water-power development legislation dealing therewith.

PROPOSED DEVELOPMENT.

A bill is now being considered by the Committee on Foreign Affairs under which, if enacted into law, permits may be issued for the development of power in the gorge below the Falls. A very large development on the American side is possible at this point. The cost of making such a development, however, is much greater per horsepower created than the cost of the developments which have been made above the Falls. If to this greater cost of development is to be added a charge not imposed upon the other developments it will be very difficult, if not impossible, to induce capital to invest the money required for such development. Further, should the development be made the company would be greatly handicapped in its operations because of the increased operating cost and fixed charges. I am told that the taxes imposed upon the companies operating on the New York side of the Niagara River already greatly exceed, per horsepower generated, the amount of the taxes and rentals imposed upon the companies on the Canadian side.

Attention has already been called to the fact that large consumers of power had located in Canada and built large plants there; that this has resulted because of the more favorable attitude of the Canadian Government toward development and use of water power. Stated conversely, because of the more unfavorable attitude of this Government during the past five or six years toward the development of its water-power resources

For the information of Members from Illinois, permit me to point out that the Chicago Tribune has gone into Canada, in the vicinity of Niagara Falls, and there built a large paper plant, capable of producing more than 100 tons of paper per day. It has located this plant there very largely because of the certainty of securing an adequate and continuous supply of hydro electric power. This plant is producing the quantity of paper just mentioned and is using in the manufacture thereof from eight to twelve thousand horsepower daily. The product so produced is shipped to and used by the Chicago Tribune in its daily publications.

Many other instances might be cited of industries of large moment which have located in Canada because of the more favorable attitude of the Canadian Government toward the development of power.

Another reason why no compensation should be imposed is that the Federal Government has a direct and vital interest in having the water-power resources of the country developed and used under the most favorable conditions, to the end that it may be produced at the lowest possible cost. I say the Government has a direct and vital interest, and I say this because of the fact of the rapidly increasing importance of electrochemistry to the national defense, illustrated with great force in the present over-seas war. Again I wish to quote from the speech of Senator SHIELDS, as follows:

THE NEEDS OF AGRICULTURE.

The greatest and most important of all uses of hydroelectricity is in heating and operating powerful electrical furnaces for manufacturing purposes of many kinds, some of which can not be carried on by any other means. I refer especially to the fixation of atmospheric nitrogen for the manufacture of agricultural fertilizers. Nitrogen, or ammonia, is the chief constituent element of agricultural fertilizers, and nitric acid is necessary in the production of smokeless powder and other high explosives. That which we now use for these purposes is obtained chiefly from Chile in the form of nitrate of soda, our annual importations being about 600,000 tons, of the value or cost of $21,000,000. The Chilean deposits of nitrate of soda are the only ones known, and all the countries of the world have obtained their supplies from them for many years. It is now estimated that these deposits will be exhausted in the course of some 10 years. If this is true, or we should be cut off from them by a superior naval power in time of war, our agricultural interests would be seriously crippled and national defense made impossible. These facts are not controvertible and we must provide for such contingencies. We have it in our power to do so. Nitrogen can be manufactured from the air in quantities to answer all our purposes. Four-fifths of the atmosphere that surrounds us and that we breathe is composed of this colorless, odorless, nonmetallic, gaseous element. Modern science after years of research and experiment by process of fixation, in the use of the electrical furnace, has made atmospheric nitrogen available for all the uses made of Chilean saltpeter.

MODERN SCIENCE IN MANUFACTURING FERTILIZER.

There are two methods or processes for the fixation of atmospheric nitrogen, one called the arc process, and the other the cyanimid process, but I will not undertake to describe them. They are both successful and each has its special advantages. The fact that nitrogen can be obtained from the air in quantities sufficient for all purposes required, and at a little less than half the cost of Chilean saltpeter, is now well established. Great nitrogen manufacturing plants, representing investment of many millions of dollars, are in successful operation in Norway, Sweden, Germany, Switzerland, France, Italy, Japan, Australia, and just across our border in the Province of Ontario, Canada. These countries were all quick to grasp the value of this great achievement of modern science and the advantage, if not the necessity, of providing within their own territories an abundant and economical supply of nitrogen, and have devoted much of their water-power resources to the generation of cheap hydroelectricity for that purpose. Germany alone has a hundred million dollars so invested. She has also an immense plant operated by steam produced by coal, but only military necessity will permit this, the cost being too great for industrial purposes. Practically all the vast quantities of explosives now used in the great war now raging in Europe are made from air nitrogen and much left for the manufacture of fertilizers. We are importing some that we use from Norway and more from Canada.

No place in the world lends itself better to the production in large quantities of nitric acid and refined steel than does the vicinity of the Falls. Here a large number of kindred industries have sprung up owing to the cheapness of the power and the large quantities which may be had.

In my judgment, therefore, instead of requiring compensation to be paid by a permittee making further development at the Falls, it would be far wiser and more in the interest of the Federal Government to make provision whereby, without Government investment it may be able to secure in times of emergency or of war the products to which I have referred. Such provision, I believe, would prove of far greater usefulness and benefit to the Federal Government than the imposition of any tax or toll possibly could. Such provision has been inserted in the bill introduced dealing with the diversion of water for power purposes in the gorge below the Falls. By the terms of this provision, the Government is not required to buy of any grantee any of his products unless it is to the advantage of the Government; and the Government, therefore, is free to go on and complete its proposed new nitric-acid plant and its armor plant and any other plant that it may see fit to build without embarrassment from this source. At the same time this legislation will provide governmental needs, without Government expense, that may be hereafter availed of at a rate of profit that the Government itself is to determine as and when the need is presented.

In conclusion let me say that I am seriously and strongly opposed to any provision requiring a permittee to pay compensation to the Federal Government. I believe such a provision to be legally, equitably, and morally bad, because it is the exercise of an arbitrary and illegal power. It is the taking of something of real substance out of the pockets of a few people in a given locality for the negligible benefit of the people of the whole country; it is discriminatory, because a single project is burdened; last, but not least, it is an act of the Federal Government which constitutes, in my judgment, a usurpation of powers and rights belonging to the States. The exercising of proper control for the furtherance and protection of a Federal purpose is one thing; requiring that the Federal Government shall be paid for permitting the use of that which belongs to a State or the individuals of a State is quite another.

And right here, for the benefit of the Colorado Members, who seem to think that compensation should be exacted of the permittees using the waters of the Niagara River, let me call to their attention the fact that the attitude of their own State is exactly what I have contended for here. In fact, no State in the Union is more zealous in claiming that the Federal Government's sole power over navigable waters within its borders is that of control for the purposes of navigation.

I understand that there is a possible development of hydroelectric power in the navigable streams of the State of Colorado of nearly 2,000,000 horsepower. I wonder if the gentlemen from Colorado favor the imposition of a Federal tax upon water-power developments in their own State? I fancy they would strongly object, and I believe their objections would be sound and well taken.

Therefore I hope that no Member of the House will unduly urge that provision for compensation should be required at Niagara or that any Member will urge or insist that any other burdensome condition be imposed the necessary result of which will be to prevent any further development being made.

Conscription is Undemocratic—Selfishness and Deceit of Militarists Exposed.

EXTENSION OF REMARKS

OF

HON. GEORGE HUDDLESTON.

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, January 10, 1917.

Mr. HUDDLESTON. Mr. Speaker, the militarists having succeeded in committing Congress to a policy of vast increases of Army and Navy, now take the next step in their program and demand conscription. Taking advantage of the world-wide terror inspired by the European debacle, they caused Congress to appropriate for the current year over $650,000,000 for military preparedness, and are now demanding $800,000,000 for next year. Having insisted last year that a standing army of 500,000 was necessary, they now increase the figures to 1,500,000, with a reserve of 1,500,000 additional.

In their new demands the militarists carefully avoid the use of the word "conscription"; they use the euphemisms "universal training" and "universal service." The scheme, however, can not be disguised with agreeable words. Conscription is what they are demanding; conscription in its true and odious form; conscription as real and oppressive as now exists among the embattled nations of Europe; conscription which drags the boy from his mother's side, the father from the bosom of his family, and places them in the ranks as unwilling soldiers in time of peace; conscription with all its crushing weight upon the people, its denial of personal liberty, its espionage, its hateful methods of registration and interference with the freedom of men to come and go, to live their lives, and to seek happiness and well-being in their own way.

Conscription as a system is universally feared and hated. No nation has ever been willing to endure it except under the fear of destruction. Prussia, the first of all to adopt universal military service, introduced it in 1806, when Napoleon had garrisoned all her important cities and had limited her standing army to 42,000. France adopted it after the terrible defeat of 1870, under the menace of a powerful and victorious Germany. The British yielded to universal service only after entering the second year of the present war, after having raised over 4,000,000 volunteer soldiers; and even as finally adopted it was not applicable to Ireland or the colonies. Australia voted conscription down two months ago, and our neighbor, Canada, though heroically responding to her duty in the great struggle, still declines to force her citizens into the ranks. How can it be, then, that the United States should accept any such system in a time of profound peace, when our friendship is courted by all the nations of the world?

Compulsory service in America is a new departure. In all our national life we have never had compulsory military service in time of peace. It can not be claimed that any emergency now exists. We are at peace with the nations and threatened

by none. They court, they crave, our friendship. Under such circumstances it is necessary that the advocates of conscription should produce some strong arguments in order to gain a patient hearing.

For the purpose of making their hateful scheme more acceptable to the masses, the militarists have brought forth the claim that conscription is democratic; that it is a burden shared equally by all the people; that it promotes equality. To coat the bitter pill, they make the specious plea that as public defense is the duty of all, conscription laws will secure that the pains of performing that duty be equally shared by all. They assert that conscription is democratic. It is with this phase of the question that I wish specifically to deal.

WHO FAVORS CONSCRIPTION?

First, I would inquire, Where does the demand for compulsory service come from? What influences are back of the agitation which would in time of peace make us a nation in arms? Does it come from the friends of the people, from those who have concerned themselves with the welfare of common men? Does it come from those who have proven their faith in democracy? Or, on the other hand, does it come from those who hate the rule of the people and would delight to thwart it? Who are they that are carrying on this agitation and seeking to convince America that compulsory military service is democratic?

I call the roll of great democrats and humanitarians, those who have battled for political freedom and the rule of the people, who have striven to elevate the condition of labor, to make the lives of women and children and the voiceless under half of humanity brighter and happier, who have labored for peace, who have recognized man's duty to his fellow man in the universal brotherhood. No answer comes. Out of all the leaders in efforts to ameliorate the condtion of mankind, no one answers in behalf of a system of conscription. To the contrary, with one voice they unite in denouncing it.

Where, then, does the support for this odious system come from? What classes favor compulsory service? I answer.

The military satrapy. Officers of Army and Navy, representatives of a system which is the very antithesis of democracy, an organization dependent upon a multitude of ranks in which each station adulates its superiors and despises those below it, which has its very breath of life in distinctions, differences, and their insignia, which finds its opportunity in increased numbers and has its honors and emoluments augmented by every humble private who may be brought into the ranks. The military system, with its manifold gradations, with its iron discipline, which has as its ideal the making of a senseless human machine with which the superior may work his absolute will; where the dangers and hardships are borne by the inarticulate men in the ranks and the honors and rewards are enjoyed by the wearers of gold lace and epaulets.

The great financiers. Owners of railroads and ships; captains of industry, who have heaped their millions out of the sweat of the masses, and who desire patient and docile servants in their industries; men of great wealth, who hold in their hands the capital of the Nation; who are seeking investments in the weak and undeveloped countries of the world, where they may fatten on concessions of mines and railroads; who are demanding the open door for investment and exploitation in China, though it involve fighting a bloody war 6,000 miles from our shores; who plan the financial conquest of Mexico and South America; who would send the American flag into the remote corners of the world so that rich profits may be brought home to their coffers; these men who hate democracy, who fear it, who with their vast wealth are chiefly interested in preserving the established order, with a free hand to monopoly and exploitation.

War traffickers, munitions makers, builders of ships for the Navy, and contractors for Army supplies. Those who coin their profits out of human blood and suffering, who owe their affluence to the great tragedy, battle; men who, masquerading as patriotic societies, have fomented the fears of the people, have financed moving pictures to terrorize the people, and carried on a Nation-wide propaganda for vast increases in Army and Navy in order that they might sell their wares.

The parasite press. The corrupt newspapers, preaching the doctrines of reaction; subsidized by selfish interests; echoers of all the undemocratic voices in our country; pandering to the selfishness of the small percentage of our people who aspire through wealth and prestige to rule over the many; drawing their support from the classes, and always insidiously seeking to discredit the common people, to make them ridiculous, and to destroy their influence; always the advocates of capital in its disputes with labor; always praising those of place and importance and spitting upon the humble and unfortunate.

Sycophants and snobs. All those who hang upon the coattails of the great and imitate and praise wealth and power wherever it is found; aristocrats of new-found wealth and ephemeral prestige, scorners of hard hands and soiled clothing, the would-be elect and privileged.

I would not charge all who favor compulsory service as belonging to the classes I have denounced. No doubt many unselfish and patriotic men favor conscription, have been convinced that it is necessary; but in the main these have been misled by a false propaganda. The agitation has had its source and mainspring in the selfish and undemocratic classes.

I speak in scoffing words of those who favor the new policy of conscription, but my bitterness is only forensic and superficial. I do not hate them. Many of them are not conscious of their undemocratic tendencies. They are clutched in the grip of their environment, associations, and selfish interests, and do not realize where the road leads to. Again, many of them are sincere in thinking with Carlisle that the world advances through its heroes and that the masses are of little worth. They would not have America a democracy ruled equally by all its citizens. They regret that we have no aristocracy, no class privileged by law, which would give greater stability to society. I do not hate them, but I abhor their opinions.

CONSCRIPTION DESTROYS PERSONAL LIBERTY.

Compulsory service, to be effective, requires the subjection of conscripts to many months of training, preceded and followed by systematic registration so as to know where each man is at any moment and what his movements are. From the birth of the unfortunate designed for conscription, the Government must lay its hands upon him, direct his movements and training, so that at the age for service he may be brought forward in the best possible shape, spiritually and physically, to be placed in the ranks. This necessitates constant supervision over his life. It would regulate residence, occupation, schooling, mating, and every detail of his life up to the period of service, and even afterwards, so long as the conscript is subject to be called to the colors. Such a system is wholly incompatible with the freedom of action constituting personal liberty. It is intolerable to a lover of liberty and wholly inconsistent with the spirit of democracy and self-government.

EXEMPTIONS TO PRIVILEGED CLASSES.

The plea for conscription is based on the assumption that the dangers and hardships of service would fall equally upon all alike. This is a false assumption. To the contrary, experience in conscript countries has shown that the privileged classes escape service through exemptions, substitutions, and evasions, while the hardships of service fall only upon the masses. Always the influential classes are able to escape the meshes of conscription laws by exemptions granted to educated classes and upper-class callings and by other privileges obtained by corruption or favoritism. Even in Germany in 1913 only 53 per cent of the male population of active service age were in the armies, while in Spain, Austria, Russia, and all other conscript countries, except France, the percentage under arms was much smaller.

It is one thing to pass conscription laws; another to enforce them. Always it is easier to enforce the laws against the poor and humble. If any may escape their meshes, it is the classes having wealth and influence. Let no hard-handed workingman expect to find the son of the capitalist serving alongside his son on terms of equality. A way will be found to avoid that. As a last resort there are unmerited promotions and soft places to be found, perfunctory duties to be performed, easy clerkships, and such like. The toil and the drudgery, the digging and the sweating, that will be reserved for the sons of the masses.

ARMY DEMOCRACY!

By the very nature of military organization it is antagonistic to democracy. It is the antithesis of equality. It has its multitude of ranks, each requiring unquestioning obedience and respect from its inferior. The ramifications of station extend from the commanding general down through a mystic maze of subordinates to the humble lieutenant who, while poor indeed, in the estimation of officers of high rank, is removed by an immeasurable gulf from the enlisted men, who in turn grade from supercilious sergeant majors through numerous carefully ranked petty officers down to the despised private. It is impossible that there should be any democracy, for there is no equality. Even among officers of equal rank the senior is the superior. The gulf that yawns between the lowest commissioned officer and the enlisted man of whatever rank is so wide that even under the military laws of our own country, a democratic country, should the enlisted man upon provocation, no matter how great, so much as raise his naked hand against an officer he may be punished by the penalty of death.

There can be no equality in hardship and danger in the Army, because on an average 1 out of each 15 is a commissioned officer who has never served as a common soldier; a commissioned officer who has been exempted from conscription in order that he might be trained as an officer, who is a professional soldier chosen for position of command not upon democratic lines for merit, but because he belonged to a rich or influential family and was able to get himself chosen or to enjoy superior opportunities of education which qualified him for a cadetship. Even under our present system the cadetships at West Point and Annapolis go to the upper classes. It is practically impossible for the sons of common men to enter the sacred precincts of the academies. Where the sons of the people have sufficient political influence to secure the nominations they are confronted with entrance examinations such as only boys who have had the best educational advantages can pass. The educational tests for admission are so exacting that few, indeed, are the high-school boys who can meet them without a special preparatory course. It is the customary thing for boys who have influence enough to get the nominations to be notified months in advance in order that they may take a special course of preparation for the entrance examinations. The masses can not afford to give their sons these educational opportunities, and the result is that they are almost wholly excluded from the Academies and have no opportunity to become officers.

With compulsory-service laws where it appears that all young men are to be forced into the Army, the pressure for appointments as officers will greatly increase, and the standards become more arbitrary, and closer and closer will be shut the door of admission of the sons of the masses into the exclusive circles of the Army and Navy. We will then have our military aristocracy of Army and Navy officers, powerful, jealous, and narrow minded; hating democracy and warring upon it with every impulse; separating themselves still more from the masses and thoroughly saturated with contempt for the man in the ranks. This is Army democracy!

The Army officer is a professional soldier. The existence of the Army is his necessity. He is not a two or three year conscript upon an equality with others but is trained for his life's calling. Also, the period of compulsory service will not afford sufficient time for training noncommissioned officers, so that we must have sergeants and corporals who are professional soldiers following the business as a calling and for what they can get out of it. We may expect these professional petty officers to be even more harsh in discipline and more overbearing toward the young conscript privates than the commissioned officers. That brutality and oppression toward the privates will be the common practice can not be questioned by anyone familiar with the conscript armies of Europe. Including officers, commissioned and noncommissioned, substantially one-third of the Army will be professional soldiers serving for rewards and emoluments, to two-thirds young conscripts serving because they are forced to do so. There can be no democracy, because there is no equality, the privileges, honors, and rewards being reserved for the one-third and the hardships and drudgery for the two-thirds.

MILITANCY V. DEMOCRACY.

The spirit of the Army and Navy is undemocratic. They are inherently the most undemocratic institutions in America, and must of necessity remain so. Their teaching is all against democracy. Democracy teaches equality, that one man is the equal of another; militancy teaches that there is no equality between men, and that the gradations of rank represent conditions of real worth. Democracy uses reason; militancy, authority. Democracy is the rule of the majority; militancy, the arbitrary rule of one supreme head. Democracy gives respect to merit; militancy, to rank. To think for one's self and to act on the dictates of conscience are the highest attributes of a democrat, but in military life adherence to such principles brings punishment swift and terrible.

Molded by democracy, man is reasonable, kind, and just; shaped by militancy, he is machinelike, emotionless, and severe. Nations trained in democracy take on aspects of amiability and the higher courage; trained in militancy, they are divided into the domineering, officious, and self-assertive officer class and the servile, docile, and enduring conscript class. Conscription makes war on democracy, it destroys democracy, for it splits society into a multitude of classes and castes in which each is sure of his position, and there can be no change. The young conscript at the critical time, when his mind and will are forming, is placed under the dominion of those whom he must accept as his superiors, irrespective of their worth, is bent to their will, is trained to recognize differences in rank and to accept them as all-important, and to obey the commands of authority as justified under all circumstances. He is trained to respect and support conditions as they are and to accept and defend the established order. That conscription might make for stability and order there is little doubt. That it thwarts progress, stupefies the imagination, dulls initiative, and molds the citizen for civil life as dull, docile, and submissive must also be admitted.

The picture I draw of the effect of conscription on civilization is not imaginary. The effects I have pointed out are to be observed in the countries of Europe where the system has been tried. In those countries in which the most thoroughgoing systems of conscription have been enforced we find society least democratic. We find that the rule of the few is best established and most secure. We find the people divided into a multitude of petty castes, ranging from the supreme civic and social head down to the humblest bearer of the nation's burdens, each class worshiping the classes above and despising those below. We find society so subdivided as to require the services of an expert in order to properly seat guests around the table. We find those even of high station quibbling with each other as to who shall pass through a door first, and when a question is asked of two workmen on the street there is a precedence to be followed between them as to which shall answer it. Each petty grade has its insignia, which it jealously guards; and social life as a whole seems to be based upon an uncomprehensible system of medals, ribbons, buttons, and decorations. Do we wish to import such a civilization into America? It is the natural outcome of compulsory service.

NO EQUALITY UNDER CONSCRIPTION.

Under conscription laws the burden of military service does not rest equally upon all. It rests at a given time only upon those of the age for active service, say, for illustration, from 20 to 22. All above that age escape, yet those innocent youths have least at stake of any members of society. They have neither property nor families to defend. If, for illustration, we should now adopt conscription laws all above the age of 22, all mature men, all men of property and families, would escape service. The hardship would fall solely on the young. True, if we should adopt conscription as a permanent policy, all hereafter on attaining the age of 20 would have to go through their period of service; but upon entering upon such a policy what justice or equality is there in exempting all above the age of 22? Should we not rather require them to bear their part of the burden of service? Should we not seek a fair percentage of all up to the age of 45 who may be physically fit and require them to do their part in our system of militarism? To place the whole burden on the immature young man is most undemocratic, for its essence is inequality.

BURDENS OF GOVERNMENT SHOULD GO WITH BENEFITS.

The plea that conscription is democratic is based on the assumption that the duty of public defense rests with equal weight on all. This I deny. Some citizens have much less interest in the public defense than others, they have less at stake, less to defend. The ravages of war outside of the horrors of the actual battle field fall chiefly upon property. Civilized armies do not make war upon noncombatants, and the chief fear of an invasion is for the destruction of property, which the invaders justify as necessary for the weakening of the resources of the enemy. We read of invasions and bombardments, with the confiscation of property, destruction of cities, and sinking of ships. The capture of a city does not mean the massacre of the people, but may mean the burning of buildings and the levy of tribute. The conqueror of a nation does not carry away its population into slavery, he exacts indemnity.

In the main and in final effect, wars are over property and for property. The man of wealth has everything to lose—his liberty and in addition his prestige and his property. The poor man has nothing to lose but liberty, and what is liberty worth if he must give it up in time of peace to a system of conscription? He might better take his chance and remain undefended to surrender to the first aggressor, for in the end he would only lose his liberty, and that he must lose at the beginning in a system of conscription.

All of this shows that the duty of public defense does not rest equally upon all. It is, of course, the duty of the humblest man to defend his country with his life if necessary, but the man of wealth owes the same duty, and in addition he has the added measure of duty growing out of the fact that he enjoys the privileges that come out of affluence. I hold that the wealth of a nation should bear the chief part of the burdens of government, and that they should so far as possible be removed from the backs of the poor. This applies not merely to taxes but to the duties of government which must be performed by the individual. As between the rich and the poor the duty is not equal, because the benefit is unequal.

A system of public defense by conscription, even in time of war, is inherently undemocratic, even if the burdens should be

laid equally upon rich and poor alike. The rich enjoy more benefits of government than the poor and should give more for them. When it is merely their lives that they hazard and their comforts that they sacrifice as soldiers, rich man and poor man have contributed equally, yet in the preservation of order, the administration of justice, the protection of property, and the escape from the payment of war indemnity, the rich enjoy immeasurably greater benefits than the poor. If it were a matter of hiring soldiers for public defense, no one would argue that the poor should pay as much as the rich. Personal service rests upon exactly the same basis.

It is clear that the burdens of government should be shared in the measure in which its benefits are enjoyed. It is sound democratic doctrine that public revenues should be derived from those best able to pay, and that taxes should be levied on property and not upon men. Of course, the payment of revenues is the least of the burdens of government. The increasing purpose of enlightened statesmen is to relieve the necessaries of life from taxation, for the necessaries are consumed by all, rich and poor alike, and to look for revenues to the luxuries and to the nonessentials of existence. In line with this enlightened policy, the burdens of war and preparation for war should be placed upon those best able to bear them, upon property, upon luxury. This principle is in direct conflict with the philosophy of conscription. Conscription places the burden of public defense and preparation therefor upon men equally per capita as a poll tax would be laid. A system of hired soldiery would place the burden upon property where other tax burdens are placed. Hence it is that conscription, the equal per capita sharing of the burden of public defense, is undemocratic in its very nature, for democracy demands that the burden of public defense shall be in proportion to the benefits derived from it.

Another reason why it is democratic that the wealth of the country should sustain its army and navy is that these instrumentalities are not only chiefly for the protection of wealth but the interests of wealth are most likely to cause war. I am not so cynical as to accept the argument that as a rich Nation we should fear an attack by impoverished European nations at the close of the war. I do not fear that any nation will turn pirate and robber and seek to despoil America. But, granting the argument, it is not our people as a whole but certain individuals among them who are rich. It is said that 2 per cent of the population of the United States own more than 60 per cent of all our wealth. Therefore an attack by a pirate nation for the purpose of robbery would be an attack not upon the common people but upon those who have amassed the fortunes.

Apart from this idea, our Army and Navy are chiefly desired to support a foreign policy of aggressive commercial expansion, for high financiering in the Orient and South America, and for the exploitation of mines and railroads among weak and undeveloped peoples, thereby bringing us into sharp competition with the greed of European financiers. It is felt that our trade and financial interests will conflict with those of other nations and that war is a possible result. If our citizens will mind their home affairs and American financiers will confine their rapacity as heretofore to exploiting our own people and our own resources, there need be little fear of a war. But it is for capital that we must hazard the chance of war. Though not well known, it is nevertheless a fact that those back of our movement for preparedness have not been inspired by the fear that we may be attacked. Its real basis is in the desire to enter into competition with the plutocrats of Europe in the plundering of weak peoples and undeveloped countries, and this it is thought may lead us into war or to the necessity of being able to bully our way through. Now, then, since wealth has made the Army and Navy necessary, why should not wealth pay for it? If wealth has caused the need for soldiers, why should the common people, who have nothing worth while to gain from the venture of over-sea development and competition, bear the burden?

Outside of the classes looking for promotions and profits, the demand for conscription comes chiefly from the big taxpayers, not from the farmers, merchants, and home-owning classes, but from the big business and financial interests. Members of this class are above the age for service themselves, and they well realize that means will be found to exempt their sons. They would place the burden of service upon the masses, yet go free themselves. What can be worse tyranny than to seize upon the common man and subject him to a harsh military discipline and to the risks of war in order that he may defend a country to which he owes scarcely anything, while the wealthy, who owe comfort and happiness to the State, are not called upon to risk anything for it? What a mockery to speak of such a system as being democratic!

The militarists in their demand for conscription are inspired by motives which are not to their credit; the professional military man, by the desire for promotion and the elevation and security of his calling; the war contractors, by hunger for profits in outfitting ships and supplying armies; the financiers, by the desire for opportunity for speculation at home and abroad; captains of industry and exploiters, for the influence that iron military discipline will have in making their victims docile, obedient, orderly, and respectful to authority; reactionaries, in order to distract attention from humanitarianism and the amelioration of the condition of the masses, so that the pendulum may swing back to the good old days of 20 to 30 years ago of the unchallenged control of caste and privilege.

CHEAP SOLDIERS WANTED.

Apart from the considerations I have named, the agitation for conscription is based on the supposed need for more soldiers. It is claimed that we need a standing army of 1,500,000, with reserves of 1,500,000 more. Advocates of conscription say that such numbers of men will not voluntarily enlist. I quite agree with this contention. No such immense armies can be raised in times of peace by the methods now used, but there can be no doubt that armies of reasonable proportions may be enlisted if we are willing to pay soldiers what they can earn in industry. Right here is the real reason for the agitation for conscription, though it is not often voiced. *Conscription will give us cheap armies. You do not need to pay a conscript anything.*

The militarists say that it would bankrupt the Nation to enlist big armies in competition with industrial wages. That is what they want—cheap soldiers. Again they would place the burden upon the poor. It is the way they have to obtain forced public service without paying adequate wages. Another undemocratic principle is thus exposed, for the wealthy can better afford to serve without wages than the poor young men who may have helpless parents dependent on them. I say that if the big taxpayers want armies, they should be made to pay for them, and the wages should be equal to the earnings of industry. We can enlist all the men we want if instead of paying them $15 per month we pay them $40 per month. For the current year Congress appropriated over $360,000,000 for disbursement by the War Department. Of this more than $20,000,000 went to commissioned officers and only about the same amount to private soldiers. The pay of the private soldier was a minor item. Why not multiply it by three or four if we want a big army? Why not give the big end of the disbursement to the thousands who carry the guns instead of to the few who wear the swords?

Our people are not lacking in patriotism. They are willing to serve when the need for service comes. They decline to enlist for the purpose of creating vast standing armies in times of peace, for they know that instead of big armies guaranteeing peace they tend to provoke war. One of the chief reasons why self-respecting men do not like to enlist in the Army and Navy is the undemocratic air that they are compelled to breathe. Free Americans are not willing to endure the superior airs of the average military officer.

If we wish to induce real men to enlist in the Army, we should democratize it. Every officer should earn his commission through a period of service in the ranks, and we should award commissions to practical military judgment and sound common sense instead of pursuing the Chinese method of making them the prize of pedantry and scholarship. What we want of officers is that they should be able to command men and to take care of their soldiers in the field, not necessarily that they should be linguists, mathematicians, and accomplished men of the world. They should be trained for the camp, not for the drawing-room.

New methods of war require intensive training for long periods. The day when raw militia might give a good account of themselves in the field has passed. The era of the professional soldier has come again. It has come not merely because of the methods by which war is carried on, but by the requirements of industry and the needs of society. But let us not make the blunder of trying to make every citizen into a professional soldier. Let us reserve the calling for those who choose to enter it. Let us not make the big mistake of surrendering our liberties in order that we may be prepared to defend them, for when liberty is surrendered, whether it be to our own privileged classes or to a foreign invader, surely there is nothing left to fight for.

If there be any sound argument in favor of compulsory service, I do not know what it is. I do know that conscription is undemocratic. I know that in its inherent nature, as are all militaristic schemes, it is destructive to equality and to the rule of the whole people. It destroys men's capacity to govern themselves as well as their opportunity to exercise their will. I hate it as I hate all things that are harmful to American ideals and destructive to American institutions.

The Federal Migratory Bird Laws and Regulations.

EXTENSION OF REMARKS

OF

HON. DUDLEY DOOLITTLE,

OF KANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, January 10, 1917.

Mr. DOOLITTLE. Mr. Speaker, during the debate on my amendment to the Agricultural appropriation bill, which, if carried, would have made the State game laws controlling in the matter of hunting, shooting, and trapping migratory game birds, *my good friend* from Georgia [Mr. HOWARD], either facetiously or seriously, took occasion to call sportsmen of the central States of the Nation "pot hunters," and insinuated they are "game hogs." Time and opportunity were not available to show the utter fallacy of such statement during the consideration of the amendment, and I take this means of stating a few facts relative thereto, with the idea of proving the unfairness of the law and to show just who the "game hogs" and "pot hunters" are. I want to defend the true sportsman, who observes the written and unwritten game laws strictly, and who never shoots a sitting bird, but always gives his game a "half chance."

Originally sportsmen were enthusiastic about this proposed Federal legislation, because we of the Middle West have been foremost in securing rigid State laws to protect the migratory birds, while in the South the very opposite course has been pursued. In other words, we were doing all of the protecting, while the South was reaping most of the benefits at our expense.

When the law was passed it was supported generally upon the theory that the hunting seasons would be curtailed in the slaughter zone, but the first results were to create Federal regulations which would curtail the hunting opportunity in the Middle West, while in the South the hunting season was not only unhampered but actually made a month longer than in the States which had been pioneers in conservation methods.

When we protested we were shamefully attacked by the New York crusaders, who, in their newspapers and elsewhere, designated us as "game hogs" and "enemies of wild life" because we failed to follow their program. This movement has been fathered by the American Game Association, whose president, John B. Burnham, is also chairman of the advisory board to the Biological Survey. This association is, according to its own printed booklets and circular matter, promoted by 14 corporations interested in the making and sale of ammunition, as well as manufacturing artificial targets generally called "clay pigeons." There are about 4,000 clubs which use their product in the sport of trap shooting. These clubs are located principally in the northern half of the Nation, while hardly any are in the South. Over $4,000,000 was spent last season for trap shooting. The hunters of the North have their hunting season curtailed, so they will have to shoot at the traps, while in the South, where there are practically no trap-shooting clubs, the migratory game is available for them to use the ammunition in shooting game. It appears to be a business proposition in the guise of conserving wild birds.

Let the American Game Association go on record in supporting a real game-protection measure such as House bill 18984. It contains the most rigid provisions, and is copied after the Missouri State law, with the addition of section 9, which restricts the use of "automatic, pump, or repeating guns" that are manufactured by promoters of the Federal bird act. Now, if they really want to protect game, let them support this bill that aims to stop the use of "machine guns" in killing game.

The bill does not stop the use of these guns provided they are so altered as to permit of but two cartridges being used without reloading, just like any ordinary double-barreled gun. Present owners of these guns can have a bolt screwed through the magazine of their guns to admit of but two cartridges being used. This will cost from 25 to 50 cents and is no hardship on the owners of these weapons, but by this limitation upon their destructiveness there is no incentive for the future purchase of such weapons. Not only do these "machine guns" use five or six shots without reloading, but a new device has been patented which can be attached without the aid of a mechanic—simply screwing it on by hand—and this extends the regular magazine of the gun so as to hold 10 cartridges which can be discharged without reloading the weapon. As a game-killing device it has no equal, and it also is a great consumer of ammunition, highly profitable from a business standpoint, and yet these machine guns are sold by the very persons who "want to conserve game."

Their idea of "conservation," however, is not to legislate against guns but against the hunting season in the "breeding zone" where the 4,000 trap-shooting clubs exist. If they want to shoot anything, let them shoot "clay pigeons"—save the birds for the "wintering zone," where there is no other way to burn up ammunition but by shooting game.

Last season there were 80,000 wild ducks killed in a single week on a 240-acre market-shooters' preserve near St. Rose, La. This is in the wintering zone, where the Biological Survey has created regulations to permit duck hunting until February 1, while in Missouri, Kansas, and Nebraska it is closed a month earlier, and in Illinois six weeks earlier. As a rule there is dry weather during the fall months in the above-named States, and ponds and many watercourses are depleted or entirely dried up. But in the months of February and March, when we have the whole country covered with water from rains and melting snow, we are not permitted to hunt the fowl which congregate in our section during the intervals of mild weather for a few days at a time when the migrating birds are following the frost line in the attempt to get to their northern breeding resorts. We call it "late-winter" shooting, but the biological "experts" call it "spring shooting."

They contend that the birds are mated and contain eggs, but if they were laying eggs at this season, the whole country would be covered with frozen duck eggs from the Middle West up to the extreme North, where they finally congregate to rear their young.

In other words, if a duck is killed in Louisiana in January, up to February 1, it is legal and not likely to do much damage, even if 80,000 are killed in one little spot of 240 acres; but if a Kansan or Missourian kills one duck in January it is a violation of the Federal law, or if an Illinoisan kills one December 16 it is a violation. The ducks in Louisiana at these dates are not "mated or filled with eggs," but in Illinois they are busy laying eggs in the snow and ice, just to practice housekeeping, so they will not lose time when they finally reach Canada or Alaska. It adds no credit to the hunter of Kansas or Missouri on account of State laws which permit him to kill but 12 or 15 ducks as the legal limit for his own use but not for commercial purposes. He is a "game hog" or a "pot hunter," pure and simple, but it is eminently proper, as a conservation argument, that the Louisiana market shooters can shoot 80,000 in one week on 240 acres of marsh land and ship them to market by the sackful.

If the Federal law is sustained, it follows that all State game laws relating to migratory birds are immediately null and void. The present Federal Weeks-McLean law offers absolutely no substitute, but the whole Nation is at once at the mercy of well-intending but misinformed "conservationists" and the men who want to commercialize in game, as is now being done in portions of the country. The Federal Weeks-McLean law merely provides "seasons" for "killing" game, but not one word is said about having game in "possession" after the legal dates. The Federal officer must actually "see" the waterfowl in the "act" of being killed. The United States court ruled this in a case in Dakota, where hunters were arrested for shooting after sundown. The inspector saw the hunters "shooting," but did not see them gather any game. In order to swear that the ducks were actually "killed" it was necessary to see the bird retrieved to show that it was "dead."

I am indebted to Mr. E. T. Grother, editor of Rod and Gun, of the St. Louis Globe-Democrat, for much of the information herein contained.

The Diversion From the Niagara River for Power of the Water Allowed by Treaty Between the United States and Great Britain.

EXTENSION OF REMARKS

OF

HON. S. WALLACE DEMPSEY,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, January 4, 1917.

Mr. DEMPSEY. Mr. Speaker, the discussions in reference to proposed Federal legislation covering the diversion of water for power purposes at Niagara Falls have occupied a large amount of time and have made a voluminous record before the Committee on Foreign Affairs; but very little of what has been brought out before the committee has been called to the atten-

tion of the Congress as a whole, and an accurate statement of the facts is desirable for and necessary to an intelligent understanding of the proposed legislation.

There are at present five companies engaged in the development of power through the use of the waters of the Niagara River. Two of these companies are American corporations, known respectively as the Hydraulic Power Co. of Niagara Falls and the Niagara Falls Power Co. Three of the companies are Canadian corporations, known respectively as Canadian-Niagara Power Co., Ontario Power Co. of Niagara Falls, and Electrical Development Co. These corporations are all separate in interest and ownership and have no relationship with one another, except that the Niagara Falls Power Co. (American) owns and controls the stock of the Canadian-Niagara Power Co. (Canadian).

The first development of power from the use of this water was through the undertaking of the Hydraulic Power Co., the construction of whose hydraulic canal was commenced in 1853 and completed for use in about the year 1856. The company owning and operating the hydraulic canal had its ups and downs, but has had a slow but constant growth in usefulness since its acquisition by its present owners in about the year 1878.

The Niagara Falls Power Co. was incorporated in about the year 1886 and its plant was completed so as to be able to deliver electrical power in about the year 1895.

Both of the above-named companies were incorporated under the laws of the State of New York, and claimed and exercised for years without challenge the right to divert waters for power purposes as riparian owners and under grants or charters of the State of New York, and the court of last resort of that State has held in substance that these companies were lawfully so engaged in power development.

The companies in question are engaged solely in power development and sell the power which is developed by them to others, either in the form of hydraulic power or in the form of mechanical energy or in the form of electrical current, their customers, in turn, using the power so supplied in these various forms for manufacturing and other purposes.

Not until the year 1906 did the Federal Government give any attention to the subject matter of this diversion. At the places where the waters are diverted from the Niagara River—which are less than a mile above the Falls of the Niagara—the Niagara River is nonnavigable, in fact, whatever may be the legal fiction in that respect, and, as the diversion in no manner interfered with interstate or international commerce, or in any way encroached, in fact, upon any power which was properly exercised by the Federal Government, no interference was attempted by the Congress before that time. In about the year 1906, however, similar developments began on the Canadian side of the Niagara River, and the American Congress then bestirred itself and enacted the so-called Burton law, which was a purely temporary measure designed to maintain the status quo until some international treaty could be made respecting the amount of the diversion of water for power purposes. The two American companies were limited by the terms of the act to the amount of their then diversions, including diversions essential to fulfill contracts then made, and the total amount permitted to be diverted on the American side by the law was 15,600 cubic feet per second, of which amount Secretary Taft issued a permit to the Niagara Falls Power Co. for 8,600 cubic feet, the Hydraulic Power Co. for 6,500 cubic feet, and the Erie Canal Co. for 500 cubic feet. Out of this water there is developed by the Niagara Falls Power Co. over 90,000 horsepower, and by Hydraulic Power Co. and tenant companies over 125,000 horsepower.

Pursuant to the terms of the Burton law the President negotiated a treaty with Great Britain which was proclaimed on the 13th day of May, 1910. By article 5 of this treaty it was provided that—

> The high contracting parties agree that it is expedient to limit the diversion of waters from the Niagara River so that the level of Lake Erie and the flow of the stream shall not be appreciably affected. It is the desire of both parties to accomplish this object with the least possible injury to investments which have already been made in the construction of power plants on the United States side of the river under grants of authority from the State of New York and on the Canadian side of the river under licenses authorized by the Dominion of Canada and the Province of Ontario.

It was therefore provided by the treaty that diversions for power purposes could be made from the river above the Falls not exceeding, on the American side, in the aggregate a daily diversion at the rate of 20,000 cubic feet per second and, on the Canadian side, of 36,000 cubic feet of water per second.

The Burton law expired on the 4th day of March, 1913, since which date the American companies have been, by action of the Secretary of War, held down in their diversions to the amount named in the permits granted by Secretary Taft over 10 years ago. While, meantime, the diversions in Canada commenced in about the year 1906 have been enlarged and continued so that at the present time there is a total diversion on the Canadian side of approximately 30,000 cubic feet per second, and contracts have been made for development to cover the remaining 6,000 cubic feet per second.

The American manufacturers, being unable to procure additional power from the American companies, have been utilizing power developed and generated in Canada and transmitted to the United States, and, in some instances, have moved their plants from the United States to Canada in order to secure the power needed for their uses.

The grounds of jurisdiction for Federal interference claimed by the Burton law were that the Niagara River was a navigable stream and an international boundary. It is obvious that the jurisdiction of Congress in the matter, so far as relates to power, is based more or less on a pretext, since the Niagara River at the point of diversions is not at all navigable and the suggestion that the international defenses have been in any manner threatened by the withdrawal of water for power purposes can have no foundation in fact. The total flow of the Niagara River is upward of 225,000 cubic feet per second, and the withdrawal of 25 per cent of that amount for a distance of less than 1 mile leaves an enormous body of water still flowing through this part of the river. The whole subject of the amount of water that could be diverted for power purposes without injury to either the navigable character of the stream, the national defenses, or the scenic grandeur of Niagara was considered and determined at the time of the making of the treaty, and the results of that determination were embodied in the language of the treaty.

The exportation of power by the Canadian companies and importation by American manufacturers is indicated by the following table showing the withdrawals thereof which have occurred within the last year:

Name of company.	Amount of power formerly exported.	Amount now exported.
	Horsepower.	*Horsepower.*
Canadian-Niagara Power Co	75,000	35,000
Ontario Power Co	75,000	55,000
Electrical Development Co	30,000	18,000
Total	180,000	108,000

Amount of power withdrawn.	Horsepower.
Canadian-Niagara Power Co	40,000
Ontario Power Co	20,000
Electrical Development Co	12,000
Total	72,000

The withdrawals by the Canadian Government have been largely due to the pressure from Canadian manufacturers arising out of the war, in which the Canadian Government and people are taking so active an interest and part. The result of these withdrawals, however, has been most disastrous to American manufacturers and American industries which have been built up along the Niagara frontier upon the expectation that the continuity of the supply of power from Canada would not be interrupted.

The Niagara frontier has become the center of the electrochemical industry in America, many products which are essential in hundreds of other manufacturing industries being produced solely or in the greater part only by the use of Niagara Falls power, so that not only are the industries at Niagara Falls most seriously crippled by the withdrawal of power by the Canadian companies, but the American industries that depend upon them are likewise seriously affected, and the seriousness of the situation is growing daily. Steel manufacturers are absolutely dependent upon Niagara industries for ferrosilicon, ferrochrome, and ferrotitanium. Industries using steel tools or in which modern grinding materials are necessary are dependent upon Niagara Falls industry for carborundum and alundum. Bleaching powder, the importation of which has been cut off by the war, is almost wholly produced in the United States at Niagara Falls, and the various chlorine and other chemical products necessary in the sterilization of water and for pharmaceutical, sanitary, dye, and textile purposes are almost wholly produced by the use of Niagara power. In fact, it would be difficult to state any line or branch of industry or activity in the country which would not be retarded by the cutting off of the articles produced by Niagara Falls power in the United States.

The Secretary of War has drafted a measure allowing the issuance of temporary permits not exceeding the 4,400 cubic

feet unallotted under the treaty and not exceeding the present installed capacity of the power-development companies for the purpose of enabling them to supply the actual installed machinery of their customers. This joint resolution, introduced in the Senate by Senator WADSWORTH, is intended to prevent machinery from becoming idle at a time when its usefulness is greatest.

Something has been said with respect to the charges of the American power companies, but in all the hearings before Congress not a single manufacturer has ever filed a complaint or suggested that the charges of either of the American companies were too high. The best answer to a suggestion that the prices charged by the companies are excessive is found in the fact that dozens of manufacturers have come to Niagara Falls and located there for the purpose of getting the advantage of the cheap power, and that many of the industries located there would be impossible without the advantage of the low-priced hydroelectric power afforded by the Niagara development.

The amount of the power used for domestic purposes in lighting stores and houses is not a considerable proportion of the whole, and the power so used is distributed by companies which are entirely unassociated with the development companies, except so far as they purchase power from the development companies. The prices charged by the distributing companies to individual consumers of light are exceedingly low, and, if due allowance were made for the portion of the cost supplied by the Government and municipalities of Ontario, are at least as low as the prices charged in that Province.

So far as the question of the payment of compensation to the Federal Government for the use of the waters of the Niagara River used for development is concerned, it may be said that the Federal Government never had a title to the waters or ownership of them. The only claim that has heretofore been made in this respect is that the Federal Government had the right to prohibit the use of the waters on the theory that their diversion was injurious to the navigability of the stream or its integrity as a national boundary river. There is no reason in logic or fairness why power-development companies at Niagara Falls should be obliged to pay compensation to the Federal Government for the use of the waters of the Niagara River, unless every other company in the United States using the waters of the navigable streams for power development shall be similarly taxed. If the power developments upon the Mississippi, Hudson, Coosa, Tennessee, Connecticut, and other navigable streams are to be taxed by the Federal Government, there is no reason why the tax should not be applied to the use of water of the Niagara River, but to select out for the imposition of a tax upon power development these companies and this river, in the absence of a general law, would be a discriminatory exercise of the power of taxation which does not appeal to the reason or to conscience.

Finally, let us remember that our country is preeminent in the electrochemical world; that this position has been achieved through the use of Niagara power; that the American power companies and their members have devoted years of intelligent service and enormous resources to enterprises of great benefit to American industries and the American people; and that their courage and good faith deserve something better than calumnious attack and blind hostility. Let us, in any temporary or permanent legislation to be adopted by the Congress, be always mindful of doing even and exact justice to those who have engaged in these great works.

Flood Control.

EXTENSION OF REMARKS
OF
HON. CHARLES F. CURRY,
OF CALIFORNIA,
IN THE HOUSE OF REPRESENTATIVES,
Saturday, January 13, 1917.

Mr. CURRY. Mr. Speaker, under leave granted me to extend my remarks, I insert the following:

[Reprinted from New York Times, June 29, 1916.]

CONTROL OF OUR TWO GREAT FLOODS—VIRTUE OF THE BILL NOW PENDING WHICH, WITHOUT PORCINITY, DEALS WITH THE MISSISSIPPI AND SACRAMENTO PROBLEMS ALONE.

[By Gen. H. M. Chittenden, United States Army, retired, American Society of Civil Engineers.]

SEATTLE, *June 23, 1916.*

To the EDITOR OF THE NEW YORK TIMES:

The debate leading up to the passage of the Mississippi-Sacramento flood bill by the House of Representatives on May 17 was one of the most instructive that have taken place in Congress in many years. The House clearly recognized a duty and proceeded to carry it out. The measure was one of the very highest importance and its skillful and intelligent handling fully justifies the recent action of the House in creating a special committee to consider solely the question of flood control.

The first fruit of the committee's work discloses a practical grasp of its purpose and powers which augurs well for its future usefulness. It has wasted no time on vague and uncertain theories nor on vast and elaborate administrative schemes, but has addressed itself to the situation as it actually exists and has found that at the present time there are two, and only two, great flood problems of the country ripe for final constructive action, with data fully assembled and analyzed, with definite engineering agreement as to the best method of procedure, and with final estimate of cost prepared. Both are problems in which vast interests of life and property are at stake. Both require immediate action. The committee accordingly took up these two problems—the lower Mississippi and the Sacramento—and if the bill which it has now carried through the House finally becomes a law, these great rivers will within another decade have ceased to vex the country with their ever recurrent record of disaster. It is worth while now, at the close of the first stage of the passage of the bill, to review some features of the debate thereon, particularly those in opposition, for they are sure to come up in more acute form in the Senate and may possibly imperil the success of the measure in that body.

Some slight opposition developed because the bill apparently neglected other parts of the country. But this did not amount to much, and perhaps the most satisfactory feature of the debate was the very general recognition of a national duty to deal with these two great problems irrespective of the demands of other sections. It was certainly a conspicuous example of the absence of log-rolling tactics which are so often charged up to Congress in its provision for waterway improvement. In fact, by passing this bill, the House deliberately removed from river and harbor legislation the two items which have had greater influence than any others in carrying such legislation through Congress. By thus dealing with these two measures once for all on their individual merits an important step has been taken in the direction of the efficient handling of such questions. We may now confidently expect that the Flood Control Committee will, as rapidly as conditions permit and data are available, proceed to deal with other important problems. In particular we hope that, if the international situation can be satisfactorily controlled, early provision will be made to remove for all time the menace of the Colorado River to the Imperial Valley of California.

There was considerable opposition to the bill, based upon honest doubts as to the technical methods proposed. Some questioned the sufficiency of levees to control the floods of the Mississippi, and felt that more comprehensive measures ought to be adopted. It was very significant, however, in view of the forestry agitation of recent years, that not a voice was raised in advocacy of reforestation as a measure of flood control. That is a great step in advance, for the persistent claims to the contrary by forestry advocates have been one of the chief obstacles in the way of really effective measures.

FUTILITY OF RESERVOIRS.

The case was different in regard to reservoirs. There is evidently a deep-seated faith in Congress in this last measure of flood prevention, and much disappointment was expressed that the committee did not recognize it in the bill. But the committee acted in pursuance of sound engineering advice. The trouble with the reservoir method is that it does not produce the same effect upon the lower courses of great rivers that it does near the sources of small rivers. For example, on the Miami River and its tributaries in Ohio it is proposed to build five great reservoirs for the sole purpose of flood control. Their outlets will always be wide open, and the water will run out immediately after the flood is passed. There will be no storage for power, etc. The effect will be to spread a flood of 3 or 4 days' duration over 10 to 20 days, after which the reservoirs will be empty. The method will be very effective so far as the Miami is concerned, but it will have practically no effect upon the lower Mississippi. Indeed, it may actually increase floods there, for these floods are always a result of a combination of floods from two or more tributaries, and the delay of outflow from the Miami might, just as likely as not, bring the contribution from that stream on the crest of the combination below. No reliance whatever, so far as the Mississippi is concerned, can therefore be placed upon reservoirs of the Miami type, which are designed for local flood protection only.

FLOODS ARE CUMULATIVE.

Neither can reservoirs of any type situated upon remote headwaters be of any avail on the lower river. One of the greatest reservoir systems in the world is on the headwaters of the Mississippi. It is a good flood preventive up there, but its effect is so far dissipated by the time it reaches Cairo (the initial point of the "lower" river) as to be wholly inappreciable. Likewise, reservoirs built in the arid regions on the watersheds of the Missouri and Arkansas can never have any material effect on the flood problem of the lower Mississippi, because its floods do not originate in that section of the country. The time may come, and probably will, when storage reservoirs will be common on most of the tributaries of the Mississippi. But such reservoirs will be built primarily for domestic, municipal, or industrial use. They will be filled more or less completely from the earlier rains of the wet season, and will be very liable not to be available at critical moments. They may have a restraining effect at one time and at another they may not. They will therefore not be an absolute reliance, and would fail every now and then to afford relief. It goes without saying that any measure of flood protection which can not be depended upon at all times should not be seriously considered.

The only kind of reservoir that can be depended upon for beneficial influence on the lower Mississippi floods is one large enough to hold nearly all the run-off of its watershed during the season of the floods. Industrial requirements will not permit it to be emptied for refilling lest the necessary supply be not forthcoming; while on the other hand flood protection requires that sufficient space shall be at all times available during the flood season to take care of any storm that may occur. To satisfy these two conflicting conditions would require such large reservoirs that in most cases they can not possibly be provided. Moreover, the cost resulting from this requirement and from the vast development of the system, if it is to have any real influence on the floods of the lower river, put it entirely out of consideration as a practical proposition.

It is needless to pursue the subject into further details. It is, indeed, unfortunate that a remedy which is so ideal theoretically should be so defective practically. But such is the actual fact. The Flood Committee understood the situation and very wisely declined to embark upon a project which would only lead to unlimited expenditure without any adequate assurance of definite results. The committee recognized

that for generations to come vast floods will descend upon the lower Mississippi and Sacramento Valleys. But it found that there was in each case a method already worked out by which these floods can be controlled so as to do comparatively little damage. In adopting these methods it at least stood on sure ground. Elsewhere there was only doubt and uncertainty as to results, with absolute certainty of appalling expenditures.

ADMINISTRATION.

A third respect in which opposition developed in the debate related to the administrative machinery and general plan of action to be adopted. There is a desire in certain quarters to organize all public activities, uses, and control of the streams of the country under one general head, so that all lines of development or improvement may be coordinated. Like the system of reservoir control, this idea is theoretically very attractive, and it is only on getting down to details that its real defects become apparent. One of these is the very ponderosity of the project. To attempt to move the whole mass along in coordination would inevitably result in disastrous delay in some cases and unnecessary expedition in others. The uses of streams are too varied, too independent of one another, to be profitably bound hand and foot together. The development of streams in the arid regions for irrigation may very well be independently worked out by the agency already provided for that purpose. The California Débris Commission is certainly as well equipped to deal with the Sacramento problem as any "national waterways council" is likely ever to be. The Mississippi River Commission is a thoroughly competent body to handle the lower Mississippi problem, and it is doubtful if a better agency for handling works of navigation in this country will ever be secured than the Corps of Engineers of the Army. Finally, no one would seriously contend that the highly important function of the flood-warning service may not advantageously be continued in the Weather Bureau, nor that the development of forests, so far as it affects stream flow, should not remain in the Bureau of Forestry.

AN ILLUSTRATION IN PORK.

There are some who feel that this proposed all-embracing organization will somehow eliminate the "pork" evil of which we hear so much in river and harbor legislation. If those who hold this view will read the Flood Committee bill, which has just passed the House, and the Newlands bill for a general organization, as printed in parallel columns in the CONGRESSIONAL RECORD of May 18 and 19, 1916, they will be disabused of this idea completely. The Newlands bill provides outright $60,000,000 arbitrarily apportioned among the various watersheds of the country, as follows:

The lower Mississippi and Illinois Rivers	$25,000,000
The Ohio and its tributaries	5,000,000
The upper Mississippi	5,000,000
The Missouri and other western tributaries	5,000,000
The Great Lakes, Atlantic, and Gulf streams	5,000,000
The streams of Oregon and Washington	5,000,000
The Sacramento and San Joaquin Rivers	5,000,000
Other California streams and the Colorado River	5,000,000

This sum, moreover, is understood to be but one-tenth of the total in contemplation, which, according to previous utterances by the originator of the scheme, is to follow in regular installments of $60,000,000. Now, those of us who have been trained to find out first by investigation what a project is going to cost and then provide the funds for it can not possibly look upon this wholesale method as based upon even the simplest principles of business. To say that six of these watersheds require each exactly the same amount is, of course, an absurdity on the face of it. As a "pork" proposition it outdistances anything ever proposed heretofore. It is "pork," not by the "barrel," subject to the O. K. of a scrupulous and disinterested body of engineers, but by the hogshead, free of all engineering scrutiny, yet "apportioned fairly" (sic) and guaranteed beyond peradventure from the outset. Surely the great American public will think twice before committing itself to any such sweeping policy as this.

The Flood Control Committee of the House has so far proceeded on strictly business principles. After a thorough exploration of the field of its labors it found that there were two flood problems of an undoubted public character that were ready for final action, with ample data, a definite method, and reliable estimates of cost. It found in each case that the necessary executive agency for carrying out the work was already in existence and had the problem well in hand. It was a fact also that these two flood problems overshadowed all others of the country in magnitude and importance. Any unnecessary delay in dealing with them could scarcely be less than a wanton trifling with life and property. Instead, therefore, of inaugurating a grand scheme of universal application and compelling these two projects to await their turn on the general program, it made immediate provision for them, with assurance that it would thereafter proceed with others as rapidly as the circumstances would warrant. By a vote of nearly four to one the House registered its approval of this policy and the country undoubtedly stands behind it with a like preponderance of sentiment.

H. M. CHITTENDEN.

Extracts from "Report of California State Water Problems Conference," dated November 25, 1916, and acting under instructions of the legislature of that State:

THE SACRAMENTO FLOOD-CONTROL PROJECT.

Of the flood-control problems of California that of the Sacramento River is the only one that has had, for a term of years, a combination of these elements: Exhaustive engineering investigation, formulation and approval of a detailed plan, adoption thereof by the State of California, and continued progress of the work under cooperation of National and State commissions created for the purpose. The Sacramento project, in consequence, is the only one for intimate investigation of which an opportunity was presented to the conference.

For detailed information in connection with this project reference is made to the following documents: Report of the House Committee on Flood Control, April, 1916, House Report No. 616, which affords the most comprehensive history of the project, its purposes and prospective advantages; report of the State reclamation board, 1916, which outlines the actual progress of the work, methods of financing, etc.; the reclamation board act, 1915, outlining the State's attitude toward the project and the powers and duties of the reclamation board in connection therewith. For purposes of this report and in order that certain recommendations herein made as to the project and certain suggestions as to reclamation may be fully understood it is necessary only to give the following points:

The Sacramento River calls for heroic treatment because of its great floods—now estimated at 660,000 second-feet—fourth largest in actual volume among the rivers of the United States, and in proportion to territory drained, from four to fifteen times as great as any of the other three.

It is agreed that the by-pass system is the only one which will secure permanent flood control of the river. The plan contemplates retaining within the channel by strong levees so much of the flow as the channel can safely carry, thereby insuring scouring and deepening; diverting the excess floods at four points over wasteweirs and carrying them through by-passes to Rio Vista, 15 miles from the river's mouth; deepening and widing this 15-mile stretch to accommodate the maximum floods; and providing that reservoirs hereafter installed for irrigation or power may fit into the plan and furnish additional factors of safety to the extent of the volume of flood held back at the critical time.

The engineers explain that on the Sacramento River the interests of flood control, navigation, care of mining débris, and reclamation are so interwoven that they can not be served economically by separate plans.

The project, as the only one which will serve these purposes, is necessary for the preservation of navigation in the Sacramento River and incidentally a protection to the lower San Joaquin as well; of value to inland waterways and therefore to commerce; a necessity for permanent reclamation of over a million acres of rich bottom lands and for placing population thereon; the only means for permanently insuring safety from floods for the city of Sacramento and the State property therein. The report of the California Débris Commission, 1910, showed that the damage done by Sacramento River floods in 1904, 1907, and 1910 was $11,000,000. In 1907 San Francisco and Sacramento were cut off from rail communication to the eastward for 10 days.

The work under the project is to be done as follows: That portion of it declared to be necessary in the interests of navigation and commerce, to wit, the construction of the four weirs, and the enlarging of the river's mouth, and any channel dredging, is placed under direction of the California Débris Commission, named by the War Department. The future expense of this portion of the project, estimated at $11,200,000, is proposed to be divided, half and half, between Congress and the State of California. The remaining portion of the work, including construction of all river and by-pass levees and obtaining rights of way therefor, is under the direction of the State, acting through the State reclamation board, and the expense thereof, aggregating about $30,000,000, is to be met by assessments on the lands benefited in proportion to benefits received.

California formally adopted the project and in effect agreed to carry through her portion thereof by legislative acts of 1911 (special session), 1913, and 1915. The project was passed, in the flood-control bill (H. R. 14777), by the lower House of Congress in May, 1916, and will come before the Senate for approval at the December short session. The bill provides for an appropriation by Congress each year of not exceeding $1,000,000 until the amount of $5,600,000 has been paid, on condition that California appropriate a similar amount. The annual appropriation named was based on the statement from the office of the Chief of Engineers for Rivers and Harbors that economical efficiency would be best served if the project be completed in five or six years.

The Sacramento River flood-control project is the only flood-control project in the United States, except that of the Mississippi, which was ready by investigation, detailed plan, report, recommendation, approval, and creation of necessary State authority for action by Congress at the present session, and this fact gave it place in the flood-control bill. The attitude assumed by California in relation thereto and the harmonious cooperation had for five years past with the national authorities have placed the State in a unique position with Congress, and her policy is being gradually made a standard which other States are asked to follow.

It should be remembered that the flood-control bill, while providing specifically for approval of the only two flood-control projects in the United States prepared for such approval, also furnishes machinery under which any meritorious flood-control project may be investigated, and after favorable recommendation by the Board of Engineers, receive approval and appropriation in the manner followed with the Mississippi and Sacramento projects. The machinery thus provided is a departure in the policy of Congress, and it may be found of value in furthering other flood-control projects of this State. Copies of the flood-control bill and other documents of interest in connection with this matter will be found among the papers submitted with this report.

Under cooperation of the State and Federal authorities work on the Sacramento project is steadily advancing. A large amount of the river levee construction and some of the by-pass levees have been completed; while work in the river's mouth is proceeding under Federal direction with State and national appropriations, made for what is locally referred to as the "minor project." (See State Reclamation Board report, 1916.)

STORAGE OF THE SACRAMENTO FLOODS.

The most severe criticism as to waste of water resources has been made against the State project for flood control of the Sacramento River which plans to send the flood waters through by-passes to the sea, instead of storing them, although it is claimed that there exist in the mountains storage facilities ample to hold back these flood waters and turn them to beneficial use.

The following statement made by E. G. Hopson, of the United States Reclamation Service, and confirmed by his testimony before the conference October 28, 1915, pages 285–288 of transcript, indicates the very positive conclusions reached by engineers in this regard:

"As to the possibility of reservoirs holding back the floods of the Sacramento Valley, there have been some very definite statements. We have collected a mass of information. All the reservoir sites are known to us and have been surveyed. It is impossible to hold back the greater part of the Sacramento floods by use of reservoirs. There are only two effective reservoir sites that I know of—that at Iron Canyon and one on the Pit River, and these could care for only the peak of the floods. Reservoirs never could hold back the great mass of flood water, and on that we can not lay too much emphasis. I think there is more fallacy abroad on that point than on any other point having to do with water problems. We could use all the sites available for the storage of flood waters, and they would affect only to an insignificant extent the flood problems."

This conclusion as to the extent to which storage may be utilized for flood control of the Sacramento River is fully confirmed by the Army engineers of the War Department, and by the State engineering department, and by private engineers who have made special study of the matter. Full explanation of the conditions which justify the conclusion will be found by reference to the report of the State reclamation board, 1916, in the chapter on "Storage and Flood Control," at page 23; to the supplemental report of the Flood Control Committee of the House of Representatives on the Sacramento River, 1916, House Report

No. 616, pages 67, 68, and 69; and to the report of the Board of Engineers for Rivers and Harbors and the California Débris Commission for 1910, House Document No. 81.

The California Legislature is now in session. The following telegram from Hon. V. S. McClatchy, president of the State reclamation board, shows that California, anticipating the enactment of H. R. 14777, will at this session of the legislature make an adequate appropriation to meet an appropriation it is expected Congress will make at the first session of the Sixty-fifth Congress. California has no doubt but that Congress will enact this just and meritorious measure at this session:

SACRAMENTO, CAL., *January 12, 1917.*

Hon. C. F. CURRY,
House Office Building, Washington, D. C.:

Administration budget to legislature provides half million for Sacramento project, conditional on similar amount from Congress. This is on theory that congressional appropriation can not be available until July, 1918. Legislature of 1919 can make another appropriation available in July of that year. There is already in State treasury, subject to call from War Department, sufficient to complete minor project.

V. S. MCCLATCHY,
President State Reclamation Board.

"The Efforts Toward Ending the War."

EXTENSION OF REMARKS
OF
HON. S. D. FESS,
OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,
Friday, January 12, 1917.

Mr. FESS. Mr. Speaker, by permission granted me to-day to extend my remarks, I here insert the documentary evidence of the efforts to secure an ending of the European war.

The entente reply to the President's note of December 18, which occurs in this morning's press is a stage, not a final stage we hope, of a remarkable series of diplomatic proceedings.

The immediate occasion for the official statements of the many countries interested, both belligerent and neutral, was the peace proposal of the central powers transmitted to the entente powers through the President of the United States. Much had been said about the conditions of peace by official England. Especial attention had been paid to the declarations of the following statesmen: Lord Curzon, July 7, 1915, and May 5, 1916; Chancellor Bonar Law's interview with the New York Times, February 20, 1916; Lord Cecil's interview with American newspapers, April 8, 1916; Walter Runceman's declaration, April 19, 1916; Lloyd George's interview with the United Press in September, 1916; Viscount Grey's address at Hotel Cecil, October 23, 1916; and Prime Minister Asquith's speech at Guild Hall, November 9, 1916.

On the latter day Chancellor von Bethmann-Hollweg addressed the Reichstag in reply to Viscount Grey.

It is not necessary to reproduce these several official statements to present a connected documentary history of the present peace movement. However, it is important to present the official reply of each leading belligerent to the inquiry of the League to Enforce Peace addressed to the warring countries. The first important reply was by England, through her statesman Viscount Grey, who spoke on the 23d of October as follows:

THE WAR'S ORIGIN AND LASTING PEACE.

[Address by Viscount Grey, British minister for foreign affairs, delivered before the Foreign Press Association, London, Oct. 23, 1916.]

Your president said I was to make a historic speech. Will he and you forgive me if I say I doubt whether any historic speech can be made while the war is actually in progress? After the war, very likely; but while the war is in progress the real historic work is being done in the offices of the general staffs of the allied countries and on the battle field where our soldiers are fighting. Words can be but little, but the work done by the general staffs at headquarters and by the armies in the field, and by the navies on the sea, that is really the work that is making history.

We have had since the beginning of the war two or three notable speeches. First of all, there was a great speech by M. Briand in the French Chamber. Next in time there was the interview given by Lloyd-George to a press correspondent, and then in this country the speech by the prime minister, Mr. Asquith, in the House of Commons; and lately we have had the note struck just as firmly in Petrograd by an official communiqué, I think under the auspices of the minister of the interior. Those speeches have given to the world the note and tone and feeling of the allies at this moment. I indorse all that they have said, but for a few moments I would like to talk, not indeed about the actual conditions of peace, which can only be stated and formulated by the allies together and not by any one of them separately, but about the general object which the allies must secure in this war.

To do that I would ask you to recall a thing we must never forget—how the war came about. If we are to approach peace in the proper spirit, it can only be by recalling and never forgetting what was the real cause of the war. Some people say we need not go back on that old ground now. Everybody knows it. Well, you can not go back on it too often. It affects the conditions of peace. Germany talks of peace; her statesmen talk of peace to-day. What sort of peace do they talk of? They say Germany must have guaranties against being attacked again. If this war had been forced on Germany, that would have been a logical statement. It is precisely because it was not forced upon Germany, but forced by Germany upon Europe, that it is the allies who must have guaranties for future peace.

In July, 1914, no one thought of attacking Germany. It is said Russia was the first to mobilize. That, I understand, is what is alleged in Germany as the justification for the statement that the war was not an aggressive war on Germany's part, but was forced upon her. Russia never made the mobilization of which Germany complained until Germany had refused a conference, and never made it until after a report appeared in Germany that Germany had ordered mobilization, and that report was telegraphed to Petrograd. As a matter of fact, it was the story of 1870 over again. The preparations for war, not merely the preparation of material, were preparatory steps to an advance in Berlin to a stage beyond that of any other country. Then when the chosen moment came the maneuver was made to procure some other country to take a defensive step, and when that defensive step was taken, then to resent it with an ultimatum which made war inevitable.

The same thing with the invasion of Belgium. Strategic railways had been made in Germany; the whole plan of campaign of the German staff was to attack through Belgium. Now the Germans are representing that they had to attack through Belgium because other people had planned to attack through Belgium. I would like nothing better than to see the statements that the Russian mobilization was an aggressive, and not a defensive, measure and that any other power than Germany had planned to attack through Belgium investigated before any independent and impartial tribunal.

HIDING THE TRUTH.

The German organization is very successful in some things, but in nothing more than in preventing the truth reaching their people, and in succeeding in presenting to them the point of view which is not that of the truth. As for the statement that war was forced on Germany: When England proposed a conference, when Russia, France, and Italy accepted a conference, when four powers offered a conference and one power refused it, is it the powers who offered the conference which were forcing war or the power which refused it? The Emperor of Russia offered The Hague tribunal. When one sovereign offers The Hague tribunal and another ignores it, is it the sovereign who offers a reference to The Hague who is forcing war?

On the very eve of war France gave her pledge to respect the neutrality of Belgium if Germany would not violate it. We asked for such a pledge. Was it the power which asked for the pledge and the power which gave the pledge which were responsible for the violation of the neutrality of Belgium or the power which refused? I say, and every Belgian knows it to be true, as well as every Frenchman and Englishman, that never at any time was there a suggestion that an English or French soldier should enter Belgium unless it were to defend Belgium from the violation of her neutrality, first undertaken by Germany. Why was it that all efforts to avoid war in July, 1914, failed? Because you can not have peace without good will, and because in Berlin there was the will to war and not the will to peace.

CROWN PRINCE'S REFLECTIONS.

And just lately, I think to an American, the Crown Prince has deplored the loss of life which is caused by this war. Yes; it was because we knew what the sufferings of war must be, because we knew how terrible a thing war let loose in Europe would be, that we tried to avoid it in July, 1914. Then was the time to be penetrated with a sense of all that war would mean. It is precisely because we knew then what it must mean that we tried to avoid war.

It is because we have had this terrible experience now on the Continent of Europe—we and our allies—of what war does mean, that we are determined that the war shall not end till we can be sure that at any rate the generations which come after us and our nations in future shall not be subject to such a terrible trial again.

What was the plan—the German plan? I saw a statement in the press the other day that a German officer had recognized that Germany had failed this time, but in 10 years she was going to succeed. The German plan was to be a short, successful war. The war was all thought out in Berlin on a plan, and there was a time-table—so long to get to Paris, so long to defeat France, so long afterward to defeat Russia. And England! The plan was that England was to be kept out of the war, but if England should enter the war it was not thought that the expeditionary force which we had available would be enough to upset the enemy plan. People who are militarists, whose ideas and whose thoughts run solely on military considerations, people who are material, forgot to estimate—indeed, they can not estimate—the spirit and the soul which exist in nations when they are attacking a foe for their lives. The plan was that Russia and France were to be defeated and England was to be isolated and disgraced.

We must never forget, as we go through this war, that an offer was made to us to keep out of the war. We were asked by the German Government to engage to remain neutral on certain conditions. We were asked to condone the violation of the neutrality of Belgium—because that is what the offer came to—though we were obliged by treaty to uphold it. We were also asked to give Germany a free hand to take whatever she liked of French colonies. That is practically what the offer was. That is why I say that the plan was not only to isolate us but to disgrace us. I would ask any neutral to put it to himself: What would have been the future of this country if the British Government had for a moment accepted such an offer? We might have had an army and a navy, but there would have been no morale, no spirit, in the nation. We should have had the contempt of the whole world.

GERMAN AIMS.

Happily tactics so gross as those did not succeed, and I need not recall what the reply of the British Government was, nor what the spirit of the nation was at the opening of the war. We should not think merely of what Germany says to-day. It is worth while looking back at the exhibition of her Government and people when the war started. Then we saw something of their real mind, and there was a certain Prof. Ostwald in Germany who unburdened himself, again I think to an American, in August, 1914. He called himself a pacifist, and this is how he described the German aims. It was a long interview, but in it occurred these two things: Germany was to dictate peace to the rest of Europe, and the principle of the absolute sovereignty of the individual nations must be given up. Do not let us forget that that was the spirit in which this war was begun. What is the spirit in which the

war is being carried on by the allies to-day? I take it from the words of the prime minister the other day:

"We shall fight until we have established the supremacy of right over force, free development under equal conditions, and each in accordance with its own genius, of all the States, great and small, which build up the family of civilized mankind."

Into this struggle we have put rightly and necessarily all our resources—all our wealth, all our material, all our labor—and now when we have had time, because it needed time, to equip and train a large army, we are putting all the best lifeblood of the nation, shedding it on the Continent, side by side with our allies, in emulation with them, stimulated by the courage and self-sacrifice which they are showing in defense of their own countries, shedding it because we know that their cause and ours is one. To the end we stand or fall together. The separation of one from the other means the destruction of the one separated, and not its safety. For all of us unity is essential, not merely to victory but to our future life and success.

Germany is trying, and has been throughout the war, to separate one from the other in order to realize her aims. Not a week passes that does not confirm our resolve to go through with our allies to the end of the war, and after the war I trust the memory of the sufferings we have undergone together, the memory of the joint courage which is carrying us through—and all that we have been through—will be a perpetual bond of alliance and sympathy between our Governments and our peoples.

OPPORTUNITY FOR NEUTRALS.

Now, I should like to say one word on another subject. Looking to the future after the war, what is it that neutrals can do? The other day I wrote this to a correspondent who sounded me on the subject:

"I believe the best work neutrals can do for the moment is to work up opinion for such an agreement between the nations as will prevent a war like this from happening again.

"If nations had been united in such an agreement and prompt and resolute to insist in July, 1914, that the dispute must be referred to a conference, or to The Hague, and that the Belgian treaty must be observed, there would have been no war."

I would ask neutrals to observe that belligerent countries, fighting as we are to-day for our very existence—fighting, it is true, for victory, with a daily increasing prospect of seeing that victory brought nearer, but still knowing that if we stop short of victory we stop short of everything for which we are fighting—can not be expected to spend much time in developing ideas of what can be done after victory is secured. But neutrals can do it, and it is interesting to observe that not only President Wilson but also Mr. Hughes, the candidate for the Presidency of the United States, are supporting a league which has already sprung into existence, supported by various distinguished people, with the object not of interfering between the belligerents in this war but of getting ready for some international association after this war is over which shall do its part in making peace secure in future.

I would like to say that, though we may have little time to give to such ideas ourselves while we are engaged in this struggle, I think that is a work in neutral countries upon which we should all look with favor and with hope.

Only bear this in mind, that if the nations of the world after this war are to do something more effective than they were ever able to do before this war, to combine themselves for the common object of preserving peace, they must be prepared not to undertake more than they are able to uphold by force, and to see when the time of crisis comes that it is upheld by force.

In other words, we would say to neutrals who are occupying themselves with this question, in a colloquial phrase, that we are in favor of it, but with the understanding that we shall ask them when the time comes for them to make any demand for such a thing, "Will you play up when the time comes?"

It is not merely the sign manual of sovereigns or Presidents that is required, but it must also have behind it the force of national sentiment. The object of this league is, as I understand it, to insist upon treaties being kept and some other settlement than war being tried before recourse to war. In July, 1914, there was no such league in existence. Supposing a generation hence such a condition of things as in July, 1914, recurs, and there is such a league in existence. Everything will depend upon whether the national sentiment behind it is so penetrated by the lessons of this war as to feel that in the future each nation, although not immediately concerned in the dispute, is yet interested, and vitally interested, in doing something, even if it be by force, to keep the peace.

METHODS OF WAR.

But there must be more than that. You must have some agreement after this war is over as to the methods under which war is to be conducted. Germany complains of our methods in this war. She complains of our blockade. From the very beginning Germany did her utmost to prevent food from reaching this country. In the early stages of the war she sank two neutral ships bringing food to this country. It does not lie with her to complain of our blockade. But what about other methods—the new methods which have been introduced—the sowing of mines indiscriminately upon the high seas, to the danger equally of neutrals and belligerents, the firing of shells into defenseless coast towns? Because you must remember that what is required, according to the German official communiques, to convert an allied town on the coast into a fortress is not the provision of guns in it, not the presence of troops, but merely the fact that it has been fired upon by a German cruiser. Then the use of poisonous gas in war, which nobody would have believed possible if the Germans had not begun it, which nobody thought of using until the Germans began it. In the Gallipoli Peninsula neither we nor the French used gas, because we would not be the first to introduce it anywhere. That has been brought into the war. Then there is the sinking of merchant vessels and the destruction of passengers and crews. There are also the acts committed in Belgium and other allied territory in German occupation, some of which have been the subject of investigation and report, and which to public knowledge are in breach of all the laws and conventions of war and of the most elementary dictates of humanity.

One thing more of which we hear very little, of which we do not know the full story. Since Turkey entered the war she has been the vassal of Germany. Probably neutral nations know more of the story than we do, but enough has leaked through to make it clear that there has gone on, and is still going on, in Turkey, on a scale unprecedented even in that country, and with horrors unequaled before, an attempt to exterminate the Christian population of Turkey—horrors which Germany could have prevented, and which could only have gone on with her toleration. Perhaps some day some neutral nation which knows the whole story will make it known to the world.

THE GREATEST ANARCHIST.

All these things have been happening during this war. What a prospect it opens for the future! Are all the researches of science to continue to be devoted after this war to the inventing of means to destroy the human race, with no restriction whatever on their use? It is a prospect which threatens civilization and the existence of the race itself.

In letting loose these things and in introducing them into war, Germany has been the great anarchist who has let loose on the world a greater and a more terrible anarchy than any individual anarchist ever dreamed of.

Unless there is some means of restraining these things future war will, by the developments of science, be made even more terrible and horrible than this war, because Germany has thrown down all the barriers which civilization had previously built up so as to keep the horrors of war within bounds. Neutral nations have an interest in seeing that something is done to insure that there shall be rules which are kept in future wars—rules which shall be so laid down and supported that it will be clear that any nation which departs from them will be regarded by the whole world as the enemy of the human race, and have the whole world against her.

The indiscriminate use of high explosives to destroy great cities and combatants and noncombatants alike, all those things which have been done in this war—the introduction of poisonous gas and the introduction, perhaps, of disease—it will need all the efforts, not only of belligerents but of neutrals, after this war is over, to see that the barriers necessary to secure that the inventions of science are used in the future in the air, on the land, on the water, and under the water, not for the destruction of mankind but for its welfare to see that all nations shall recognize some responsibility to prevent outbreaks of war, and that if there be war it shall be conducted by rules at least as humane as those which our ancestors observed, and which Germany to-day has disregarded and thrown to the winds. That is a matter in which the whole human race is interested.

For years before this war we were living under the deepening shadow of Prussian militarism, extending itself over the whole of Germany, and then extending itself over the whole Continent. There must be no peace except a peace which is going to insure that the nations of Europe will live in the future free from that shadow, will live in the open air, and in the light of freedom. For that we are contending. We know that if mankind has any birthright, as we believe it has the birthright of peace and liberty, then our cause is just and right, because it is for that we are fighting. If we are asked how long the struggle is to continue, we reply it must continue till these things are secured, and if it be hard that the present generation in its prime should be called upon to sacrifice all that it has for the sake of the future of the nation and the generations that come after, it is our determination, which the progress of the war but deepens, in common with that of our allies, to continue the war till we have made it certain that the allies in common shall have achieved the success which must and ought to be theirs; till they have secured the future peace of the whole Continent of Europe, and until they have made it clear that all the sacrifices we have made shall not have been made in vain.

The second was by Germany, through her chancellor, who, on the 9th of November, replied to Grey, as follows:

SAYS GERMANY TRIED TO AVERT THE WAR—BETHMANN-HOLLWEG'S SPEECH BEFORE REICHSTAG COMMITTEE NOVEMBER 9 GIVEN IN FULL—PUTS BLAME ON RUSSIA—DECLARES BERLIN PERSUADED VIENNA TO REACH AGREEMENT WITH PETROGRAD AT LAST MOMENT.

The complete and corrected text of the speech made by the German chancellor, Dr. von Bethmann-Hollweg, before the chief committee of the Reichstag on November 9 has just been received in this country. The chancellor, it will be seen from this version, which is printed for the first time in America, acknowledges the efforts made in the interests of peace by the entente and the Czar of Russia, and, for the first time, quotes documents to show that not only had Russia and Austria-Hungary reached an agreement, which would have averted the great war, but he asserts that such agreement had been brought about through the earnest solicitation of Germany at Vienna.

Germans have pointed to this statement as a refutation of the assertion of the allies in their note of December 30 that Germany blocked the attempt to avert the war in July, 1914. The full text of the speech follows:

The exhaustive debates which have taken place in the chief committee during the course of the last few weeks have in the end always turned on questions regarding the prosecution and the termination of the war. On the enemy's side they usually speak about the prosecution of the war. Lord Grey also spoke of it in his speech at the banquet to the Foreign Press Association. The British minister then said that there was one thing which deserved to be kept in mind, namely, that one could not revert too often to the consideration of the origin of the war, because that origin would have its influence on the conditions of peace.

In view of the fundamental importance which Lord Grey has again recently attached to this question of peace conditions, which we, too, have attached to it, I am obliged to state the facts in order to disperse the clouds with which our enemies endeavor to disguise the real situation.

In reply I can only repeat what is known. The act which made war inevitable was the Russian general mobilization, which was ordered on the night of July 30–31, 1914. Russia, England, France, and the entire world knew that this step must make further waiting impossible for us. Even in England people are beginning to understand the fateful significance of the Russian mobilization. The truth is coming to light. An English professor of world fame wrote some time ago that many people would think differently about the end of the war if they were better informed about its beginning, especially about the fact of the Russian mobilization.

No wonder, then, that Lord Grey, in his recent speech, could not pass the Russian mobilization unnoticed, but felt himself obliged to speak of it. He could no longer deny that the Russian mobilization preceded the German and the Austrian mobilization, but as he desires to remove all blame for the war from the entente, he makes a daring endeavor by means of quite a new version of the case, to represent the Russian mobilization as Germany's work.

Lord Grey's explanation is that Russia ordered her first mobilization only after a report had appeared in Germany that Germany had ordered a mobilization, and after this report had been telegraphed to Petrograd.

It took about two and a quarter years for Lord Grey to discover this interpretation, which is as new as it is objectively false, of the cause of the war. The occurrence to which he alluded is well known. The document which forms the basis of his proof is an extra edition of the Berlin

Lokal-Anzeiger. You will remember, gentlemen, perhaps, that on Thursday, July 30, 1914, in the early afternoon, the Lokal-Anzeiger issued a false report in an extra edition that the Emperor had ordered a mobilization. You also know that the sale of this extra edition was at once stopped by the police, and the available copies were seized. I can also declare that the foreign secretary immediately informed the Russian ambassador, and simultaneously all other ambassadors, by telephone, that the news issued by the Lokal-Anzeiger was false. The Russian Embassy was also informed as soon as possible from the Lokal-Anzeiger's office that there had been a mistake.

I can further confirm that the Russian ambassador, immediately after the issue of the extra edition, telegraphed a cipher message to Petrograd, which, according to the Russian Orange Book, read as follows:

"I learn that an order for the mobilization of the German Army and fleet has just been published."

But this telegram, after Herr von Jagow's telephonic explanation, was followed by a second telegram "en clair," which read as follows:

"Please consider my last telegram canceled (nichtig). Explanation follows."

A few minutes later the Russian ambassador sent a third cipher telegram, which, according to the Russian Orange Book, said that the German foreign minister had just telephoned to him that the news of the mobilization of the army and fleet was false, and that the extra edition in question had been seized. The immediate intervention of Herr von Jagow, the secretary of state for foreign affairs, in order to rectify the false news—an intervention which in the official Russian Orange Book is confirmed by the telegram of M. Sverbejeff, the Russian ambassador—of itself contradicts the assertion of Lord Grey that we intentionally desired to deceive Russia for the purpose of bringing about a mobilization. I can, however, also confirm, according to investigations of the Imperial Postal Administration concerning the periods of the sending of the Russian ambassador's three telegrams, that these must have arrived in Petrograd almost simultaneously.

CITES CZAR'S MESSAGE AS PROOF.

The Russian Government itself, which, after all, must be best acquainted with the reasons for its mobilization, never had an idea of explaining its fateful step by appealing to the Lokal-Anzeiger's extra edition. Lord Grey, I assume, will not desire to reject the Czar as a witness. On Friday, July 31, at 2 o'clock in the afternoon, when the mobilization order had already been issued to all the Russian forces, the Czar telegraphed, in reply to the Kaiser's last appeal for peace:

"It is technically impossible to discontinue our military preparations, which have become necessary owing to Austria-Hungary's mobilization."

No mention of the Lokal-Anzeiger. No mention of the German mobilization.

As early as July 29 Russia had already answered this measure with the mobilization of 13 army corps. After July 29 Austria-Hungary had taken no further military measures which could have furnished Russia with any grounds for a general mobilization, which was equivalent to a declaration of war. Only after the general mobilization had taken place in Russia did Austria-Hungary on the morning of July 31 also proceed to a general mobilization. We ourselves even then exercised forbearance and patience to the utmost limits of consideration for our own existence and our duty toward our allies. As far back as July 29, when Russia mobilized against Austria-Hungary, we ourselves could have mobilized. The text of our treaty of alliance with Austria-Hungary was known, and nobody could have considered our mobilization aggressive. We did not do it.

But to the news of the Russian general mobilization we at first replied only with the announcement of a state of affairs threatening danger of war, which did not yet signify mobilization. We informed the Russian Government and added that mobilization must follow if Russia did not cease every war measure against us and Austria-Hungary within 12 hours and give us a definite declaration in regard to this. We gave Russia thereby, even when war seemed already inevitable owing to her fault, another opportunity to come to her senses, and even at the last moment to save the peace. By this delay we also gave Russia's allied friends the world-historical opportunity to influence Russia in favor of peace.

It was in vain. Russia left us without a reply and England persisted in silence toward Russia. France, through the mouth of her premier, in the evening of July 31, simply denied to our ambassador the fact of the Russian mobilization and ordered her own mobilization some hours earlier than when we ourselves had proceeded to mobilize. Moreover, as regards the alleged defensive character of the Russian complete mobilization, I will here emphatically declare that on the outbreak of war in 1914 a general instruction of the Russian Government issued in 1912 for the contingency of mobilization was in force, which, word for word, contains the following passage by the All-Highest:

"It is ordered that the announcement of mobilization is at the same time an announcement of war against Germany." Against Germany! In 1912, against Germany!

It is incomprehensible how, in view of these documentary facts, Lord Grey can come before the world and his own country with the story of a maneuver by which we enticed the pacific Russian into mobilization against his own will by grossly deluding him about our own measures. No! The truth is Russia would never have decided on the fateful step if she had not been encouraged to it from the Thames by acts of commission and omission.

I recall the actual situation at the time when Russia issued the order for a general mobilization. The instructions which I gave our ambassador in Vienna on July 30 are known. Lord Grey also well knows that I retransmitted to Vienna with the most peremptory recommendation the mediation proposal which he made to our ambassador on July 29 and which appeared to me a suitable basis for the maintenance of peace. At that time I telegraphed to Vienna:

GERMAN EFFORTS IN VAIN.

"Should the Austro-Hungarian Government refuse all mediation we are confronted with a conflagration in which England would go against us, and Italy and Rumania, according to all indications, would not be with us; so that with Austria-Hungary we should confront three great powers, Germany, as the result of England's hostility, would have to bear the chief brunt of the fight. The political prestige of Austria-Hungary, the honor of her arms, and her justified claims against Serbia can be sufficiently safeguarded by the occupation of Belgrade or other places. We therefore urgently and emphatically ask the Vienna cabinet to consider the acceptance of mediation on the proposed conditions. Responsibility for the consequences which may otherwise arise must be extraordinarily severe for Austria-Hungary and ourselves."

The Austro-Hungarian Government acceded to our urgent representations by giving its ambassador in Berlin the following instruction:

"I ask your excellency most sincerely to thank Herr von Jagow, the secretary of state for foreign affairs, for the information given through Herr von Tschirschki, and to declare to him that despite the change in the situation which has since arisen through the Russian mobilization we are quite ready to consider the proposals of Sir Edward Grey for a settlement between us and Serbia. A condition of our acceptance is, of course, that our military action against Serbia should meanwhile proceed, and that the English cabinet should induce the Russian Government to bring to a standstill the Russian mobilization directed against us, in which case also we, as a matter of course, will at once cancel our defensive countermeasures forced upon us in Galicia."

Against this I place the following steps of Lord Grey. On July 27, 1914, in reply to a remark of the Russian ambassador at London that the impression in German and Austro-Hungarian circles was that England would remain quiet, he (Viscount Grey) said that that impression had been removed by the orders which "we gave to the first fleet." On July 29 Lord Grey immediately acquainted the French ambassador with his confidential warning to our ambassador at London, that Germany must be prepared for speedy decisions—that is, for her (England's) participation in the war against us.

Could Lord Grey suppose that such a disclosure would serve peace? Must not France thereby have been encouraged to give Russia a promise of unconditional war support, which Russia had for days urgently demanded? Must not Russia have been strengthened to the utmost in her bellicose intention by the certainty of a Franco-British alliance? The Russian reply to Lord Grey's morning conversation was in fact not long in coming. On the evening of the same day, July 29, M. Sazonoff instructed the Russian ambassador in Paris to express his sincere thanks for the declaration made to him by the French ambassador that Russia could rely fully upon the support of her ally, France.

PUTS THE BLAME ON RUSSIA.

Russia, therefore, during the night of July 30, was given the fact of Austro-Hungarian compliance, due to our influence, which gave an open road to the maintenance of peace. She was simultaneously faced with the certitude of Anglo-French support, disclosed by Lord Grey to M. Paul Cambon, which alone gave her the possibility of war.

She chose mobilization, and with it war. Who now is to blame for this fateful decision? We, who recommended with the greatest emphasis to the Vienna Cabinet utter complaisance and the acceptance of the English proposal for mediation, or the British Cabinet, which, in a critical hour, held out to France and Russia a prospect of its support. Lord Grey did not speak of these decisive things, but, on the other hand, he turned the attention of his audience to minor things.

The resort to The Hague Tribunal which the Czar proposed sounds on first sight very important, but it was proposed after the Russian troops had already been put in motion against us. His own conference proposal—I have repeatedly pointed out this in the Reichstag—Lord Grey set aside in favor of our mediation.

And Belgium! Before a single German soldier had set foot on Belgian territory Lord Grey explained to the French ambassador, after the latter's report to his Government, that in case the German fleet should enter the Channel or pass from the North Sea with the intention of attacking the French coast or the French fleet or disturb (Beunruhigen) the mercantile fleet—I repeat the word "disturb," gentlemen—the British fleet would interfere, and give its protection in such a manner that from this moment England and Germany would be in a state of war.

Can he who declared that our fleet's putting to sea would be a casus belli still seriously maintain that the violation of Belgian neutrality was the sole cause of England's entering the war against her will? And finally, with regard to the statement that, in order to keep England out of the war, we made a discreditable proposal to the British Government to shut its eyes to the violation of Belgian neutrality and allow us a free hand to take the French colonies, I challenge Lord Grey to investigate the real facts in his Blue Book and in his documents.

In an earnest endeavor to localize the war, I assured the British ambassador in Berlin on July 29 that on the condition of England's neutrality we would guarantee the integrity of France. On August 1 Prince Lichnowsky asked Lord Grey whether in the event of Germany's undertaking to respect the neutrality of Belgium England would also undertake to observe neutrality. He further held out the prospect that in the event of English neutrality the integrity not only of France but also of the French colonies might be guaranteed. On my instructions he gave an assurance that we were ready to give up the idea of an attack against France if England would guarantee the neutrality of France.

At the last moment I promised further that so long as England remained neutral our fleet would not attack the French northern coast, and on the condition of reciprocity would undertake no hostile operations against French merchant ships. Lord Grey's sole reply to this was that he must finally decline all promise of neutrality. He could only say that England wished to keep her hands untied. If England had given this declaration of neutrality she would not have been exposed to the contempt of the whole world, but would have gained the credit of having prevented the war (das Verdienst den Ausbruch des Krieges zu verhindern).

I ask here, too, who willed the war? We, who were prepared to give England every imaginable security for France and Belgium, or England, which declined all our proposals and refused even to indicate the way for the preservation of peace between our two nations (zwischen unsern beiden Ländern)?

CONCERNING A PEACE LEAGUE.

Lord Grey finally dealt exhaustively with the period after peace and with the establishment of an international union to preserve peace. On that subject, too, I will say a few words. We never concealed our doubts whether peace could be lastingly insured by international organizations such as arbitration courts. I will not discuss here the theoretical parts of the problem, but in practice now and in peace we shall have to define our attitude toward the question.

When, after the termination of the war, the world shall fully recognize its horrible devastation of blood and treasure, then through all mankind will go the cry for peaceful agreements and understandings which will prevent, so far as is humanly possible, the return of such an immense catastrophe. This cry will be so strong and so justified that it must lead to a result. Germany will honorably cooperate in investigating every attempt to find a practical solution, and collaborate toward its possible realization, and that all the more

if the war, as we confidently expect, produces political conditions which will do justice to the free development of all nations, small as well as great. In that case the principle of right and free development must be made to prevail, not only on the Continent, but also at sea.

Of that Lord Grey, of course, did not speak. The guaranty of peace which he has in mind appears to me to possess a peculiar character, devised especially for British wishes. During the war the neutrals, according to his desire, will have to remain silent and patiently endure every compulsion of British domination on the seas. After the war, when England as she thinks will have beaten us, when she will have made a new arrangement of the world, then neutrals are to combine as guarantors of the new English arrangement of the world. To this arrangement of the world will also belong the following:

From a trustworthy source we know that England and France already, in 1915, guaranteed to Russia territorial rule over Constantinople, the Bosporus, and the western shore of the Dardanelles, with its hinterland, while Asia Minor was to be divided among the entente powers. The English Government avoided replying to the questions which were asked in Parliament on this subject, but certainly these plans of the entente are also of interest for the international peace union which later is to guarantee them. These are the annexation intentions of our enemies, to which also must be added Alsace-Lorraine, while I, in the discussion of our war aims, have never indicated the annexation of Belgium as our intention.

Such a policy of force (Gewaltpolitik) can not, of course, form the basis for an effective international peace union, and it is in the strongest contrast to Lord Grey's and Mr. Asquith's ideal state of things, where right governs might and all States form a family of civilized mankind, and can freely develop themselves, whether big or small, under the same conditions and in accordance with their natural capabilities. If the entente wishes seriously to take up this position, then it should also act consistently upon it; otherwise the most exalted words about peace union and harmonious living together in an international family are mere words (schall und rauch).

OPPOSES AGGRESSIVE COALITIONS.

The first condition for the development of international relations by means of an arbitration court and the peaceful liquidation of conflicting antagonisms would be that henceforth no aggressive coalitions should be formed. Germany is ready at all times to join the union of peoples, and even to place herself at the head of such a union, which will restrain the disturber of peace. The history of international relations before the war lies clearly before the eyes of the entire world.

What brought France to Russia's side? Alsace-Lorraine. Why did Russia desire Constantinople? Why did England join them?

Because Germany, in peaceful work, had become too great for her. What did we desire? Lord Grey says that Germany, with her first proposal concerning the integrity of France and Belgium, desired to purchase England's permission to take what she wanted of the French colonies. Even the most harebrained German did not entertain the idea of attacking France for the purpose of seizing her colonies.

It was not this which was fateful to Europe, but that the English Government favored French and Russian predatory aims which were unattainable without a European war. As against this aggressive character of the entente, the triple alliance had always found itself in a defensive position. No honorable critic can deny that. Not in the shadow of Prussian militarism did the world live before the war, but in the shadow of the policy of isolation which was to keep Germany down.

Against this policy, whether it appears diplomatically as encirclement, military as a war of destruction, economically as a world-boycott, we from the beginning have been on the defensive. The German people wages this war as a defensive war for the safety of its national existence and for its free development.

We have never pretended anything else; we have never intended anything different. How otherwise could this display of gigantic forces, this inexhaustible heroism, determined to fight to the last, be explained? There is no precedent for it in all human history. At the obstinacy of the enemy's will to war, at the calling up of military material and auxiliary forces from all parts of the world, our resistance hardened to still greater determination. However England may still supplement her strength—and there is a limit even to England's command of strength—it is predestined to fail before our will to live. This will is unconquerable, imperturbable. We wait for our enemies to recognize this, confident that this recognition must come.

The position taken by von Bethmann-Hollweg was popular in Germany.

REICHSTAG LEADERS BACK CHANCELLOR—INDORSE HIS PEACE LEAGUE VIEWS AND HIS ANSWER TO VISCOUNT GREY—BELGIAN POLICY IN DOUBT—BUT PRESS COMMENT ASSUMES THAT THE CHANCELLOR MEANT TO RENOUNCE ANNEXATION.

BERLIN, *November 10.*

Leaders in all parties in the Reichstag main committee, after yesterday's speech by Chancellor von Bethmann-Hollweg, expressed virtually unanimous agreement with the principal points in his address. All emphasized the importance of the Russian order of 1914, according to which, the chancellor said, mobilization meant a declaration of war against Germany. The speakers said that the chancellor's descriptions of the origin of the war ought to be known to the whole world, not only to neutral but also to hostile belligerent countries.

They also indorsed the chancellor's views concerning an international league for the preservation of permanent peace, expressed their agreement with such views, and specified their own ideas in regard to it. In addition, most of the orators stated the views of their parties concerning Belgium, and, incidentally, concerning the Polish trouble.

The first speaker, a member of the Catholic Party, said he welcomed the chancellor's declaration that Germany would join a union of States for the preservation of peace. He added that it was evident that in such a union of States the vital questions of a State or States ought not to be voted down by the majority. He said also that the experiences of the war justified a desire for the better protection of Germany's frontier. The proclamation of the Kingdom of Poland, he said, meant that the Poles would have a chance for free and independent evolution. Belgium, he said, "must never again be used as a starting point for an invasion against Germany."

SOCIALIST SAYS PEACE IDEA GAINS.

In the course of this discussion a member of the Socialist Party said that in all countries the idea that there should be an end to war was gaining ground. The chancellor was correct in stating that the cry for international treaties to prevent recurrence of war would become so strong that eventually it must lead to results.

The speaker said that formerly Germany had attached less importance than France and England to the idea of arbitration. The chancellor had expressed fear that England would frame a peace coalition in accordance with her own desires. Nevertheless the principle ought to be recognized as right. It was an important point, the Socialist member continued, that the chancellor never had spoken of the annexation of Belgium as essential. Germany was at war for defense and not for conquest, he said, and it would be of advantage if Germany should take the lead in a coalition for the prevention of war.

An independent Socialist member said that special importance attached to the chancellor's expression of readiness to participate in attempts to form a coalition which would guarantee peace. He added that Viscount Grey, the British foreign secretary, had never approved the idea of boycotting Germany to annihilate it, but that, on the contrary, he had declined several times to approve such a project. The Socialist member took exception to the ideas of the Conservatives in regard to Belgium and said the chancellor should make it clear that he was opposed to the annexation of Belgium.

A member of the annexationist group expressed sympathy with the principle of arbitration, but added that if Germany had accepted it in 1914 the result would have been to give time to her enemies, whose plan was not to begin the war until 1916.

A Socialist member took up the question of the Russian mobilization, saying that newspaper reports showed it was in progress before the official Russian date of the beginning of mobilization, and quoted several press dispatches from Petrograd to Paris and London on July 29 and 30, 1914, to prove his assertions.

PRESS COMMENT GENERALLY FAVORABLE.

All the morning newspapers commenting on the speech agree that the chancellor clearly established the truth concerning the beginning of the war, says the Overseas News Agency, which gives a symposium of the editorial comment.

The Lokal-Anzeiger says:

"To the whole world the name of Edward Grey is known as the chief instrument of the present war. Anyone who reads between the lines of Grey's banquet speech and his other utterances will perceive that he accuses others in order to exculpate himself, and that all these attempts merely spring from an evil conscience charged with guilt."

The Tageszeitung says that under no circumstances can it consider the question of the causes of the war as bearing upon the end of the war, since the end will be decided by the military situation. It also expresses regret that the chancellor's words concerning Belgium may admit of the idea that the chancellor suggests peace on the basis of the status quo on the west front.

Germania, the Catholic organ, expresses doubt as to Viscount Grey's sincerity on the question of arbitration. It says that the countries hostile to Germany have for years followed an aggressive policy and have fostered a spirit of "revenge." When this is considered in connection with Russia's lust of conquest they can hardly be considered, therefore, as trustworthy guardians of international peace. Germany, it adds, on the other hand, has kept peace since her foundation, which now enables her to give proof of moral strength in war.

The chancellor's remark that he never demanded the annexation of Belgium is generally treated as equivalent to a definite renunciation of annexation. The Kreuzzeitung says it understands his words in this sense and regrets them, along with the other conservative organs like the Post, Tageszeitung, and the Tägliche Rundschau. These papers also regret that the chancellor did not define more clearly his position regarding Belgium.

The Tageblatt indorses the views expressed in the chancellor's speech and in the Reichstag debate concerning arbitration, and quotes British objection against the arbitration idea.

—

HOPES FOR PEACE WITHOUT CONQUEST.

BERLIN, *November 10, 1916.*

Vorwärts prints a significant editorial on the chancellor's speech of yesterday. It may be taken as faithfully mirroring the feelings of the masses.

"When will the war end?" the writer asks. "When the nations of Europe shall think as the great mass of the German Nation thinks today. Peace at any price? No! But war—eternal war for conquest? Still less! Defeat, the cutting up of the nation, slavery under the yoke of the victor? No! But the peace of good understanding, assuring the rights of all nations, big and little? Better to-day than to-morrow! So think 99 out of 100 Germans to-day; and when the other nations think so, too, peace will come.

"Perhaps the chancellor's speech yesterday is a step toward the longed-for goal. What the German Government wants is now pretty clear. What is French shall remain French; what is Belgian shall remain Belgian; and what is German shall remain German. That is what the chancellor said yesterday. Poland shall be free from Russia and lean on the central powers.

"The chancellor agrees with the ideas regarding international arbitration courts as President Wilson and Viscount Grey elaborated them, and he uses such strong terms that there can be no doubt of his sincerity. But if all Governments are agreed to avoid future wars by mutual understanding and arbitration, why can not this intention hold good also for the present war? The peace that shall have within it guarantees of permanence and that shall have been concluded in the determination to avoid future wars by arbitration can not be dictated by the victor to the vanquished; it can only be concluded without conquest."

—

SEE A WAY OPENED FOR PEACE.

AMSTERDAM, *November 10, 1916.*

Several German newspapers, in commenting on Chancellor von Bethmann-Hollweg's speech, express the opinion that it opens the way for peace. The Tageblatt says the ideas for the future which the chancellor discussed are more important than the question, "Who is guilty of having caused the war?" and refers to his remark that after the war humanity will demand measures to prevent the recurrence of such conflicts.

"Whoever is convinced," the Tageblatt continues, "that the cry will go through humanity for a peaceful arrangement will not fail to make preparation for a response to this great cry."

The Freisinnige Zeitung says that the chancellor in all seriousness declares his readiness to collaborate in efforts to obtain international

guarantees for lasting peace, adding: "Now is the time for the entente powers, especially Great Britain, to come forward with a program."

Vorwärts says that what the German Government now desires is tolerably clear; that the chancellor expressed it in different words than Philipp Scheidemann, Socialist leader in the Reichstag, who in a speech last month asserted that the belligerent nations desired peace, but that the views of Dr. von Bethmann-Hollweg are no less clear than are those of Herr Scheidemann.

"In the chancellor's speech," Vorwärts continues, "one hears the first sound of the future rustling which will signalize the end of war's horrors."

—

BLAMES ALLIES' OBSTINACY—BETHMANN-HOLLWEG SAYS IT ONLY HARDENS GERMANY'S RESISTANCE.

AMSTERDAM, *November 10.*

Chancellor von Bethmann-Hollweg expressed the conviction that Germany was certain of final victory in his speech before the main committee of the Reichstag yesterday, according to reports of the session published here. The chancellor is quoted as saying:

"England and France in 1915 guaranteed to Russia territorial rule over Constantinople, the Bosporus, and the western shores of the Dardanelles, with its hinterland, while Asia Minor was to be divided among the members of the entente. The annexation intentions of our enemies also include Alsace-Lorraine, which the league of peace is to guarantee them. Such a policy, of course, can not form a basis for an effective peace union. Germany is ready at all times to join a union of the peoples, and even to place herself at the head of such a union to restrain a disturber of the peace. Not in the shadow of Prussian militarism did the world live before the war, but in the shadow of a policy of isolation which was to keep Germany down.

"Against this policy, whether it appears diplomatically as an encirclement, militarily as a war of destruction, or economically as a world boycott, we from the beginning were on the defensive. The German people wages this war as a defensive war for the safety of its national existence, for its free development. We never pretended anything else, never intended anything else. Not otherwise can be explained this display of gigantic force, this inexhaustible heroism, unexampled in all human history.

"The enemy obstinately wills to war with the calling up of military material and auxiliary forces from all parts of the world. These efforts harden our resistance to still greater determination. Whatever England can still bring up of strength—and England's command of strength has its limits—it is predestined to fall before our will to live. This will is unconquerable, and we await the enemy's recognition of this, confident that this recognition must come."

—

DERNBURG FOR PEACE LEAGUE—URGES GERMANS NOT TO LET GREY "TAKE THE WIND OUT OF OUR SAILS."

BERLIN, *November 10.*

Though evoking practically no favorable comment at the time it was first suggested, the idea of a league of nations to maintain peace by force, if necessary, as championed by President Wilson and latterly espoused by Viscount Grey, has by no means fallen on unfruitful soil here. It is now not only warmly received in out-and-out pacifist circles and among the Social Democrats, but is meeting with thoughtful interest in much wider and more important circles of public opinion.

Dr. Bernhard Dernburg, writing on diplomacy in the Tageblatt, says:

"I ask the question, Why, after President Wilson, before the Taft Peace League, and in his Cincinnati speech, had called on the nations of the world to confess their belief in the importance of super-State agreements, no answering echo came from Germany, either from the Government or Parliament? Or is there anyone who does not agree with Viscount Grey's 'peace treaties guaranteed by force of arms,' or who does not dare to speak his mind? Why must we let the wind be taken out of our sails by Viscount Grey and thereby give him an opportunity of calumniating us in the most impertinent manner? Do we enjoy standing before the world without contradiction as Huns, barbarians, people without faith and loyalty—not only before the English world, which isn't quite a matter of indifference to us, since a peace which in the last analysis is nothing but 'no war' is, after all, not our goal—but especially before the neutral world, which, after all, includes some 140,000,000 cultivated whites?

"I understand quite well the shy pride of our German character, which wants to make no answer to such things and rightly considers them beneath our dignity. But no utterance of this sort should remain in future without refutation. If it can not be done by the Government, there should be sufficient talent among the parties to undertake the task; and if the Reichstag does not happen to be in session, one can learn of the English that when they have anything to say they quickly enough get up a public meeting, a luncheon, or a similar opportunity, or, at the worst, write a letter, in order to give a leading statesman an opportunity to express himself without contradiction.

"For I assert with all conviction that the German nation, too, wills that in future such frightful happenings as the present world war shall be avoided by all possible means, and the German nation wills to have all means employed which may serve this end. Yes; even if we believe that many of these means which one dubs 'pacifist' would in the end have no success, we must not decline them and haughtily close our doors against them, if only out of respect for others who do believe in them.

"We made a poor showing at the various Hague conferences—not, perhaps, because in the final analysis we did not have right on our side, but because we blurted out our views regarding the proposals made there with such brutal objections as deeply to hurt the sensibilities of the other side, which, after all, consisted of the leading men of the rest of the world. That surely was not art and surely was not diplomacy. Good will to a right end we all can have.

"Viscount Grey has characterized as one of England's war aims super-State organizations, and the chancellor in his last speech assented with the phrase, 'That is what we want, too.' But such an expression must go still further; it must be made still clearer, else its effect is lost. A free profession of faith in the idea, however, would create an agreement between enemies on at least one war aim, and even that would be something worth while. Moreover, it would conform with the feelings of the great majority of the German nation."

—

SOUGHT CHANCELLOR'S VIEWS—HIS REICHSTAG SPEECH AN ANSWER TO THE PEACE LEAGUE'S INQUIRY.

WASHINGTON, *November 10.*

The indorsement by the German chancellor of the aims of the League to Enforce Peace in the Reichstag yesterday was a direct answer to an inquiry made by the officials of the league to the German Government asking for its views in the matter. This was learned authoritatively to-night.

Some weeks ago an official of the league wrote a letter to Count von Bernstorff requesting that the views of his Government be made known, in the interests of the progress of the league's work. The ambassador at once forwarded the letter to the German foreign office with the recommendation that the request be granted.

In official and diplomatic circles here considerable importance is attached to the chancellor's utterances. It is said that, although the German Government's indorsement of the principles of the league may not hasten the calling of a peace conference, Germany's action may materially aid in the establishment of a more lasting and equitable peace than might otherwise be obtained.

Germany took the initiative to secure through neutrals a conference between the belligerents to discuss peace terms.

TEXT OF THE TEUTONIC NOTES TO THE NEUTRAL POWERS AND THE POPE.

TO THE NEUTRAL POWERS.

BERLIN, *December 12.*

Following is the text of the note addressed by Germany and her allies to the neutral powers for transmission to the entente allies:

"The most terrific war experienced in history has been raging for the last two years and a half over a large part of the world—a catastrophe which thousands of years of common civilization was unable to prevent and which injures the most precious achievements of humanity.

"Our aims are not to shatter nor annihilate our adversaries. In spite of our consciousness of our military and economic strength and our readiness to continue the war (which has been forced upon us) to the bitter end, if necessary; at the same time, prompted by the desire to avoid further bloodshed and to make an end to the atrocities of war, the four allied powers propose to enter forthwith into peace negotiations.

"The propositions which they bring forward for such negotiations, and which have for their object a guarantee of the existence of the honor and liberty of evolution for their nations, are, according to their firm belief, an appropriate basis for the establishment of a lasting peace.

"The four allied powers have been obliged to take up arms to defend justice and the liberty of national evolution. The glorious deeds of our armies have in no way altered their purpose. We always maintained the firm belief that our own rights and justified claims in no way control the rights of these nations.

"The spiritual and material progress which were the pride of Europe at the beginning of the twentieth century are threatened with ruin. Germany and her allies, Austria-Hungary, Bulgaria, and Turkey, gave proof of their unconquerable strength in this struggle. They gained gigantic advantages over adversaries superior in number and war material. Our lines stand unshaken against ever-repeated attempts made by armies.

"The last attack in the Balkans has been rapidly and victoriously overcome. The most recent events have demonstrated that further continuance of the war will not result in breaking the resistance of our forces, and the whole situation with regard to our troops justifies our expectation of further successes.

"If, in spite of this offer of peace and reconciliation, the struggle should go on, the four allied powers are resolved to continue to a victorious end, but they disclaim responsibility for this before humanity and history. The Imperial Government, through the good offices of your excellency, asks the Government of [here is inserted the name of the neutral power addressed in each instance] to bring this communication to the knowledge of the Government of [here are inserted the names of the belligerents]."

—

TO THE VATICAN.

BERLIN, *December 12.*

The note of the German Government, as presented by Dr. von Muhlberg, German minister to the Vatican, to Cardinal Gasparri, papal secretary of state, reads as follows:

"According to instructions received, I have the honor to send to your eminence a copy of the declaration of the Imperial Government to-day, which by the good offices of the powers intrusted with the protection of German interests in the countries with which the German Empire is in a state of war, transmits to these States, and in which the Imperial Government declares itself ready to enter into peace negotiations. The Austro-Hungarian, Turkish, and Bulgarian Governments also have sent similar notes.

"The reasons which prompted Germany and her allies to take this step are manifest. For two years and a half a terrible war has been devastating the European Continent. Unlimited treasures of civilization have been destroyed. Extensive areas have been soaked with blood. Millions of brave soldiers have fallen in battle and millions have returned home as invalids. Grief and sorrow fill almost every house.

"Not only upon the belligerent nations, but also upon neutrals, the destructive consequences of the gigantic struggle weigh heavily. Trade and commerce, carefully built up in years of peace, have been depressed. The best forces of the nation have been withdrawn from the production of useful objects. Europe, which formerly was devoted to the propagation of religion and civilization, which was trying to find solutions for social problems, and was the home of science and art and all peaceful labor, now resembles an immense war camp in which the achievements and works of many decades are doomed to annihilation.

"Germany is carrying on a war of defense against her enemies, which aim at her destruction. She fights to assure the integrity of her frontiers and the liberty of the German nation, for the right which she claims to develop freely her intellectual and economic energies in peaceful competition and on an equal footing with other nations. All the efforts of their enemies are unable to shatter the heroic armies of the (Teutonic) allies, which protect the frontiers of their countries, strengthened by the certainty that the enemy shall never pierce the iron wall.

"Those fighting on the front know that they are supported by the whole nation, which is inspired by love for its country and is ready for the greatest sacrifices and determined to defend to the last extremity the inherited treasure of intellectual and economic work and the social organization and sacred soil of the country.

"Certain of our own strength, but realizing Europe's sad future if the war continues; seized with pity in the face of the unspeakable misery of humanity, the German Empire, in accord with her allies, solemnly repeats what the chancellor already has declared a year ago,

that Germany is ready to give peace to the world by setting before the whole world the question whether or not it is possible to find a basis for an understanding.

"Since the first day of the pontifical reign his holiness the Pope has unswervingly demonstrated in the most generous fashion his solicitude for the innumerable victims of this war. He has alleviated the sufferings and ameliorated the fate of thousands of men injured by this catastrophe. Inspired by the exalted ideas of his ministry, his holiness has seized every opportunity in the interests of humanity to end so sanguinary a war.

"The Imperial Government is firmly confident that the initiative of the four powers will find friendly welcome on the part of his holiness, and that the work of peace can count upon the precious support of the Holy See."

—

AUSTRIA'S SEPARATE STATEMENT.

LONDON, *December 12.*

An official Austrian statement, referring to the peace offer, says:

"When in the summer of 1914 the patience of Austria-Hungary was exhausted by a series of systematically continued and ever-increasing provocations and menaces, and the monarchy, after almost 50 years of unbroken peace, found itself compelled to draw the sword, this weighty decision was animated neither by aggressive purposes nor by designs of conquest, but solely by the bitter necessity of self-defense, to defend its existence and safeguard itself for the future against similar treacherous plots of hostile neighbors.

"That was the task and aim of the monarchy in the present war. In combination with its allies, well tried in loyal comradeship in arms, the Austro-Hungarian Army and fleet, fighting, bleeding, but also assailing and conquering, gained such successes that they frustrated the intentions of the enemy. The quadruple alliance not only has won an immense series of victories, but also holds in its power extensive hostile territories. Unbroken is its strength, as our latest treacherous enemy has just experienced.

"Can our enemies hope to conquer or shatter this alliance of powers? They will never succeed in breaking it by blockade and starvation measures. Their war aims, to the attainment of which they have come no nearer in the third year of the war, will in the future be proved to have been completely unattainable. Useless and unavailing, therefore, is the prosecution of the fighting on the part of the enemy.

"The powers of the quadruple alliance, on the other hand, have effectively pursued their aims, namely, defense against attacks on their existence and integrity, which were planned in concert long since, and the achievement of real guarantees, and they will never allow themselves to be deprived of the basis of their existence, which they have secured by advantages won.

"The continuation of the murderous war, in which the enemy can destroy much, but can not, as the quadruple alliance is firmly confident, alter fate, is ever more seen to be an aimless destruction of human lives and property, an act of inhumanity justified by no necessity, and a crime against civilization.

"This conviction and the hope that similar views may also be begun to be entertained in the enemy camp has caused the idea to ripen in the Vienna Cabinet—in full agreement with the Governments of the allied [Teutonic] powers—of making a candid and loyal endeavor to come to a discussion with their enemies for the purpose of paving a way for peace.

"The Governments of Austria-Hungary, Germany, Turkey, and Bulgaria have addressed to-day identical notes to the diplomatic representatives in the capitals concerned who are intrusted with the promotion of enemy nationals, expressing an inclination to enter into peace negotiations and requesting them to transmit this overture to enemy States. This step was simultaneously brought to the knowledge of the representatives of the Holy See in a special note, and the active interest of the Pope for this offer of peace was solicited. Likewise the accredited representatives of the remaining neutral States in the four capitals were acquainted with this proceeding for the purpose of informing their Governments.

"Austria and her allies by this step have given new and decisive proof of their love of peace. It is now for their enemies to make known their views before the world.

"Whatever the result of its proposal may be, no responsibility can fall on the quadruple alliance, even before the judgment seat of its own peoples, if it is eventually obliged to continue the war."

The note was transmitted to the belligerent powers by President Wilson without comment.

The chancellor explained the purpose in his address to the Reichstag on the same day, December 12.

The chancellor said:

"The Reichstag had been adjourned for a long period, but fortunately it was left to the discretion of the president as to the day of the next meeting. This discretion was caused by the hope that soon happy events in the field would be recorded, a hope fulfilled quicker, almost, than expected. I shall be brief, for actions speak for themselves."

The chancellor said Roumania had entered the war in order to roll up the German positions in the east and those of Germany's allies. At the same time the grand offensive on the Somme had as its object to pierce the German western front, and the renewed Italian attacks were intended to paralyze Austria-Hungary.

"The situation was serious," said the chancellor. "But with God's help our troops shaped conditions so as to give us security which not only is complete but still more so than ever before. The western front stands. Not only does it stand but in spite of the Roumanian campaign it is fitted out with larger reserves of men and material than it had been formerly. The most effective precautions have been taken against all Italian diversions. And while on the Somme and on the Carso the drum fire resounded while the Russians launched troops against the eastern frontier of Transylvania, Field Marshal von Hindenburg captured the whole of western Wallachia and the hostile capital of Bucharest, leading with unparalleled genius the troops that in competition with all the allies made possible what hitherto was considered impossible.

VAST SUPPLIES SEIZED.

"And Hindenburg does not rest. Military operations progress. By strokes of the sword at the same time firm foundations for our economic needs have been laid. Great stocks of grain, victuals, oil, and other goods fell into our hands in Roumania. Their transport has begun. In spite of scarcity, we could have lived on our own supplies, but now our safety is beyond question.

"To these great events on land heroic deeds of equal importance are added by our submarines. The specter of famine, which our enemies intended to appear before us, now pursues them without mercy. When after the termination of the first year of the war the Emperor addressed the nation in a public appeal, he said 'Having witnessed such great events, my heart was filled with awe and determination.' Neither our Emperor nor our nation ever changed their minds in this respect. Neither have they now. The genius and heroic acts of our leaders have fashioned these facts as firm as iron. If the enemy counted upon the weariness of his enemy, then he was deceived.

"The Reichstag, by means of the national auxiliary war-service law, helped to build a new offensive and defensive bulwark in the midst of the great struggle. Behind the fighting army stands the nation at work—the gigantic force of the nation, working for the common aim.

"The Empire is not a besieged fortress, as our adversaries imagined, but one gigantic and firmly disciplined camp, with inexhaustible resources. That is the German Empire, which is firmly and faithfully united with its brothers in arms, who have been tested in battle under the Austro-Hungarian, Turkish, and Bulgarian flags.

"Our enemies now ascribed to us a plan to conquer the whole world, and then desperate cries of anguish for peace. But not confused by those asseverations, we progressed with firm decision, and we thus continue our progress, always ready to defend ourselves and fight for our nation's existence, for its free future, and always ready for this price to stretch out our hands for peace.

NOT DEAF TO PEACE.

"Our strength has not made our ears deaf to our responsibility before God, before our own nation, and before humanity. The declarations formerly made by us concerning our readiness for peace were evaded by our adversaries. Now we have advanced one step farther in this direction. On August 1, 1914, the Emperor had personally to take the gravest decision which ever fell to the lot of a German—the order for mobilization—which he was compelled to give as a result of the Russian mobilization. During these long and earnest years of the war the Emperor has been moved by a single thought: How peace could be restored to safeguard Germany after the struggle in which she has fought victoriously.

"Nobody can testify better to this than I, who bear the responsibility for all actions of the Government. In a deep moral and religious sense of duty toward his nation, and, beyond it, toward humanity, the Emperor now considers that the moment has come for official action toward peace. His Majesty, therefore, in complete harmony and in common with our allies, decided to propose to the hostile powers to enter peace negotiations. This morning I transmitted a note to this effect to all the hostile powers through the representatives of those powers which are watching over our interests and rights in the hostile States. I asked the representatives of Spain, the United States, and Switzerland to forward that note.

"The same procedure has been adopted to-day in Vienna, Constantinople, and Sofia. Other neutral States and His Holiness the Pope have been similarly informed."

The Reichstag adjourned, to be reconvened at the call of the president. Prior to adjournment the president of the chamber declared that the nation and its representatives would always support the chancellor in a policy which was farsighted and intelligent.

AWAIT ANSWER SERENELY.

The chancellor then read the note, and, continuing, said:

"Gentlemen, in August, 1914, our enemies challenged the superiority of power in the world war. To-day we raise the question of peace, which is a question of humanity. We await the answer of our enemies with that sereneness of mind which is guaranteed to us by our exterior and interior strength and by our clear conscience. If our enemies decline to end the war, if they wish to take upon themselves the world's heavy burden of all these terrors which hereafter will follow, then even in the least and smallest homes every German heart will burn in sacred wrath against our enemies, who are unwilling to stop human slaughter in order that their plans of conquest and annihilation may continue.

"In the fateful hour we took a fateful decision. It has been saturated with the blood of hundreds of thousands of our sons and brothers who gave their lives for the safety of their home. Human wits and human understanding are unable to reach to the extreme and last questions in this struggle of nations, which has unveiled all the terrors of earthly life, but also the grandeur of human courage and human will in ways never seen before. God will be the judge. We can proceed upon our way."

The purpose of the note was made known to the German field forces:

KAISER NOTIFIES THE ARMY.

While the announcements were being made in the Reichstag the Kaiser sent the following message to all the commanding generals:

"Soldiers, in agreement with the sovereigns of my allies and with the consciousness of victory I have made an offer of peace to the enemy. Whether it will be accepted is still uncertain. Until that moment arrives you will fight on."

The Russian Duma took action first, it was said, to quiet the rumors that the Czar might be induced to make a separate peace.

By a unanimous vote the Russian Duma to-day went on record against acceptance of the peace proposals of the Teutonic powers.

This news is contained in a Reuter dispatch from Petrograd, which states that formal action of the Duma by resolution followed an address by the new foreign minister, M. Pokrovsky, who announced at the outset that he spoke with full authority in behalf of the Czar. M. Pokrovsky said in his speech:

"In addressing you immediately upon having been appointed minister of foreign affairs, I am not in a position to give you a detailed statement on the political situation, but I feel constrained to inform you without delay and with the supreme authorization of his Imperial Majesty of the attitude of the Russian Government regarding the application of our enemies, of which you have heard through news telegrams.

"Words of peace, coming from the side which bears the whole burden of responsibility for the world conflagration, which it started, and which is unparalleled in the annals of history, however far back one goes, were no surprise to the allies.

FEELERS OFTEN PUT OUT BY BERLIN.

"In the course of the two and a half years of war Germany has more than once mentioned peace. She spoke of it to her armies

and her people each time she entered upon a military operation which was to be decisive. After each military success she put out feelers for a separate peace on one side and another and conducted a propaganda in the neutral press. All these efforts have met with calm and determined resistance by the allied powers.

"Seeing now that she is powerless to make a breach in our unshakable alliance, Germany makes an official proposal to open peace negotiations. In substance, the German proposal contains no tangible indications regarding the nature of the peace which is desired by the enemy armies which devastated and occupied Belgium, Serbia, and Montenegro and part of France, Russia, and Roumania.

"The Austro-Germans have just proclaimed an illusory independence for part of Poland and by this are trying to lay hands on the entire Polish Nation. The motives of the German step will be shown more clearly if one takes into consideration the domestic conditions of our enemies.

"Without speaking of the unlawful attempts to force the population of Russian Poland to take arms against its own country, it will suffice to mention the introduction of general forced labor into Germany to understand how hard is the situation of our enemies.

"To attempt at the last moment to profit by their fleeting territorial conquest before their domestic weakness was revealed—that was the real meaning of the German proposal. In the event of failure they will exploit at home the refusal of the allies to accept peace in order to rehabilitate the tottering morale of their populations.

DECEIVED AS TO RUSSIA'S SPIRIT.

"But there is another senseless motive in that they fail to understand the true spirit which animates Russia. Our enemies deceive themselves with the vain hope that they will find among us men cowardly enough to allow themselves to be deceived, if only for a moment, by the lying proposals.

"That will not be. No Russian heart will yield; all Russia will rally more closely around its august Sovereign, who declared at the very beginning of the war that he would not make peace until the last enemy soldiers had left our country, and for the general collaboration which constitutes the only sure means of arriving at the end we all have at heart, namely, the crushing of the enemy.

"The Russian Government repudiates with indignation the mere idea of suspending the struggle, thereby permitting Germany to take advantage of the last chance she will have of subjecting Europe to her hegemony. The innumerable sacrifices already made would be in vain if premature peace were concluded with an enemy whose forces have been shaken but not broken, and an enemy who is seeking a breathing space by making deceitful offers of a permanent peace.

"In this inflexible decision Russia is in complete agreement with all her valiant allies. We are all equally convinced of the vital necessity of carrying on the war to a victorious end, and no subterfuge by our enemies will prevent us from following this path to the end."

—

DUMA'S REJECTION OF THE TEUTON PEACE PROPOSALS DECLARES THEM PROOF OF FOES' WEAKNESS AND HYPOCRISY.

LONDON, *December 15.*

The Russian Duma's resolution declaring against acceptance of the Teuton peace proposals reads as follows:

"The Duma, having heard the statement by the minister of foreign affairs, unanimously favors a categorical refusal by the allied Governments to enter, under present conditions, into any peace negotiations whatever.

"It considers that the German proposals are nothing more than fresh proof of the weakness of the enemy and a hypocritical act from which the enemy expects no real success, but by which it seeks to throw upon others the responsibility for the war and for what happened during it, and to exculpate itself before public opinion in Germany.

"The Duma considers that a premature peace would not only be a brief period of calm but would also involve the danger of another bloody war and a renewal of the deplorable sacrifices by the people. It considers that a lasting peace will be possible only after a decisive victory over the military power of the enemy and after definite renunciation by Germany of the aspirations which render her responsible for the world war and for the horrors by which it has been accompanied."

On the 18th of December the President addressed his own famous and much-discussed peace note to the belligerents, and which was made public on the 20th:

PRESIDENT WILSON'S NOTE TO THE BELLIGERENT NATIONS.

THE SECRETARY OF STATE TO THE AMERICAN AMBASSADORS OF THE CAPITALS OF THE BELLIGERENT POWERS.

DEPARTMENT OF STATE,
Washington, D. C., December 18, 1916.

The President directs me to send you the following communication to be presented immediately to the minister of foreign affairs of the Government to which you are accredited:

The President of the United States has instructed me to suggest to the [here is inserted a designation of the Government addressed] a course of action with regard to the present war, which he hopes that the Government will take under consideration as suggested in the most friendly spirit, and as coming not only from a friend but also as coming from the representative of a neutral nation whose interests have been most seriously affected by the war and whose concern for its early conclusion arises out of a manifest necessity to determine how best to safeguard those interests if the war is to continue.

[The third paragraph of the note as sent to the four central powers—Germany, Austria-Hungary, Turkey, and Bulgaria—is as follows:]

The suggestion which I am instructed to make the President has long had it in mind to offer. He is somewhat embarrassed to offer it at this particular time, because it may now seem to have been prompted by a desire to play a part in connection with the recent overtures of the central powers. It has, in fact, been in no way suggested by them in its origin, and the President would have delayed offering it until those overtures had been independently answered but for the fact that it also concerns the question of peace and may best be considered in connection with other proposals which have the same end in view. The President can only beg that his suggestion be considered entirely on its own merits and as if it had been made in other circumstances.

[The third paragraph of the note as sent to the 10 entente allies—Great Britain, France, Italy, Japan, Russia, Belgium, Montenegro, Portugal, Roumania, and Serbia—is as follows:]

The suggestion which I am instructed to make the President has long had it in mind to offer. He is somewhat embarrassed to offer it at this particular time, because it may now seem to have been prompted by the recent overtures of the central powers. It is, in fact, in no way associated with them in its origin, and the President would have delayed offering it until those overtures had been answered but for the fact that it also concerns the question of peace and may best be considered in connection with other proposals which have the same end in view. The President can only beg that his suggestion be considered entirely on its own merits and as if it had been made in other circumstances.

[Thenceforward the note proceeds identically to all the powers, as follows:]

The President suggests that an early occasion be sought to call out from all the nations now at war such an avowal of their respective views as to the terms upon which the war might be concluded and the arrangements which would be deemed satisfactory as a guaranty against its renewal or the kindling of any similar conflict in the future as would make it possible frankly to compare them. He is indifferent as to the means taken to accomplish this. He would be happy himself to serve, or even to take the initiative in its accomplishment, in any way that might prove acceptable, but he has no desire to determine the method or the instrumentality. One way will be as acceptable to him as another, if only the great object he has in mind be attained.

He takes the liberty of calling attention to the fact that the objects, which the statesmen of the belligerents on both sides have in mind in this war, are virtually the same, as stated in general terms to their own people and to the world. Each side desires to make the rights and privileges of weak peoples and small States as secure against aggression or denial in the future as the rights and privileges of the great and powerful States now at war. Each wishes itself to be made secure in the future, along with all other nations and peoples, against the recurrence of wars like this and against aggression or selfish interference of any kind. Each would be jealous of the formation of any more rival leagues to preserve an uncertain balance of power amid multiplying suspicions; but each is ready to consider the formation of a league of nations to insure peace and justice throughout the world. Before that final step can be taken, however, each deems it necessary first to settle the issues of the present war upon terms which will certainly safeguard the independence, the territorial integrity, and the political and commercial freedom of the nations involved.

In the measures to be taken to secure the future peace of the world the people and Government of the United States are as vitally and as directly interested as the Governments now at war. Their interest, moreover, in the means to be adopted to relieve the smaller and weaker peoples of the world of the peril of wrong and violence is as quick and ardent as that of any other people or Government. They stand ready, and even eager, to cooperate in the accomplishment of these ends, when the war is over, with every influence and resource at their command. But the war must first be concluded. The terms upon which it is to be concluded they are not at liberty to suggest; but the President does feel that it is his right and his duty to point out their intimate interest in its conclusion, lest it should presently be too late to accomplish the greater things which lie beyond its conclusion, lest the situation of neutral nations, now exceedingly hard to endure, be rendered altogether intolerable, and lest, more than all, an injury be done civilization itself which can never be atoned for or repaired.

The President therefore feels altogether justified in suggesting an immediate opportunity for a comparison of views as to the terms which must precede those ultimate arrangements for the peace of the world, which all desire and in which the neutral nations as well as those at war are ready to play their full responsible part.

If the contest must continue to proceed toward undefined ends by slow attrition until the one group of belligerents or the other is exhausted; if million after million of human lives must continue to be offered up until on the one side or the other there are no more to offer; if resentments must be kindled that can never cool and despairs engendered from which there can be no recovery, hopes of peace and of the willing concert of free peoples will be rendered vain and idle.

The life of the entire world has been profoundly affected. Every part of the great family of mankind has felt the burden and terror of this unprecedented contest of arms. No nation in the civilized world can be said in truth to stand outside its influence or to be safe against its disturbing effects. And yet the concrete objects for which it is being waged have never been definitively stated.

The leaders of the several belligerents have, as has been said, stated those objects in general terms. But, stated in general terms, they seem the same on both sides. Never yet have the authoritative spokesmen of either side avowed the precise objects which would, if attained, satisfy them and their people that the war had been fought out. The world has been left to conjecture what definitive results, what actual exchange of guaranties, what political or territorial changes or readjustments, what stage of military success, even, would bring the war to an end.

It may be that peace is nearer than we know; that the terms which the belligerents on the one side and on the other would deem it necessary to insist upon are not so irreconcilable as some have feared; that an interchange of views would clear the way at least for conference and make the permanent concord of the nations a hope of the immediate future, a concert of nations immediately practicable.

The President is not proposing peace; he is not even offering mediation. He is merely proposing that soundings be taken in order that we may learn, the neutral nations with the belligerent, how near the haven of peace may be for which all mankind longs with an intense and increasing longing. He believes that the spirit in which he speaks and the objects which he seeks will be understood by all concerned, and he confidently hopes for a response which will bring a new light into the affairs of the world.

LANSING.

[Copies of the above will be delivered to all neutral Governments for their information.]

On the next day Secretary Lansing made his statements, both of which are here appended:

SECRETARY LANSING'S TWO STATEMENTS REGARDING PEACE NOTE TO BELLIGERENTS.

WASHINGTON, *December 21.*

Robert Lansing, Secretary of State, issued two statements to-day bearing upon President Wilson's action in addressing the belligerent Governments regarding terms for peace. The first statement was as follows:

"The reasons for the sending of the note were as follows:

"It isn't our material interest we had in mind when the note was sent, but more and more our own rights are becoming involved by the belligerents on both sides, so that the situation is becoming increasingly critical.

"I mean by that that we are drawing nearer the verge of war ourselves, and therefore we are entitled to know exactly what each belligerent seeks, in order that we may regulate our conduct in the future.

"No nation has been sounded. No consideration of the German overtures or of the speech of Lloyd George was taken into account in the formulation of the document. The only thing the overtures did was to delay it a few days. It was not decided to send it until Monday. Of course, the difficulties that faced the President were that it might be construed as a movement toward peace and in aid of the German overtures. He specifically denies that that was the fact in the document itself.

"The sending of this note will indicate the possibility of our being forced into the war. That possibility ought to serve as a restraining and sobering force, safeguarding American rights. It may also serve to force an earlier conclusion of the war. Neither the President nor myself regard this note as a peace note; it is merely an effort to get the belligerents to define the end for which they are fighting.

MR. LANSING'S SECOND STATEMENT.

Later in the day the Secretary issued the following statement:

"I have learned from several quarters that a wrong impression was made by the statement which I made this morning, and I wish to correct that impression.

"My intention was to suggest the very direct and necessary interest which this country, as one of the neutral nations, has in the possible terms which the belligerents may have in mind, and I did not intend to intimate that the Government was considering any change in its policy of neutrality, which it has consistantly pursued in the face of constantly increasing difficulties.

"I regret that my words were open to any other construction, as I now realize that they were. I think that the whole tone and language of the note to the belligerents show the purpose without further comment on my part. It is needless to say that I am unreservedly in support of that purpose and hope to see it accepted."

The note conveyed confidence to the German Embassy, as suggested by its reception.

"Now I am perfectly convinced there will be a conference," said Count von Bernstorff, the German ambassador, when he learned the details of President Wilson's undertaking.

Prime Minister Lloyd-George was to have addressed Parliament on the 19th of December on the German note, but was delayed for a short time by illness. His speech follows:

LLOYD-GEORGE'S HISTORIC SPEECH REGARDING PEACE.

I shall have to claim the indulgence of the House in making a few observations that I have to make in moving the second reading of the bill.

I appear before the House of Commons to-day with the most terrible responsibility that can fall upon the shoulders of any living man. As the chief minister of the Crown, and in the midst of the most stupendous war in which this country ever has been engaged, a war upon which its destinies depend, the responsibilities which rest upon the Government have been accentuated by the declaration of the German chancellor, and I propose to deal with that at once.

The statement made by him in the German Reichstag has been followed by a note presented to us by the United States minister, without any note or comment. The answer, which is given by the Government, will be given in full accord with all our various allies. Already there has been an interchange of views, not upon the note itself, because it has only recently arrived, but upon the spirit which impelled the note. The note is only a paraphrase of the speech, so that the subject matter of the note itself has been discussed informally with the allies, and I am glad to be able to say that we arrived separately at identical conclusions.

I am very glad that the first answer was given to the German chancellor by France and by Russia. They have unquestionably the right to give the first answer. The enemy is still on their soil and their sacrifices have been greater. The answer they have given has already appeared in all the papers, and I stand here to-day on behalf of the Government to give a clear and definite support to the statement they have already made. And here let me say that any man or set of men who wantonly and without sufficient cause prolongs a terrible conflict like this has on his soul a crime that oceans could not cleanse; on the other hand, a man or set of men who from a sense of war weariness abandoned the struggle without achieving the high purpose for which we entered upon it would be guilty of the most ghastly poltroonery ever perpetrated by any statesman.

QUOTES LINCOLN'S WORDS.

I should like to quote the well-known words of Abraham Lincoln under similar conditions:

"We accepted the war for an object, a worthy object. The war will end when that object is attained. Under God I hope it will never end until that time."

Are we to achieve that object by accepting the invitations of the German chancellor? That is the only question we have to put to ourselves.

There has been some talk about the proposals of peace. What are those proposals? There are none. To enter on the invitation of Germany, proclaiming herself victorious, without any knowledge of the proposals she intends to make, into a conference, is putting our heads into a noose with the rope end in the hands of the Germans.

This country is not altogether without experience in these matters. It is not the first time we have fought a great military despotism which was overshadowing Europe, and it will not be the first time we shall help to overthrow it. We have an uncomfortable historical memory of these things. We can recall how one of the greatest of these despots, having a purpose to serve in the organization of his nefarious scheme, invariably appeared in the garb of the angel of peace. He usually appeared under two conditions—when he wished for time to assimilate conquest and reorganize for fresh advances, or, secondly, when his subjects showed symptoms of fatigue and war weariness. The appeal was always made in the name of humanity. He demanded an end of bloodshed, at which he professed himself to be horrified, but for which he himself was mainly responsible. Our ancestors were taken in once, and bitterly did they and Europe rue it. The time was devoted to reorganizing his forces for a deadlier attack than ever upon the liberties of Europe.

STANDS BY ASQUITH'S TERMS.

Examples of the kind cause us to regard this note with a considerable measure of reminiscent disquiet. We feel we ought to know before we give favorable consideration to such an invitation that Germany is prepared to accede to the only terms on which it is possible for peace to be obtained and maintained in Europe.

What are these terms? They have been repeatedly stated by all the leading statesmen of the allies. All I can do is to quote what the leader of the house, Mr. Bonar Law, said last week when he made practically the same statement of terms as those put forward by Mr. Asquith—"restitution, reparation, guarantees against repetition.

So that there shall be no mistakes—and it is important that there should be no mistake in a matter of the life and death of millions—let me say complete restitution, full reparation, and effectual guaranties.

Did the German chancellor use a single phrase that would indicate that he was prepared to accept such terms? Was there a hint of restitution? Was there any suggestion of reparation? Was there any indication of any security for the future, that this outrage on civilization would not again be perpetrated at the first profitable opportunity?

The very substance and style of the speech constituted a denial of peace on the only terms on which peace is possible. He is not even conscious now that Germany has committed an offense against the rights of free nations. Listen to this quotation: "Not for an instant had they (the central powers) swerved from the conviction that a respect for the rights of free nations is in any degree incompatible with their own rights and legitimate interests." When did they discover that? Where was the respect for the rights of other nations in Belgium?

That, it is said, was for self-defense. Menaced, I suppose, by the overwhelming army of Belgium, the Germans were intimidated into invading Belgium, burning Belgian cities and villages, massacring thousands of inhabitants, old and young, carrying survivors into bondage—yea, carrying them into slavery at the very moment when the note was being written about the "unswerving conviction of the respect for the rights of other nations."

What guaranty is there that these terrors will not be repeated in the future? That, if we enter into a treaty of peace, we shall put an end to Prussian militarism? If there is to be no reckoning for these atrocities by land and sea, are we to grasp the hand which perpetrated them without any reparation being made?

We have to exact damages.

We have begun; already it has cost us much.

We must exact it now, so as not to leave such a grim inheritance for our children.

CRITICIZES SPEECH AND NOTE.

Much as we all long for peace, deeply as we are horrified at the war, their note and speech give small encouragement to hope for an honorable and lasting peace. What hope is given in that speech? The whole root and cause of this bitterness, the arrogant spirit of the Prussian military caste—will it not be as dominant as ever if we patch up a peace now?

The very speech resounds with the boast of the Prussian military triumph; the very appeal for peace was delivered ostentatiously from the triumphal chariot of Prussian militarism.

We must keep a steadfast eye on the purpose for which we entered the war. Otherwise the great sacrifices we are making will be all in vain. The German note states that for the defense of their existence and for the freedom of national development the central powers were constrained to take up arms. Such phrases can not but deceive those who listen to them. They are intended to deceive the German Nation into supporting the designs of the Prussian military caste.

Who ever wished to put an end to their national existence or to the freedom of their national development? We welcomed their development so long as it was on behalf of peace. The greater their development in that direction, the greater would humanity be enriched by that development.

That was not our design and it is not our purpose now. The allies entered into this war to defend Europe against the aggression of Prussian military domination, and they must insist that the end is a most complete and effective guaranty against the possibility of that caste ever again disturbing the peace of Europe.

Prussia, since she got into the hands of that caste, has been a bad neighbor—arrogant, threatening, bullying, shifting boundaries at her will, taking one fair field after another from weaker neighbors and adding them to her own dominions, ostentatiously piling up weapons of offense, ready on a moment's notice to be used.

NO MORE SWASHBUCKLING.

She has always been an unpleasant, disturbing neighbor to us. She got thoroughly on the nerves of Europe, and there was no peace near where she dwelt.

It is difficult for those who were fortunate enough to live thousands of miles away to understand what it has meant to those who live near. Even here, with the protection of the broad seas between us, we know what a disturbing factor the Prussians were with their constant naval menace. But even we can hardly realize what it has meant to France and Russia. Several times there were threats. There were two of them within the lifetime of this generation which presented an alternative of war or humiliation.

There were many of us who had hoped that internal influences in Germany would have been strong enough to check and ultimately to eliminate this hectoring. All our hopes proved illusory, and now that this great war has been forced by the Prussian military leaders upon France, Russia, Italy, and ourselves, it would be a cruel folly not to see to it that this swashbuckling through the streets of Europe to the disturbance of all harmless and peaceful citizens shall be dealt with now as an offense against the law of nations.

The mere word that led Belgium to her own destruction will not satisfy Europe any more. We all believed it; we all trusted in it. It gave way at the first pressure of temptation, and Europe has been plunged into this vortex of blood. We will therefore wait until we hear what terms and guaranties the German Government offers other than those, better than those, surer than those, which she so lightly broke. Meanwhile we ought to put our trust in an unbroken army rather than in a broken faith.

For the moment I do not think that it would be advisable for me to add anything upon this particular invitation. A formal reply will be delivered by the allies in the course of the next few days.

PAINTS STERN PICTURE OF SITUATION.

What is the urgent task in front of the Government? To complete and make even more effective the mobilization of all our national resources, a mobilization which has been going on since the commencement of the war, so as to enable the nation to bear the strain, however prolonged, and to march through to victory, however lengthy and however exhausting may be the task. It is a gigantic task, and let me give this word of warning—if there be any who have given their confidence to the new administration in expectation of a speedy victory, they will be doomed to disappointment.

I am not going to paint a gloomy picture of the military situation (if I did it would not be a true picture), but I must paint a stern picture because that accurately represents the facts. I have always insisted on the nation being taught to realize the actual facts of this war. I have attached enormous importance to it at the risk of being characterized as a pessimist. I believe that a good many of our misunderstandings have arisen from exaggerated views which have been taken about successes and from a disposition to treat as trifling real setbacks.

To do so, to imagine that you can only get the support and the best help of a strong people by concealing difficulties is to show a fundamental misconception of our people. The British people are just as sweet toothed as anybody, and they like pleasant things being put on the table, but that is not the stuff they have been brought up on, and that is not what the British Empire has been nourished on.

Britain has never shown at its best except when it was confronted with a danger, real and understood.

ROUMANIA AND GREECE.

Let us look at the East for a moment. The Roumanian blunder was an unfortunate one, but at the worst it prolongs the war; it does not alter the fundamental facts of the war. I can not help hoping that it may even have a salutary effect in calling the attention of the allies to the obvious defects in their organization, not merely the organization of each, but the organization of the whole. If it does that and braces them to fresh efforts, it may prove, bad as it is, a blessing. That is the worst. That has been a real setback. It is the darkest cloud, and it is a cloud that appeared on a clearing horizon.

We are doing our best to make it impossible that that disaster should lead to worse. That is why we have taken within the last few days very strong action in Greece. We mean to take no risks there. We decided to take definite and decisive action, and I think it has succeeded. We have decided also to recognize the agents of that great Greek statesman, M. Venizelos.

THE TRIUMPHS ON THE SOMME.

I should like to say one word about the lesson of the fighting on the western front—not about the military strategy, but about the significance of the whole of that great struggle—one of the greatest struggles in the history of the world. It is full of encouragement and of hope.

Just look at it—an absolutely new army! The old had done its duty and spent itself on the achievement of its great task. This is a new army. But a year ago it was ore in the earth of Britain—yea, and of Ireland. It became iron, it has passed through a fiery furnace, and the enemy know that it is fine steel.

Yet this absolutely new army, new men, new officers, generals new to this kind of work, have faced the greatest army the world has ever seen, the best equipped, the best trained, and they have beaten them, beaten them battle after battle, day after day, week after week, from the strongest intrenchments ever devised by human skill. They have driven them out by valor—by valor that is incredible.

When you read the story of it, there is something which is full of hope for the future, which fills you with pride in the nation to which they belong. It is a fact full of significance for us and for the foe. It is part of his reckoning. He sees that army grow under his very eyes. A great French general said to me: "Your army is a new army. It must learn—not merely its generals, not merely its officers, but its men—what to do and how and when to do it."

Therefore, basing our confidence upon these facts, I am as convinced as I ever was of ultimate victory if the nation proves as steady, as valorous, as ready to sacrifice and ready to learn and to endure as that great army of our sons in France.

GOVERNMENT ORGANIZED FOR ACTION.

I should like now to say a word or two about the Government itself. In doing so I am anxious to avoid all issues which excite irritation or controversy. There is no time for that. It must not be assumed, however, if I do so that I accept as complete the accounts which have been given of the way the Government was formed. My attitude toward the policy of the late administration, of which I was a member and for all of whose deeds I am just as responsible as anyone else, has been given in letters or memoranda, and my reasons for leaving it have also been given in a letter. If it were necessary I should on personal grounds welcome the publication of these, but I am convinced that controversies as to the past will not help us as to the future. Therefore, as far as I am concerned, I place them on one side and get on with what I regard as the business of the Government under these trying conditions.

I should like to say something first of all as to the unusual character and composition of the Government as an executive body. The House has realized that there has been a separation between the functions of the prime minister and the leader of the House. That was because we came to the conclusion that it was more than any one man, whatever his energy or physical strength, could do to undertake both functions in the middle of a great war.

The task of leader of the House is a very anxious and absorbing one. I have not been able to attend the House very much during the last two or three years, but I have been here often enough to realize that the task of leader of the House of Commons is no sinecure, even in a war.

There are three characteristics in the present administration in which it may be said that it has departed, perhaps, from precedent. First of all these is the concentration of the executive authority in a very few hands. The second is the choosing of men of administrative and business capacity rather than men of parliamentary experience, where we were unable to obtain both for the headship of Government departments. The third is the franker and fuller recognition of the partnership of labor in the government of this country.

No Government has ever been formed which has had such a number of men who all their lives have been associated with labor and the labor organizations of this country. We realize that it is impossible to conduct a war without getting the unqualified support of labor, and we are anxious to obtain their assistance and counsel for the conduct of the war.

A STRUCTURE FOR WAR.

The fact that this is a different kind of organization from any that preceded it is not necessarily a criticism of its predecessors. They were peace structures; they were organized for a different purpose and for a different condition of things. The kind of craft which you have for river or canal traffic is not exactly the kind of vessel you would construct for the high seas. I have no doubt that the old cabinets (I am not referring to the last cabinet but to the old system of cabinets where you had the heads of every department represented inside the cabinet) were better adapted to navigate the parliamentary river with its shoals and shifting sands, and, perhaps, to cruise in home waters. A cabinet of 23, however, is rather topheavy for a gale.

I do not say that this particular craft is best adapted for parliamentary navigation, but I am convinced that it is the best for war. In war you want quick decisions about everything. Look at the last two and a half years. I am not referring to what has happened in this country. When I say these things, I would rather the House of Commons would look at the war as a whole. Take the concern of the allies as a whole—and here I am certain I will get the assent of my right honorable friend, Mr. Asquith—the allies have suffered disaster after disaster through tardiness in decision and action, very largely for reasons which I will give later on, and in which I know I am in complete agreement with my right honorable friend.

VALUE OF THE SMALL CABINET.

It is true that in a multitude of counselors there is wisdom, but that was written for oriental countries in peace times. You can not run a war with a Sanhedrin. That is the meaning of a cabinet of five, with one of its members doing sentry duty outside, manning the walls and defending the council chamber against attack, while we are trying to do our work inside—and a very difficult task it is.

Some concern has been expressed as to the relations of the small executive with the other members. It has been suggested that there is danger of a lack of coordination and of common direction. It has been wondered how we could ever meet. One very respected newspaper suggested that there ought to be weekly dinners to discuss matters of common concern.

What is the difficulty? Whenever anything concerns a particular department, we follow the time-honored precedent, and the head of that department with his officers attend the executive period. They immediately get into contact with each other and discuss the problem which requires to be discussed.

There is another change—the amalgamation of the old war committee and the cabinet. The old war committee had what the cabinet had not; it had a secretary who kept a complete record of all decisions, which no cabinet ever had. With the cabinet it was always a question of memory. Not even my right honorable friend or any of his predecessors ever took a note of the decisions.

Mr. ASQUITH. It is very desirable that this should be known. It is the inflexible unwritten rule of the cabinet that no member of the cabinet shall take any note or record of its decisions except the prime minister, and he does so for the purpose of sending his letter to the King.

The PRIME MINISTER. I am very much obliged to my right honorable friend for reminding me. That is so. That indicates what a real difference there is between the war committee and the cabinet. In the war committee a full record is taken of every decision. The minutes are sent around to each member for correction. The matters dealt with there are just as confidential—I might say even more confidential—as the vast majority of questions decided in the cabinet.

I come to one point which has caused some dismay—the new ministries. But each minister answers for his department exactly in the same way as under the old system; each minister is accountable for his department, and the Government as a whole is accountable to parliamentary control. The control of Parliament always has been and must be supreme, because it represents the nation, and there is not the slightest attempt to derogate from the complete control of Parliament, which is responsible to the nation.

NEED OF THE LABOR MINISTER.

My right honorable friend, the home secretary, in introducing the bill, and the leader of the house subsequently gave a very detailed account of the public work of the new ministries. The ministry of labor has been urged for 30 years by organized labor unions, and my experience in the ministry of munitions has taught me that it is desirable that there should be a department, which is not altogether in the position of an employer, whenever there is a dispute about labor or wages. I hope that this department will not confine itself simply to disputes, which is but a small part of the industrial problem with which it has to deal. I hope it will become in a real sense a ministry of labor.

At the ministry of munitions I had the duty to set up something, which is known as the welfare department, to make labor conditions better and to make labor less repellent and more attractive and healthful. A number of very able volunteers are organizing that department. I am glad to say that they belong to the Society of Friends, who, though they have a rooted objection to war, have never declared during this war that they could not take part in national work. They are working hard in this department, and I am hoping this department is assisting the mobilization of labor for the purpose of war.

NATIONALIZING SHIPPING.

My right honorable friend has already indicated to the house what we propose to do with regard to shipping. It was never so vital to the life of the nation as now during this war. It is the jugular vein which, if severed, would destroy the life of the nation. We are taking over all the ships of this country on the same conditions as we have taken over the railways, so that during the war shipping will be nationalized in the real sense of the term. The prodigious profits which were made out of freights have contributed in no small measure to the high price of commodities.

One of the greatest shippers in the United Kingdom has undertaken to conduct this great enterprise for the welfare of the country. He is now in conference with the admiralty, and I hope soon to inform the house of the plans he recommends to be taken, not merely the taking of ships already in the country, but for speedy construction of more, so as to make up the wastage which, I think, is inevitable during a great war, especially when you are dealing with those piratical methods which characterize the maritime policy of the German Empire.

In this case the Government says, as the late Government said, they are dealing with a national commodity which is essential to the life of the nation, and I think they are right. The position is being carefully considered, and we shall be able to place our plans before you before we separate.

THE GRAVE FOOD PROBLEM.

Now, I must say something about food. The food problem is a grave problem, and would become graver unless not only the Government but the nation is prepared to grapple with it without loss of time.

The main facts are that the available harvests of the world have failed. In times of peace we could always make up the deficiency of one particular country by resorting to another. If America failed there was Russia, or the Argentine, but the Argentine promises badly as well as Australia, and Russia is not available.

Under the circumstances it was decided by the late Government to appoint a food controller, and we actually appointed him—an able and experienced administrator, a man of great determination and force of character. And he is assisted by one of the greatest agricultural experts in this house. At the head of the board of agriculture we have a man singularly gifted, who has as thorough a knowledge of principles and practices of this question as any man in this or any other country.

I have felt it important that we should secure the best brains in the country to bear on this very difficult and dangerous problem. The problem is a double one. It is one of distribution and of protection. In respect of both we must call on the people of this country to make real sacrifices, but it is essential if we do so that the sacrifice should be equal. Overconsumption by the fortunate must not be allowed to create a shortage for the less well-to-do.

I am sure that we can depend on the men and women of all conditions, to use the ordinary phrase, to play the game. Any sort of concealment hurts the nation when it is fighting for its life. Therefore we must appeal to the nation as a whole (without the help of the nation we can accomplish nothing) to assist us in so distributing our resources that there shall be no man, woman, or child who suffers from hunger because some one has been getting too much.

When it comes to production, every available square yard of land must be made to produce food, and the labor available for tillage should not be turned to mere ornamental purpose until the food necessities of the country have been adequately safeguarded. The best use must be made of the land and of all available labor to increase the food supplies of the country. All those who have the opportunity must feel that it is their duty to the State to assist in producing and contributing to the common stock from which everyone draws. If we do this, we get rid of any privation, everyone having plenty of the best and healthiest food.

CALLS FOR NATIONAL SACRIFICE.

By that means alone will the nation be able to carry on the war to the triumphant issue to which we are all looking forward. It means sacrifice; but what sacrifice! Talk to the man who has returned from the horrors of the Somme or one who has been through the haunting wretchedness of a winter campaign and you will know something of what those gallant men are enduring for their country. They are enduring much; they are hazarding much, while we are living in comfort and security at home.

You can not have absolute equality of sacrifice in war; it is impossible; but you can have equal readiness of sacrifice from all. There are hundreds of thousands who have given their lives; there are millions who have given up comfortable homes and exchanged them for daily communion with death. Multitudes have given up those they love best.

Let the nation as a whole place its comforts, indulgences, and elegances on a national altar, consecrated by such sacrifices as these men have made. Let us proclaim during the war a national Lent. The nation will be better for it—stronger mentally, morally, and physically. It would strengthen its fiber and would ennoble its spirit.

Without it we shall not get the full benefit of this struggle. Our armies might drive the enemy out of the battered villages of France, across the devastated plains of Belgium. They might hurl them across the Rhine in utter disarry, but unless the nation as a whole shoulders part of the burdens of victory they will not profit by the triumph.

FURTHER CURB ON WAR PROFITS.

It is not what a nation gains but what a nation gives that makes it great. While a nation is making such enormous sacrifices, as I have already pointed out, it is intolerable that any section should be permitted to make exceptional profits out of the sacrifices of others, and by that means actually increase the burdens borne by others.

A good deal has already been done by the late administration to arrest unfair profit-taking out of the war; but the Government has come to the conclusion that they can not ask the nation for more sacrifices without taking even more drastic steps than they have yet taken.

There are several ways of dealing with this problem. One is the annexation of war profits. The other is the cutting down of prices so as to make excessive profits impossible. The munitions act adopted both of these expedients. Eighty per cent of the excess profits in controlled firms were annexed, and, in addition, there has been more searching and minute revision of prices in controlled firms, and an enormous reduction already has been achieved in those firms.

The problem is now being carefully examined by the chancellor of the exchequer and others, and we hope to be able to make an announcement of the course the Government intends to adopt shortly. It is quite clear that if the nation is to be asked to make further sacrifices to win the war the way should be cleared by action of this kind.

TO MOBILIZE LABOR RESOURCES.

I now come to a very difficult subject, and one which is equally vital to the success of this country in this great war. I have hitherto talked largely of the mobilization of the material resources of the nation. I now come to the mobilization of the labor resources of the country, which are even more vital to our success than the former. Let there be no mistake about it. Without this we shall not be able to pull through. The mere haphazard supply and demand will not accomplish what is necessary to save the nation within the time that it is essential it should be accomplished.

It is not a question of years; it is a question of months, perhaps of weeks; and unless not only more of the material resources of the country but the labor of the country is used to the best advantage, and every man is called upon to render such services to the State as he can best give, victory may be beyond our reach.

The problem with which we are confronted is a simple one. Nearly a year ago we decided that in order to maintain our armies in the field the nation must have complete control over all its military resources in men. But it is impossible to take men into the army without taking them from civil employment, and it is our object to establish such a system of recruiting as will insure that no man is taken into the army who is capable of rendering more useful service in industry.

To complete our plans and to have the organization of our national resources perfect we ought to have power to see that every man who is not taken into the army, whatever his position or rank, is really employed on one of national importance.

For instance, I was constantly appealed to, when secretary for war, to relieve men for agricultural work. We were quite prepared to do so, but there was absolutely no guarantee, if they were released, that they would be used for agricultural purposes. The moment they were released from the army they were free to go to the munition works or to any other work where they thought they could sell their labor to the best advantage. We could not be sure that these men would be used for agricultural purposes; we must have assurance.

There are a considerable number of people skilled in tillage, but, although they are not producing food, we can not employ them. I believe there are scores, if not hundreds of thousands, of cases of the kind, which, if you could utilize them to the best advantage, would produce great quantities of food in this country.

The difficulty in agriculture is skilled men. You may have two or three skilled men on a particular farm, but you may have other farms where there are no skilled men at all. Would it not be possible for the skilled men to look after not one but several farms, which could be worked with the aid of unskilled men and women or——

Mr. LAMBERT. Will the right honorable gentleman let us know what the Government is going to do about it?

Mr. LLOYD GEORGE. I thought I had made it perfectly clear. Of course, I could not give the whole of the details; but I assure the right honorable gentleman that schemes of very great magnitude have been promulgated and are being put into operation.

The matter was considered by the war committee of the late Government, and it was unanimously decided by them that the time had come for the adoption of the principle of universal national service. It was one of the first matters taken up by the present Government.

The war cabinet has adopted the conclusion come to by the war council, and plans for carrying it into effect have already been prepared.

TO ESTABLISH NATIONAL SERVICE.

In order to do this we propose to appoint a directorate of national service to be in charge both of the military and civil side of the national service. The civil and military sides of the directorate will be entirely separate.

It is not proposed to make any change with regard to military service, but with regard to civil service it is proposed to set up a registration of munition volunteers with similar conditions as to rates of pay and separation allowances.

I have no doubt that we shall get an adequate supply of volunteers, but if it is found impossible to get the numbers we require we shall not hesitate to come to Parliament and ask for powers to make our plan really effective. The nation is entitled to the best services of all its members.

We have been fortunate in inducing the lord mayor of Birmingham, Mr. Neville Chamberlain, to accept the position of director general of national service. It was with difficulty that he was induced to undertake this onerous duty. It is the recognition of its urgency that induced him to undertake the task. He would immediately proceed to organize a system of enrollment for industrial work in the hope that before long he would be able to report that he has secured a sufficiently large army of industrial workers mobilized for war purposes.

HOPES TO END IRISH TANGLE.

I wish it had been possible to say something about Ireland, but circumstances have made it impossible for me to devote my time to the problems which have arisen in that country. I have had one or two interviews with the chief secretary and others, but unfortunately I have had to leave the question in order to attend to so many other pressing matters.

All I have to say is this: I wish it were possible to remove the misunderstanding between Great Britain and Ireland which has for centuries been the cause of misery and embarrassment to one and weakness to the other. I should have considered it a war measure of the first importance, and I should have considered it a great victory for the allied cause.

I tried once to remove the misunderstanding between England and Ireland. I was drenched with suspicion of Irishmen by Englishmen and of Englishmen by Irishmen, and, worse and most fatal of all, suspicion by Irishmen of Irishmen. It was a quagmire of distrust which clogged my footsteps and made progress impossible. That is the real enemy of Ireland. If that could be slain I believe it would accomplish an act of reconciliation that would make Ireland greater and Britain greater and make the United Kingdom and the Empire greater than they ever were before.

That is why I have always thought and said that the real solution of the Irish problem is largely one of better atmosphere, and in that I speak not merely for myself, but for my colleagues.

We shall strive by every means and at many hazards to produce the atmosphere, but we ask the men of all races, of all creeds, to help us, not to solve a political question but to help us to do something that would be a real contribution to the winning of the war.

I must say one word about the dominions——

An HONORABLE MEMBER. What about the navy?

Mr. LLOYD GEORGE. The achievements of the navy speak for themselves. I don't know that anything I could say would be in the least adequate to recognize the enormous and the incalculable services that the great navy of Britain has rendered, not merely to the Empire but to the whole of the allies. Not merely would victory have been impossible, but the war could not have been kept going, even for two years and a half, had it not been for the services of the navy.

TO CALL IMPERIAL CONFERENCE.

Now, coming to the dominions—the ministers have repeatedly acknowledged the splendid assistance which the dominions have given of their own free will to the old country in its championship of the cause of humanity. They have recognized throughout that our fight is not a selfish one, that it is not merely a European quarrel, and that there were great world issues which their children were as concerned in as ours.

The new administration is just as full of gratitude as the old for the superb valor which our kinsmen have shown in so many striking fields, but I want to say that we feel that the time has come when the dominions ought to be more formally consulted as to the progress and course of the war, as to the steps that ought to be taken to secure victory, and as to the best methods of garnering its fruits.

We propose, therefore, at an early date to summon an imperial conference to place the whole position before the dominions, to take counsel with them as to what further action we can take together in order to achieve an early and complete triumph for the ideals which they share with us.

As to our relations with the allies, I said earlier in the year that there were two things we ought to seek as allies. One is unity of aim and the other unity of action. The first we have achieved. Never have allies worked in greater harmony and more perfect accord than the allies in this great struggle. There has been no friction, no misunderstand.

TARDINESS IN WAR ACTION.

But when I come to unity of action, I still think there is a good deal left to be desired. I have only to refer to the incidents in Roumania, and each man can spell out for himself what I mean. The enemy has got the two supreme advantages of internal lines and one great dominant power that practically dominates the course of the war. We have neither of these advantages and we must therefore achieve the same end by other means.

Our advantages are advantages which time will improve. No one can say that we have made the best of the time. There has been a tardiness of decision and action. Before we can take full advantage of the enormous resources at the command of the allies there must be some means of arriving at quicker and readier decisions and of carrying them out.

There must be more consultation between men; in the matter of the direction of affairs there must be less feeling that each country has got only its own front to look after. There must be a just policy of a common front as there is on the other side. Austrian guns are helping the German infantry and Germany infantry is stiffening the Austrian Army. The Turks are helping the Germans; Austrians and Bulgarians mix with all. There is an essential feeling that there is but one front, and we have got to get that more and more, instead of having overwhelming guns on one side and bare breasts and gallant hearts on the other.

REGRETS BREAK WITH ASQUITH.

I end with one personal note, I may say, and I say it with all sincerity, that it was one of the deepest regrets of my life that I parted with the right honorable gentleman opposite (Mr. Asquith). Some of his friends know how I strove to avert it. For years I served under the right honorable gentleman, and I never had a kinder or more indulgent chief. If there were any faults of temper they were entirely mine, and I have no doubt that I must have been very difficult at times. No Member of Parliament has greater admiration for his brilliant intellectual gifts, and no man was happier to serve under him than I for eight years. We differed as men of such different temperaments must necessarily differ, but we never had a personal quarrel.

ISSUES THAT ARE ABOVE PARTY.

In spite of serious differences, it was with deep, genuine grief that I felt it to be necessary to tender my resignation to my right honorable friend, but there are moments when personal and party considerations must sink into actual insignificance, and if in this war I have given scant heed to the call of party (and so I have), it has been because I realized from the moment when Prussian cannon hurled death at a peaceable and inoffensive little country that a challenge had been sent to civilization to decide an issue higher than party, deeper than party, wider than all parties—an issue upon the settlement of which will depend the fate of men in this world for generations after the existing parties will be fallen like dead leaves on the highway. These are the issues that I want to keep in front of the nation so that we should not falter in our faith in our cause.

There is a time in every prolonged war, in the passionate rage of the conflict, when men forget the high purpose with which they entered into it.

This is the struggle for international right, international honor, international good faith—the channel along which peace on earth and good will among men must follow. The embattlements, laboriously built up by generations of men against barbarism, were broken, and had not the might of Britain passed into the breach, Europe would have been inundated with a flood of savagery and unbridled lust of power.

The trained sense of fair play among the nations, the growth of an international consciousness for the protection of the weak against the strong, of a stronger consciousness that justice has a more powerful backing in the world than greed, the knowledge that any outrage upon fair dealing between nations, great or small, will meet with prompt and inevitable chastisement—these constitute the causeway along which humanity was progressing slowly to higher fields.

The triumph of Prussia would sweep it all away and leave mankind to struggle, helpless, in the morass of horror. That is why, since this war began, I have known but one political aim. For that I have fought with a single aim. That was to rescue mankind from the most overwhelming catastrophe that has ever yet menaced its well-being.

The English public stands behind the new prime minister, as is suggested by leaders of every political coloring:

LORD CURZON AND EX-PREMIER ASQUITH ON THE PEACE OVERTURES.

Lord Curzon, president of the war council and Government leader, in discussing the German overture in the House of Lords December 19, said:

"The policy of the new Government is that the war must be conducted with the utmost prosecution; that there must be an ample return for all sacrifices; that full reparation must be made by the enemy for his countless crimes, and security given that those crimes will not be repeated, and that the sacrifices made shall not have been in vain.

"The Government's aim is that the peace of Europe shall be reestablished on the basis of the free and independent existence of nations great and small, and that, as regards this country, it shall be free from the menace which the triumph of Germany and the German spirit would entail.

"Our answer to Germany's latest move must be swift and sure. It is not too much to ask the people to take upon themselves for a few months the obligations which Germany has imposed upon herself. The nation is fighting for its life and is entitled to the best and fullest service of its sons."

Alluding to the position of Roumania, Lord Curzon said that Germany's success was by no means so great as she was trying to make it appear:

"Evidence is forthcoming daily of the desperate straits of Germany at home and in the field. The position of the central powers is not so good as they would have the world believe. Our attitude should not be one of despondency or alarm."

Lord Curzon spoke for an hour and twenty minutes, and was followed by the Marquis of Crewe, lord president of the council in the late government, who approved in general terms the policy outlined by his successor, Lord Curzon, touching peace. He said:

"We have not much hope that Germany's peace offer will lead to anything. The offer, however, seems an indication of the strength of the pressure of our blockade. If peace were made on German terms, while the present age may not see war again, nobody can say that our children will not witness another war with greater horrors. We must carry it on to the last man and the last shilling."

Ex-Premier Asquith followed Premier Lloyd-George in his address to Parliament on the 19th, saying:

"I agree with Mr. Lloyd-George that Roumania has been bad business, although it is not possible at this moment, even if it were desirable, to go into the matter precisely to apportion the different degrees of responsibility, and I have no desire to enter into that question. Yet I am heartily in agreement with him. We have often discussed the matter together, and I do say that it is a very good illustration of the desirability, nay, urgent necessity, of more intimate cooperation between the general staff and politics of the allied countries.

"You can not get over, unfortunately, in this world the limitations of time and space and the difficulty of bringing together in constant and intimate communication not only soldiers, but still more the representatives, of four powers so widely separated geographically and otherwise. As those who constitute this alliance know, these difficulties are, I will not say insurmountable, but very great. If the right honorable gentleman, Lloyd-George, and his colleagues can devise some method of bringing about more intimate communication, they will render one of the greatest services it is possible to render to the allies. I wish him all success in that direction."

In all the speeches made by members of the late administration there breathed a spirit of hearty good will for Lloyd-George in his task. Lord Crewe said his Government "was not precisely a dictatorship, but it came not very far from being one." A dictatorship, in Crewe's opinion, demanded complete immunity from criticism of all kinds, whether in Parliament or press. He said:

"There was some idea that when the decrepit figures and tottering intellects of the late government had disappeared from the scene an era of perpetual new enterprises would begin and that lightning decisions would be taken every day, and possibly twice a day. Some felt, however, that the conduct of the war was not such a random and slapdash enterprise as certain gentlemen appeared to think. There had always been a number of wiseacres, writers, and speakers who had urged that we should proceed straight ahead, prepared to ignore our allies or to flout neutrals at any point, if it appeared advantageous to their program to do so."

Mr. Bonar Law, the chancellor of the exchequer, said:

If the spirit of the speech to which we have just listened were to permeate the country, I believe that all the blood and treasure which have been spent in the war would have been spent in vain. * * *

It is all very well to say, "Let us get their terms of peace." Yes, but can you get any terms more binding than the treaty for the protection of the neutrality of Belgium? Can you come to any conclusions on paper or by promises that will give us greater security than we had before this war? * * *

Not this nation alone, but the neutral nations, will, I hope, understand the position at which we have now arrived. Germany has made peace proposals. On what basis? On the basis of her victorious armies. Is there a man who, considering the conditions under which this war was forced on us and the conditions under which the war has been carried on, honestly believes that the dangers and insecurities from which we have suffered can be cured in any way than by making the Germans realize that frightfulness does not pay; that militarism is not going to rule the world?

What are we fighting for? Not territory, not greater strength as a nation. We are fighting for two things—for peace now and for security for peace in time to come. Let the House remember that what has happened in this war—outrages in Belgium, outrages by sea and land, massacres in Armenia which Germany could have stopped by a word—then realize this: The war will have been fought in vain, utterly in vain, unless we can make sure that it shall never again be in the power of any State to do what Germany has done.

Is peace to come in this war on the basis that the greatest crime in the world's history is to go absolutely unpunished? It is my firm belief that unless all the nations in the world can be made to realize that these moral forces must be vindicated there never can be an enduring peace.

I am not afraid. I am sure our troops will fight to the end. If the people at home who up to now have made few sacrifices, except the sacrifices of those dear to them, are determined in this matter, and if they believe that the objects for which they are fighting can be secured, then there is no sacrifice we are not prepared to make.

WAR WILL BE CONTINUED, KAISER TELLS HIS FORCES—OUR ARMS, HE SAYS, WILL ENFORCE PEACE FOE SPURN.

AMSTERDAM, *January 6.*

A Berlin telegram says that the following order of the German Emperor to the army and navy has been officially published:

"Conjointly with the allied (central powers) rulers, I proposed to our enemies to enter forthwith into peace negotiations. Our enemies refused my offer. Their hunger for power desires Germany's destruction.

"The war will be continued. Before God and humanity I declare that on the Governments of our enemies alone falls the heavy responsibility for all the further terrible sacrifices from which I wished to save you.

"With justified indignation at our enemies' arrogant crime and with determination to defend our holiest possessions and secure for the Fatherland a happy future, you will become as steel.

"Our enemies did not want the understanding offered by me. With God's help our arms will enforce it.

"WILHELM, *I. R.*"

On the 21st an attempt was made in the Senate to indorse the President's action by a resolution introduced by Senator

HITCHCOCK. The press carried the following comment on the morning of the 22d:

BORAH BLOCKS VOTE ON PEACE POLICY—HITCHCOCK SEEKS INDORSEMENT OF PRESIDENT'S ACTION, BUT IDAHO SENATOR HAS IT REFERRED—WANTS MORE LIGHT ON IT—FEARS EUROPE WILL GAIN THE IMPRESSION THAT WE ARE SELFISH AND INDIFFERENT TO THE FUTURE.

WASHINGTON, *December 21.*

An attempt to obtain the Senate's formal indorsement of the President's action in sending notes to the belligerent powers with regard to peace was blocked this afternoon by Senator BORAH, of Idaho. Senator HITCHCOCK, of Nebraska, asked consent for the immediate consideration of a resolution by which the Senate "strongly indorses and approves the action taken by the President," and states that "it is the sense of the Senate that this action represents the overwhelming sentiment and earnest desires of the people of the United States." Senator BORAH objected, and the resolution was referred to the Committee on Foreign Relations.

Senator BORAH explained that he did not intend in any sense to criticize the action of the President, who had undoubtedly "acted upon full information and after mature reflection." "But when I cast a vote in the Senate upon a matter of this kind," Mr. BORAH said, "it must reflect my judgment and not some one's else. I read the note on my way to the Capitol, and had only partially read it, at that. For the Senate of the United States, pro forma, without the slightest consideration, with no possible time for reflection, to pass a resolution embodying a particular move in so stupendous a matter would convict it of an utter want of appreciation of the delicate and tremendous problem with which we are dealing.

"We all want peace. Nothing would add more to the happiness of our Christmas holidays than to feel that it was on the way. But I think it will be generally conceded that to want peace and to secure it are two different propositions. The one is a question of sentiment, the other requires a vast amount of judgment. I repeat, I do not find fault with the President. But I want to be informed myself when I take part in the proceedings.

FEARS FOR OUR INFLUENCE.

"I sometimes think we do not appreciate what this war is about. We are likely to convince both sides in Europe that we simply want peace regardless of the worth of it, the reliability of it, or the honor of it. If such an opinion of our attitude, selfish, superficial, and indifferent of the future, obtains in Europe, we will have but little influence when the vital hour comes for action. I simply do not propose to cast any vote or take any step myself until I have given the matter every consideration which it is possible for me to give it."

The objection to an immediate consideration of the resolution developed the source of opposition due to the fear of future complications. Attempts were made to amend its form.

The original Hitchcock resolution read as follows:

"*Resolved*, That the Senate approves and strongly indorses the action taken by the President in sending the diplomatic notes of December 18 to the nations now engaged in war, suggesting and recommending that those nations state the terms upon which peace might be discussed."

As amended and adopted the resolution read:

"*Resolved*, That the Senate approves and strongly indorses the request of the President in the diplomatic notes of December 18 to the nations now engaged in war that those nations state the terms upon which peace might be discussed."

DEFEAT REPUBLICAN RESOLUTION.

Before the vote on the amended Hitchcock resolution, a substitute resolution, framed by a group of Republican leaders and offered by Senator GALLINGER, was rejected by a vote of 36 to 27, in which one Democrat, Senator MARTINE, voted with the Republicans, and one Republican, Senator NORRIS, voted with the Democratic majority in opposition. The Gallinger resolution, which avoided any approval of the President's action, read as follows:

"*Resolved*, That the Senate of the United States, in the interest of humanity and civilization, expresses the sincere hope that a just and permanent peace between the warring nations of Europe may be consummated at an early day and approves all proper efforts to secure that end."

The resolution as finally passed on January 6, after several days of debate, reads as follows:

Resolved, That the Senate approves and strongly indorses the request by the President in the diplomatic note of December 18 to the nations now engaged in war that those nations state the terms upon which peace might be discussed."

Before being amended the Hitchcock resolution read:

"*Resolved*, That the Senate approves and strongly indorses the action taken by the President in sending the diplomatic notes of December 18 to the nations now engaged in war, suggesting and recommending that those nations state the terms upon which peace might be discussed."

AVOID GIVING BLANKET INDORSEMENT.

The essential difference lies in the fact that the original resolution approved "the action taken by the President in sending" the note, while the resolution as amended by Senator JONES, of Washington, merely indorses "the request" that the belligerents state the terms on which peace might be discussed.

Thus the amended resolution carefully singles out of the entire note one idea which is approved. The original resolution approved the whole idea of sending the note, carrying with it, in the belief of its opponents, an indorsement of everything in the note.

On the 22d, the day after the Hitchcock resolution was introduced in the Senate, Minority Leader MANN spoke as follows in the House:

Mr. MANN. Mr. Chairman, the war in Europe has now lasted nearly two and one-half years, which is long enough. I wish simply to express my commendation of the President of the United States for the circular note which he recently sent to the various powers engaged in war. [Applause.] I do not know whether it will accomplish the purpose or do any good abroad; but I think it was eminently proper that the President of our country, after this long time that these countries have been engaged in war, should call to the attention of the people of the world the desirability of closing the war; and without regard to partisanship I believe that the whole people of this country will warmly congratulate and commend the President for any effort which he has made or may make toward procuring peace in the world again. [Applause.]

The President's proposal met with sympathy in Germany, as indicated by the following Berlin dispatch of the 24th:

OFFICIAL GERMANY SPEAKS—SYMPATHETIC TO WILSON'S NOTE, UNDERSECRETARY BUSSCHE SAYS—OPPOSED TO ANY PARTITION—HOLDS ALIENATION OF DARDANELLES IN PEACE PARLEYS SHOULD BE PREVENTED—RIGHTS OF SMALL NATIONS—WON'T SPEAK ABOUT BELGIUM, BUT ASKS HOW ABOUT GREECE AND ROUMANIA.

BERLIN, *December 24.*

Baron von dem Bussche-Haddenhausen, Undersecretary of State for Foreign Affairs and formerly first secretary of the German Embassy in Washington, in an interview with a member of the Overseas News Agency staff regarding President Wilson's note to the belligerents, describes the reception of the note by German official circles as sympathetic.

The undersecretary opened the conversation himself without delay, says the news agency report of the interview, by saying, "I am sure I know what you want to ask me. You want to know our opinion about what I may call President Wilson's peace note. In this case I think it would be best if you asked me regarding those points which impress you as most important."

In complying with his suggestion the interviewer said: "There are two main points in the President's note which, although interwoven with each other, make separate consideration necessary. The first is in relation to the immediate and near future and conveys the meaning that the conditions ought to be made known under which the belligerents consider the conclusion of peace possible. The second problem is further reaching. It takes a broad view of the possibilities of the future in general and asks by what means such catastrophes as the present can be averted."

Baron Bussche, says the account of the interview, agreed to this and said that also to his mind the two points mentioned made a somewhat different treatment desirable.

PROTECTION OF SMALL STATES.

"As to the problem which you mentioned last," he remarked, "that of general arrangements for the future, I dare say that the United States will play an important part in them. The United States always has been among the most enthusiastic and foremost advocates of the idea of arbitration.

"As to the conclusion of peace itself, this must be done by the belligerents. I think I understand President Wilson aright if I say that he does not offer mediation for this point, and that he only shows the interest which the United States, as well as all other neutrals, naturally have to see peace restored. The President says that in this direction it would be of material advantage if conditions could be communicated under which the belligerents consider it possible to make peace. As to these conditions, I may point out one remarkable fact: All the belligerents have insisted that one of their most important aims is the protection of small neutral States.

"I don't want to reopen discussions of the past. I want to be as impartial, as 'neutral,' as it is possible to be in the present hour when I state what must be Germany's standpoint in this respect. All the belligerents agreed in words about this position of neutrals, but as to their action they have been less unanimous. I don't want to speak about Belgium at all. As I've already said, I don't want to speak of the past.

CITES GREECE AND ROUMANIA.

"But how about Greece, how about Roumania? Roumania has been dragged into the war virtually against her will by the entente. Of course, we recognize that Lloyd George in his last speech called the entente's action in Roumania's case a blunder, but that is small comfort. And then about Constantinople? M. Trepoff, the Russian premier, a few days ago announced to the world that possession of this city had been promised to Russia by the entente in 1915. Does this not mean the partition of a State which can not even be called small, and which has assisted vitally during the present war?

"At all events, from our standpoint we must insist that an aggressive coalition of the great powers against one or several others, with the intention of partition or conquest, ought to be prevented."

Finally Baron Bussche, asked to express his general opinion regarding the President's note, said:

"I think I can state now that the President's note has been received with sympathy. This is certainly true of official circles.

"We shall know after a few days what will be the entente's answer to our offer to enter into a conversation on negotiations or a conference in which the belligerents can outline and communicate their conditions. This, I understand, is also President Wilson's opinion, and we shall know whether the entente will avoid answering this, our question, as, according to the latest utterances of entente statesmen, may seem possible, or whether things will take a different course."

TEXT OF GERMANY'S NOTE TO PRESIDENT WILSON, PROPOSING PEACE CONFERENCE OF BELLIGERENTS.

BERLIN, *December 26.*

Germany and her allies, Austria-Hungary, Bulgaria, and Turkey, replied to-day to the note of President Wilson in which he asked that the belligerent nations state the aims for which they were fighting. The text of the reply, which was handed to James W. Gerard, the American ambassador, says:

"The high-minded suggestion made by the President of the United States of America in order to create a basis for the establishment of a lasting peace has been received and considered by the Imperial Government in the friendly spirit which was expressed in the President's communication.

"The President points out that which he has at heart and leaves open the choice of road. To the Imperial Government an immediate exchange of views seems to be the most appropriate road in order to reach the desired result. It begs, therefore, in the sense of the declaration made on December 12, which offered a hand for peace negotiations, to propose an immediate meeting of delegates of the belligerent States at a neutral place.

"The Imperial Government is also of the opinion that the great work of preventing future wars can be begun only after the end of the present struggle of the nations. It will, when this moment shall have come, be ready with pleasure to collaborate entirely with the United States in this exalted task."

The answer of the central powers concludes with the usual diplomatic terms of politeness.

AUSTRIA JOINS GERMANY IN A DESIRE FOR PEACE.

TEXT OF AUSTRIA'S PEACE NOTE.

The text of the Austrian peace note, sent through Ambassador Penfield, given at the State Department, follows:

"Aide Memoire. In reply to the aide memoire communicated on the 23d instant by his excellency the American ambassador containing the proposals of the President of the United States of America for an exchange of views among the powers at present at war for the eventual establishment of peace, the Imperial and Royal Government desires particularly to point out that in considering the noble proposal of the President it is guided by the same spirit of amity and complaisance as finds expression therein.

DIRECT EXCHANGE ADVISED.

"The President desires to establish a basis for a lasting peace without wishing to indicate the ways and means. The Imperial and Royal Government considers a direct exchange of views among the belligerents to be the most suitable way of attaining this end. Adverting to its declaration of the 12th instant, in which it announced its readiness to enter into peace negotiations, it now has the honor to propose that representatives of the belligerent powers convene at an early date at some place on neutral ground.

"The Imperial and Royal Government likewise concurs in the opinion of the President that only after the termination of the present war will it be possible to undertake the great and desirable work of the prevention of future wars. At an appropriate time it will be willing to cooperate with the United States of America for the realization of this noble aim."

Turkey also joins Germany and Austria:

THE TURKISH REPLY.

The text of the reply of the Turkish Government to the President's note, as received from Ambassador Elkus to-day, is as follows:

"Mr. AMBASSADOR: In reply to the note which your excellency was pleased to deliver to me under date of the 23d instant, No. 2,107, I have the honor to communicate to your excellency the following:

"The general initiative of the President, tending to create bases for the reestablishment of peace, has been received and taken into consideration by the Imperial Ottoman Government in the same friendly (word omitted) which manifests itself in the President's communication. The President indicates the object which he has at heart and leaves open the choice of that path leading to this object. The Imperial Government considers a direct exchange of ideas as the most efficacious means of attaining the desired result.

"In conformity with its declaration of the 12th of this month, in which it stretched forth its hand for peace negotiations, the Imperial Government has the honor of proposing the immediate meeting, in a neutral country, of delegates of the belligerent powers.

"The Imperial Government is likewise of opinion that the great work of preventing future wars can only be commenced after the end of the present struggle between the nations. When this moment shall have arrived the Imperial Government will be pleased (to) collaborate with the United States of America and with the other neutral powers in this sublime task.

"HALIL."

The first formal note in reply to the President was made by Switzerland on the evening of December 24:

Secretary Lansing made public the text of an official communication from the Swiss Government pledging itself to support the efforts of President Wilson to sound the nations of the world, and particularly the belligerents, with respect to the ending of the war, and guarding against such catastrophes in the future. It shows that the Swiss Government has been "in touch," to quote the communication, with President Wilson concerning his desire to bring peace.

The translation of the note made public to-night shows that it was addressed by the Swiss federal council, under date of yesterday, to all belligerents and neutrals, and that the Swiss Government will consider itself happy "if it could act in any, no matter how modest, a way for the rapprochement of the peoples now engaged in the struggle and for a lasting peace." It is the first formal response made by any foreign Government to the note recently forwarded by Secretary Lansing, under instructions from President Wilson, to all belligerents and neutrals.

In diplomatic and official circles it is regarded as the forerunner of a series of notes from neutrals approving and supporting the steps taken by the President in the direction of a better understanding between the nations. The Scandinavian nation, Holland, Spain, and Latin-American nations are expected soon to make responses in which, it is confidently believed in official circles here, they will adopt as favorable an attitude as has Switzerland.

TEXT OF SWISS NOTE.

Here is the text of the note from the Swiss consul, as given out by Mr. Lansing:

"The President of the United States of America, with whom the Swiss federal council, guided by its warm desire that the hostilities may soon come to an end, has for a considerable time been in touch, had the kindness to apprise the federal council of the peace note sent to the Governments of the central and entente powers. In that note President Wilson discusses the great desirability of international agreements for the purpose of avoiding more effectively and permanently the occurrence of catastrophes such as the one under which the peoples are suffering to-day. In this connection he lays particular stress on the necessity for bringing about the end of the present war. Without making peace proposals himself or offering mediation, he confines himself to sounding as to whether mankind may hope to have approached the haven of peace.

"The most meritorious personal initiative of President Wilson will find a mighty echo in Switzerland. True to the obligations arising from observing the strictest neutrality, united by the same friendship with the States of both warring groups of powers, situated like an island amidst the seething waves of the terrible world war, with its ideal and material interests most sensibly jeopardized and violated, our country is filled with a deep longing for peace, and ready to assist by its small means to stop the endless sufferings caused by the war and brought before its eyes by daily contact with the interned, the severely wounded, and those expelled, and to establish the foundations for a beneficial cooperation of the peoples.

"The Swiss federal council is therefore glad to seize the opportunity to support the efforts of the President of the United States. It would consider itself happy if it could act in any, no matter how modest, a way for the rapprochement of the peoples now engaged in the struggle and for reaching a lasting peace."

COUNCIL IS SUPREME.

The Swiss federal council, from which this note emanated, is a Bundesrath to which the chief executive authority in Switzerland is deputed, and consists of seven members elected for three years by the Swiss Federal Assembly. The members of this council must not hold any other office in the Confederation or Cantons of Switzerland nor engage in any calling or business. It is only through this executive body that legislative measures are introduced in the deliberative councils. The seven members of the federal council act as ministers or chiefs of the seven administrative departments of the Republic of Switzerland—the departments of foreign affairs, interior, justice, military, finance, agriculture, and posts.

The belief which has been strong in certain quarters that before sending his peace note President Wilson was in possession of important confidential information and had been in touch with various foreign Governments through confidential reports made by our ambassadors and ministers appears to receive some corroboration from a phrase contained in the officially announced translation of the note from the Swiss federal council. At the very outset this note says: "The President of the United States * * * with whom the Swiss federal council * * * has for a considerable time been in touch." This is the first official intimation that the President had been in touch with the Swiss Federal Council.

Another significant feature of the note is that it emphasizes and gives prominence to what it regards as that portion of President Wilson's note in which he "discusses the great desirability of international agreements for the purpose of avoiding more effectively and permanently the occurrence of catastrophes such as the one under which the peoples are suffering to-day." This appears to be interpreted by the Swiss council as the outstanding feature of the President's note. The Swiss council's note is accepted as meaning that the Swiss Government would be willing to support any effort by the President in the direction both of peace and of international agreements having for their purpose the prevention of the recurrence of great international wars.

—

OTHER NEUTRAL NATIONS TAKE OFFICIAL ACTION.

TEXT OF NORWEGIAN NOTE TO WASHINGTON INDORSING PRESIDENT WILSON'S MOVE FOR PEACE.

WASHINGTON, *December* 29.

The text of the note from Norway, as delivered by Norwegian Minister Bryn to Secretary Lansing to-day, follows:

"It is with the liveliest interest that the Norwegian Government has learned of the proposals which the President of the United States has just made with the purpose of facilitating measures looking toward the establishment of a durable peace, while at the same time seeking to avoid any interference which could cause offense to legitimate sentiments.

"The Norwegian Government would consider itself failing in its duties toward its own people and toward humanity if it did not express its deepest sympathy with all efforts which would contribute to put an end to the ever-increasing suffering and the moral and material losses. It has every hope that the initiative of President Wilson will arrive at a result worthy of the high purpose which inspires it."

Identical notes have been sent by Sweden and Denmark.

—

NO ACTION BY SOUTH AMERICA.

Most of the South American nations, it was indicated in diplomatic quarters, will not send communications regarding the President's note on the official understanding that it was addressed to them largely for their own information and not to solicit action.

Holland, whose attitude has been the subject of much speculation, also was said to be unlikely to take any action, owing to the feeling there that it might appear unneutral to one side or the other and militate against the location of the eventual peace conference in that country.

Spain's attitude in withholding sympathy is not yet known to the public, as the State Department has not given out her answer for the public eye.

BERLIN AGAIN INVITES—REPLY TO SWISS NOTE REPEATS PEACE CONFERENCE OFFER—LIKE ANSWER TO WILSON—GERMAN PRESS APPROVES EXCLUSION OF NEUTRALS FROM COUNCIL—"PRESIDENT DESIRES PACT THAT WILL LEAVE NO HATRED," SAYS VOSSISCHE ZEITUNG, "AND THEREIN LIES OUR DANGER"—HIGH GERMAN DIPLOMAT EXPECTS ENTENTE TO REJECT OVERTURES—MEETING IN SWITZERLAND.

BERLIN, *December* 27.

The German reply to the Swiss note was handed to the Swiss minister to-day. It is on the same lines as the reply to President Wilson. The text of the answer of Germany to the Swiss note reads:

"The Imperial Government has taken note of the fact that the Swiss federal council, as the result of its having placed itself in communication with the President of the United States, is also ready to take action and side with the United States toward bringing about an understanding between the belligerent nations and toward the attainment of a lasting peace.

RENEWS CONFERENCE OFFER.

"The spirit of true humanity whereby the steps of the Swiss federal council are inspired is fully appreciated and esteemed by the Imperial Government.

"The Imperial Government has informed the President of the United States that a direct exchange of views seems to it to be the most suitable means of obtaining the desired result.

"Led by the same considerations which caused Germany on December 12 to offer her hand for peace negotiations, the Government has proposed an immediate meeting of all the belligerents at a neutral place.

AGREES WITH MR. WILSON.

"In agreement with the President of the United States, the Government is of the opinion that the great work of preventing future wars

can only be taken in hand after the present world war has terminated. So soon as that moment comes they will joyfully be ready to cooperate in this sublime task.

"If Switzerland, which, faithful to its noble traditions, in mitigating the sufferings caused by the present war, has won unending gratitude, will also contribute to safeguarding the world's peace, the German Nation and Government will highly welcome such action."

—

EMPIRE CONFERENCE PROPOSED BY THE BRITISH CABINET.

PEACE TERMS ONE OF THE THEMES AT BRITISH EMPIRE CONFERENCE.

LONDON, *December 26.*

The secretary of state for the colonies has sent a telegram to the dominions explaining the purposes of the forthcoming imperial conference announced by Premier Lloyd-George. The telegram explains that what the Government contemplates is not an ordinary imperial conference, but a special war conference of the Empire.

The prime minister of each of the dominions is "invited to attend a series of special meetings of the war cabinet in order to consider urgent questions affecting the prosecution of the war, possible conditions on which, in agreement with our allies, we could assent to its termination, and problems which would then immediately arise."

The premiers are urged to attend at an early date, not later than the end of February.

The Labor member of the British war council, in an address to French Socialists, says peace now means bondage:

HENDERSON, OF BRITISH WAR COUNCIL, FIRES FRENCH SOCIALISTS BY HIS APPEAL—SEES CRISIS APPROACHING—PREDICTS THE SEVEREST TEST OF DEMOCRATIC IDEALS IN THE NEXT FEW MONTHS.

PARIS, *December 26.*

In addresses at the National Congress of the French Socialist Party, Arthur Henderson, a member of the British war council, and G. H. Roberts, member of the British Parliament, both affirmed amid enthusiastic cheers that the war must be fought out until full guaranties had been obtained for a lasting peace.

"In my opinion"—

Said Mr. Henderson—

"we have now reached the most dangerous and difficult period of the war. During the next few months the democracies of England and France are going to be tested as never before. Do not misunderstand me. I do not mean that the stress and strain of fighting in the field will be more severe, although I do not ignore such a possibility. But the danger is of entirely a different character.

"Our stupendous losses, our unprecedented sacrifices, our horror of war, our love of peace, may lead us to mortgage the future. With such awful experiences we are apt to forget the great moral, eternal principles, and ideals for which we entered the struggle. We are not only fighting a negative action against material forces which are highly organized but we are engaged in a great spiritual conflict upon the result of which depend all our great ideals. If we enter into negotiations now, we do so when Germany is not repentant for her wrongdoing and is glorifying in the success of her military efforts; in fact, in the victory of German imperialism. In my opinion, if France and ourselves were to enter into negotiations under existing conditions, with such a spirit, we should be nations in bondage. Nothing less than that is the price which our enemy would exact for peace to-day.

"I can not tell you how many months and what sacrifices stand between us and victory. But I can tell you what will be the rewards of victory if we are true to ourselves. We shall have asserted the rights of nations, large or small, to live their own lives undisturbed by the ambitions of powerful neighbors. We shall have exacted such reparation for wrongs done them by this war as will be a warning to aggressors for all time to come. We shall have laid the foundations of that league of nations, beginning with those who have fought and suffered at our side, which will deliver Europe and the world from the terror of war.

"We hate war. It is brutal; the negation of everything for which we stand. Therefore we must prevent its recurrence, so far as is in our power. We desire to see the democracies of the world free to progress to their highest ideals. To accomplish this we must stand together for the destruction of militarism, the vindication of national right and liberty, the punishment of national wrong. Be the nations large or small, they must be free."

Emile Vandervelde, the Belgian socialist leader, said:

"Our comrades who have remained in invaded Belgium endure German dominion with admirable firmness. Nothing but encouragement reaches us from them. So that it would seem that the persons most hostile to war are those farthest from it."

M. Vandervelde also declared that the struggle must be carried on until Belgium and Serbia were delivered and "Caesarism is laid low."

The President transmitted the German note of December 12 to the entente powers December 19.

The entente powers replied December 30:

REPLY OF THE ENTENTE ALLIES TO THE CENTRAL POWERS.

PARIS, *December 30.*

The text of the entente reply to the Teuton peace proposal is as follows:

"The allied Governments of Belgium, France, Great Britain, Italy, Japan, Montenegro, Portugal, Roumania, Russia, and Serbia, united for the defense of the liberty of their peoples and faithful to engagements taken not to lay down their arms separately, have resolved to reply collectively to the pretended propositions of peace which were addressed to them on behalf of the enemy Governments through the intermediary of the United States, Spain, Switzerland, and Holland.

"Before making any reply the allied powers desire particularly to protest against the two essential assertions of the notes of the enemy powers that pretend to throw upon the allies responsibility for the war and proclaim the victory of the central powers. The allied Governments can not admit an affirmation doubly inexact and which suffices to render sterile all tentative negotiations. The allied nations have sustained for 30 months a war they did everything to avoid. They have shown by their acts their attachment to peace. That attachment is as strong to-day as it was in 1914. But it is not upon the word of Germany, after the violation of its engagements, that the peace broken by her may be based.

"A mere suggestion, without a statement of terms, that negotiations should be opened is not an offer of peace. The putting forward by the Imperial Government of a sham proposal lacking all substance and precision would appear to be less an offer of peace than a war maneuver. It is founded on calculated misinterpretation of the character of the struggle in the past, the present, and the future.

"As for the past, the German note takes no account of the facts, dates, and figures, which establish that the war was desired, provoked, and declared by Germany and Austria-Hungary.

"At The Hague conference it was a German delegate who refused all proposals for disarmament. In July, 1914, it was Austria-Hungary who, after having addressed to Serbia an unprecedented ultimatum, declared war upon her in spite of the satisfaction which had at once been accorded.

"The central empires then rejected all attempts made by the entente to bring about a pacific solution of a purely local conflict. Great Britain suggested a conference; France proposed an international commission; the Emperor of Russia asked the German Emperor to go to arbitration, and Russia and Austria-Hungary came to an understanding on the eve of the conflict. But to all these efforts Germany gave neither answer nor effect.

"Belgium was invaded by an empire which had guaranteed her neutrality and which had the assurance to proclaim that treaties were 'scraps of paper' and that 'necessity knows no law.'

"At the present moment these sham offers on the part of Germany rest on the war map of Europe alone, which represents nothing more than a superficial and passing phase of the situation and not the real strength of the belligerents. A peace concluded upon these terms would be only to the advantage of the aggressors who, after imagining that they would reach their goal in two months, discovered after two years that they could never attain it.

"As for the future the disasters caused by the German declaration of war and the innumerable outrages committed by Germany and her allies against both belligerents and neutrals demand penalties, reparation, and guaranties. Germany avoids mention of any of these.

"In reality these overtures made by the central powers are nothing more than a calculated attempt to influence the future course of war and to end it by imposing a German peace. The object of these overtures is to create dissension in public opinion in the allied countries. But that public opinion has, in spite of all the sacrifices endured by the allies, already given its answer with admirable firmness and has denounced the empty pretense of the declaration of the enemy powers.

"They (the peace overtures) have the further object of stiffening public opinion in Germany and in the countries allied to her—one and all severely tried by their losses, worn out by economic pressure, and crushed by the supreme effort which has been imposed upon their inhabitants.

"They endeavor to deceive and intimidate public opinion in neutral countries, whose inhabitants have long since made up their minds where the initial responsibilities lie and are far too enlightened to favor the designs of Germany by abandoning the defense of human freedom.

"Finally, these overtures attempt to justify in advance in the eyes of the world a new series of crimes—submarine warfare, deportations, forced labor, and forced enlistment of the inhabitants against their own countries, and violations of neutrality.

"Fully conscious of the gravity of this moment, but equally conscious of its requirements, the allied Governments, closely united to one another and in perfect sympathy with their peoples, refuse to consider a proposal which is empty and insincere.

Once again the allies declare that no peace is possible so long as they have not secured reparation for violated rights and liberties, the recognition of the principle of nationality, and of the free existence of small States, so long as they have not brought about a settlement calculated to end once and for all forces which have constituted a perpetual menace to the nations, and to afford the only effective guaranty for the future security of the world.

In conclusion, the allied powers think it necessary to put forward the following considerations, which show the special situation of Belgium after two and a half years of war. In virtue of the international treaties signed by five great European powers, of which Germany was one, Belgium enjoyed before the war a special status, rendering her territory inviolable and placing her, under the guaranty of the powers, outside all European conflicts. She was, however, in spite of these treaties, the first to suffer the aggression of Germany. For this reason the Belgian Government think it necessary to define the aims which Belgium has never ceased to pursue while fighting side by side with the entente powers for right and justice.

Belgium has always scrupulously fulfilled the duties which her neutrality imposed upon her. She has taken up arms to defend her independence and her neutrality violated by Germany and to show that she remains faithful to her international obligations.

On the 4th of August, 1914, in the Reichstag, the German chancellor admitted that this aggression constituted an injustice contrary to the laws of nations, and pledged himself in the name of Germany to repair it. During two and a half years this injustice has been cruelly aggravated by the proceedings of the occupying forces, which have exhausted the resources of the country, ruined its industries, devastated its towns and villages, and have been responsible for innumerable massacres, executions, and imprisonments.

At this very moment, while Germany is proclaiming peace and humanity to the world, she is deporting Belgian citizens by thousands and reducing them to slavery.

Belgium before the war asked for nothing but to live in harmony with her neighbors. Her King and her Government have but one aim—the reestablishment of peace and justice. But they only desire peace which would assure to their country legitimate reparation, guaranties, and safeguards for the future.

New Year's greeting was sent to the United States by the President of Switzerland, who declared his country stood ready to defend its soil:

HOPES TO SALUTE WITH AMERICA THE DAWN OF PEACE THIS YEAR, HE SAYS—NATION FINDS MORAL SATISFACTION IN CARING FOR THE VICTIMS OF THE WAR, REGARDLESS OF THEIR NATIONALITY.

GENEVA, *January 1.*

President Schulthess, of Switzerland, sends the following message for 1917 to the American people through the Associated Press:

"Switzerland, surrounded by four great nations at war and faithful to its secular traditions, is determined to maintain her absolute and loyal neutrality in this terrible conflict. The Swiss people, banded about their flag, are ready for every sacrifice to protect their independence, the integrity of their territory, their honor, and national dignity.

"WILL NOT PERMIT INVASION.

"They are convinced that all their neighbors will respect their decision, but whatever happens never will they allow a foreign army to invade their soil.

"The oldest democracy in the world sends fraternal wishes to her great sister Republic, to the American people, and to their illustrious President. Switzerland hopes to be able to salute with the United States the coming of peace in the year which commences. In the meanwhile Switzerland finds her moral satisfaction in giving hospitality and caring for the victims of the war, regardless of their nationality, and also in foreshadowing a happier future by showing that peoples of different languages and races can not only live in peace but even form a single nation."

ATTACK FEARED BY ALLIES.

Statements in Paris and Rome papers that Germany might violate Swiss territory have caused anxiety among the Swiss, which President Schulthess and several state councllors thought it necessary to counteract by stating publicly that they had no fear that Switzerland would be forced from her neutrality.

Movements of Italian troops near the Swiss border have been interpreted by the alarmists as proofs that Italy feared an attack by way of the Republic, but high government officials emphatically ridiculed such an assumption.

—

ALLIED PREMIERS IN ROME TO DISCUSS BALKAN SITUATION; URGING ITALY TO SAVE SALONIKI ARMY, BERLIN SUGGESTS.

ROME, *January 5.*

Strictest secrecy is maintained about the discussions and decisions of the meeting of allied premiers and ministers which is now in session here, but all agree that their object in coming to Rome is to coordinate their *efforts* for more decisive action, aiming to bring the war to a speedy and successful termination. The present exchange of views in person was rendered necessary by the many changes which have lately occurred in the different cabinets of the allies.

An Italian statesman remarked that from to-day a new phase of the war would begin. At the same time, it is felt that the meeting in Rome contributes to give greater importance to the answer of the allies to President Wilson's note.

—

HAILED IN ROME AS A SIGN OF THE ENTENTE'S FIRM PURPOSE.

PARIS, *January 5.*

A dispatch to the Havas Agency from Rome says:

"Premier Briand, Minister of War Lyautey, and M. Thomas, minister of national manufactures, including munitions, representing the French cabinet; Premier Lloyd George and Viscount Milner of the British cabinet, and Gen. Palitzin, representing the Russian staff, are expected to arrive *in Rome to-day* for a war council with the Italian officials.

"The coming of the British and French cabinet ministers is creating a most favorable opinion in the newspapers, which regard the forthcoming conferences as a sign of a closer union of the allies and as marking the beginning of greater and more formidable efforts.

"The Corrière d'Italia says that the meeting will have significance that will not escape Berlin and Vienna, as it will be demonstrated that the entente, instead of being weakened by threats of peace, is resolved firmly to continue the war until the objects of the allies are attained."

—

BERLIN BELIEVES IMPENDING DISASTER TO SARRAIL INSPIRED MEETING.

BERLIN, *January 5.*

The Overseas News Agency says to-day with regard to the visit of Premier Lloyd George and Viscount Milner to Rome:

"The Berliner Tageblatt points out that a great war council has been assembled in Rome, probably in order to obtain the necessary Italian cooperation in the Balkans, as otherwise the French Gen. Sarrail's army would be irretrievably lost. This council, the newspaper adds, at least clearly demonstrates the critical situation of the entente powers in the Balkans."

—

A private dispatch received here yesterday from Paris stated that the British and French cabinet ministers reached Rome yesterday. The message went on:

"Aside from the general questions and mutual decisions arising for the coming year, the new conference has for its most particular object an examination of the military situation in the East. All other interpretations which shall be suggested by the German propaganda will be entirely erroneous."

The situation demands more concert of action among the allies, as indicated by the Rome conference:

WAR DIET LUNCHEON FOR ALLIES' COUNCIL—CONFERENCE IN ROME HOLDS ALL-DAY SESSION, ITALIAN PREMIER PRESIDING.

PARIS, *January 6, 1917.*

The conference of the entente statesmen, including Premiers Lloyd-George, Briand, and Boselli, was in almost continuous session to-day, according to a Havas dispatch from Rome. Premier Boselli presided at the meeting, which was the first of a number at which the general situation will be discussed by representatives of Great Britain, France, Italy, and Russia.

In honor of the event the Italian Government declared the day a holiday.

ROME, *January 6, 1917.*

At the war council of representatives of the entente powers in Rome there will be neither fetes nor banquets. Premier Boselli will give a luncheon to-morrow to the visiting statesmen. The menu will be drawn up in conformity with the food restrictions now applicable to hotels and restaurants.

—

ROME WAR COUNCIL ENDS DIFFICULTIES.

PARIS, *January 8, 1917.*

Although no communication has been made public regarding the conference of the entente allies, says a Rome dispatch to the Temps, private conversations with some of the principal figures in the conference leave no doubt that the result is fully satisfactory and that the representatives of the entente powers separate in full accord and full confidence. The French premier, M. Briand, said to the Temps correspondent:

"Our visit has been most fruitful and was timely. Many difficulties of detail had arisen since the last conference of the allies, and in all directions the attempt was made to becloud the entente and the relations between the allies, without mentioning public events that are known to every one. It was necessary to dissipate the fogs and overcome the difficulties and find a common solution to accord with present and future events. All that was undertaken in a spirit of accord and good faith and we have eliminated all the little difficulties that could hinder our united efforts."

This morning's press carried the anxiously awaited reply to the President by the entente powers.

TEXT OF ALLIES' REPLY TO WILSON.

[Ambassador Sharp to the Secretary of State.]

AMERICAN EMBASSY,
Paris, January 10, 1917.

The following is the translation of the French note:

"The allied Governments have received the note which was delivered to them in the name of the Government of the United States on the 19th of December, 1916. They have studied it with the care imposed upon them both by the exact realization which they have of the gravity of the hour and by the sincere friendship which attaches them to the American people.

"In a general way they wish to declare that they pay tribute to the elevation of the sentiment with which the American note is inspired and that they associate themselves, with all their hopes, with the project for the creation of a league of nations to insure peace and justice throughout the world. They recognize all the advantages for the cause of humanity and civilization which the institution of international agreements, destined to avoid violent conflicts between nations would prevent—agreements which must imply the sanctions necessary to insure their execution, and thus to prevent an apparent security from only facilitating new aggressions.

"But a discussion of future arrangements destined to insure an enduring peace presupposes a satisfactory settlement of the actual conflict. The allies have as profound a desire as the Government of the United States to terminate as soon as possible a war for which the central Empires are responsible and which inflicts such cruel sufferings upon humanity. But they believe that it is impossible at the present moment to attain a peace which will assure them reparation, restitution, and such guaranties to which they are entitled by the aggression for which the responsibility rests with the central powers, and of which the principle itself tended to ruin the security of Europe—a peace which would, on the other hand, permit the establishment of the future of European nations on a solid basis. The allied nations are conscious that they are not fighting for selfish interests, but, above all, to safeguard the independence of peoples, of right, and of humanity.

"The allies are fully aware of the losses and suffering which the war causes to neutrals as well as to belligerents, and they deplore them, but they do not hold themselves responsible for them, having in no way either willed or provoked this war; and they strive to reduce these damages in the measure compatible with the inexorable exigencies of their defense against the violence and the wiles of the enemy.

"It is with satisfaction, therefore, that they take note of the declaration that the American communication is in nowise associated in its origin with that of the central powers transmitted on the 18th of December by the Government of the United States. They did not doubt, moreover, the resolution of that Government to avoid even the appearance of a support, even moral, of the authors responsible for the war.

"The allied Governments believe that they must protest in the most friendly but in the most specific manner against the assimilation, established in the American note, between the two groups of belligerents; this assimilation, based upon public declarations by the central powers, is in direct opposition to the evidence, both as regards responsibility for the past and as concerns guaranties for the future; President Wilson, in mentioning it, certainly had no intention of associating himself with it.

"If there is a historical fact established at the present date, it is the willful aggression of Germany and Austria-Hungary to insure their hegemony over Europe and their economic domination over the world. Germany proved by her declaration of war, by the immediate violation of Belgium and Luxemburg, and by her manner of conducting the war her simulating contempt for all principles of humanity and all respect for small States. As the conflict developed, the attitude of the central powers and their allies has been a continual defiance of humanity and civilization.

"Is it necessary to recall the horrors which accompanied the invasion of Belgium and of Serbia, the atrocious régime imposed upon the invaded countries, the massacre of hundreds of thousands of inoffensive Armenians, the barbarities perpetrated against the populations of Syria, the raids of Zeppelins on open towns, the destruction by submarines of passenger steamers and of merchantmen, even under neutral flags, the cruel treatment inflicted upon prisoners of war, the juridical murders of Miss Cavell, of Capt. Fryatt, the deportation and the reduction to slavery of civil populations, etc. The execution of such a series of crimes, perpetrated without any regard for universal reprobation, fully explains to President Wilson the protest of the allies.

"They consider that the note which they sent to the United States in reply to the German note will be a response to the questions put by the American Government, and, according to the exact words of the latter, 'constitute a public declaration as to the conditions upon which the war could be terminated.'

"President Wilson desires more. He desires that the belligerent powers openly affirm the objects which they seek by continuing the war; the allies experience no difficulty in replying to this request. Their objects in the war are well known; they have been formulated on many occasions by the chiefs of their divers Governments. Their objects will not be made known in detail, with all the equitable compensations and indemnities for damages suffered, until the hour of negotiations. But the civilized world knows that they imply, in all necessity and in the first instance, the restoration of Belgium, of Serbia, and of Montenegro, and the indemnities which are due them; the evacuation of the invaded territories of France, of Russia, and of Roumania, with just reparation; the reorganization of Europe, guaranteed by a stable régime and founded as much upon respect of nationalities and full security and liberty of economic development, which all nations, great or small, possess, as upon territorial conventions and international agreements, suitable to guarantee territorial and maritime frontiers against unjustified attacks; the restitution of provinces or territories wrested in the past from the allies by force or against the will of their populations;

the liberation of Italians, of Slavs, of Roumanians, and the Tcheco-Slovaques from foreign domination; the enfranchisement of populations subject to the bloody tyranny of the Turks; the expulsion from Europe of the Ottoman Empire, decidedly alien to western civilization. The intention of His Majesty the Emperor of Russia regarding Poland have been clearly indicated in the proclamation which he has just addressed to his armies.

"It goes without saying that if the allies wish to liberate Europe from the brutal covetousness of Prussian militarism it never has been their design, as has been alleged, to encompass the extermination of the German peoples and their political disappearance. That which they desire above all is to insure a peace upon the principles of liberty and justice, upon the inviolable fidelity to international obligations with which the Government of the United States has never ceased to be inspired.

"United in the pursuit of this supreme object, the allies are determined, individually and collectively, to act with all their power and to consent to all sacrifices to bring to a victorious close a conflict upon which, they are convinced, not only their own safety and prosperity depend, but also the future of civilization itself.

"SHARP."

BELGIUM'S SEPARATE REPLY TO THE PRESIDENT.

[Ambassador Sharp to the Secretary of State.]

AMERICAN EMBASSY,
Paris, January 10, 1917.

Copy of Belgium note as follows:

"The Government of the King, which has associated itself with the answer handed by the President of the French council to the American ambassador on behalf of all, is particularly desirous of paying tribute to the sentiment of humanity which prompted the President of the United States to send his note to the belligerent powers, and it highly esteems the friendship expressed for Belgium through his kindly intermediation. It desires as much as Mr. Woodrow Wilson to see the present war ended as early as possible.

"But the President seems to believe that the statesmen of the two opposing camps pursue the same object of war. The example of Belgium unfortunately demonstrates that this is in no wise the fact. Belgium has never, like the Central Powers, aimed at conquest. The barbarous fashion in which the German Government has treated, and is still treating, the Belgian nation does not permit the supposition that Germany will preoccupy herself with guaranteeing in the future the rights of the weak nations, which she has not ceased to trample under foot since the war, let loose by her, began to desolate Europe.

"On the other hand, the Government of the King has noted with pleasure and with confidence the assurances that the United States is impatient to cooperate in the measures which will be taken after the conclusion of peace to protect and guarantee the small nations against violence and oppression.

"Previous to the German ultimatum, Belgium only aspired to live upon good terms with all her neighbors. She practiced with scrupulous loyalty toward each one of them the duties imposed by her neutrality. In the same manner she has been rewarded by Germany for the confidence she placed in her, through which, from one day to the other, without any plausible reason, her neutrality was violated, and the chancellor of the Empire, when announcing to the Reichstag this violation of right and of treaties, was obliged to recognize the iniquity of such an act and predetermine that it would be repaired.

"But the Germans, after the occupation of Belgian territory, have displayed no better observance of the rules of international law or the stipulations of The Hague convention. They have, by taxation as heavy as it is arbitrary, drained the resources of the country; they have intentionally ruined its industries, destroyed whole cities, put to death and imprisoned a considerable number of inhabitants. Even now, while they are loudly proclaiming their desire to put an end to the horrors of war, they increase the rigors of the occupation by deporting into servitude Belgian workers by the thousands.

"If there is a country which has the right to say that it has taken up arms to defend its existence, it is assuredly Belgium. Compelled to fight or to submit to shame, she passionately desires that an end be brought to the unprecedented sufferings of her population. But she could only accept a peace which would assure her, as well as equitable reparation, security, and guaranties for the future.

"The American people, since the beginning of the war, has manifested for the oppressed Belgian nation most ardent sympathy. It is an American committee, the Commission for Relief in Belgium, which, in close union with the Government of the King and the national committee, displays an untiring devotion and marvelous activity in revictualing Belgium. The Government of the King is happy to avail itself of this opportunity to express its profound gratitude to the commission for relief as well as to the generous Americans eager to relieve the misery of the Belgian population. Finally, nowhere more than in the United States have the abductions and deportations of Belgian civilians provoked such a spontaneous movement of protestation and indignant reproof.

"These facts, entirely to the honor of the American Nation, allow the Government of the King to entertain the legitimate hope that at the time of the definitive settlement of this long war the voice of the entente powers will find in the United States a unanimous echo to claim in favor of the Belgian nation, innocent victim of German ambition and covetousness, the rank and the place which its irreproachable past, the valor of its soldiers, its fidelity to honor, and its remarkable faculties for work assign to it among the civilized nations.

"SHARP."

The simplest summary of this reply will indicate the following terms:

Restoration of Belgium, Serbia, Montenegro, with indemnities.

Evacuation of invaded territories of France, Russia, and Roumania, with reparation.

Reorganization of Europe under guaranties to insure to all nations respect and liberty of development.

Restitution of territories wrested in the past from the allies by force or against people's will.

Liberation of Italians, Slavs, Roumanians, and Tcheco-Slovaks from foreign domination.

Enfranchisement of populations subject to the Turks.

Expulsion from Europe of the Ottoman Empire.

To these terms the allies add that Russia has already clearly indicated her intentions toward Poland, and that if the allies wish to free Europe from Prussian militarism it has never been their design to "encompass the extermination of the German people and their political disappearance."

The day following the entente reply to the President, Prime Minister Lloyd-George made his second speech on the entente situation.

LLOYD-GEORGE SPEAKS AGAIN—FULL TEXT OF GUILDHALL ADDRESS PREDICTING VICTORY IN "NEXT FEW MONTHS"—ASKS FOR A BIG LOAN—REMINDS HEARERS THAT THE CONFLICT IS "A WAR OF EQUIPMENT" AND CITES ROUMANIA'S FLIGHT—FIGHTING FOR A REAL PEACE—IT MUST BE FOUNDED "ON THE ROCK OF VINDICATED JUSTICE"—PLEADS FOR SELF-DENIAL.

LONDON, *January 11.*

In a 45-minute speech at this afternoon's meeting at the Guildhall to launch the new British loan, Premier Lloyd-George said that the allies, having received from the central powers, not a peace offer but "a trap baited with fine words," could not be charged with having rejected peace terms; that they demanded a real peace, and, after the Rome conference, were satisfied that, though its achievement might be difficult, defeat was impossible. With the financial backing which the Government sought from the projected loan, he said the armies of the entente would "cleave a road to victory" in the next few months. The premier's speech, which was enthusiastically received, was in full as follows:

"My lord mayor, my lords, ladies, and gentlemen, the chancellor of the exchequer, in his extremely lucid and impressive speech, has placed before you the business side of this proposal, and I think you will agree with me, after hearing his explanation of his scheme, that he has offered for subscription a loan which possesses all the essential ingredients of an attractive investment. They are the most generous terms that the Government can offer without injury to the taxpayer. I agree that the chancellor was right in offering such liberal terms, because it is important that we should secure a big loan now, not merely in order to enable us to finance the war effectively, but as a demonstration of the continued resolve of this country to prosecute the war [loud cheers]; and it is upon that aspect of the question that I should like to say a few words.

"The German Kaiser a few days ago sent a message to his people that the allies had rejected his peace offers. He did so in order to drag those whom he could no longer dragoon. [Laughter and cheers.] Where are those offers? We have asked for them. We have never seen them. We were not offered terms; we were offered a trap baited with fair words. They tempted us once, but the lion has his eyes open. [Loud cheers.] We have rejected no terms that we have ever seen. Of course, it would suit them to have peace at the present moment on their terms. We all want peace; but when we get it it must be a real peace. [Cheers.]

WAR BETTER THAN A PRUSSIAN PEACE.

"The allied powers, separately and in council together, have come to the same conclusion. [Cheers.] Knowing well what war means, knowing especially what this war means in suffering, in burdens, in horrors, they have still decided that even war is better than peace at Prussian price of domination over Europe. We made it clear in our reply to Germany; we made it still clearer in our reply to the United States.

"Before we attempt to rebuild the temple of peace we must see now that the foundations are solid. They were built before upon the shifting sands of Prussian faith. Henceforth when the time for rebuilding comes it must be on the rock of vindicated justice. [Applause.]

"I have just returned from a council of war of the four great allied countries upon whose shoulders most of this terrible war falls. I can not give you its conclusions [laughter]; they might be information to the enemy. [Renewed laughter.] There were no delusions as to the magnitude of our task; neither were there any doubts about the results.

VICTORY DIFFICULT, DEFEAT IMPOSSIBLE.

"I think I can say what was the feeling of every man there. It was one of the most businesslike conferences I ever attended. We faced the whole situation, probed it thoroughly, and looked its difficulties in the face, and made arrangements to deal with them. [Laughter and applause.] We separated feeling more confident than ever. [Renewed applause.] All felt that if victory were difficult, defeat was impossible. [Applause.] There was no flinching, no wavering, no faint-heartedness, no infirmity of purpose.

"There was a grim resolution at all costs that we must achieve the high aim with which we accepted the challenge of the Prussian military caste and rid Europe and the world forever of her menace. [Renewed applause.] No country could have refused the challenge without the loss of honor. None could have rejected it without impairing national security. No one would have failed to take it up without forfeiting something which is of greater value to every free and self-respecting people than life itself. Those nations did not enter into the war lightly. They did not embark upon this enterprise without knowing what it really meant. They were not enticed by the prospects of immediate victory.

"Take this country. The millions of our men who enlisted in the army enlisted after the German victories of August, 1914, when they knew the accumulated and concentrated power of the German military machine. That was when they placed their lives at the disposal of their country. [Cheers.] What about the other lands? They knew what they were encountering; that they were fighting an organization which had been perfected for generations by the best brains of Prussia—perfected with one purpose, the subjugation of Europe. [Applause.]

"Why did they do it? I passed through hundreds of miles of the beautiful land of France and of Italy, and as I did so I asked myself this question: Why did the peasants leave by myriads these sunny vineyards and cornfields in France? Why did they quit these enchanting valleys, with their comfort, their security, their charm, in order to face the grim and wild horrors of the battle field? They did it for one purpose, and one purpose only. They were not driven to the slaughter by Kings. These are great democratic countries. No Government would have lasted 24 hours that had forced them into an abhorrent war of their own free will. They embarked upon it because they knew the fundamental issue had been raised which no country could shirk without imperiling all that has been won in the centuries of the past and all that remains to be won in the ages of the future.

"That is why, as the war proceeds and the German purpose becomes more manifest, the conviction is becoming deeper in the minds of those people that they must work their way through to victory in order to save Europe from an unspeakable despotism. [Cheers.] That was the spirit that animated the allied conference in Europe last week. [Renewed cheers.]

ALLIES' INCREASING TRUST IN BRITAIN.

"But I tell you one thing that struck me, and strikes me more and more each time I attend these conferences and visit the Continent: The increasing extent to which the allied peoples are looking to Great Britain. [Loud cheers.] They are trusting her rugged strength and great resources more and more. [Renewed cheers.] She is to them like a great tower in the deep. She is becoming more and more the hope of the oppressed and despair of the oppressor; and I feel more and more confident that we shall not fail the people who put their trust in us.

"But when that arrogant Prussian caste flung the signature of Britain in the treaty in the waste-paper basket as if it were of no account they knew not the pride of the land they were treating with such insolent disdain. They know it now. [Cheers.] Our soldiers and our sailors have taught them to respect it. You had an eloquent account from my colleague, the chancellor of the exchequer, of the achievements of our soldiers; our sailors [loud cheers] are gallantly defending the honor of our country on the high seas. They have strangled the enemy's commerce; they will continue to do so in spite of all the piratical devices of the foe.

PREDICTS VICTORY IN 1917.

"In 1914 and 1915, for two years, a small, ill-equipped army held up the veterans of Prussia, with the best equipment in Europe; in 1916 hurling them back and delivering a blow from which they are reeling. In 1917 the armies of Britain will be more formidable than ever in training, in efficiency, in equipment; and you may depend upon it, if you give them the necessary support they will cleave a road to victory through the dangers and perils of the next few months. [Loud cheers.]

"But we must support them; they are worth it. [Cheers.] Have you ever talked to a soldier who has come back from the front? There is not one of them who will not tell you how he is encouraged and sustained by hearing the roar of the guns behind him.

"I will tell you what I want to do. I want to see checks hurtling through the air, fired from the city of London; fired from every city, town, and village and hamlet throughout the land; fired straight into the intrenchments of the enemy. [Loud cheers.]

"Every well-directed check [laughter] well loaded, properly primed, is a more formidable weapon of destruction than a 12-inch shell. [Cheers.] It clears a path to the barbed-wire entanglements for our gallant fellows to march through. A big loan helps you, insures victory; a big loan will help shorten the war; it will help save lives; it will help save the British Empire; it will help save Europe; it will help save civilization." [Cheers.]

Continuing, the prime minister discussed the industrial situation, of so much importance to the United States. He said:

There are many shortcomings in our business, our commerce, our industry. The war is settling them all right in the most marvelous way. You ask a great business man like my friend, Lord Pirrie, what is going on in those great factories throughout Great Britain and Ireland. Old machinery is scrapped ["Hear, hear!"]; the newest, the best and the latest is set up; slipshod and wasteful methods are scrapped, and hampering customs discontinued. Millions are brought into the labor market to help to produce who were before purely consumers.

I do not know what the national debt will be at the end of this war [laughter], but I will make a prediction: Whatever it is, what is added in real assets to the real riches of the nation will be infinitely greater than any debt we ever acquire. The resources of the nation in every direction have been developed and directed; the nation itself disciplined, braced up, quickened, has become a more alert people. We have thrown off the useless tissues; we are a nation that has been taking exercise. [Laughter.] We are a different people.

I will tell you another thing: The Prussian menace was a running mortgage, which detracted from the value of our national security. Nobody knew what it meant. We know too well now. You could not tell whether it meant millions or hundreds of millions or thousands of millions, or how many of them. You could not tell that it would not mean ruin.

That mortgage will be cleared off forever [loud cheers], better security on a better foundation, safer security and at a better rate of interest. [Laughter.] The world will then be able, when this war is over, to attend to its business in peace. There will be no war or rumors of war to disturb and to distract. We can build up, we can reconstruct, we can till, we can cultivate, and enrich, and the burden and terror and waste of war will have gone. [Cheers.]

PREDICTS A LEAGUE OF PEACE.

The peace and security for peace will be that the nations will band themselves together to punish the first peacebreaker who comes out.

As to the armies of Europe, every weapon will be a sword of justice in the government of men; every arm will be a constabulary of peace. [Cheers.] There were men who had hoped to see this achieved in the way of peace. We were disappointed. It was ordained that you should not reach that golden era except along the path which was paved with gold—yea, and cemented with valiant blood. There are millions who have given of the latter who are ready—nay, millions more ready, myriads more ready—for the sacrifice, if the country needs it.

It is for us to contribute the former. Let no man, no woman, in this crisis of the nation's fate, through indolence, greed, avarice, or selfishness, fail. If they are doing their part, then, when the time comes for the triumphal march through the darkness and terror of the night into the bright dawn of the morning of the new age, they will each feel that they have done their share. [Loud cheers, during which the premier resumed his seat.]

ONUS FOR FURTHER BLOODSHED PUT ON ALLIES BY KAISER—IN NOTE TO NEUTRALS, GERMANY INSISTS SHE MADE HONEST EFFORT TO END WAR—SAYS FORM OF ENTENTE REPLY EXCLUDES ANSWER—WILLING TO LEAVE HISTORY JUDGE WHICH SIDE WAS AGGRESSOR IN WORLD STRUGGLE.

BERLIN, *January 11.*

Germany has handed neutral Governments a note concerning the reply of the entente to the German peace proposals, the Overseas News Agency announces.

It is first stated, says the news agency announcement, that the German Government has received the reply of the entente to the note of December 12, containing a proposition to enter at once into peace negotiations. The note then continues:

"Our adversaries declined this proposition, giving as the reason that it is a proposition without sincerity and without importance. The form in which they clothe their communication excludes an answer to them, but the Imperial Government considers it important to point out to the Governments of neutral powers its opinion regarding the situation.

LEAVES RESPONSIBILITY TO HISTORY.

"The central powers have no reason to enter into any discussion regarding the origin of the world war. History will judge upon whom the immense guilt of the war shall fall; history's verdict will as little pass over the encircling policy of England, the revengeful policy of France, and the endeavor of Russia to gain Constantinople as over the instigation of the Serbian assassination in Sarayevo and the complete mobilization of Russia, which meant war against Germany.

"Germany and her allies, who had to take up arms for defense of their liberty and their existence, consider this, their aim of the war, as obtained.

"On the other hand, the hostile powers always went further away from the realization of their plans, which, according to the declarations of their responsible statesmen, were, among others, directed toward the conquest of Alsace-Lorraine and several Russian Provinces, the humiliation and diminution of the Austro-Hungarian monarchy, the partition of Turkey, and the mutilation of Bulgaria.

SURPRISED BY REPARATION DEMAND.

"In the face of such war aims the demand for restitution, reparation, and guaranties in the mouth of our adversaries produces a surprising effect.

"Our adversaries call the proposal of the four allied (Teutonic) powers a war maneuver. Germany and her allies must protest in the most energetic fashion against such a characterization of their motives, which were frankly explained. They were persuaded that a peace which was just and acceptable to all the belligerents was possible; that it could be brought about by an immediate, spoken exchange of views; and that, therefore, the responsibility for further bloodshed could not be taken.

"Their readiness was affirmed without reservation to make known their peace conditions when negotiations were entered into, which refutes every doubt as to their sincerity.

"Our adversaries, who had it in their hands to examine the proposition as to its contents, neither attempted an examination nor made counter proposals. Instead they declared that peace was impossible so long as the reestablishment of violated rights and liberties, the recognition of the principle of nationalities, and the free existence of small States were not guaranteed.

LEAVES CASE TO WORLD OPINION.

"The sincerity which our adversary denies to the proposals of the four allied powers will not be conceded by the world to these demands if the world holds before its eyes the fate of the Irish people; the destruction of the liberty and independence of the Boer Republic; the subjugation of northern Africa by England, France, and Italy; the suppression of Russian alien nations; and also the violation of Greece, which is without precedent in history.

"Against the pretended violations of the laws of nations by the four allies (Teutonic), those powers are not entitled to complain, which from the beginning of the war trampled on justice and tore to pieces the treaties upon which it is built. England already during the first weeks of the war repudiated the London declaration, the content of which had been recognized by its own delegates as a valid law of nations, and in the further course of the war violated in the most severe fashion also the Paris declaration, so that by her arbitrary measures for warfare a condition of lawlessness has been created.

ATROCITIES ARE CHARGED.

"The war of starvation against Germany and the pressure exercised in England's interest against neutrals are not less scandalously conflicting with the rules of the laws of nations as with the commands of humanity.

"Likewise, contrary to the laws of nations and incompatible with the usages of civilization, are the use of colored troops in Europe and the extension of the war into Africa, which was done by a breach of existing treaties and which undermines the prestige of the white race on that continent. The barbarous treatment of prisoners, especially in Africa and Russia, and the deportation of the civilized population from eastern Prussia, Alsace-Lorraine, Galicia, and Bukowina are further proof of how our adversaries point out the special situation of Belgium. The Imperial Government is unable to acknowledge that the Belgian Government has always conserved the duties which were enjoined upon her by her neutrality. Already before the war Belgium, under England's influence, sought support in military fashion from England and France, and thus herself violated the spirit (of the treaty) which she had to guarantee her independence and neutrality.

"Twice the Imperial Government declared to the Belgian Government that it did not come as an enemy to Belgium and asked it to spare to the country the terrors of war. Germany offered to guarantee the integrity and independence of the Kingdom to the full extent and compensate for all damages which might be caused by the passage of the German troops. It is known that the royal British Government in 1887 was resolved not to oppose the use of the right of way through Belgium under those conditions.

"The Belgian Government declined the repeated offer of the Imperial Government. Upon her and those powers which instigated her to this attitude falls the responsibility for the fate which befell Belgium.

DECLARES ALLEGATIONS REFUTED.

"The accusations about the German warfare in Belgium and the measures taken there in the interest of military safety have been repeatedly refuted by the Imperial Government as untrue. Germany again offers energetic protest against these calumnies.

"Germany and her allies have made an honest attempt to terminate the war and open the road for an understanding among the belligerents. The Imperial Government asserts the fact that it merely depended upon the decision of our adversaries whether the road toward peace should be entered upon or not. The hostile governments declined to accept this road. Upon them falls the full responsibility for the continuation of the bloodshed.

"Our allied powers, however, shall continue the struggle in quiet confidence and with firm trust in their right until peace is gained which guarantees to their nations honor, existence, and liberty of development, and which to all the nations of the European Continent gives the blessing to cooperate in mutual respect and under equal rights together for the solution of the great problems of civilization."

THE "LEAK" EPISODE.

Coincident with the announcement of the President's peace note, the stock market revealed what appears to be a sensitive appreciation of its speculative possibilities and led to a charge that advance knowledge had reached Wall Street through some leak of the Government. Representative WOOD offered the following resolution on the 22d, two days after the note was made public:

[House resolution 420, Sixty-fourth Congress, second session.]

Resolved, That a committee of five Representatives be appointed by the Speaker of the House to investigate and make report as to whether or not anyone high in the administration of governmental affairs in the United States, or any relative of anyone high in authority in the administration of governmental affairs in the United States, profited financially, either directly or indirectly, by the fluctuation in the stock market occurring on Thursday, December 21, 1916, following the two contradictory interpretations given to the public from the office of the Secretary of State concerning the note of the President of the United States dated December 20, 1916, to the belligerent powers.

On January 3, the second day of meeting after the holiday vacation, Mr. WOOD introduced the following:

[House resolution 429, Sixty-fourth Congress, second session.]

Whereas Thomas W. Lawson, of Boston, gave to the public a statement which appears in the daily newspapers under date of December 28 and 29, 1916, in which he says, amongst other things, that "If it was actually believed in Washington there was to be a real investigation of last week's leak there would not be a quorum in either the Senate or House next Monday and a shifting of bank accounts similar to those in the good old sugar investigation days;" and in another statement which appears in the daily press of December 31, 1916, he says, "The good old Capitol has been wallowing in Wall Street leak grafts for 40 years, wallowing hale and hearty;" and

Whereas the statements of the aforesaid Thomas W. Lawson, and each of them, affect the dignity of this House and the integrity of its proceedings and the honesty of its Members:

Resolved, That the Speaker appoint a select committee of five Members of the House and that such committee be instructed to inquire into the charges made by the aforesaid Thomas W. Lawson, and for such purpose it shall have power to send for persons and papers and enforce their appearance before said committee, and to administer oaths, and shall have the right to make report at any time.

On the 4th the House Rules Committee was instructed by the House to make an investigation of the charge involved in the resolution and report back to the House within 10 days.

Hearings were begun on the 5th and continued to the 11th. The committee had before it the following persons: Representative WOOD, January 5; Representative GARDNER, January 6; Private Secretary Tumulty, January 8; Secretary Lansing, January 8; Mr. Lawson, January 8 and 9; Mr. Sabin, president of the Guaranty Trust Co.; Mr. Otto H. Kahn, New York, Kuhn, Loeb & Co.; Mr. Bernard M. Baruch, 111 Broadway, New York; Mr. R. M. Bolling; newspaper men—Crawford and Jamieson, of the Central News people; Odlin, International News Service, Washington, D. C.; Reily (managing editor), Eland, and Boyle, of Wall Street Journal; Public Printer Ford; Night Superintendent McEvoy, Government Printing Office, January 10.

These hearings consist of 271 pages of printed matter, consisting of parts 1 to 6. The first and second contain the testimony of Mr. WOOD, the author of the resolution, and that of Congressman GARDNER.

Mr. WOOD offered the following letter:

DECEMBER 26, 1916.

Hon. WILLIAM R. WOOD,
House of Representatives, Washington, D. C.

DEAR SIR: The Democratic majority of the House will not, I presume, permit the adoption of your resolution of inquiry, but it is a highly meritorious measure none the less, and, if I can do so, I want to help you.

Bernard M. Baruch, of this city, unquestionably had the news of Secretary Lansing's note as early as Saturday, December 9. The note was dated December 11 and was not dispatched till December 12. How Baruch got it I am not prepared to say, but a gentleman of my acquaintance makes the positive statement that he saw Mr. Tumulty and Baruch breakfasting together at the Biltmore Hotel in this city on two or three occasions coincident with the penning of the note and its secret dispatch. That Baruch at this juncture smashed the market heavily and in all directions admits of no doubt and can be easily demonstrated in this way:

At his offices, No. 111 Broadway, he has a system of private telephone lines to various brokerage houses. Before he has an opportunity to remove these wires you must obtain a list of them. If he is compelled to supply you with a list I would check it by obtaining an identical list from the New York Telephone Co. and the Western Union Telegraph Co., these being the two companies that supply the wires. Having obtained this list you can then obtain from all the brokerage houses connected thereby a transcript of all orders executed for his account within the period in question. This investigation should cover not only his personal accounts but any secret accounts, such as accounts carried by "number," or any fictitious names, all of which, as the brokers' books will show, are controlled by him or guaranteed by him. If the brokers refuse this information Congress has the power to compel it. The stock exchange also has the power to enforce its members to produce their books and accounts, and as the rules of the stock exchange are sufficiently broad and elastic to cover every departure from ethical business methods on the part of its members, an appeal to the governors of that institution will no doubt elicit the desired information. Many reputable members of the exchange are anxious to assist you in running to earth this most unsavory scandal.

There is a great deal more in this matter than you imagine, and if you can once get your machinery in motion I am in a position to say that you will be supplied with all the necessary information.

Very truly, yours,

A. CURTIS.

Part 3 of the hearings gives the statements of Mr. Tumulty, Secretary Lansing, and the first part of Lawson's examination:

LANSING GIVES NOTE'S HISTORY—TELLS OF MEETING CORRESPONDENTS.

Secretary Lansing was called next.

"Possibly I had better start," said Secretary Lansing, "by stating that I assume that confidential communications between the President and myself are not a part of the inquiry. I can give you a physical history of the note. The draft of the note was received by me from the White House at 4 o'clock Monday afternoon. I called up Mr. Polk, counsellor for the department, and Mr. Woolsey, law adviser attached to my office, and discussed the three forms in which the note had to be prepared and sent forth. I then handed it to Mr. Woolsey, enjoining the strictest secrecy, that he might take it to the three confidential stenographers. There it was to be prepared and delivered to Mr. Salmon, chief of the index bureau.

NOTE PUT IN CIPHER.

"The index clerk," continued the Secretary, "was to encipher the note, and said that it would take so long to cipher the three notes that he would have to have an assistant. I directed that we engage his most confidential man for the work. He did so, was given the copies, and the two men locked themselves in the room. They were given the copies at 8 o'clock and at 2.30 Tuesday morning (Dec. 19) the notes were enciphered, delivered to the telegraph room, and sent.

"On Tuesday afternoon I discussed with the President the time when the note should be made public. The reason for secrecy was the courtesy due to the nations who were to receive the note that it should not be published here before they received it. We decided it would take at least two days for it to reach Austria and Roumania, and we decided it should be made public on Thursday morning.

"Tuesday evening about 6 o'clock a copy of the note was handed to Mr. James, chief of the information bureau. He at once took it up with the Printing Office. It was read by one man and then sent to the Printing Office.

CALLS IN CORRESPONDENTS.

"At about 11 o'clock I received the newspaper correspondents and told them that I would have an important communication for them at 5 o'clock to be released the next morning. I told them in confidence, as I was afraid its contents might come back from Europe in garbled form. Further, I thought it courteous not make it public until it had been received by the countries to which it was addressed. I told them it did not contain any proposal of peace nor offer of mediation.

"That evening at my house Ambassador Willard—of Spain—told me he had been advised of the contents of the note by the President, and we discussed the advisability of him addressing Spain on the subject. The next morning the note was made public in the press."

"It's been suggested here that representatives of the newspapers may have sent out information."

"I have seen references to it in the newspapers."

"Has anything been done at the State Department to show whether there is any foundation for that?"

"Nothing at all. I think it would be easy to find out."

LANSING SOUGHT TO FORESTALL RUMORS.

Questioned further about his Wednesday conference with the newspaper men, Secretary Lansing said:

"My statements regarding the note were entirely negative. I said nothing whatever about a request for terms having been made. I gave no details. I stated that at 5 o'clock they would be able to get an important communication sent to belligerent Governments. I said that it was not a proposal of peace or an offer of mediation. Then, I explained the reason I wished them to preserve confidence. I knew the note was in the hands of the printer and wanted to guard against any mere rumor that might get out."

Representative CHIPERFIELD asked Secretary Lansing about his two statements explaining the note after it had been made public.

"Were these statements made entirely on your own initiative?" asked CHIPERFIELD.

LANSING DRAWS LINE.

"See here," Secretary Lansing declared with emphasis, "that is away beyond the scope of this investigation."

Representative GARRETT interjected:

"Such a matter has not the slightest pertinence to this inquiry on the effect of a leak on the stock market."

"Not perhaps any connection with the leak on the note and its effect on the market," said Representative CHIPERFIELD, "but it has been stated that the Secretary's statements did in fact affect the stock market."

Democrats of the committee objected that such a line of questioning was improper and the Chair ruled that the Secretary need not answer.

Resuming his testimony, Secretary Lansing said he did not know if representatives of Wall Street papers were present at the conference of the newspaper men and did not know their duties.

On the 12th the Committee on Rules made its report to the House that there was no foundation for the Lawson charge and recommended that the Wood resolution be tabled. Upon this a debate of 2 hours and 30 minutes was had. The House then recommitted the matter to the committee with instructions to continue the investigation.

Post Office Appropriation Bill.

EXTENSION OF REMARKS

OF

HON. JOHN A. MOON,

OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

Monday, January 15, 1917.

Mr. MOON. Mr. Speaker, under the authority given by the House in the discussion of the Post Office appropriation bill to Members to extend remarks in the RECORD, I add to my remarks in extension the following:

In recommending the discontinuance of the pneumatic-tube service in the cities of Boston, Philadelphia, Chicago, St. Louis, and a portion of Brooklyn, consideration was given to the following facts:

That the service was born in iniquity and has been maintained by corruption and graft.

First. The public records show, I am advised by the Post Office Department, that a former Second Assistant Postmaster General who held office at the time this service was in its infancy, 'within six weeks, at the outside, after he left the office, was given $1,000 cash and $10,000 in stock for his services at Washington,' but I know nothing personally about this.

Second. That the pneumatic-tube service in New York City was constructed by contractors who took their pay in stock and bonds; that the only value which the stock and those bonds had was the contract with the Government; and it was certainly unfortunate that an owner of the bonds and one of the contractors was a Member of the House of Representatives and a member of the Committee on Appropriations, as I am advised by the department.

Third. Mr. Moody, of Massachusetts, in a discussion of this matter, said:

> I will state that a large block of the stock of this company as a New Year's present was sent to a near relative of an important and influential Member of the House. I am glad to say that the return mail was not allowed to depart from Washington without carrying back that dishonoring and dishonorable gift.

Fourth. Attention is called to the names of persons in public life who in this list of stockholders are now insisting on the continuation of this service.

Fifth. The records show that in Boston more than 4 miles of the service were built for commercial purposes, and they were an entire failure, and were later foisted on the Post Office Department, under what circumstances no one seems to know, at an exorbitant rental, and are to-day a useless expense and a handicap on the postal service of that city.

Sixth. The statement that every Congress which investigated this matter, every commission that investigated the matter, has reported in favor of the tubes, is untrue, because the commission appointed by Congress in 1901 to investigate the Postal Service recommended to Congress that the tube service be discontinued. This report was signed by Edward O. Wolcott, W. B. Allison, THOMAS S. MARTIN, E. F. Loud, W. H. Moody, T. C. Catchings, and William H. Fleming, one member dissenting.

Seventh. Because another committee appointed by the Post Office Department reported under date of December 10, 1908:

> In view of the foregoing we consider it appropriate to advise you that in our opinion it is not feasible and desirable at the present time for the Government to purchase, to install, or to operate the pneumatic tubes, and this is our unanimous judgment.

This was signed by D. A. Campbell, postmaster, Chicago, Ill.; George H. Roberts, postmaster, Brooklyn, N. Y.; E. C. Mansfield, postmaster, Boston, Mass.; Frank Wyman, postmaster, St. Louis, Mo.; Joseph Stewart, Second Assistant Postmaster General; V. J. Bradley, superintendent Railway Mail Service; E. M. Morris, assistant superintendent Division of Salaries and Allowances; and J. M. Masten, assistant superintendent Railway Mail Service.

Eighth. Because the postmaster of Chicago, one of the cities in which the service is to be discontinued, and who was a witness before our committee at the request of the tube companies, stated that it is his opinion, also that of the Chicago postal officials, that the pneumatic-tube service is the most extravagant service in the post office, and that the service could be discontinued and could be replaced with as expeditious service, and result in a saving of at least $140,000 a year in that city alone, and that the people of Chicago would get just as good service as at present.

Ninth. The postmaster at Boston also appeared before the committee, at the request of the tube companies, and testified in a similar manner.

Tenth. The report of the departmental committee shows fully why, in the opinion of the postmaster, the service should be discontinued at Philadelphia.

Eleventh. Because the report of the departmental commission, made up of the ablest postal experts in the service, which report was strongly supported by facts, concurred in by the postmasters who appeared before the committee as witnesses at the request of the tube companies as well as the others where the service is to be discontinued, was conclusive in every particular, and, with the exception of one or two minor features, was not questioned even by the tube companies when a member of the commission was before the committee as a witness by request of the tube representatives.

The committee, therefore, had to decide between the recommendations of the department, the postmasters, and others responsible for the service, on the one hand, and the inspired representations made by the tube companies on the other; and the only practical conclusion would be to follow the recommendations of the Post Office Department. Unless this is done you will within the next 10 years take out of the pockets of the American people more than $5,000,000 to be used in extravagance and waste in continuing a handicap on efficient Postal Service which should have been thrown off years ago and from which the department and postmasters have asked to be relieved.

The uselessness of the tubes can not be better demonstrated than by the fact that although a fully equipped tube line was built between the Capitol and the House Office Building about six years ago, it has never been utilized, and Congress, by approving the proposed amendment, is attempting to foist on the Post Office Department for its use something which the Members themselves have not found practical.

This service is so extravagant and useless that, even if the tube companies offer to give the tubes to the Government, it would be useless extravagance and waste to operate them, because better service could be supplied at much less cost than the Government could even operate the tubes.

The amendment to the pneumatic-tube section of the bill, placed on it on Saturday last, does not, I think, accomplish the purpose for which it was intended. The amendment was that—

> Page 15, line 15, after the word "devices," strike out "$449,500" and insert in lieu thereof "$1,061,000 for continuance of service now existing in New York, Philadelphia, Boston, Chicago, St. Louis, and Brooklyn."

Of course, the continuance of this service, if at all, must be under existing law; it can not be otherwise or without a change of that law. The existing law provides that before contracts can be made beyond the periods now covered there must be a report by a committee selected by the Postmaster General, and that report must be favorable to the service and must be submitted before the advertisement for contracts can be made or the contracts let. A committee was appointed and its report has been made, and it is unfavorable to the continuance of the service, and therefore, as a matter of law, no new contract or advertisement for contract can be made, notwithstanding a mere appropriation to continue existing service. Under the general law, to which the amendment applies, and which necessarily must be read along with the amendment, no contract can be made without advertisement. The contracts, under the amendment made at the last session of Congress providing for their extension, will expire on the 4th of March. This amendment now passed does not renew that law, but, in effect, provides for continuance of existing general law on the subject. It at least does not repeal it. The existing law is the law to which I have referred, which prevents the making of any contracts until the favorable report in made, as above referred to. It seems clear to me that there is no authority for the Postmaster General, when we construe these statutes together, to make any new contracts for any term of years, notwithstanding money may be provided, until the favorable report required by existing law has been made, and, as stated, this has not been done. The law requiring such favorable report as a condition precedent is still in existence and must be complied with before any appropriation made for the continuance of the service can be lawfully available.

List of stockholders of American Pneumatic Service Co. June 10, 1916.

Holders of first preferred stock of American Pneumatic Service Co., etc.—Continued.

We hereby certify that the foregoing is, to the best of our knowledge and belief, a true and correct list of the names, addresses, and holdings of the owners of the first preferred capital stock of the American Pneumatic Service Co. to the aggregate of thirty thousand (30,000) shares at the close of business June 10, 1916, as shown by the stock ledgers in the custody of the undersigned transfer agent.

INTERNATIONAL TRUST CO.,
A. F. HAYDEN,
Assistant Secretary.

Pecan Industry.

EXTENSION OF REMARKS
OF
HON. FRANK PARK,
OF GEORGIA,
IN THE HOUSE OF REPRESENTATIVES,

Friday, January 12, 1917.

Mr. PARK. Mr. Speaker, I ask unanimous consent to extend my remarks by printing in the RECORD information obtained from the Department of Agriculture and the vice president of the National Nut Growers' Association relating to the pecan industry.

The matter referred to is as follows:

Hon. FRANK PARK,
House of Representatives.

MY DEAR SIR: I beg to hand you herewith a statement of the pecan situation in a nutshell:

I.

A nut of immense economic value. The pecan furnishes practically a balanced ration. It is a highly concentrated and highly nutritious food. Compared with round steak, it contains one-twelfth as much water, two-thirds as much protein, from four to six times as much fat, and has between three and four times as great fuel value.

Pecans contain most of the elements essential to the building of the frame and body tissues. The food value of pecans is rapidly becoming generally recognized, and it will probably not be long before the pecan will be used extensively not only as a substitute for certain classes of food, such as meats, but also as a substitute for foods of all classes.

II.—THE UNITED STATES NEEDS PECANS.

We are annually importing between 60,000,000 and 70,000,000 pounds of nuts, at a cost of between $12,000,000 and $13,000,000; while we exports nuts worth less than a half a million dollars. Why should we spend millions of dollars each year in buying nuts from foreign countries when we can grow the pecan, the equal of any other nut, either native or foreign, in unlimited quantities?

III.—THE PECAN IS ALREADY OUR GREATEST COMMERCIAL NUT.

It is generally supposed that the Persian (English) walnut is our leading nut, but as a matter of fact the pecan has already overtaken it in production; and the rate of increase in production of pecans is now well ahead of that of walnuts.

In average years our crop of walnuts is now about 25,000,000 pounds, and, conservatively estimated, our total crop of pecans is about 30,000,000 pounds. Therefore, the pecan is already the leading nut in the United States.

It is estimated that there are now 200,000 acres of orchards planted to the so-called "Papershell" pecan, only a small percentage of which have yet reached the age of initial fruit bearing. Pecans are adapted to a vast area of our country and already are being produced in 26 States. The industry is capable of untold expansion, and properly safeguarded should produce all of the nuts our country can consume, with a surplus for export.

IV.—THOUSANDS OF OUR CITIZENS ARE INTERESTED IN PECAN CULTURE.

In 1909, 82,000 citizens of the United States, residing in 26 States, were engaged in growing pecans. This number was 18,000 greater than that of those engaged in orange growing and 72,000 greater than those engaged in growing grapefruit.

Since 1909 many thousands of our citizens have planted pecan orchards, so that the number of people engaged in pecan culture to-day is far in excess of above figures.

V.—PECAN GROWING IS AN INFANT INDUSTRY.

It is only during the last score of years that the cultivated pecan has attracted large capital. Prior to that time the seedling, or the unimproved pecan, was all that could be had. Until within the last year or two the cultivated pecan has been an experiment. To-day it is a commercial reality, and the demand for its product is increasing faster than is the supply. Within a very few years and with reasonable and adequate assistance the pecan should produce annual crops of nuts worth millions of dollars.

VI.—AN INFANT INDUSTRY IN NEED OF EXPERT ASSISTANCE.

The pecan is a native tree recently brought under cultivation. Like all plants when taken out of their "native range," it has become the victim of many diseases and insect pests. To date, a total of 12 diseases and 8 insect pests have attacked the pecan. Some of these are of major moment. Probably 20 per cent of the cultivated pecan trees are affected with rosette, a disease the cause and cure for which are not yet understood. The pecan nut case-bearer threatens to do to the pecan what the boll weevil has done to cotton.

Being a new industry, many of the cultural problems are awaiting solution. It is confidently believed that with a sufficient appropriation, the Department of Agriculture should be able speedily to discover the exact nature of these problems and to work out practical methods of solution. If not promptly attended to, the pests and diseases will certainly do much toward discouraging further development, and may prove disastrous to the vast orchards already planted.

The pecan industry is a husky infant, with almost boundless possibilities. We are building an industry which for generations should yield its bountiful crop of delicious food and bring millions of dollars to our citizens.

PROPOSED FEDERAL AID.

During the last fiscal year the Department of Agriculture has spent on pecan investigations the following amounts:

(a) Cultural and varietal problems	$4,000
(b) Diseases affecting pecans	3,000
(c) Insect enemies of the pecan	4,600

In an amendment to H. R. 19359, intended to be proposed by Senator RANSDELL, it is asked that these sums be increased to the following respective amounts:

(a) To $14,000.
(b) To $8,000.
(c) To $9,600.

This proposed increase is in response to a request of the National Nut Growers' Association, made during their annual meeting held in Jacksonville, Fla., November 24, 1916, and also in accordance with the needs of the industry as seen by the Department of Agriculture. (See letter of Secretary Houston to Hon. FRANK PARK, Member of Congress, in CONGRESSIONAL RECORD, Jan. 6, 1917, p. 1101. For confirmation of data, see CONGRESSIONAL RECORD above referred to, and also letter of Chief of Bureau of Crop Estimates, also addressed to Mr. PARK under date of Jan. 2, 1917, a copy of which is inclosed herewith.)

Your cooperation in securing the appropriation above mentioned will be greatly appreciated.

J. M. PATTERSON,
Vice President National Nut Growers' Association and Chairman of Committee on Federal Aid, Putney, Ga.

WASHINGTON, D. C., *January 11, 1917.*

UNITED STATES DEPARTMENT OF AGRICULTURE,
BUREAU OF CROP ESTIMATES,
Washington, D. C., January 2, 1917.

Hon. FRANK PARK,
House of Representatives.

DEAR SIR: I inclose the statistics requested by you concerning the United States production of nuts in the census year and the production of almonds and English walnuts only in several subsequent years, together with the imports and exports of nuts by this country during the years 1914, 1915, and 1916.

You will observe that the most important nut crop in the census year was the English walnut, with a production of about 22,000,000 pounds; black walnuts were rated second, with a production of almost 16,000,000 pounds; pecans third, with a production of almost 10,000,000 pounds; almonds fourth, slightly below 7,000,000. It is interesting to observe also, that while the English walnut increased in production during the period between the Twelfth and Thirteenth Censuses slightly over 100 per cent, pecans increased more than 200 per cent from a former production of slightly over 3,000,000 pounds, while almonds showed a slight decline. According to reports issued by the State of California, the English walnut crop in that State, which produces all but 2 or 3 per cent of the country's crop of this nut, was about 22,000,000 pounds in 1913, 18,000,000 in 1914, 29,000,000 in 1915, and 24,000,000 during the past year. In other words, the production of the English walnut has apparently not increased more than 10 or 20 per cent since the census year 1909, whereas recent investigations by this bureau indicate a total present production of pecans in favorable years of at least 25,000,000 to 30,000,000 pounds, speaking conservatively; so that there is evidence that the crop of pecans, including both the wild and cultivated varieties, already exceeds, in favorable pecan years, the production of the English walnut in this country, thus taking the position of the leading nut crop of the United States. With the rapid development of cultivated orchards in your own State of Georgia, and to a less marked but still very great extent in other States of the Gulf coast, the production of the pecan is increasing at an extraordinary rate, and the increase during the next 10 years will probably greatly exceed that taking place during the 10-year period just closed. The value of the two nuts, as reported at the last census, was in the neighborhood of 10½ cents for the English walnut and slightly under 10 cents for pecans. The increasing proportion of improved varieties of the pecan may be expected to bring the average price for pecans higher than that for the English walnut. The average price for the seedling pecans for the season 1915 ranged close to 10 cents, while that for the improved nuts averaged about 28 cents, and the average value of all pecans in that year was probably not far from 12 cents per pound. The average price quoted for the California crop of English walnuts was from 13.6 cents to 17.5 cents for firsts to fancy nuts, and 10.6 cents for No. 2s. The invoice price of imported walnuts for that season was less than 9 cents.

The importance of the nut industry in this country and the necessity for further development of home production of this important and pleasing article of food is shown by the fact that during the past three years we have imported an average of between sixty and seventy million pounds of nuts, of a total value ranging between twelve and thirteen million dollars. Of these almost three-fourths consist of English walnuts and almonds. This country is amply capable of producing all of these two nuts that will be consumed here and vastly more, and, in addition, an almost limitless quantity of pecans, for which, at the reasonable prices to the consumer that may be expected when commercial orchards of improved nuts come to full bearing, the demand may be expected to grow enormously.

Very few of our domestic nuts are exported, the total value of such exports aggregating in value less than a half million dollars.

In all of these figures those relating to peanuts are excluded, although classed with other nuts in the statistics of imports and exports.

The material collected by the bureau during the past season in relation to pecans is being now put in form for printing, and it will doubtless be possible for you to obtain copies of this forthcoming report for distribution to those of your constituents who are interested in this crop.

Very truly, yours,

LEON M. ESTABROOK,
Chief of Bureau.

Post Office Appropriation Bill.

EXTENSION OF REMARKS

OF

HON. WARREN WORTH BAILEY,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, January 13, 1917.

Mr. BAILEY. Mr. Speaker, on the ground of personal interest perhaps it were proper for me to remain silent while this proposition to increase the rate on second-class mail matter is under discussion. But permit me to say that if the matter were considered a merely personal one, as it may affect my interests as a publisher, not one word would come from me at this time or in this place. It is because it is felt to be larger than a mere personal concern that these brief remarks are ventured.

It appears to me that it is scarcely fair in estimating the cost of transporting the mails that each class of matter should be considered apart. In doing this we are following a doubtful example set by the railroads in resisting public efforts to secure lower passenger fares. By a process of bookkeeping they have been able to show that passengers have been carried at a loss. They have justified their demand for increased rates on this ground, yet apparently their income from traffic as a whole should be the actual test. And in the case of the Postal Department, it seems to me, the same test should apply. It is not a question whether the revenue from second-class matter is sufficient to meet the cost of transporting and handling it; it is a question of whether the postal revenues as a whole are sufficient to defray all the costs of the service.

As a matter of fact revenues as a whole have been more than adequate. An actual surplus has been covered into the Treasury in recent years. That this is desirable I am not here to argue. I simply refer to the fact. Yet it seems to me that the people of this country have never regarded the Postal Service from the angle of profit. They have desired simply that it should serve the great purpose of easy communication. And this purpose, I am sure, is the one they hold paramount. It is not recalled that I have ever heard complaint among the people regarding the cost of maintaining the Postal Service. The only complaints which have reached me are in regard to any inadequacy which may have obtained.

It is alleged that it costs the Postal Department 8¼ cents a pound to handle second-class mail. That may be. But I may perhaps be permitted to entertain a doubt on the subject, particularly in view of the fact that it has been only a few years back when the express and railroad companies were both vigorously competing for this very class of matter. Just why the express companies ceased this competition I do not know. But I know the railroads are still handling vast quantities of newspapers at the cent-a-pound rate. Would they be anxious to get this business if the cost of handling it were even approximately what it is alleged the Postal Department finds it?

What would happen were the zone system to be incorporated in the measure now before us? Is it not practically certain that a vast volume of what now goes as second-class mail

matter would be diverted either to the railroads or to the express companies? Has it occurred to anyone that possibly one of the reasons for the attacks on the cent-a-pound rate may be found in the desire of private corporations to share in a traffic which has been so largely handled by the post office?

That second-class matter gives rise to great volumes of first and third class matter I think no one will dispute. Perhaps the postal system has no better feeder than that afforded by the newspapers and periodicals whose circulation it is now proposed to curtail by making the cost of transportation through the mails in many instances prohibitive. For that is precisely what the pending proposal would effect. It would tend to parochialize the press of the country. To-day our press is national in its scope.

The humblest hamlet in the Union may be the home of a newspaper or periodical of such peculiar genius that a demand for it has become country wide. Do we intend to strangle it? Is it our desire to limit its circulation to its county, its State, or to the little zone which includes its place of publication? Certainly the 600 per cent increase in the postal rate which is fixed as the maximum in this bill as it stands would not encourage the circulation in New York of a paper published in San Francisco or Portland, or vice versa. Should this zone system actually go into effect, it will have the most adverse influence on the dissemination of public information that this country has seen in the last half century.

There are a hundred arguments against a revocation of the existing rate for second-class matter. Let it be kept in mind that this rate was originally adopted for the very purpose of facilitating the spread of information. The framers of the present law were not subsidizing editors, as the distinguished chairman has intimated, if he did not charge. They were enabling publishers to lower the subscription price of their papers, a thing they very speedily did, weeklies having been reduced from $2 a year as a rule to $1.50 or lower. The average weekly to-day costs a dollar a year. But if the rates proposed in this bill shall go into effect, it is a safe proposition that the average weekly will advance to $1.25 or $1.50. Other publications, of course, will be compelled to make similar advances in their rates of subscription. So, after all, it is the people, the newspaper readers, the patrons of magazines and periodicals, whom we are hitting in our smash at the publisher, who has been charged with being in the receipt of a subsidy.

Has it occurred to anyone that the outcry against this so-called subsidy was never heard until after "muckraking" became the rage a few years ago? For 30 years or more the cent-a-pound rate had been accorded second-class matter without exciting either the saviors of society or the watchdogs of the Treasury. But both these became very much aroused along about the time the cheap magazines were fairly reeking with the muck raked up by Ray Stannard Baker, Ida Tarbell, Lincoln Steffens, and others who had taken the pains to delve into modern industrial, commercial, political, and social affairs. It was contemporaneous with the activities of these and other undesirables that the watchdogs began to bark and the saviors of society to point the accusing finger at a subsidized press.

It is a curious circumstance that the party which so largely profited by the exposures made by the muckrakers is to-day making itself or proposing to make itself responsible for putting into effect the retaliatory measure to which the victims of the exposure attempted to resort when they were writhing under an astonished public eye in the pitiless publicity afforded by the cheap magazine and the independent press.

And right here let me suggest that this 600 per cent maximum increase in the rate for second-class mail will not matter much to that part of the press which is actually subsidized—that part of it which is maintained as an auxiliary by great special interests. Has any protest against the proposed increase come from an organ of Wall Street? Has any organ of the Steel Trust made protest? Has any organ of Amalgamated Copper, of Du Pont Powder, of Standard Oil, or of the great Railroad Trust been heard in denunciation of this startling advance in postage on second-class matter? I think not. And I suspect that every such organ will welcome the proposed change should it be authorized by this Congress. The organs of special privilege must readily recognize in this proposal the death warrant of a great portion of the independent press of the United States. Is this also recognized by proponents of the zone system in this House?

I can not believe it. I can only believe that they have been misled into adopting an idea which on the surface seems so fair. They have failed, it seems to me, to grasp the real intent of the existing law, to understand that we are spending money in spreading information by means of the press precisely as we are spending money for the spread of information by the maintenance of schools and colleges. The citizenship of this country can not reach to its highest level of intelligent action on public matters without adequate information, and if we deny to it a cheap press we deny to it the opportunity so to inform itself as to be fitted for its greatest usefulness in preserving our free institutions and in extending the range of social development.

The Salary Increases in the Postal Service.

EXTENSION OF REMARKS

OF

HON. HENRY T. RAINEY,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, January 13, 1917.

Mr. RAINEY. Mr. Speaker, under the leave granted me to extend my remarks in the RECORD to-day I desire to call attention to the fact that heretofore during this session I have to the very best of my ability on the floor opposed the various salary increases demanded by Government employees, and I have opposed to the very best of my ability the increase in the amount awarded Members of Congress for clerical assistance. All these increases, if carried out according to the scheme proposed by the organizations of Government employees, if their demands are fully met, will make in the aggregate an annual additional charge upon the Treasury of $80,000,000 a year, or perhaps more than that. If carried out according to the plan proposed by the Committee on Appropriations of the House of Representatives, the increase will be at least $40,000,000.

I have insisted to the very best of my ability that these increases should not be now granted for the reasons I have given in my various speeches on this subject delivered in the House of Representatives on the 19th day of December, 1916; the 21st day of December, 1916; and on the 8th and 10th days of January, 1917; my speech on the 8th day of January being printed in the back of the daily CONGRESSIONAL RECORD for January 9. So far I have not discussed on the floor the matter of the increases demanded in the Post Office Department, and some of the data and facts which I have used in my speeches do not apply to the Post Office Department. However, I expect to oppose the 5 and 10 per cent increase for employees of this department if an attempt is made to insert it in this bill as being unscientific and inadvisable at the present time. If the 5 and 10 per cent increase is carried into this bill it will add $16,000,000 per year to the expenses of this Government. The bill already carries increases to clerks aggregating almost $1,000,000 per year. If the 10 and 20 per cent increase demanded by the clerks ultimately goes in the bill, together with the $100 increases which may stay in the bill, this alone will add to the expenses each year of conducting this Government $33,000,000.

I have received to-day a communication from Thomas F. Flaherty, secretary-treasurer of the National Federation of Post Office Clerks, with offices at Room 400, American Federation of Labor Building, Washington, D. C., which is so courteous in its terms, contains so much valuable information, and presents in such a fair way the demands of the post-office clerks that I am taking the liberty under the leave extended me of inserting it here in the CONGRESSIONAL RECORD, and I also insert immediately after it a copy of my reply to the same.

The following is the matter referred to:

MR. FLAHERTY'S LETTER.

NATIONAL FEDERATION OF POST OFFICE CLERKS,
Washington, D. C., January 12, 1917.

Hon. HENRY T. RAINEY,
House of Representatives, Washington, D. C.

DEAR SIR: I have read with interest your speech, "The Salary Grab: Collective Bargaining and the Treasury of the United States," as printed in the CONGRESSIONAL RECORD of January 9, and because I know you to be a fair-minded, honorable legislator, one who would not knowingly wrong your fellow men, I am impelled to acquaint you, through the medium of this communication, with the working conditions of the postal employees.

It is my belief that you share the all too common opinion, both in and out of Congress, that the postal employees, in common with other Government workers are petted, pampered children of fortune, underworked and overpaid. I have sufficient confidence in your sense of justice and fair play to believe you will alter your judgment when you learn some of the facts surrounding their employment.

You make the statement in speaking of the attractiveness of Government positions, "Half holidays on Saturdays, 30 days' sick leave every year at full pay, 30 days' vacation every year at full pay, only 7 hours' work a day if you are assigned to duty here in Washington, insurance policies free, the absolute certainty that you will be retained when advanced in years, the prospect of being retired after 25 years' service at half pay or two-thirds pay; these are the alluring features

which bring every year an army of applicants for the few vacancies which occur."

The postal employees—and they form approximately three-fifths of the Government working force—do not get Saturday half holidays. In fact, it has only been in the past six months that the great bulk of them got any holiday at all. The law now provides that the clerks and city carriers working on the 7 principal holidays shall be compensated with time off on 1 of the following 30 days. This has resulted in insuring a more general observance of holidays in the Postal Service, but the Saturday half holiday is not in effect.

You also said these employees get 30 days' sick leave. This does not apply in the Postal Service. The postal employees get no sick leave whatever. They forfeit their pay when incapacitated through sickness. We have repeatedly tried to get legislation to grant two weeks' sick leave, but without success.

Thirty-day vacations were also mentioned by you. It seems to be the general opinion in Congress that postal employees get 30 days' annual vacations with pay. They do not. Their vacation is limited to 15 days.

The postal workers are not enjoying the benefits of a seven-hour workday. On the contrary, in the case of city letter carriers and many clerks their day's work is spread over 10 hours; 8 hours within 10 usually.

The work of the post-office clerk is performed largely at night. Recently, because of the unwillingness of the department to recruit its force to a proper working quota, there has been much overtime. It is true that the clerk is paid for overtime, but his work is of such an exacting nature that overtime is most burdensome.

In addition to office work, performed mostly at night as stated, the distributor must memorize intricate distribution schemes on his own time.

I have never heard a more eloquent portrayal of the hardship of the work of a typical post-office clerk than that given by Mrs. Frank Halas, wife of a Chicago clerk, in an open meeting of the Chicago Post Office Clerks' Union on December 10, 1916, in the Masonic Temple at Chicago. She said:

"Only the wife of a man who works at night knows what it means for a woman to wait through the night for her man to come home. We know, of course, of the overtime work in the post office, but each time we can not help feeling, 'Is it overtime that is keeping him tonight or has something happened to him?' It was less than a year ago, you know, that one of the clerks, returning from his work, was shot, being mistaken for a hold-up man.

"I remember a few years ago, on the night before Easter, when the work was so rushed at the post office Frank was due home at 2.30. I was waiting for him, but by 3.30 he had not come. By 4.30 the old doubt as to whether it really was overtime this time kept hammering at me, and by 5 o'clock an ambulance drove up to the door and stopped. I was standing by the window and the driver looked up and asked me what the number of the house was. I told him. He turned to the ambulance attendant and said, 'This is the right place all right,' but the attendant said, 'No; it isn't. We're on the wrong street.' It was after 6 when Frank came home to us that night. It was Easter Sunday, and to me he had truly risen from the dead that day.

"Don't you know that the ordinary man or woman doesn't even know that there is such a thing as a postal clerk who has to work at nights, and do overtime work at that?" she asked. "Let us be your mouthpiece to the public. It's a good public—a big-hearted public—and it will act if only it understands what night work means. We can tell them what it means. We can all do what I have been doing in my own feeble way during the last few years. We can prevail upon them to mail their letters early in the day so that they will be delivered early the next day, instead of mailing most of them just at the close of business hours."

You stated, "These positions can be filled, every one of them, in a week's time as well as they are filled now by competent young men and women to be selected from the various States of this Union." In so far as the postal experts, the distributors, money order, parcel post, and registry experts are concerned this is not true.

I am sending you a copy of an Illinois scheme book, which Chicago clerks must master to qualify as mailing distributors. This scheme is typical of thousands that post-office clerks and railway mail clerks are to-day studying throughout the service.

I invite your attention to page 112 of this book. You will find your home town, Carrollton, in a brace with four other offices, each receiving eight dispatches per day from Chicago, as follows:

Berdan	Chicago, Springfield & St. Louis, 3, No. 3. Chicago & Rood House, 71, No. 2, except Sunday.
Carrollton	Chicago, Springfield & St. Louis, 5, No. 2.
Eldred	Chicago & Rood House, via Bloomington.
Kane	Chicago & St. Louis, 23, No. 3.
Fayette	Chicago & Rood House, 15, via San Jose; pouch to Burlington & Peoria, 317. Chicago & C. B., 7, No. 2.

A distributor in the mailing division of the Chicago office assigned to the Illinois section must know how to dispatch mail for Carrollton as well as the other 1,754 post offices in the State. He must know the final minute in which a letter or newspaper can leave the office and the method of dispatch, by wagon or by tube. He must know the train time of each dispatch—there are eight in this instance—on week days as well as on Sundays. He must master at least 5,000 separate and distinct facts on his own time, and he must be able to forget as quickly as he learns, for the schemes are constantly changing. He is examined frequently to determine his knowledge of his scheme, and if he fails within a reasonable time to make the required 98 per cent he is subjected to the penalty—dismissal for inefficiency.

In view of these facts, I hardly believe you could fill the position of the postal distributors in a week's time. Years of constant study and application are required to qualify in this and other exacting post-office work.

You quoted an advertisement in a civil-service paper as follows: "Wanted, young men as railway mail clerks, $75 a month; list free."

To be literally true this advertisement should read, "$75 a month when employed." For the railway mail clerk substitute, like other postal substitutes, is paid only for actual service performed. His salary rate is $900 per annum, but it must be remembered that rarely is he constantly employed.

According to the report of the Second Assistant Postmaster General, the number of regular railway mail clerks during the last fiscal year has decreased 281, while the work has increased 3.69 per cent, indicating that a smaller number of men are doing more work, and, despite the flambuoyant advertisements of the civil-service schools, the opportunities for appointments as regulars are decreasing.

To dispute the claim of the advertisement you quoted, that salaries are $75 monthly in the Railway Mail Service, I am submitting the average monthly salary of Railway Mail Service substitutes in California for 1915. (I am informed that the 1916 earnings are smaller.)

Railway Mail Service.

AVERAGE SALARY PER MONTH OF CALIFORNIA SUBSTITUTES ON THE BASIS OF SUBSTITUTES AVAILABLE FOR DUTY.

Month.	Substitutes available for duty.	Total days.	Average salary per month.
January	109	1,195	$26.14
February	106	978	22.64
March	106	1,125	26.32
April	105	790	18.66
May	102	623	14.97
June	102	1,009	24.16
July	100	1,361	34.20
August	100	1,457	35.25
September	100	1,217	30.45
October	98	784	19.28
November	97	728	18.42
December	98	1,140	29.38

I am submitting for your further information on this subject an editorial from the Railway Post Office, the official publication of the Railway Mail Association, issue of March, 1916; also extracts from the testimony of Mr. Edward Ryan, president of the Railway Mail Association, before a subcommittee of the Committee on Labor, April 3, 1916. (Exhibit A.)

As arduous as the work of the railway mail substitute is, yet he is relatively no worse off than is the substitute post-office clerk and city letter carrier. I am submitting in this connection an excerpt from my testimony before a subcommittee of the Committee on Labor on March 21, 1916.

I call your particular attention to a statement made by a substitute in the San Francisco post office. He was notified, presumably by the Post Office Department, that substitutes earned between $50 and $90 per month. He found they earned between 50 cents and $1 per day. (Exhibit B.)

Let me quote to you from a letter received from some substitute carriers of Philadelphia, under date of December 28, 1916:

"We have to report every morning, rain or shine, about 5.30 or 6 a. m. We are then told to hang around on detail in case of an emergency. When the day is finally over, the chances are we did not catch any work and in the bargain had to spend money for car fare and lunch. This is the same program every day, and it is not unusual to last from 10 days to 2 weeks before we get in a day's work. Our salary throughout the year, on an average, is about $7 or $8 a week and not much more. It is a shame to think that a Government like ours should expect a man to give up all of his time, day in and day out, and get no compensation for it whatever. Everywhere you read of working people receiving bonuses, presents, etc., for Christmas, while we are lucky to have any pay coming to us."

My information is that 80 substitute clerks in Philadelphia earn from $25 to $30 a month and 125 substitute carriers earn $30 a month. In Boston, I am informed, the substitutes are earning from $35 to $40 a month.

Your attention is directed to the testimony before the House Post Office Committee, December 6, 1916, on the hearing on the pending Postal appropriation bill on the subject of substitute service (p. 15).

SUBSTITUTE SERVICE.

"Mr. MADDEN. Let me ask a question right in connection with Mr. Cox's question. What length of time, on the average, is a man required to serve as a substitute in the big centers, at any rate, before he is eligible to appointment at the $800 grade, and what average compensation does he receive for his work during his substitute period of service?

"Mr. KOONS. It would vary at the different offices.

"Mr. MADDEN. Well, it must average up to something.

"Mr. KOONS. Well, we can go over our statistics and make it up for the different offices. We could not tell you what each substitute drew, from our records. He is employed at the rate of 35 cents an hour. Some substitutes do not want regular employment and some do. The great majority of substitutes receive employment enough at the larger offices to earn at least $50 a month.

"Mr. MADDEN. My experience is taken from the record of the Chicago office, which may be said to be a typical office among the first-class offices. My experience is that a man serves on the average, as a substitute, not less than three years.

"Mr. KOONS. Is that the clerk or the carrier?

"Mr. MADDEN. Either. That he does not make, during his period of substitute service, to exceed $400 a year; that he must report every day for duty, and in big cities he has to pay his car fare down and back, and wait around until every regular man is assigned or until it is found that there is a vacancy and work for him to do; and if there is no work for him he goes back home and waits to come down next day. Now, at the end of his substitute period of three years, earning an average of $40 a month, he has had to live; he has had to borrow from everybody that would loan him; he is in debt; he gets a job at $800; and it has only been two or three years since he has been able to get that. Then he is put on as a temporary regular clerk.

"Mr. KOONS. I think that applies to the carriers.

"Mr. MADDEN. I think it applies to the clerks. He has worked for six months presumably as a regular, and at the end of that period of service they find themselves in a position that they want to economize, and they reduce him back to the substitute grade, so that he has got 10 years of real service before he reaches the $1,200 grade; and no part of his regular service under the $800 appointment, when he is put back is counted as a part of his first year's service."

You will observe from the above that your colleague, Mr. MADDEN, probably the best informed man on the floor of the House on matters affecting the postal workers, fixes the average length of service for a substitute at three years; the average compensation at $400 a year. Practically all of the post-office clerks, railway mail clerks, and city letter carriers, against whose wage increase you have so vigorously protested, had to go through this precarious period.

In its report on the pending postal appropriation bill, page 4, the majority of the House Post Office Committee advances the argument that

the postal employees whose promotions are provided for in the bill are justly entitled to this recognition because of the hardships of the substitute period and the length of service it requires before reaching the maximum salary grade. This same argument for the promotion of some of the clerks and carriers applies with equal force to the insertion of the 5 and 10 per cent increases to which you are opposed.

Some of these employees to whom you would deny increases entered the service at $400 per year; many of them entered at $600 a year. The present salary classification law covering post-office clerks and letter carriers was established 10 years ago. I submit that during the past 10 years the cost of living has risen more rapidly than the postal salary scale, so that to-day the employees are relatively no better off than a decade ago.

You will probably ask, "Why don't the men quit if the jobs are so undesirable?" They are quitting. In the larger post offices the substitutes are flitting in and out of the service daily. It is impossible to hold them. The same is true with the men who have recently been appointed to regular positions. The older employees, unfortunately, can not quit. Their post-office training has unfitted them for service elsewhere. There is no other bidder for their knowledge, no rival concern willing to pay them an advanced salary. Unlike the artisan, the stenographer, the lawyer, the dentist, the post-office distributor can not wander far afield with his wares. He must work in a post office. In fact, he must work at the particular distribution section or case to which he is assigned. His knowledge is valueless elsewhere. There is no "hope to spring eternal" in the breast of the post-office clerk. His whole life is circumscribed between the $800 entrance salary and the $1,200 maximum salary. Every year his eyes are turned toward this body with wistful longing. It is Congress alone that can give him renewed hope, encouragement, and cheer.

You mention the "prospect of being retired on half pay or two-thirds pay after 25 years' service." This is only a prospect; a remote one, seemingly. Meanwhile there is in existence an inhumane departmental regulation which terminates a man's connection with the service if he is incapacitated through sickness for a year. Until July 28 last this sick limitation was fixed at 150 days.

Here are a few typical cases of men forced from the service, men with whom I worked, in my home city of San Francisco, as reported in the San Francisco Examiner April 21, 1916:

"The rule made by First Assistant Postmaster General Roper that a letter carrier who is absent more than 150 days from his duties on account of illness must resign has been rigidly enforced in San Francisco, and in the past two years seven men who have devoted years to the service have found themselves without positions. Some of these men have been in the service for 25 years, and because illness has overtaken them, regardless of their financial condition they have been discharged.

"They are Charles Seeburt, 23 years' service, the first to go under the ruling. He has since died. R. T. Donovan, 20 years in the service. W. E. Rosebro, 5 years' service. F. W. Kehoe, 10 years as letter carrier, Spanish War Veteran, now fully recovered from his illness, but without a position because his convalescence was too long to comply with orders. A. J. Field, 10 years an employee of the Government. H. Cusens worked as a carrier for 25 years. He died shortly after his forced resignation."

I would like the opportunity, Mr. RAINEY, to show you through the Chicago post office, and it is typical of any large office housed in an old building. Perhaps you visualize the post-office clerks at work at tidy desks or reading postal cards in swivel chairs. This is a mental picture a great many people have of this class of workers. But you would find the Chicago post office the very antithesis of neatness or order. You would find men clothed in overalls and caps at work in a vile, noisome atmosphere, standing at letter cases or paper racks distributing mail at a feverish pace. The general sanitary conditions of the place are deplorable in the extreme. The chief State factory inspector of Illinois, Oscar F. Nelson, told me that he would not, as a State official charged with seeing the health, safety, and comfort laws of your State properly administered, permit the Chicago post office to continue to operate in its present insanitary state if it were a private establishment. Unfortunately, the State factory inspector has no jurisdiction, and governmental agencies have paid no heed to our numerous protests.

This same disregard for the well-being of the postal workers is found in many of the other larger offices. In Boston the men are crowded into basements and in old ramshackle sheds; in Philadelphia they are jammed up on a mezzanine floor, where the sunlight never penetrates.

The Postal Department forces the railroads in its mail contracts to furnish decent toilet and drinking facilities for the men en route, but it shows no such fine consideration for the clerks in its terminal railway offices, who are compelled to work amid the most unwholesome surroundings.

You state, "The majority of these Government clerks pay no taxes." This can hardly be applied to the postal employees as a class. Despite their meager wage these men pay indirectly, if not directly, their proportionate share for the upkeep of the Government and the local governments of the communities in which they live. It is true that the exigencies of the service at times mitigate against railway mail clerks acquiring a permanent residence. I recently saw an advertisement in a Cheyenne (Wyo.) newspaper, offering for sale the homes of a dozen or more railway mail clerks, who were compelled to move elsewhere because of a reorganization of their line. It is very doubtful if any of them will ever acquire homes elsewhere, owing to the present uncertainties of employment in their service. There has also come to my attention the arbitrary transfer of a half dozen clerks from the Pacific coast to Chicago, necessitating the breaking up of homes, the severing of old ties. If these service conditions were as well advertised as are the attractive features of the service, I dare say the 180,000 people applying for Government positions yearly would be somewhat lessened.

You justified in your speech the wage increases secured by workers from a business which was on a paying basis. In his report to the Sixty-third Congress Postmaster General Burleson said the Postal Service was permanently self-sustaining and there was no danger of further deficiencies. Prior to the recent election and in his last report to the Sixty-fourth Congress the Postmaster General records a total surplus for the past four years of $12,500,000.

In line with the enlightened policy of the manufacturing establishments that you mentioned as having shared their profits with their employees, is it unreasonable for the Congress to grant the temporary wage bonus of 5 and 10 per cent to the postal workers whose efforts have contributed so largely toward the accumulation of this surplus? Moreover, the Postmaster General, in his report, emphatically favors a high wage scale in the Postal Service, saying: "It has been the earnest effort of the department to fix the standard rates of pay for the different classes of work at from 15 to 30 per cent above the average rates paid for similar services by the leading commercial institutions of the country."

The Postmaster General appeared before the House Appropriations Committee in person to ask that the salaries of his four assistants be increased from $5,000 to $7,200 annually. I take it from this that he would not object to a slight increase to his thousands of other faithful assistants—the men in the ranks who are performing their arduous daily tasks.

I have felt, Mr. RAINEY, that some of your strictures on the Government clerks have been made because of a lack of understanding of some phases of their work. Therefore I have gone into the subject, in so far as it affects the postal employees, at some length with you. If you will read what I have written and then investigate fully the different service abuses I have pointed out, I am sure we can count on your cooperation in securing the correction of most of them.

Very truly, yours,

THOS. F. FLAHERTY,
Secretary-Treasurer.

—

COPY OF REPLY OF MR. RAINEY TO MR. FLAHERTY'S LETTER.

UNITED STATES HOUSE OF REPRESENTATIVES,
Washington, D. C., January 13, 1917.

THOMAS F. FLAHERTY,
400 American Federation of Labor Building,
Washington, D. C.

MY DEAR MR. FLAHERTY: I am just in receipt of your communication of January 12, which I have carefully read and have read with much interest. The post-office clerks certainly have a very able representative, indeed. In order to get my viewpoint of the salary grab which I am fighting it will be necessary for you to read all of my speeches, and I call attention to my speeches of December 19 and 21 and January 9 and 10. I think the speech of January 8 was printed in the back of the CONGRESSIONAL RECORD for January 9. If you will read all these speeches as carefully as I have just read your communication, you will understand my motives.

The demands of Government employees carried into all the departments, if they get increases of 10 and 20 per cent—and this is the only thing they will be satisfied with—will cost the country at least $80,000,000. I am aware of the fact that Members of Congress have placed themselves in practically a defenseless position by increasing their own emoluments at this session. These increases, however, will be taken off next year, I predict. These increases were made after I had opposed them most strenuously and in spite of my opposition. I realize that substitute mail clerks do not get much pay. I wish they could get more. They are, however, preparing themselves for the more important positions to which they are in regular course advanced. At the present time we have embarked upon a preparedness program which is exceedingly expensive. This, together with the salary grab which is now in operation, is the sole cause of the prospective deficit in the Treasury. We succeeded in defeating the other day the proposition to increase the compensation of the employees of the Bureau of Animal Industry. It can not come up again at this session. The proposition was submitted with the statement that it would mean an increase of $300,000 a year in the expenses of conducting that service. In a brief analysis I made I was able to show that it meant ultimately, a few years from now, an increase of $8,000,000 or $9,000,000 a year. At the present time there is a perfect craze for getting money out of the Treasury for individuals. The cost of living will decrease after this war is over, but the salaries of Government employees never decreases.

I think employees in the Postal Service are entitled to the same sick leave, the same vacations, and the same salaries as employees in other branches of the service. I understood that most of them got these privileges. I know that it I go to the Post Office Department one minute after 1 o'clock on Saturdays I find it as impossible to do business there as in any other department of this Government on Saturdays. The clerks are all gone. Nobody is there except the heads of departments. It is absolutely impossible to get any papers in order to present anything, and I find them leaving the department at the same hour I find them leaving all the other departments.

Of course I understand that carriers and railway mail clerks can not have half holidays and as regular hours as other classes of Government employees. They know this when they go into the service. When they go into the service they know also what the compensation is and what they can expect in the various grades. Government employees are not required to defend the salary demands they are making. If they are granted, the only thing they will have to do is to collect the increased salaries. Members of Congress and Senators are responsible, however, and will be compelled to go back to their States and defend themselves. I represent an agricultural district. Most Members of Congress do represent agricultural districts.

To-day, with the present high prices of agricultural products, the farmer is receiving an average of less than $600 compensation per year, and that includes the compensation for himself and for all of his family, and they all work with him on the farm. He works not seven or eight hours a day but from daylight in the morning until absolute darkness in the evening, the hardest kind of drudgery, and he pays taxes on everything he owns. Tax assessors and collectors find him always. Why should I vote to levy taxes on him for the purpose of increasing the compensation of men who work, many of them, less than eight hours a day in comfortable surroundings, nearly all of them with half holidays, sick leave, and vacations. I am aware of the fact that railway mail clerks are the most efficient of our Federal employees, and are required to do complicated work, master difficult schemes, etc. They are paid more money, however, than the substitutes, to whom you call attention, and when they entered upon their careers they knew what to expect in the way of compensation and service. There are many thousands of employees in the Government service who are underpaid, but there are many more thousands who are overpaid. A few weeks ago out in my State a great auditorium in Chicago was filled with men who had passed the age of 45 years, whose hair was turning gray, and who could not get employment because they were past 45 years of age. They felt that they were as competent as they ever were. As a matter of fact, however, they are not, as you well know, and younger men who can move faster are taking their places. This is an industrial situation which we all deeply regret, but this unfortunate situation does not apply to Government clerks.

Referring again to the Post Office Department, I frequently go there just at the hour when the clerks are coming out in the afternoon and have finished their day's work. The surprising feature about it is the number of old men and old women coming through the doors of the building, all returning to their homes. I want to say that every time

I see them coming out I am exceedingly pleased. I am glad this Government retains them in their positions even when they are very old and can render but little service. This is, of course, one of the attractions of the service, as it should be. I hope some day in this United States to see an old-age pension. I do not want to see it, however, applied only to Government employees; I want it to reach all classes who are without sufficient income to maintain themselves.

The demands Government clerks are making, however, if successful, will postpone for a hundred years the realization in this country of old-age pensions.

Government clerks are secure in their positions during the period of their natural lives, no matter how much indignation the public may feel if their demands are granted. Members of Congress, however, are answerable to the people, and they ought to be. The granting of salaries is not a matter requiring merely the exercise of generous impulses. Members of Congress are occupying positions of trust and can not be generous with the money of other people. I will be glad at all times to do the best I can to see that salaries are just. This would involve the lowering of more salaries than would be raised, however, if such a plan were carried to its logical conclusion.

I suggest that you can accomplish more by showing, if you can, that Government clerks are not receiving as much compensation as persons in private employment who discharge similar duties receive—bank clerks, bookkeepers, clerks in stores, etc. If they do not receive as much, they ought to receive as much. If they are receiving more, they are receiving too much. No special training is required to deliver lettters in a city or along any rural route. No special training is required for any work in the Post Office Department that I can think of, except the postal clerks on our railway trains. I marvel at their efficiency. At some proper time, when the demands are not so great on the Treasury as they are now, I would be glad to assist in getting them the compensation they ought to receive. I must confess, however, that I am not just at the present moment fully advised as to what they do receive. They may get all they are entitled to get. However, it is hardly fair to compare their work with the very simple duties discharged by other employees of the Post Office Department, and who want the same increase given them.

I thank you for your communication, which furnishes much valuable information. I wish it were possible for me to agree with you, but this year we can not agree. I am on the committee which is charged with the duty of raising the revenue with which to meet all these demands, and I know what is going to happen when we bring in a bill for passage through the House attempting to meet all these varied demands on the Treasury of the United States. The demands of the clerks for increases are badly timed Their advisors and leaders ought to postpone these discussions until after this war ends, with its possible disarmament arrangements, which may apply even to this country.

Very truly, yours,

HENRY T. RAINEY.

Post Office Appropriation Bill.

EXTENSION OF REMARKS

OF

HON. RICHARD W. AUSTIN,

OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, January 13, 1917,

On the bill (H. R. 19410) making appropriations for the service of the Post Office Department for the fiscal year ending June 30, 1918, and for other purposes.

Mr. AUSTIN. Mr. Speaker, in the consideration of the paragraph of the pending bill relating to the compensation of rural letter carriers, and in support of the amendment I have offered, covering an increase for services on routes in excess of 24 miles, I desire to submit a letter from Mr. W. D. Brown, editor of the Rural Free Delivery News, published in this city. While Mr. Brown is, and has always been, an earnest and enthusiastic champion of the rights and interests of the rural letter carriers, his statement is absolutely fair and just, both as to the men in the service and to the Government. I could not possibly state the case stronger, and hence I submit his communication for the favorable consideration of the Members of the House. If relief in the way of an increase in salaries covering routes in excess of 24 miles and fair and adequate allowance to cover the cost of maintenance of outfit, increase in the cost of living, horse feed, and so forth, can not be placed in the pending bill because of points of order under the rules of the House, I earnestly hope the Committee on the Post Office and Post Roads will at an early day report out legislation which will give the faithful and efficient rural letter carriers the relief they need and deserve.

MR. BROWN'S LETTER.

WASHINGTON, D. C., *January 11, 1917.*

Hon. R. W. AUSTIN,
House Office Building.

MY DEAR CONGRESSMAN: I inclose herewith petitions from a number of your rural letter-carrier constituents, asking your support of a bill in their behalf. These petitions are based upon a large number of letters and suggestions from carriers and fairly represent the consensus of their wishes.

When Congress in 1914 fixed the maximum salary at $1,200 . . r year for standard 24-mile routes, carriers were content and did not contemplate asking for anything further. But the failure of the Postmaster General to observe the scale of pay intended by Congress made additional legislation necessary to enforce the will of Congress. The department then undertook to reorganize the service by discontinuing many routes and covering their territory wholly, or in part, by extension of other routes. Last year Congress ordered that the service be reorganized to the basis of 24-mile standard routes, but from information at hand it appears that the departmental practice of discontinuance and extension of routes still prevails.

The present prices of horse feed, etc., have greatly increased the expense of maintaining rural-delivery equipment, and correspondingly reduced the net salaries left to carriers to meet the increased cost of living, and every mile added to their routes increases the cost to them of performing their service. The compensation for a 30-mile route is the same as for 24 miles, but an additional horse is required to do the work, the cost of which must be borne by the carrier. Is this fair?

In his last annual report the Postmaster General recommended certain rural-delivery legislation, which, he stated, would reduce the cost of the service $4,000,000 below the last appropriation. The Post Office appropriation bill now under consideration in the House carries the provisions asked for, but does not reduce the total amount of the appropriation. However, that is immaterial, as the proposed provisions afford ample authority for such reductions as may be desired. If the bill as reported should become a law it would open the way for a practical contract service in rural delivery. It would make it possible to merge two or more routes into one long route and fix the compensation upon such basis, not exceeding $2,000, as the carrier would be willing to accept. The carrier could then sublet a part of the route to such assistant or subcontractor as he or some one else might wish to favor, thus injecting the spoils system also.

If Congress desires to help rural carriers to meet the greatly increased cost of living and maintenance of necessary equipment for their routes, the amounts should be graded upon some specific basis, and the following is suggested for 24-mile standard routes:

	Per year.
For maintenance of motorcycles without side vans	$60
For maintenance of automobiles or motorcycles with side vans	120
For maintenance of horse-drawn vehicle equipment	180

Allowances for routes greater or less than the standard to be increased or reduced proportionately.

But, regardless of all else, carriers should be paid for routes above the standard length in the same ratio as for routes below the standard. The amounts upon this basis are set out in the inclosed petition, and I earnestly ask for them your favorable consideration.

The time element proposed in the bill is a menace to the efficiency of the service. Quick delivery and prompt dispatch are the essentials of good service, and these can best be accomplished by motor vehicles. But if the use of such vehicles and the consequent saving of time should hurtfully affect their pay, carriers would hardly be inclined to incur the additional expense and reduce their compensation, and especially in view of existing regulations, which prohibit or greatly restrict engagement in other occupations.

Eight-hour daily service in rural delivery is wholly impracticable. A compilation of exact figures probably would demonstrate that rural carriers now average at least eight hours daily throughout the year. During the season of good roads, when motor vehicles can be used, many routes can be served in a total of five or six hours, which is a great advantage to shippers of produce, etc., by parcel post. But in the winter season horse vehicles must be used and double or more time is required. A straight eight-hour day would penalize the rural carrier for providing, at his own cost, the most expeditious service in summer and leave him suspended midway on his route, away from home and the post office, on uncompleted trips in the winter.

It would seem wise, therefore, to make routes of only such length as would insure observance of regular schedules for the delivery and dispatch of mail and fix reasonable compensation for service on same.

I wish to remind you that the first demand upon the rural carrier's pay is for equipment, which must be kept in good condition for service. The increased cost of horse feed, etc., has kept pace with all other necessities, so that the carrier must bear a double burden of the high cost of living. I confidently believe you will agree that something should be done to relieve the situation, and I urge that whatever action is taken should be specific and not left to chance.

I particularly ask your favorable consideration of the salary scale for routes more than 24 miles long as set out in the inclosed petitions. If the scale fixed by Congress for routes less than 24 miles is just, the same scale for routes above the standard is equally just.

A flexible salary scale in civil service is wrong in principle and demoralizing in practice. It is, in effect, a contract system and clears the way for favoritism and spoils.

In closing let me remind you that the Post Office appropriation bill which was passed in March, 1914, carried certain legislation beneficial to rural carriers, but it required two separate subsequent acts (the joint resolution of Mar. 4, 1915, and the act of July 28, 1916) to enforce same. The necessity for plain, specific, and unmistakable legislation is therefore apparent.

Thanking you for your favorable consideration, I am,

Yours, very truly,

W. D. BROWN.

Post Office Appropriation Bill.

EXTENSION OF REMARKS

OF

HON. L. C. DYER,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, January 13, 1917.

Mr. DYER. Mr. Speaker, under leave granted me to extend my remarks I insert the following:

ST. LOUIS, MO., *January 8, 1917.*

Hon. L. C. DYER,
Washington, D. C.:

Legislation that tends to embarrass newspaper publishers is seriously threatened by measures now pending. One of these measures fixes without defined regard to the facts a penalty upon the newspaper that publishes an advertisement relating to any kind of liquors. Our contention is that if there is to be a statute of this character the responsibility should be definitely fixed upon the advertiser and not the publisher. We also wish to protest against the new zone rate for postage on the ground that it is practically confiscatory, in view of the new

prices fixed by paper manufacturers. This proposed increase discriminates in favor of points in densely inhabited sections. It would destroy a large volume of circulation now carried by St. Louis newspapers.

THE ST. LOUIS TIMES.
THE WESTLICHE POST.
THE GLOBE DEMOCRAT.
THE ST. LOUIS REPUBLIC.
THE POST DISPATCH.
THE ST. LOUIS STAR.

—

ST. LOUIS, MO., *January 8, 1917.*

Hon. L. C. DYER,
House of Representatives, Washington, D. C.:

St. Louis Aerie, No. 41, Fraternal Order of Eagles, having 1,200 members, respectfully but urgently petitions you to oppose section 10 of House bill No. 19410, known as Post Office appropriation bill, unless first paragraph is amended to exclude from the operation of bill fraternal magazines published by fraternal orders, not for profit, but solely for purposes of education and information. Such is the Eagle Magazine, official publication of this order. If present bill is passed, the postage on our magazine will be almost prohibitive. Kindly help us.

H. N. MORGAN, *Worthy President.*
WILBUR E. BENT, *Secretary,*
2354 Lafayette Avenue.

—

THE NATIONAL DRUGGIST,
St. Louis, January 2, 1917.

Hon. L. C. DYER, M. C.,
Washington, D. C.

DEAR MR. CONGRESSMAN: I inclose copy of the resolutions of the St. Louis-Southwestern Trade Press Association in regard to the rider on the Post Office appropriation bill which provides for an increase of the second-class postage rate and the application of the zone system thereto.

I sincerely trust you will use your influence to defeat the proposed measure.

This of all times is the least opportune for increasing the postage rate on newspapers and periodicals. As you are aware, the cost of all kinds of printers' supplies has materially advanced on account of the war. The white paper alone on which the National Druggist is printed will cost me approximately $10,000 more for the year 1917, based on the present market price, than in normal times—a very considerable increase for any small business to bear, as you must admit. If, then, the Government adds an additional $2,500 or $3,000 for postage, the burden will be more than I can bear. And it will affect all other trade journals in exactly the same way, and not trade journals only, but all magazines, farm journals, religious journals, etc.—indeed, everything except the country newspapers, which are distributed absolutely free, or, rather, at the Government's expense, though, of course, it would not be as bad on the daily newspapers as it is on papers of national circulation.

If any raise is to be made, it should be made a little at a time and should come gradually, so that the publishers won't feel it so considerably. It takes a considerable time for a business to adjust itself to sudden changes of any kind.

But the zone system for second-class postage is all wrong. It may be right as applied to merchandise, but not as applied to reading matter.

The zone system as applied to reading matter will have a tendency to sectionalize the various publications. The southern publisher will naturally try to confine himself to his own territory. And a northern publisher will do the same, as would the western or eastern. We don't want any such tendency encouraged in this country. What we need is national unity in thought, feeling, and everything, and not sectionalism in anything.

The worst thing about the proposition is that it comes as a rider on the Post Office appropriation bill. If it was a fair and honest measure, it would have been brought up on its merits, so that those whose interests it so seriously affects could have an opportunity to present their objections to it. It would be very unjust to have it railroaded through, as seems to be the purpose of the author. And, by the way, one can not help commenting on the inconsistency of the position of its author, who is the publisher of a local periodical and pays no postage at all, it being distributed to his subscribers at the Government's expense. I say it is inconsistent in a man who enjoys such an abuse of privilege to try to fasten an unjust law, like that under consideration, upon other people.

I trust you will do what you can to defeat the proposition. And, by the way, I notice that Mr. HENRY, chairman of the Rules Committee, has expressed himself in opposition to it, which is encouraging. In a statement published in the morning's paper he says:

"It can not be defended, and we should not thus hamper the freedom of the press and inconvenience the people."

Hoping you will do your best to defeat it,

Yours, very truly,

H. R. STRONG.

—

THE EAGLE MAGAZINE,
South Bend, Ind., January 6, 1917.

Hon. L. C. DYER,
House of Representatives, Washington, D. C.

MY DEAR CONGRESSMAN DYER: The Fraternal Order of Eagles is vitally interested in a certain section contained in the appropriation bill reported to the House this week.

Section 10 of this bill provides for a very radical increase in postage on publications, including fraternal publications. If this zone system proposed becomes operative, it will cost the Eagle Magazine $35,000 annually in addition to the present postage to mail the periodical. Such an increase would practically cause the suspension of the publication.

You are familiar with the magazine; you know it is owned and published by the order. As a stockholder in it you know it is not published for profit. As one somewhat acquainted with its contents, you know it has unquestionable educational value. Do you not believe that a publication such as this should be excluded from the operation of section 10 and not be put on the same plane as the Saturday Evening Post, Ladies' Home Journal, mail-order house catalogues, and other reading matter published by private corporations for profit only? If you agree with this view, which is the view of every member of the present administration of the Fraternal Order of Eagles, will you not use your influence in behalf of our publication?

With kindest personal regards, I am,

Sincerely, yours,

FRANK E. HERING,
Managing Editor.

"Drop Penny Postage."

EXTENSION OF REMARKS

OF

HON. WILLIAM S. VARE,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, January 13, 1917.

Mr. VARE. Mr. Speaker, the provision in the Post Office appropriation bill for the establishment of a "drop-penny" or local first-class postage rate of 1 cent per ounce or fraction thereof marks another step toward an equitable reclassification of postage rates according to the cost of handling incurred by the Government.

Since the days of the complicated methods for computing postage, when charges were based on the length of haul, the attitude of the American Congress has been to recognize the difference in the cost of handling local mail and that on which transportation charges must be paid.

As early as 1872 a 1-cent rate was established for letters of the first class for delivery from the office of mailing, providing that office did not have carrier-delivery service. At that time the postage rate was based on one-half ounce. When the weight standard was increased to 1 ounce in 1885 the same provision was retained.

During the Sixty-first Congress a bill was introduced by my colleague from Pennsylvania [Mr. GRIEST] providing for a 1-cent tariff on all first-class mail of 1 ounce or fraction, including offices with letter-carrier delivery.

No one questions the logic of the argument that the profits from local mail must be large when one can post a letter to any point in the United States, England, Germany, Canada, or Alaska for the same price that he or she would pay to mail the same letter to a next-door neighbor.

It is an acknowledged fact that the receipts of post offices in our large cities for "drop-letter" mail is far in excess of delivery costs. The time is now ripe for the adjustment of the charge to a reasonable rate corresponding with the actual cost of handling.

The Postmaster General in his last annual report says:

Whereas the department is no longer a tax on the general revenue it is desired to again emphasize its position that it should not be permitted to become a revenue producer for the Government. It should become a fixed policy that all surplus postal revenues should be used for the enlargement of the service, the increase of postal efficiency, and, when justified, to a reduction in rates of postage.

We are not as yet in a position where we can have a universal penny-postage system, but we are able to follow the advice of the Postmaster General to the point where we can support a reduction in the cost of sending local mail matter.

Public Opinion on the Tubes.

EXTENSION OF REMARKS

OF

HON. J. HAMPTON MOORE,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, January 13, 1917.

Mr. MOORE of Pennsylvania. Mr. Speaker, under leave to extend my remarks I lay before the committee some editorial comments from leading newspapers of the country demanding the retention of the pneumatic-tube service in the cities affected. I assume these comments may be accepted as public opinion upon the question of taking away from the Postal Service an underground system of transporting first-class mail and substituting therefor the antiquated system of surface or overhead delivery.

A perusal of these expressions of public opinion will show that we are living in a progressive age and are not inclined to return to the horse-car or the mule-train period in the large centers of population. As I desire the committee and the House to deal with this question in its broad or national sense, I shall refrain from publishing numerous letters and telegrams expressing surprise and amazement that the Postmaster General and members of the majority of the Committee on the Post Office and Post Roads should contemplate this backward step:

[Editorial from the Philadelphia Ledger, Dec. 12, 1916.]

EXTENSION, NOT EXTINCTION.

There doesn't seem to be anything very convincing in the arguments over the pneumatic mail service in this city. The real trouble seems to be in the limitations of this service. Why not have a real pneumatic mail service, such as is operated in London, where packages as well as letters are sent over the great stretches of territory in the metropolitan district?

In Paris the pneumatic mail system is developed to a greater extent perhaps than in any other large city in the world. Pneumatic stations are scattered all over Paris, just as telegraph offices are here. Any person wishing to communicate quickly by letter with another person in a distant part of the city can, for about the equivalent of 10 cents, purchase what is known as a "petit bleu" at one of these stations, write on it whatever he wishes to say, seal it, hand it in, and immediately it is shot through the pneumatic mail tubes to the station nearest to the address on the outside, and from there is delivered by special messenger. The "petit bleu" has the advantage over a telegram in its perfect secrecy, and a neat writer can find space on it for 50 or even a hundred words. Perhaps the proper solution of the pneumatic mail-tube system for Philadelphia will lie in its extension rather than its extinction.

—

[From the Philadelphia Public Ledger, Dec. 11, 1916.]

WHY MAIL TUBES ARE INDISPENSABLE—LARGE CITIES SUBJECTED TO CONDITIONS LITTLE UNDERSTOOD BY REST OF COUNTRY.

Between 5 and 6 o'clock in the evening 3,400 vehicles of all kinds pass Arch Street on Broad, according to Chief Connell, and this is the heaviest traffic in the city. It is heavier than the traffic of any New York street also, as Marcus M. Marks, president of the Borough of Manhattan, recently placed the maximum of Fifth Avenue at 2,500 vehicles an hour.

"The section of Broad Street between Arch and Filbert Streets carries 37 per cent more traffic per hour than Fifth Avenue," Chief Connell continued. And he thinks that Broad Street accommodates the heaviest travel in the United States. Altogether the increased traffic presents many problems, not the least of which is the increase in the appropriations that will be needed to keep the streets in repair.

Before the automobile came into use 4,000 to 5,000 vehicles a day used Broad Street, while now the number is near 30,000. In 1912 there were less than 9,000 motor cars in Philadelphia; in 1914 there were 17,000; and now there are more than 35,000, or four times the number of four years ago and twice the number of two years ago. Consequently it is natural to predict that the number will double again in the next two years, in Chief Connell's opinion, so that the separation of passenger and freight traffic, both on east and west and north and south streets, seems a virtual necessity.

—

[From the Philadelphia Inquirer, Dec. 12, 1916.]

MR. BURLESON OBSTRUCTS PROGRESS—"MOST RIDICULOUS SUGGESTION EVER SERIOUSLY MADE BY ANY POSTMASTER GENERAL."

Any suggestion that the underground system be abolished would be met with a perfect hurricane of disapproval. Why, the people of Philadelphia have just authorized the expenditure of $67,000,000 for additional rapid transit.

If street cars and private vehicles are blocked on the surface, how can mail cars or wagons hope to escape them? They can not; and yet here comes Postmaster General Burleson with the astounding proposition to abolish the mail tubes, which operate almost instantaneously underground, and use automobiles on the surface in their place!

It is the most ridiculous suggestion ever seriously made by any Postmaster General since the beginning of the Nation.

Mr. Burleson thrusts himself in the path of progress. If he will not remove himself from it, we look to the Congress of the United States to push him to one side, so that the obstruction may be cleared away and the mails of the United States may not be interfered with.

—

[From the Philadelphia Press, Dec. 14, 1916.]

"ALMOST UNTHINKABLE"—ABSOLUTE PROOF THAT TUBE SERVICE IS A PUBLIC NECESSITY.

It is almost unthinkable that the department will persist in its determination to abolish the service in face of absolute proof that it is a public necessity here, the one efficient branch of an otherwise slow and undependable postal system.

It has been shown that the pneumatic tube constitutes an irreplaceable medium for the speedy forwarding of market quotations from the Bourse station to transcontinental trains. It has been shown that the tube service facilitates daily bank clearances in this city on amounts aggregating between twenty and thirty million dollars, and that its abolition would involve a loss of about a thousand dollars a day on clearing-house business alone. It has been demonstrated that mail transferred by the tube route is safer from thieves and from accidental destruction, and that the substitution of surface motor-vehicle routes would further complicate the city's crowded central traffic zones and would constitute an additional menace to pedestrians, who have already suffered so severely from fast-driven mail trucks.

The single argument for the abolition of the pneumatic tube is the supposed economy that may be effected by the substitution of motor vehicles. Assuming that the change would be economical—and all the pneumatic-tube service costs is $100,000 a year—is the saving worth the extra trouble, expense, danger it entails, to say nothing of its effect upon the efficiency of the service? The Philadelphia post office nets the Government an annual profit of $5,000,000. Surely one-fiftieth of that sum is not too much to spend in insuring the city a first-class postal service.

—

[From the Philadelphia Record, Dec. 13, 1916.]

ONE THOUSAND ONE HUNDRED DOLLARS LOSS A DAY TO BUSINESS.

Mr. J. Allan Thompson, of the Philadelphia Clearing House, declared that a saving of 2 per cent is effected in certain bank clearings through the use of the pneumatic-tube service, which enables the banks to gain a day's time by expeditious work near the end of the day. He calculated that removal of the tube service would result in an actual loss of approximately $1,100 a day to the banks. He estimated that Philadelphia business men would lose more than twice the cost of the tube service annually if they were deprived of it.

[From the Philadelphia Record, Dec. 13, 1916.]

MAIL TRUCKS IN CROWDED STREETS—LIFE AND DEATH CLOSELY INVOLVED WITH ABOLITION OF MAIL TUBES.

Capt. Mills, of the traffic squad, made a long speech regarding congestion in the Philadelphia streets through which the mail trucks handling the pouches now handled by the tubes would have to pass. He embodied in the record the following interesting data regarding traffic conditions:

"The department I represent is vitally interested in the number of fast-moving delivery vehicles which the proposed abolition of the pneumatic service will cause to be operated upon our city streets, already taxed beyond safe carrying capacity, and so much so that it has been found necessary to place a limit upon the time a vehicle shall stand upon the highway. Vehicles carrying mail from the Bourse Station to the Broad Street Station, from which points tubes are now in operation, will cross 12 intersecting streets where the vehicle traffic numbers from 325, at Fifth Street, to 1,750 per hour, at Broad Street, not including street railway cars, and would also be compelled to pass through seven streams of pedestrians fluctuating between 3,000 and 7,000 per hour.

"Auto vehicles in operation from the Central Station to the southward of the Fairhill Station would be compelled to pass through our most congested centers. This is certainly a matter of vital importance, especially when the Post Office Department has maintained a schedule calling for a rate of speed as high as 10 miles per hour.

"The department of public safety is receiving constant complaints of the operation of mail-service vehicles, and I quote here from an evening paper the statement of a committing magistrate at a hearing following injury to a child:

"'United States mail drivers never go slowly. They fly along our public thoroughfares without the slightest regard for the safety of citizens and little children. They hum around corners and take chances in the thick of traffic as if they had a special permit from Washington to gamble with the lives of the citizens of the Republic.'

"To which statement I must add, in justice to the Postal Department, that they render every assistance possible in locating drivers of vehicles guilty of reckless driving.

"There have been 115 deaths since January 1, 1916, due to motor vehicles. There have been 38 collisions with United States mail vehicles, and 21 persons have been injured by United States mail vehicles in the same period of time."

—

[From the Philadelphia Inquirer, Dec. 13, 1916.]

"TUBES SHOULD BE EXTENDED"—PHILADELPHIA AND NEW YORK BUSINESS MEN AROUSED.

Postmaster Morgan, of New York, has come out strongly against the abolition of the pneumatic-tube mail system in that city. He believes, with other reasoning men, that the tubes should be extended instead of being abolished. The peculiar conditions existing in New York at present, with Broadway torn up, traffic blockades becoming more frequent each day, and the dangers of heavy snowfalls, all combine to make it pretty sure that the tubes will be retained there for the present at least.

But Morgan is not alone in opposing the abolition of the pneumatic-tube system. The Merchants' Association of New York and a score of other business organizations have entered their protests. The business men of this city have done their part in going to Washington and filing their protests with the Congressmen. *Mayor Smith, whose experience as postmaster of Philadelphia enables him to speak by authority, has wired his belief that the abandonment of this modern method of conducting the postal business would be a great mistake.* But in spite of all this it is intimated that Burleson will ultimately have his own way about it. It seems to be reduced to a question of whether we are to abolish the tubes or abolish Burleson.

—

[From the New York Tribune, Dec. 16, 1916.]

"A VASTLY DETERIORATED MAIL SERVICE" IF CONGRESS BACKS UP POSTMASTER GENERAL BURLESON'S ASSAULT ON TUBES.

If Congress backs up Postmaster General Burleson as the House committee has done there will be a vastly augmented fleet of mail automobile trucks rushing through the streets of this city. *There will be, according to Postmaster Morgan, a vastly deteriorated mail service. There will be, according to Commissioner Woods, a vastly complicated traffic problem, with an almost certain increase of injuries and deaths, due to the incorrigible speeding propensities of the drivers of these huge vehicles.* That is, there will be inflicted on this city, which so far as the post office is concerned is a gold mine, a service uncertain in bad weather, less good in any weather, and perhaps no less expensive than the present one—of that there is scant means of judging; and there will be imposed on the public here the expense of providing for the handling of a more complex and dangerous street situation than the present one, for which the traffic squad now is hardly adequate.

—

[From the New York Times, Dec. 30, 1916.]

MOTOR TRUCKS MODERN JUGGERNAUTS.

Mayor Mitchel wrote to Speaker CHAMP CLARK yesterday protesting against the bill to replace with auto vehicles most of the present pneumatic tubes for the transmission of mail.

The mayor wrote that the leading commercial organizations of the city would argue against the proposed measure at the proper time, but he felt it his duty to emphasize one phase of the matter vitally affecting every inhabitant of the city—"the shortsightedness and folly of doing anything which must inevitably add to the great congestion of street traffic and the dangers resulting therefrom." The mayor dwelt upon the number of street accidents, and said that last year 659 persons were killed and 23,000 injured, 281 of those killed being children. Of the killed 105 met death through motor trucks.

"Despite the fact that motor trucks number less than 2½ per cent of the total vehicles," the mayor wrote, "they were chargeable with more than 16 per cent of the fatalitits, a striking evidence of the dangerous character of that class of vehicles, among which are included mail trucks. This annual toll of human life in our city streets has excited public indignation and alarm. Constant and urgent appeals are made for measures of protection. Stringent traffic rules have been adopted, and 650 policemen have been assigned exclusively to the regulation of traffic. Every possible effort is put forth to restrict the speed of vehicles in the street and to secure such regularity of movement as shall permit an even and orderly flow of traffic. By reason,

however, of the enormous number of vehicles and the great population which daily use our streets, the situation is hard to cope with, and is becoming increasingly difficult."

The Postmaster General attempts to justify his amazing recommendation abolishing pneumatic tubes by saying that lobbying has been done. That statement is false and ridiculous. What need of lobbying is there when every intelligent business man, competent postal official, chamber of commerce, business organizations of every kind, every reputable newspaper and other organ of public opinion in Philadelphia and throughout the country has been advocating this service persistently since its inauguration by John Wanamaker nearly 25 years ago, within which period five Government commissions, after exhaustive inquiry, have vindicated the tubes' unique usefulness and their extension and purchase by the Government? Other Burleson charges are equally absurd, and will be met and the real meaning of this propaganda against the tubes will be disclosed.

—

[From the New York Evening Post, Dec. 20, 1916.]

"A BRIEF FOR THE PROSECUTION"—POSTAL COMMITTEE IGNORED TWO IMPORTANT CONSIDERATIONS.

Everything turns, therefore, on the question whether the Postmaster General and his committee have or have not correctly appraised the advantages of the pneumatic-tube service. *And here we have to say at once that the committee's report, in spite of its painstaking and elaborate character, distinctly makes the impression of a brief for the prosecution rather than that of a judicial summing up by professional experts.* Of this character there are two evidences that seem to us absolutely conclusive. In the first place, there appear throughout the report emphatic references to the fact that the tube service is not adapted to the carrying of much mail matter other than letters. Now, it seems hardly possible that a man seriously and intelligently occupied with postal problems should forget for a moment that *it is by the test of letter service, and only of letter service, that the question of superior dispatch by such a system as that of the tubes should be judged. Parcels that belong to the second, third, or fourth class are neither entitled by the rates of postage nor, except in rare instances, by their importance to the highest advantages of speed the Post Office can furnish. On letters the Post Office makes an enormous profit, out of which the expense of handling other classes of matter is defrayed; and it is in the prompt delivery of letters, not of parcels, that the public is keenly and constantly interested.* The importance attached in the report to the matter of parcels is not only a defect in itself but seems to us to show that the desire to weigh fully and fairly the merits of the case was interfered with, in the committee's mind, by a bias toward a foregone conclusion.

The second point to which we have referred not only bears out this impression but goes far toward invalidating the committee's condemnation of the tube system above quoted. That condemnation rests entirely on the handling of train mail. Even for that it is not conclusive, and has been subjected to important criticism; but the point we wish to make is that it ignores altogether the use of the tube in the transmission of local mails. This city is of almost imperial magnitude, and its five millions of people have every possible claim to all the facilities for quick postal intercourse among themselves that circumstances make possible. It is almost incredible, but we believe it is literally true—though we may possibly have overlooked some slight reference—that the report makes no mention whatever of this cardinally important function of the tube service, a function which must become increasingly important as the city grows still further in population. The continuity of transmission which the tube system supplies is certainly completely effective as regards the local service, even if its value is impaired for out-of-town service by the consideration mentioned by the report; and yet this first-rate element in the case is completely ignored. Evidently before action is taken it is imperative that the whole matter be subjected to more searching consideration and more judicial appraisal.

—

[From the New York Morning Telegraph, Dec. 22, 1916.]

"NOT AFFECTED BY SNOW BLOCKADES"—SERIOUS CONTROVERSY WITH POSTMASTER GENERAL.

As New York City is practically intersected and will soon be entirely criss-crossed with tubes and tunnels for the more rapid transportation of passengers, the suggestion that letters should be sent between post offices by wagon instead of tubular dispatch seems to be archaic. More than seems, is. Yet a serious controversy is in progress with the Postmaster General favoring a return to vehicles—preliminary, perhaps, to a suggested return to horse cars on the streets—and the business interests of New York, the Merchants' Association, Chamber of Commerce, Dry Goods Association, and banks and bankers generally demanding the retention of the present method of quick service by underground metal tubes not affected by snow, ice, floods, breakdowns, or other interruption of street travel.

—

[Editorial from the New York American, Apr. 6, 1916.]

MOTOR-TRUCK INTERESTS.

The Postmaster General, who up to that time had expressed himself most favorably toward the tubes, suddenly began to talk about the desirability of supplanting them with the antiquated wagons' successors, motor trucks and automobiles, going back to the old order of things, to conditions existing in the centuries that are gone. The influence of these motor-truck interests had become so potential in the department as to lead to shocking results, one of which was the conviction in the United States court of the leading automobile mail contractor of New York, who had vociferously proclaimed his ability and intention "to smash the tubes" and seize that appropriation for his own business. He was convicted for corrupting postal employees, one of whom was sentenced with him to the Atlanta Penitentiary.

—

[From the New York Times, Dec. 15, 1916.]

WANTS TO KNOW THE REASON—NEW YORK TIMES ASKS WHY INVESTIGATORS REFUSED TO HEAR OTHER SIDE.

The Post Office Department may not be relentless in the intention ascribed to it to discontinue the pneumatic-tube service in several leading cities. It would have no support in such intention in New York at least. There are several millions invested in the plant here, which is operating with such efficiency that the service causes no criticism outside the Post Office Department. That is about as high praise as any public utility can command. The department confesses the strength of the position of the tube service in New York at least, for it has replied to inquiries that it has no intention of discontinuing the service, but that it wishes to reconsider the terms of the contract, which is about to expire.

The owners of the plant are in the unfortunate position of having irretrievably invested several millions in facilities otherwise useless, and without the protection of a permanent contract. The returns on the investment are no doubt considerable, and the department would be sustained in any reconsideration of the subject which should be fair to all the parties. It would be on the defensive in any plan to reduce profits of the proprietors at the expense of the service to the public. It is desirable that the department should convince others than itself that the public would be better served by automobiles than by the tubes.

The tubes do not lend themselves to the transportation of such matter as is mailed under the Parcel Post Service. The automobiles necessary for the parcel post could carry letters also without any additional cost which it would be easy to trace. It is even probable that the department would not be eager to apportion the cost of carrying letters and parcels by automobiles. All its practice is against anything like cost accounting and in favor of distributing letter-carrying profits over the losses of other departments. Even if the tube profits could be shown to be larger than the cost to the department of similar service by motors, it would not follow that the tubes should be discontinued, for it would still be necessary to consider comparative efficiency of service. A service which might be good enough for parcels would not be good enough for the carriage of letters over the routes served by the tubes in this city, however it may be in the several other cities, which should speak for themselves. The speed in the tubes is several times that which it is possible to maintain through street traffic. The deliveries by motors are only a few each hour, while there are several departures by tubes each second.

It is not surprising that a score of civic associations of this city went to Washington to protest to the House committee regarding the unconsidered prosecution of the department's plans, whatever they are. It is surprising and not reassuring that the committee was unable to find time for the presentation of the arguments which the associations wished to make. When investigators refuse to hear the other side there is curiosity to know what is the case against the tubes which is so conclusive that Congress, like the department, is prepared to act before the public learns the reasons for action. The public is prepared to hear the department's side, and, in fact, wants very much to hear it.

—

[From the New York World, Dec. 14, 1916.]

WHAT NEW YORK HAS TO CONTEND WITH.

Postmaster Morgan states that the department has been trying to restore mail boxes, but that the Municipal Art Commission and the Washington authorities can not get together on the design.

Is not that a fair sample of what New York has to contend with? Is it not appropriate that a world metropolis which is in danger of losing most of its pneumatic mail tubes because a corporation controls the public streets, should lose 7,000 mail boxes because of a difference of opinion about the mere pattern of them?

—

[From the New York Times, Dec. 24, 1916.]

NO TIME FOR MOTOR-TRUCK JOY RIDES—NEW YORK ALDERMEN PROTEST AGAINST "EXHUMING INANIMATE MAIL MATTER."

In an effort to retain the pneumatic tube as the chief carrier of the city's mails, the aldermen yesterday adopted unanimously two resolutions to be sent to President Wilson and Congress. The resolutions were introduced by President Dowling and Minority Leader Henry H. Curran, and, as both were identic in substance, were incorporated as one. It follows:

"*Resolved*, That the board of aldermen requests the Postmaster General of the United States to abandon his contemplated reduction of the underground mail-tube service in this city.

"When our people have to burrow like moles through subways and tunnels to escape the perils of traffic congestion on the streets, it is no time to exhume inanimate mail matter and joy ride it about the town in speeding motor trucks, to the still greater peril of those who survive us on the surface of the earth."

—

[From the New York Globe, Dec. 16, 1916.]

"SAVE THE MAIL TUBES"—SHORTSIGHTED POLICY OF COMMITTEE NOT NECESSARILY THE VIEW OF CONGRESS.

The pneumatic tube offers the most rapid means of transporting mail. It has been employed for years with success between the general post office and important branch stations, and it has been an important factor in bringing the service in New York up to what it is, although there is room still for much improvement. To do away with the tubes and substitute for them motor trucks not only will impair the Postal Service, but needlessly add to the congestion of the streets as well.

Because the postal committee of the House is in favor of adopting such a shortsighted policy does not necessarily mean that Congress will see matters in the same light. It is up to the business men of New York to organize a movement that will convince the Senate and the House that the interests of the city demand that hands be kept off its pneumatic mail tube.

—

[From the Chicago Examiner, Dec. 12, 1916.]

BUSINESS WORLD V. POSTAL AGENTS—MOTOR-TRUCK SPEED ONE-THIRD THAT OF THE PNEUMATIC TUBES.

In Mr. Burleson's plea that the motor trucks can make 12 miles an hour the committee will punch a big hole by the answer that 12 miles an hour by the autotrucks is just about one-third of the 33 miles an hour underground which the tubes consume in carrying the mails, and that the 12-mile-an-hour speed which he sets for his autotrucks, slow as it is, is much too fast for the congested thoroughfares of the great cities.

And to the specious theories of the inexperienced business man in the Post Office Department the alert Chicago committee will oppose the emphatic statements of some of the greatest business men in Chicago and the world—

Of Samuel Hastings, president of the Illinois Manufacturers' Association, that "Chicago, which has the heaviest first-class mail in the country, can not afford to lose the pneumatic-tube service."

Of Angus S. Hibbard, of the Chicago Telephone Co., that "in special-delivery letters, which may be worth thousands of dollars to the sender, 24 hours is saved by the pneumatic-tube service."

Of John W. O'Leary, president Association of Commerce: "Chicago absolutely needs the pneumatic-tube service and is entitled to it."

Of W. A. Curtis, of the great mail-order firm of Montgomery Ward & Co.: "*The discontinuance of the tubes would be a far step backward. In Paris, I understand, the pneumatic tubes make it possible to receive and answer a letter from any part of the city within an hour. How is Chicago ever to enjoy such facilities if Mr. Burleson is to lop off the progressive foundation for it in the tubes?*"

And of William F. Burrows, president of Libby, McNeil & Libby, and of Ward M. Willitts, president of Adams & Westlake Co., and of J. J. Charles, president of Hibbard, Spencer, Bartlett & Co., and of Nelson A. Lampert, vice president Fort Dearborn National Bank, and of H. A. Wilkie, president of the Rotary Club, and of a long list of the greatest names in western business.

Mr. Burleson, the Texas politician, is pitting his political idea of business against the sound judgment of the soundest economic and business builders of the Republic.

Will the politician persist in this illogical theory against the protest of the practical Titans of legitimate trade?

—

[From the New York World, Dec. 23, 1916.]

"A BACKWARD STEP"—"DEPARTMENT ABANDONING A COURSE THAT ALL LIVE POSTAL SYSTEMS USE."

The investments of the tube companies can not be commandeered. They should be bought. If the times are not propitious for appropriations or bond issues for such a purpose, the Government could buy them by adding to the yearly rental an amortization allowance to extinguish the principal in 20 or 25 years. With such a bargain the department could take the tubes at once and make extensions and improvements at its own convenience and cost.

The one intolerable course is that the department shall deliberately take a backward step by abandoning a device that all live postal systems use and that is necessary to postal efficiency. Why not buy the tubes by the amortization plan?

—

[From the New York Tribune, Dec. 22, 1916.]

"ENTITLED TO THE BEST"—NEW YORK THE GREATEST SOURCE OF POSTAL REVENUE IN THE COUNTRY WANTS THE TUBES.

It was unfortunate that the Post Office Department did not put in its own tubes at the start, instead of making contracts with an outside corporation formed to do a governmental service. The relation between the corporation and the Government is unnatural and onerous. The corporation can not expect to get absolutely fair treatment from Congress or from the department. It is at the mercy of both every time its short-time contracts run out.

Without Government ownership we never can escape such squabbles as now threaten an unjust and unwise curtailment of pneumatic-tube facilities here. *New York, the greatest single source of postal revenue in the country, is entitled to the best and fullest facilities available. The House of Representatives, under Mr.* MOON'S *captious and prejudiced leadership, may vote to discontinue the use of the down-town tubes here, which even the Post Office Department officials admit to be indispensable. But a saner view is to be expected from the Senate, which for the last six years has been successfully frustrating Mr.* MOON'S *persistent attempts to bedlamize the Postal Service.*

—

[From the Chicago Examiner, Jan. 2, 1917.]

BURLESON'S OWN RECORDS REFUTE ATTACK ON TUBES.

Do the fast underground pneumatic tubes expedite the delivery of the mails in Chicago?

That is the question upon which hangs the continuance or the discard of Chicago's fast mail service.

Postmaster General Burleson with amazing positiveness asserts that the tubes do not expedite the mails.

JAMES R. MANN, the Republican leader and a Chicago Congressman, writes to the Examiner that the House of Representatives will vote yes or no upon Mr. Burleson's reactionary proposition as it may be proved true or false.

Therefore the whole policy of the tube managers and of the people should be to prove, and prove quickly, that Mr. Burleson is mistaken, and that the tubes do most emphatically expedite the delivery of the mails.

The proposition that the tubes do expedite the mails seems to be self-evident, and in point of fact it is self-evident.

But let us offer the facts from Mr. Burleson's own official post-office records and from the investigation of fair-minded civic organizations that have given clear and conclusive investigations.

Take Philadelphia. Last week the united business organizations of Philadelphia appointed a great committee, in which they included four of Philadelphia's Representatives in Congress. This fair and fully representative committee spent an entire day in rigid investigation of the tubes. The result smashed almost every claim that Mr. Burleson had made in opposition to the tubes.

In the matter of expedition of the mails a test was made along the several branches of the tube service side by side with the service of the auto trucks.

Take the longest of three branches from the general post office to the North Philadelphia Station of the Pennsylvania Railroad, 4.4 miles. At this point the tube service and the autotruck service starting at the same moment the tube carriers reached their destination more than 25 minutes ahead of the autotrucks, each carton carrying 8¾ pounds of mail and the tube carriers arriving only eight and three-tenths seconds apart.

Is it any wonder that the entire committee and the four Congressmen were completely satisfied that the tubes do vastly expedite the delivery of the mails? So much for Philadelphia.

Now, take Chicago, which with us is much more to the point. In advance of the formal report of the committee that is being formed to investigate, we will take Mr. Burleson's own official records from the Chicago post office. They are entirely sufficient.

The Examiner has before it the "yellow schedule" of the Chicago post office dated November 1. The "yellow schedule" certainly can not be charged with partiality to the tubes. Read its record:

From the general post office to the stockyards is the longest, and therefore the fairest, test of speed. It is about 4 miles or a little more. Upon the printed schedule here is the motortruck record:

Leaves general post office, 12.30 a. m.

Arrives stockyards, 1.06 a. m.

This is at midnight, when the streets are comparatively clear of traffic and travel, and the time is 36 minutes. Take the midday schedule, when the city is in normal activity:

Leaves general post office, 12.15 p. m.

Arrives stockyards, 1.07 p. m.

Therefore, the midday time of the auto trucks is 52 minutes.

On the last page of the "yellow schedule" is the pneumatic-tube schedule, and there is written in the official printed record of Mr. Burleson's own Chicago office the following:

PNEUMATIC-TUBE SCHEDULE—ONE CARRIER.

From general post office to stockyards, 14 minutes.

The "one carrier" means one carton containing 8¾ to 10 pounds of mail. But these carriers follow each other every 8.3 seconds, or a possible six carriers to the minute, or about 70 pounds to the minute of mail.

But why prolong a discussion so self-evident and so completely established by the official records of Philadelphia and Chicago post offices?

Mr. Burleson's attitude in this whole matter so vital to Chicago is, to say the least, astonishing.

—

[From the Chicago Examiner, Dec. 9, 1916.]

NOT DESTRUCTION, BUT ENLARGEMENT—NO TIME THIS FOR MR. BURLESON TO COME LOPPING WITH HIS MEAT AX OF PARSIMONY.

Within this period five commissions of the United States Government, including one in the last Congress, after exhaustive inquiry have vindicated the unique usefulness of the tubes and advocated their extension and even their purchase by the Government.

It would be in the nature of a crowning outrage if the Burleson administration of the Post Office Department should lop this essential, progressive feature from the meager equipment of the Chicago post office.

The Chicago office is staggering now under a multitude of difficulties of insufficient equipment. Its hands are lifted in appeal to the Government for enlargement and progressive improvement, not for parsimonious contraction and dangerous surgery upon its essential members.

The great house of Sears, Roebuck & Co. is transporting its own mail to-day to the moving centers, and other great business houses are doing likewise, simply because the Chicago post office is not equipped to do the work that is its own.

Is this a time for Mr. Burleson to come lopping with his meat ax of parsimony at the very arteries of our mail system?

What Chicago wants and what Philadelphia wants and Boston is not the destruction but the enlargement of its pneumatic-tube service, and, if possible, the purchase of the tube service by the Government, in order to improve and perpetuate its value to these tremendous centers of the mails.

—

[From the New York World, Dec. 29, 1916.]

MORE TRUCKS, MORE DEATHS—NEW YORK TRAFFIC FATALITIES NUMBERED 765 IN 11 MONTHS.

The health department's record of traffic fatalities during 11 months of the current year shows a total of 765 deaths, as compared with 626 for the corresponding period of last year. Of this formidable increase of 139, or 18 per cent, street vehicles and surface cars contributed 95.

Notwithstanding all the efforts made to protect life in public thoroughfares, the grim fact remains that 765 lives were lost there in 11 months this year. At a proportionate rate of increase the number will be doubled every five years.

Certainly there is no problem of municipal administration more urgent than that of checking this waste of human life in the streets.

—

MR. BURLESON'S OWN OFFICIAL RECORDS—STARTLING CONTRADICTION OF STATEMENTS WITH PROOF OF ACTUAL PERFORMANCE IN CHICAGO.

It has also been demonstrated that an automobile can deliver the mail from the general post office to the Stockyards Station in 17 minutes, while for any appreciable quantity of mail it requires 21 minutes by tubes. (*Official report of the Post Office Department on the pneumatic-tube service in Chicago.*)

—

[From the Chicago Examiner of Jan. 2, 1917.]

THE ABOVE STATEMENT SHOWN TO BE FALSE BY A RECORD OF ACTUAL PERFORMANCE.

Now, take Chicago, which with us is much more to the point. In advance of the formal report of the committee that is being formed to investigate, we will *take Mr. Burleson's own official records from the Chicago post office.* They are entirely sufficient.

The Examiner has before it the "yellow schedule" of the Chicago post office dated November 1. The "yellow schedule" certainly can not be charged with partiality to the tubes. Read its record:

From the general post office to the stockyards is the longest and, therefore, the fairest test of speed. It is about 4 miles, or a little more. Upon the printed schedule here is the motor-truck record:

Leaves general post office, 12.30 a. m.

Arrives stockyards, 1.06 a. m.

This is at *midnight*, when the streets are comparatively clear of traffic and travel, *and the time is 36 minutes.* Take the midday schedule, when the city is in normal activity:

Leaves general post office, 12.15 p. m.

Arrives stockyards, 1.07 p. m.

Therefore, the midday time of the autotruck is 52 *minutes.*

On the last page of the "yellow schedule" is the pneumatic-tube schedule, and there is written in the official printed record of Mr. Burleson's own Chicago office the following:

PNEUMATIC-TUBE SCHEDULE—ONE CARRIER.

From general post office to stockyards, 14 minutes.

The "one carrier" means one carton containing 8¾ to 10 pounds of mail; but these carriers follow each other every 8.3 seconds, or a possible six carriers to the minute, or about 70 pounds to the minute of mail.

But why prolong a discussion so self-evident and so completely established by the official records of Philadelphia and Chicago post offices?

Mr. Burleson's attitude in this matter, so vital to Chicago, is, to say the least, astonishing.

—

[From the New York American of Jan. 4, 1917.]

BURLESON'S MAIL TESTS DENOUNCED—NEW YORK MERCHANTS' ASSOCIATION CALLS REPORT OF MOTOR TRIALS WORTHLESS AS AGAINST PNEUMATIC TUBES.

The Merchants' Association, in a booklet issued last night, attacked and condemned the recommendation of Postmaster General Burleson to

replace the postal pneumatic-tube service of New York and other cities with an autotruck service.

The comparative tests carried out by postal officials by direction of the Postmaster General before the abolition of the pneumatic tubes was recommended were declared *"false, misleading, and practically worthless."* The statement says:

"In their investigation, vital factors were ignored or suppressed. By reason of their suppression, false inferences were suggested, leading to fallacious conclusions. The utility of the tubes was minimized, and the practicable performance of autos under service conditions was grossly exaggerated."

The specific complaints made out against the tests carried on by Mr. Burleson were: That the auto tests were made in summer, under minimum traffic congestion, and entire absence of obstructions of snow and ice; that excessive speeds were maintained and that "service" stops were omitted.

It was also charged that "the rapidity and capacity of the tubes was understated, the operation of the tubes being retarded on one occasion." The tests were made on Sunday, when there were fewer clerks on duty to handle the tube service, and the autos were favored by the absence of the usual street traffic and congestion.

After giving examples of the alleged unfairness of the tests, the statement continues:

"It has been shown that the so-called tests ignored all factors of obstruction, and that the results were presented as though they were typical and fairly representative of the conditions to be met.

"Such is not the fact. It is proved by the experience of every important post office in the country that the actual service rate of speed of autos is not more than one-third that presented by the report of the committee of post-office employees and accepted by the Postmaster General.

"While the auto mail service in this city was disorganized and inefficient for many days in succession last winter, the pneumatic-tube service continued without interruption, and by reason of its existence, the entire volume of outgoing letter mails originating in this city was dispatched without delay."

[Postmaster Morgan, of New York, before the House Post Office Committee, Dec. 14, 1916.]

PRACTICAL VIEWS OF A PRACTICAL MAN—HOW THE LARGEST CITY IN THE WESTERN HEMISPHERE WOULD BE AFFECTED BY THE LOSS OF THE TUBES.

The New York mail service is a competitive service. It is opposed by the telegraph, telephone, messenger service, and other agencies. If the tubes are eliminated, $250,000 annual special-delivery revenue will be lost to it. In addition, the frequent snowstorms of New York's winters would make truck service impossible. It would be necessary to double or triple the number of trucks now used. If the tubes were displaced, thousands, if not millions, in gross revenues of the office would be lost because the service would be diminished.

If Congress would make it possible to have hourly mail deliveries all over the city, as I should like to see, we could produce more for the Nation's Treasury. Help us to give the public more service—don't injure the service we have now.

[Washington special to Boston Transcript.]

"WHAT THE TUBES CAN DO"—STATEMENT BEFORE HOUSE COMMITTEE BY A MAN WHO KNOWS.

Delegations of representative citizens were present from Boston, New York, Chicago, St. Louis, and other cities. The attendance was so large that on the motion of Congressman PAIGE, of Massachusetts, the hearing was transferred from the committee's hearing room in the Capitol to the caucus room in the House Office Building.

The tubes were established to carry first-class mail, which pays the Government $1 a pound, but also can carry newspapers and parcel-post packages. Boston, he said, has 7 miles of tube service, while there are 50 miles of service in the country.

In answer to a question by Mr. Whipple, the witness said that the statement in the report that "rapidity of tube containers is limited to intervals of about 15 seconds" was untrue. "Our containers," he continued, "are dispatched at intervals of 8 to 10 seconds, and under certain conditions can be dispatched at even smaller intervals." A member of the committee asked Mr. Emerson what the tubes did do, not what they could do, and he replied that the containers were dispatched at intervals of not more than 10 seconds. The witness denied the statement that only about 20 pounds of letter mail could be dispatched each minute, saying that the truth was that the company could dispatch 60 pounds, or 3,000 letters, each minute.

Mr. Emerson paid considerable attention to the commission's statement that "complaints resulting from damage to mail" in the tube service were frequent. "This statement is not in accordance with the facts," he said. "The truth is that complaints of damage to mail, due to openings of the containers, or any other cause, are very infrequent. Our systems in five cities carry approximately 26,000,000 letters per day. Out of this enormous mass on only eight different occasions during the year has a container come open. These eight containers carried a total of say 4,000 letters, very few of which, perhaps 200, were injured or soiled. The proportion of these letters to the total number of letters carried during the year by mail tubes is so infinitesimal that to make it more easily understood one would have to divide 1 per cent into 2,000,000 parts; in other words, it is two-millionths of 1 per cent." A laugh went about the room as this statement was made.

Picking Uncle Sam's Pocket.

EXTENSION OF REMARKS

OF

HON. WILLIAM P. BORLAND.

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Monday, January 15, 1917.

Mr. BORLAND. Mr. Speaker, Uncle Sam is a liberal old soul. He don't mind spending his money, but he likes to get something for it. He hates like thunder to have his pocket picked. I append here a very strong editorial from a leading newspaper of the South on the timely subject of what becomes of Uncle Sam's money:

JUST ONE WASTE CITED.

On Wednesday, January 3, Hon. WILLIAM P. BORLAND, one of the Representatives of Missouri in the House of Representatives, stood and again called attention to the fact that Uncle Sam should run his business in a businesslike manner.

Mr. BORLAND is not a mere calamity howler. His voice is not one calling for economy without calling attention to a genuine and particular waste. He points the way to a possible saving and an existing poor business arrangement.

This speech of Mr. BORLAND called the attention of the House to the fact that the 30,000 Government clerks in the executive departments at Washington work only seven hours a day instead of a standard business day of eight hours. Those 30,000 business hours are wasted in Washington every day. In addition to this the employees at Washington have a far greater number of holidays than does the average employee.

Outside of Washington the civil-service employees work the regulation eight-hour day as a minimum, sometimes longer, and have none of these special privileges allowed the Washington employees.

The Representative from Missouri goes on to show that this favoritism requires the employment of an unnecessarily large number of clerks to transact the public business at Washington. It necessitates the expenditure of an unnecessary and excessive sum for the proper movement of the mere machinery of government. Mr. BORLAND says: "The army of clerks in Washington is increasing like a swarm of locusts to eat up the substance of the taxpayers. The pay roll of the Federal Government is now $50,000,000 a year in the District of Columbia. Ten per cent of this, or $5,000,000, is a conservative estimate of the amount of this waste."

Mr. BORLAND continues: "If eight hours for a day's labor is fair for the taxpayer, it is fair for the tax eater. If the farmers and business men throughout the country who are not afraid to work at least eight hours a day to pay the taxes that support the Government are advised in truth, they will insist that these public employees—those who are supported by the Government—shall give an honest and standard day's work. This abuse has been going on for years, until it has become a 'vested wrong.' Retrenchment is a matter of specific reform, and here is one upon which all intelligent business men can agree."

At the end of the next fiscal year the Government will be facing a deficit of $370,000,000. Already arrangements are being made for new and additional taxes. The people pay the taxes. In the light of such a thing the administration will do well to heed the words of Mr. BORLAND and try a bit of saving.

Grover Cleveland said: "In concluding this communication its last words shall be an appeal to the Congress for the most rigid economy in the expenditure of the money it holds in trust for the people. The way to perplexing extravagance is easy, but a return to frugality is difficult. When, however, it is considered that those who bear the burdens of taxation have no guaranty of honest care save in the fidelity of their public servants, the duty of all possible retrenchment is plainly manifest."

Thomas Jefferson said: "Public expenditures ought to be honestly and economically made, that labor might be lightly burdened."

The Baltimore platform said: "We denounce the profligate waste of the money wrung from the people by oppressive taxation through the lavish appropriations of recent Republican Congresses, which have kept taxes high and reduced the purchasing power of the people's toil. We demand a return to that simplicity and economy which befits a democratic Government, and a reduction in the number of useless officers, the salaries of which drain the substance of the people."

Mr. BORLAND says: "Every dollar in the Federal Treasury, or that ever will be in the Federal Treasury, comes out of the pockets of the American producer."

Now, this was written without any knowledge of the political affiliation of Mr. BORLAND. His is sound advice whatever his party. For the information of the editor and the readers of the Times the following is read from the Congressional Directory: "WILLIAM PATTERSON BORLAND, Democrat, of Kansas City, Mo." He's a good man. Kansas City will help the Nation by keeping him there.

Constructive Legislation for Financial Preparedness—Federal Banking Consolidation Act.

An act to coordinate, unify, and consolidate the financial system of the United States by creating and establishing a Federal exchange, amending the postal savings act, and amending the Federal reserve act.

EXTENSION OF REMARKS

OF

HON. JOHN M. MORIN,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, January 16, 1917.

Mr. MORIN. Mr. Speaker, on January 9, 1917, I introduced into the House a bill the object of which, as its title states, is to "coordinate, unify, and consolidate" our financial system, in order that the full financial power of the United States may be available to meet the demands, both domestic and foreign, which will be made upon the capital of the country for many years after the close of the war. This bill is based upon the obvious fact that a sound and efficient financial system can be established only by legislation which is properly correlated, and it is therefore designed to create and establish the additional legal mechanism which is required to knit together the financial legislation now in existence in such manner as to create a complete financial

structure, over which the capital of the country may flow in response to the varying demands of our business activities with the greatest safety, freedom, and efficiency.

Specifically, this bill is designed to standardize high-class investment securities as distinguished from speculative securities; to create a central public market restricted entirely to such securities, which would, incidentally, include Federal farm-loan bonds, and thereby make such bonds marketable as "listed securities"; and to make the Federal reserve banks paying institutions, representing the entire financial community, by offering such inducements to membership in the Federal Reserve System as would make it more advantageous for the State banks and trust companies to join the reserve system than to remain out of it.

In the preparation of this bill I have been assisted by a constituent and neighbor of mine, Mr. Earle P. Carman, a lawyer and financial expert and a recognized authority on national and international finance. Mr. Carman is of opinion that this bill, if enacted, would provide us with the most efficient and scientific financial system ever established in any country and enable the United States to retain permanently its present position of primacy as a financial power.

In order that all may become thoroughly familiar with the object of this measure, I would like to submit for consideration a brief analysis of this bill:

Aside from the introduction and the general provisions, which are self-explanatory and comprise sections 1, 10, 11, 12, and 13, this bill is composed of three divisions, which supplement each other in such manner as to make their operation reciprocal and effective; and in like manner, the bill in its entirety is designed to supplement the Federal reserve act and the Federal farm loan act in such manner as to make the three acts—should this bill become law—reciprocal, effective, and scientific in operation.

FEDERAL EXCHANGE DIVISION.

The first division of the bill, comprising sections 2 to 7, inclusive, which may be designated as the "Federal exchange division," has three objects in addition to its reciprocal purposes hereinafter explained. These objects are:

First. To provide the public with a practical means of distinguishing between investment securities and speculative securities, which are hopelessly confused on all existing exchanges and handled in such manner that it is practically impossible for the public to distinguish the one from the other. For the purposes of this bill the term "investment securities" may be said to mean bonds and stocks which are issued under every reasonable restriction as to safety and which represent existing property having an actual value greatly in excess of the total amount of such securities issued against it and a demonstrated earning power sufficient to insure the payment of interest or dividends under the most adverse conditions reasonably conceivable. All stocks and bonds not possessing these requisites must be regarded as speculative securities, for the purposes of this bill.

Second. To establish a central trading mart or national public market for securities issued by the Federal land banks under the provisions of the Federal farm loan act. The Federal farm loan bonds, to be issued under that act, will be investment securities of the highest class and under proper conditions would find a market second only to that of Government bonds. This has been the case with bonds issued by the land banks in France and Germany, and since the beginning of the war such securities in those countries have been preferred to Government bonds. In those countries, however, land-bank bonds are "listed securities," while under our present financial system the Federal farm-loan bonds will be "unlisted securities." An unlisted security has only a private market—that is, it can be sold or transferred by the holder only when a purchaser has been found through private inquiry. A listed security has a public market, where its price is quoted daily, and it can be sold or transferred by simply instructing a broker to sell it. This elementary explanation is made to emphasize the fact that an unlisted security can not compete in the money market with a listed security of equal grade or even of an inferior grade. The farm-loan bonds as unlisted securities can not compete in the security market with listed industrial securities, except when the supply of money or capital is excessive.

Third. To standardize high-class investment securities of all kinds by providing an exchange upon which no other class of securities can be handled, and thus create a safe and sound basis for the extension of the functions of the Federal reserve banks in such manner as to make them paying institutions, representing all the sound financial interests of the Nation. If this bill becomes law, membership in the Federal Reserve System will have such advantages that nearly all of the eligible State banks will join the system.

POSTAL SAVINGS DIVISION.

The second division of the bill, being section 8, which may be designated as the "postal-savings division," has two objects in addition to its reciprocal purposes hereinafter explained. These objects are:

First. To effect a more complete mobilization of our national resources by relieving the Postal Savings System of burdensome and arbitrary restrictions and placing its ultimate control in a committee qualified to administer it in such manner that it will reach all classes of the population, including the foreign element, who for various reasons will not deposit their savings anywhere except in a postal savings bank. This would bring into use and make productive a vast fund of capital which is now idle and in hiding among the prejudiced, ignorant, and timid classes. There does not appear to be any reason why the aggregate of our postal savings deposits should not be relatively as great as they were in France prior to the war. If this were the case, however, the postal savings deposits in this country would amount to about $750,000,000, while, in fact, they did not reach $100,000,000 until quite recently.

Second. To facilitate the deposit by the Government of postal savings funds in private banks, as required by existing law, by authorizing the board of trustees of the Postal Savings System to accept as security for such deposits securities listed on the Federal exchange under such conditions and limitations as the said board of trustees may deem wise.

FEDERAL RESERVE DIVISION.

The third division of the bill, being section 9, which may be designated as the "Federal reserve division," has two objects, in addition to its reciprocal purpose hereinafter explained. These objects are:

First. To make the Federal reserve banks paying institutions by authorizing them to utilize a part of their resources in loans to member banks of the reserve system when such loans are secured by bonds or stocks listed on the Federal exchange. This the bill would accomplish by creating an issue department and a banking department in each Federal reserve bank. The issue department would perform all the functions performed by the bank at the present time, and would control its liquid resources. The banking department would perform the single function of making loans to member banks against Federal exchange securities, and would control the resources of the bank which are of a permanent nature, and therefore adapted to this class of loans.

The exact proportion of the resources which each department would utilize can be ascertained only by a careful compilation of banking statistics, but it is certain that the issue departments, under the terms of the bill, would control considerably more than half of the total resources of the banks. The addition of the eligible State banks to the reserve system, which is practically certain to follow the enactment of this bill, would practically double the resources of the reserve banks, and their issue departments would therefore have resources in excess of the total resources of the reserve banks at the present time. The operations of each department would be kept separate and distinct, but the Federal Reserve Board, under urgent circumstances, could authorize any bank to transfer funds from one department to the other, subject to such penalty as the board should deem it necessary to impose.

Second. To enable the reserve banks to exercise their proper influence in the money market, by indicating the conditions with respect to investment capital, as well as the conditions with respect to liquid capital. At the present time the discount rates of the reserve banks indicate the supply of and demand for liquid capital only, because the banks are restricted in their activities entirely to commercial credit transactions and other operations involving liquid capital. Under this bill the discount rates of the issue departments would continue to indicate the credit situation with respect to liquid capital, while the interest rates of the banking departments would indicate the credit situation with respect to investment capital. The discount rates of the issue departments and the interest rates of the banking departments, when considered together, would constitute a true barometer of the actual financial condition of the country. The reserve board and the reserve banks would thus be able to indicate in advance undue expansion of credits and thus avoid the danger of money stringency or panics.

RECIPROCAL OPERATIONS OF THE THREE DIVISIONS.

The reciprocal operation of the three divisions is obvious.

The first division, by standardizing high-class investment securities, makes the operation of the second and third divisions safe and practicable.

The second division, by authorizing the acceptance of such standardized securities as security for postal-savings funds, creates an inducement to banks throughout the country to buy such standardized securities.

The third division, by authorizing the banking departments of the Federal reserve banks to make loans to member banks against such standardized securities, creates an inducement to member banks to buy such securities.

This inducement to the member banks to buy these standardized securities creates a preferred market for such securities, since the banks are the original purchasers at wholesale of practically all high-grade securities, which they then can sell at retail to individual investors.

The preferred market thus created for such securities furnishes the inducement to corporations and underwriters to list these securities on the Federal exchange, and that inducement would be so great that no firm or corporation could afford not to list any securities which would be eligible.

Thus the three divisions of the bill operate reciprocally, each insuring the success of the other.

RELATION OF THE BILL TO FEDERAL RESERVE ACT AND FEDERAL FARM-LOAN ACT.

The bill in its entirety supplements the Federal reserve act by providing inducements to eligible State banks to join the reserve system, which the State banks could not afford to ignore. These inducements are (1) the right to obtain loans from the Federal reserve banks against high-grade collateral security, in addition to the existing right to discount paper and secure currency; and (2) the right to receive their proportionate share of postal-savings funds, which under this bill would reach several hundred millions of dollars, and which under existing law must be deposited in member banks of the reserve system, if there are any such banks in the communities where the deposits originated.

The admission of the eligible State banks to the reserve system would complete the unification of our banking system, which the Federal reserve act is designed to accomplish.

This bill supplements the Federal farm-loan act by creating a preferred market for securities issued under it, and thus placing such securities on a level with all other high-grade securities. This would enable the land banks to readily sell all the securities they care to issue, and would insure the farmer the benefit of the most favorable rate of interest at all times.

As stated before, in the preparation of this bill I have had the assistance of a neighbor and constituent of mine, Earle P. Carman, one of the ablest financial experts in this country. Mr. Carman has made a very extensive study of finance, both in this country and abroad, and is familiar with the financial systems of all the leading nations. He is an original thinker and his ideas have commanded the attention and received the approval of many of our most eminent financial authorities. I wish to read a paragraph concerning him from Jordan's Encyclopedia of Pennsylvania Biography, which says:

Mr. Carman is a frequent contributor to financial periodicals and an occasional lecturer on financial topics. His insight into financial problems is well illustrated by the fact that he was the first man to publicly advocate important measures in the development of the Federal Reserve Banking System, which were afterwards adopted by the Federal Reserve Board and the National Association of Credit Men. These measures were suggested by Mr. Carman in an article entitled "The change in credit methods made necessary by the Federal reserve act," which was published in the Commercial and Financial Chronicle, of New York, April 24, 1915, later appeared in pamphlet form, and soon found a permanent place in financial literature in the libraries of the American Bankers' Association and of all the Federal reserve banks.

The article above mentioned is also quoted at length in a new financial textbook, recently published by the University of Chicago.

Mr. Carman originated the legislative plan embodied in this bill, and that plan is an adaptation of long established and scientific financial principles to the business and financial conditions existing in this country. This plan was stated and discussed at length by Mr. Carman in an article published in the Annalist, of New York, April 24, 1916. That article was published before the Federal farm-loan act was passed, and it includes a discussion of that act and shows the need of the legislation embodied in this bill and the relation of such legislation to our entire financial system. I wish to read that article in full, which is as follows:

CONSTRUCTIVE LEGISLATION FOR FINANCIAL PREPAREDNESS.

[By Earle P. Carman.]

(NOTE.—As the Federal farm-loan act has been enacted since the following article was written, the other legislation suggested might be combined in a comparatively short and single act, bearing a title such as suggested on the cover hereof and designated (for example) by the short title of "Federal banking consolidation act.")

I.

It can hardly be assumed that the United States will permanently occupy first place in the world as a financial power unless it develops a financial system as efficient and scientific as the financial systems of the great nations with which it must compete for that commanding position.

A nation may be banker to the world only by providing an abundance of capital for foreign investment, and as the development of our internal resources must continue to require a large proportion of the capital of the country for many years to come, the only hope of accumulating any considerable amount of capital for foreign enterprise, without retarding domestic development, lies in the establishment of a financial system which will promote the highest efficiency in credit operations and the greatest economy in the use of capital. Such a system can be established only by legislative acts which are correlated and which supplement each other in such manner as to create a complete structure that will provide lines of communication for the economic movements of capital in response to all the business needs of the country.

Our business activities, considered from a financial viewpoint, naturally divide themselves into three general classes: Commercial operations, agricultural operations, and industrial operations.

As the credit facilities provided by the Federal Reserve System, as at present constituted, are limited practically to commercial operations, and Federal legislation in respect of agricultural operations and industrial operations seems likely to be enacted—either in beneficial or injurious form—we may well profit by examining the principles which should govern such legislation and the objects which it should accomplish.

The ultimate ideal of scientific finance is to make all capital productive in the highest degree. This ideal will never be fully attained, but the nearer the financial system of any nation approaches that supreme perfection the greater will be the prosperity of that nation and the richer and happier its people.

As capital is made up of savings which are constantly accumulating among nearly all classes of people and are therefore very widely scattered, banking institutions are organized for the purpose, inter alia, of mobilizing savings, and financial systems are established for the purpose, inter alia, of utilizing savings as capital.

In financial operations capital is represented by money and credit. This credit is represented by written instruments, varied in value and multitudinous in number, which circulate in somewhat limited, though established, business channels much as the money of the country circulates among the masses. Credit instruments thus constitute a form of currency. For the purpose of comparison we may refer to the money of the country—gold, silver, and paper—as "money currency" and to all forms of credit instruments—whether temporary or permanent in character—as "credit currency."

Money currency is created exclusively by the Government and is always worth its face value in gold, while credit currency is created without limit by private individuals, and its value depends upon the security behind each credit instrument. This security may or may not be worth the face value of the instrument.

Money currency represents only gold in the last analysis, while credit currency may represent any kind of property, fixed or movable, and it may also represent only potential wealth or prospective property values. In the latter case it is speculative credit currency.

This credit currency constitutes the medium of exchange in the great majority of business transactions, which are settled by credit operations in which credits are made to offset each other through the circulation and exchange of credit instruments. Banks and bankers are the intermediaries through whom these credit operations are carried on. The ultimate balances resulting from these exchanges of credit are settled in money, but such balances are relatively so small that their settlement constitutes but a minor part of the banker's duties; and while money is the universal and basic medium of exchange in the last resort, the volume of business transactions settled through credit operations without money is so vast that modern banking may be defined for practical purposes as the "creation, distribution, and exchange of credits."

When these facts are borne in mind, it would appear to be obvious that our financial system, in addition to providing an elastic money currency, should also perform at least the following functions:

1. It should provide legal facilities for the creation and circulation of a sound credit currency in each of the three great fields of business activity—commercial, agricultural, and industrial.

2. It should operate in such manner as to provide the public with a practical means of distinguishing between that credit currency which represents existing property of known value, which we may designate as "scientific credit instruments," and that credit currency which represents only potential wealth or property of unknown value, which we may designate as "speculative credit instruments."

3. It should mobilize our financial resources to the greatest practicable extent by providing depositories for savings which will reach all classes of people, including that considerable number of the population (both native and foreign) who will not intrust their savings to any person or institution except the Government itself.

4. It should unite our strong banking institutions into a single system, in order to effect the greatest efficiency and economy in the utilization of capital when mobilized.

The Federal Reserve System provides credit currency for commercial operations and unites the national banks, but in order that our financial system as a whole may perform the other functions mentioned, the following Federal legislation would appear to be advisable:

1. Legislation which will establish a Federal land credit system, providing for the creation of sound agricultural credit currency.

2. Legislation which will establish a Federal exchange, in order to provide a central public market for (a) industrial securities which have attained the standard of an investment, excluding all speculative securities, and (b) securities issued by the Federal land credit system and all other investment securities; the listing regulations of the Federal exchange to be such that it will operate as the circulation center of investment securities only.

3. An amendment of the postal savings act, which will remove all limitations as to the amount which may be accepted for deposit, the rate of interest paid thereon, and the rate of interest charged on postal savings funds redeposited with private banks, and vest the power to regulate these matters in a committee composed of the governor of the Federal Reserve Board and the chief executive officers of the Federal land-credit system and the Federal exchange.

4. An amendment of the Federal reserve act, which will create an issue department and a banking department in each of the Federal reserve banks; the issue departments to control reserves held against demand deposits, rediscounting, and the issue of currency; and the banking departments to control reserves held against time deposits and the capital of the reserve banks, with authority to make advances to member banks of the reserve system (subject to regulation by the Federal Reserve Board) against securities listed on the Federal exchange.

In order to determine whether such legislation, when combined with existing law, would provide us with a financial system that would perform the functions mentioned, we must now observe the nature and the method of financing commercial operations, agricultural operations, and industrial operations, respectively; then briefly examine the problem of mobilizing savings, and also the problem of unifying our banking system; and in conclusion, observe the probable results of the operation of our financial system, if thus established.

II.

Commercial operations include the transactions involved in the distribution of the marketable products of the land, the factory, and the mine from the time such products come into existence as salable commodities until they reach the consumer, either at home or abroad. Ordinarily there are several sales of the same commodities as they pass from one party to another in the distributing operations which form the connecting links between the producer and the consumer. Each sale may involve a corresponding credit operation; thus the producer may extend credit to the jobber, the jobber may extend credit to the wholesaler, and the wholesaler may extend credit to the retailer, who may pay when the goods are sold to the consumer. In commercial credit transactions the aim is to extend credit to each party only during the period of his possession of the goods, it being assumed that when the goods are sold the loan will be paid out of the money realized; hence, instruments representing commercial credits are said to be "self-liquidating."

Formerly no means existed of identifying commercial credits, which were represented by the same form of instrument used in most other temporary credit transactions; but recently the Federal Reserve Board has provided a means of identifying commercial credit instruments without difficulty by its regulations creating and defining "bank acceptances," "trade acceptances," and "commodity paper," which by their form and origin practically insure their character as commercial instruments, and eventually will doubtless be used exclusively in commercial operations.

As these instruments can be converted into cash at any time by discounting them at the reserve banks, no facilities are needed to expedite their circulation, as in the case of credit instruments of a permanent nature.

III.

Agricultural operations, other than the distribution of products, are financed in other countries through rural-credit societies and land-mortgage banks.

A rural-credit society is an association of producers organized for the cooperative sale of agricultural products and the cooperative purchase of agricultural equipment and supplies. The credit instruments issued by such societies are usually supported by the joint and several liability of all the members and are highly regarded in foreign financial circles, but as such instruments are not secured by any specific assets they must be classified as speculative, for our present purposes, and therefore do not come within the scope of the legislation under consideration.

A system of land-mortgage banks will be provided by the bill reported by the committees of the present (Sixty-fourth) Congress which will be known as the "Federal farm-loan act," if enacted. This bill provides for the division of the United States into 12 districts and the establishment of a Federal land bank in each district and creates a Federal Farm-Loan Board with general supervisory powers. Upon the application of 10 or more persons the farm-loan board may charter national farm-loan associations, to which the land banks may make loans against first mortgages on improved farm land on the amortization plan for periods of from 5 to 40 years, such loans never to exceed half the value of the land mortgaged. Against these mortgages the land banks may issue bonds to be known as "Federal farm-loan bonds," under restrictions which insure that the amount of bonds outstanding shall never exceed the unpaid principal due on the mortgages against which such bonds are issued.

If the Federal farm-loan act proves to be practicable in operation, it will thus provide legal facilities for the creation of sound agricultural credit instruments of the highest class, but the sale of the farm-loan bonds will nevertheless be measured largely by their circulating power, and in order that such bonds or any other investment securities may circulate with ease and rapidity a central public market is absolutely essential. In practical banking operations the value of credit instruments is determined quite as much by the ease and rapidity with which they circulate as by any precise knowledge of the bankers as to the security behind the instruments. The fact that credit instruments can be made to circulate with ease and rapidity is convincing evidence of their soundness, while the fact that they can be sold on a public market at any time for the price quoted at the instant enables bankers throughout the country to make loans against such instruments as security or to realize upon them when necessary if owned outright. The value of such instruments even to the permanent investor is greatly enhanced by their circulating power, which enables him to obtain temporary loans whenever needed without the trouble and expense of changing his investment.

The Federal farm-loan act will not provide the facilities necessary to insure the easy and rapid circulation of land-credit instruments created under it.

IV.

Industrial operations may be said to embrace practically all forms of business activity other than commercial operations and agricultural operations. As industrial enterprises of importance require a vast amount of capital, they are usually owned by a large number of people, each of whom supplies a share of the capital. This distribution of ownership in proportion to the amount of capital contributed is effected by incorporating the enterprise and issuing certificates of ownership in the form of capital stock. Borrowed capital is obtained through the issue and sale of bonds. Although certificates of stock are merely evidences of ownership in the business, while bonds are instruments of credit, yet, in so far as the practical operation of our financial system is concerned, stocks and bonds together may properly be regarded as constituting our "industrial credit currency," used in financing industrial operations.

A great many—perhaps the majority—of industrial enterprises are speculative in their origin. They are designed to develop natural resources in new or only partially developed territory, or to establish new and untried lines of enterprise in existing fields, and are based on possibilities of creating new property values at great profit.

Many industrial enterprises which begin as a speculation develop into an established success. The stocks and bonds used in financing such enterprises are speculative while the enterprises remain speculative and become sound as the enterprises become sound. While an enterprise remains speculative the value of its credit currency can only be guessed at; but after it has attained the dignity of an established business, by growth and development through a period of time, the value of its credit currency becomes fairly definite and can be ascertained with reasonable certainty—that is, as much certainty as ordinarily exists in the line of business followed.

The period during which an enterprise is developing is called the "seasoning period" of its stocks and bonds; and when the enterprise has developed until its power to earn enough, over and above expenses, to pay interest on its bonds and dividends on its stock has been demonstrated with reasonable certainty, such bonds and stocks are said to be "seasoned securities."

"Unseasoned securities" form the basis of speculation, while "seasoned securities" form the basis of investment.

It will be observed that State laws provide ample facilities for the creation of industrial credit currency and existing stock exchanges provide ample facilities for its circulation, but there is no mechanism in our financial system designed to provide the public with a practical means of distinguishing between unseasoned or speculative securities and seasoned or investment securities.

It is contended by some authorities that sufficient facilities for this purpose are provided by existing stock exchanges, which are said to disclose public opinion as to the nature and value of securities listed thereon by quoting the prices which the public is willing to pay for such securities. It is obvious, however, that investors can not determine whether the price quoted for any security discloses the opinion of the speculative public or the opinion of the investing public as to the value of such security. The inability of existing stock exchanges to fairly serve the investing public, as distinguished from the speculative public, is due to the fact that they provide a market for investment securities and speculative securities without distinction. It would appear to be evident that exchanges which operate as circulation centers for both investment credit currency and speculative credit currency, without distinction, can not furnish safe or satisfactory service to those who desire investment credit currency only.

A Federal exchange restricted to investment securities only would appear to create some very desirable connecting links in our financial structure and perform three distinct services of great benefit to sound finance, namely, (1) it would provide the public with a practical means of distinguishing between speculative securities and investment securities, (2) it would standardize high-class investment securities and thus form a basis for the extension of the functions of the reserve banks in such manner as to serve the entire banking community, and (3) it would provide a central public market for securities issued by the Federal land banks and thus impart to such securities the circulating power which is essential to the efficient operation of the agricultural credit system, which the Federal farm-loan act is designed to provide.

Such an exchange should, of course, be governed by a nonpartisan board of governors, and should furnish a voluntary (but not an exclusive) market for all securities which may meet with its listing requirements. Underwriters having such securities to market could be depended upon to list them on the Federal exchange in order to obtain a more ready sale and get their money from investors at a lower rate of interest by reason of the increased public confidence in securities so listed.

It would seem that such an exchange could be located only in Washington because of the absence of constitutional authority for Congress to establish such an institution outside the District of Columbia.

V.

The mobilization of savings is the primary problem in finance in all countries, since savings scattered or hidden are of no public benefit, while savings mobilized become the munitions of finance. This problem is solved quite as much by the variety of the depositories for savings which are provided as by their number. There should be a sufficient variety of depositories to appeal to all classes of people, and a sufficient number to reach all parts of the country.

While there are in the neighborhood of 28,000 private banking institutions in the United States, and they are legally divided into five general classes, yet in respect of the inducements offered to attract savings deposits practically all of these institutions fall within two general classes. Savings are attracted in all countries by the protection offered and the rate of interest paid by the depositories.

In this country four classes of institutions—national banks, State banks, trust companies, and private banks—when considered as classes, offer substantially the same inducements to the public in respect of protection of deposits and interest paid thereon, and thus the effect is the same as if all of these institutions constituted but one general class. Our savings banks form the other general class, and while they sometimes pay a higher rate of interest on deposits than other banks, and are presumed to afford greater protection to depositors by reason of the nature of the investments to which they are limited by law, yet failures of savings banks are frequent enough in most sections to prevent this class of depositories from reaching a very considerable number of our population, especially those of foreign birth.

In respect of the mobilization of savings, the financial system of France outranks all others, the accumulation of savings in that country having long been a wonder of the financial world. In addition to the large number and the variety of private banking institutions which offer inducements to the public for deposits, the Government has provided two classes of savings depositories which it controls to the extent necessary to eliminate practically all risk of loss. The "ordinary savings banks" form one of these classes and the postal-savings banks form the other. The rate of interest paid by the postal-savings banks is always somewhat lower than the rate paid by the ordinary savings banks, although the Government controls the investment of the deposits of both in substantially the same manner. This difference in the rate of interest is designed to encourage deposits in the ordinary savings banks, which are organized by private individuals and thus represent local enterprise.

The postal-savings banks are designed to reach the ignorant, prejudiced, and very timid classes, who look upon governments as omnipotent and either distrust or hate all private bankers or capitalists; and also to reach those sections of the country where the amount of deposits available would not be sufficient to support private depositories, which must necessarily operate at greater expense than the postal depositories.

The deposits of both the ordinary savings banks and the postal-savings banks must be paid into a central institution in Paris which is charged with the control or investment of "all private funds intrusted to the State, either voluntarily or under compulsion." In the investment of savings deposits, this institution is limited practically to Government bonds, municipal bonds, and bonds of the Credit Foncier (land-mortgage bank).

The method of mobilizing savings in France, and the extraordinary success which has attended it, suggest the solution of the problem in

this country. The Federal farm-loan act will be a long step in that direction, as it provides for the establishment of savings departments by the Federal land banks, which in respect of their operation will form a system closely resembling the system of ordinary savings banks of France. The National farm-loan associations (which will be formed in great number if the system is successful) will accept and transmit savings deposits, withdrawable on not less than 30 days' notice, to the land banks of their respective districts, and will make payments of withdrawals to depositors, as agents of the land banks, thus performing substantially the functions of the ordinary savings banks of France; while the savings departments of the land banks will invest their funds in much the same manner that the funds of the ordinary savings banks of France are invested by the central institution in Paris, known as the Caisse Des Depots et Consignations.

Thus the problem of more completely mobolizing our savings, especially in the rural districts, seem to be in fair prospect of solution through the enactment of the Federal farm-loan act, in so far as time deposits are concerned; but the problem in respect of deposits withdrawable on demand (and this includes the savings of a very large number of the foreign element) and, to a considerable extent, the whole problem in the cities remains to be solved.

If the postal savings act were amended, as suggested, and the power to regulate the acceptance of deposits and the rate of interest were thus vested in a proper committee, the postal savings depositories could be made to complete the mobilization of our resources to the greatest possible extent by providing savings depositories which would reach all parts of the country and attract the inactive capital now in hiding among the several classes of people before mentioned.

The records of the Post Office Department show that foreigners now constitute 58.7 per cent of the total number of postal savings depositors and own 71.8 per cent of the total deposits. Under existing restrictions, limiting deposits to $500 and interest to 2 per cent, postal savings deposits at the close of the last fiscal year aggregated less than $66,000,000. If properly regulated the aggregate of such deposits in this country might become relatively as great as in France, in which case our total would be at least $750,000,000.

VI.

No nation can develop its full financial power without a unified banking system. It is evident that the unification of our banking system can be accomplished only by bringing the eligible State banks into the Federal Reserve System, and this can be effected in no other way than by offering inducements which will give the State banks that join the reserve system a decided advantage over those that remain aloof.

The extension of the Postal Savings System in the manner heretofore indicated would swell the aggregate of postal savings funds to several hundred millions, and although these funds must be redeposited ratably with all the banks that qualify in the communities where the deposits originate, yet under the provisions of the reserve act only member banks are eligible to receive such deposits. The right to receive their share of the postal savings deposits would be a strong inducement to State banks to join the reserve system, and if the further inducement were added which would be offered by the banking departments of the Federal reserve banks (should their operations be divided between issue departments and banking departments as suggested) it is difficult to see how any State bank able to get into the reserve system could afford to remain out of it.

If precedent were needed to justify a division of the operations of a central bank into a department of issue and a department of banking, such precedent could be found in the Bank of England, however much conditions in England may differ from conditions here; but the soundness of such a division of functions would appear to be evident upon principle alone, and the wisdom thereof appears to be strongly indicated by existing conditions in this country.

In principle the reserves held against demand deposits are temporary or liquid capital, while the reserves held against time deposits and the capital of the reserve banks partake of the nature of permanent capital. This fact indicates the logical apportionment of the resources of the reserve banks to the issue departments and the banking departments, respectively, and suggests the functions which each department should perform. The issue departments should hold the liquid capital and utilize it in rediscounting and currency operations, and the banking departments should hold the permanent capital and utilize it in advances against investment securities sound enough to be

In respect of existing conditions, although the reserve system has been in operation but a short time and under abnormal conditions, it seems to be clearly evident that the reserves against demand deposits, which will be held in the reserve banks when the reserve act becomes fully operative, will be ample to meet all demands for rediscounts and currency; indeed, this would appear to be above question should such reserves be tremendously augmented by the addition of the strong State banks to the system.

The use of the other resources of the reserve banks by their banking departments would not only reduce idle capital to a minimum and serve the entire banking community, instead of commercial interests only, but would also make the reserve banks paying institutions at all times, while the interest rates in the two departments would always form an accurate index to the general credit situation. So long as the reserve banks are restricted to commercial operations (a restriction not imposed upon the central banks in other countries) their interest rates can scarcely more than indicate the credit situation in respect of liquid capital only.

VII.

It seems reasonable to assume that our financial system, if strengthened by the legislation suggested, would operate substantially as follows:

The issue departments of the Federal reserve banks would provide ample facilities for the creation and circulation of a sound commercial credit currency, while the regulations of the Reserve Board enable the public to distinguish between sound commercial credit instruments and other instruments similar in form but either speculative or nonliquid in character.

A Federal land credit system, such as the Federal farm-loan act is designed to establish, would provide facilities for the creation of a sound agricultural credit currency, easily recognized by the public; while the financing of agricultural enterprises of a speculative character, and of realty operations generally, would continue undisturbed through the facilities already existing or which may be provided by State legislation.

A Federal exchange, if established and operated as suggested, would standardize investment securities, enable the public to distinguish between speculative securities and investment securities without difficulty, and provide facilities for the circulation of the land-credit instruments issued under the Federal land-credit system; while the creation and circulation of industrial securities of a speculative character would continue undisturbed through the facilities provided by existing law.

The savings depositories of the land banks would complete the mobilization of savings of a permanent nature, especially in the rural districts; while the Postal Savings System, if extended as suggested, would complete the mobilization of savings of a temporary nature in all parts of the country and bring into use a vast fund of capital now idle and unproductive.

The Postal Savings System would be operated justly and scientifically by a committee composed of the chief executive officers of the Federal Reserve Board, the Federal land-credit system, and a Federal exchange, which would represent practically all the divergent business interests of the country and would possess that knowledge of conditions which should enable it to operate the system in such manner as to promote the public welfare in the highest degree.

The inducements provided by the deposits of postal savings funds and the banking departments of the reserve banks would bring nearly all the eligible State banks into the reserve system and make it the greatest power in finance that ever existed, while the reserve banks would serve the entire banking community and always indicate the credit situation by their interest rates.

And finally, it is believed that such a system would provide legal channels for the natural movements of capital with the greatest safety, freedom, and efficiency, and thus infuse into domestic finance that economy which, with the increase in national resources effected through the more complete mobilization of savings, would provide the United States with sufficient capital for foreign enterprise to make it a formidable contender for the premier position as a financial power.

Before concluding these remarks it might not be amiss to state that this bill has already created quite a good deal of favorable comment from the press throughout the country. Many inquiries have been made as to the scope of the measure, and I therefore would like to add that its intention is not to assume Federal control of any stock exchange, or affect their operations in any manner, except that it would tend to reduce unintentional speculation by enabling investors to keep out of the speculative market when they really desire to do so. The measure is also absolutely devoid of partisan politics; but foreseeing that in the near future there would be a need for such constructive legislation, I have carefully planned and worked out this bill as the basis for a measure that would be constructive in its every operation and destructive in no sense of the word.

Post Office Appropriation Bill.

EXTENSION OF REMARKS
OF
HON. WILLIAM A. AYRES,
OF KANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, January 13, 1917.

Mr. AYRES. Mr. Speaker, the amendment to the Post Office appropriation bill which has for its object the granting of a horizontal increase in salary of 10 per cent to the employees in the Postal Service drawing less than $1,200 per annum and a 5 per cent increase in the salaries of those employees drawing not more than $1,800 and not less than $1,200 per annum is simply an act of justice to these employees and in keeping with the general sentiment of public and private employers to allow their employees a fair wage in return for the services rendered. The wages these men receive to-day were fixed by law some 10 years ago to meet conditions as they existed at that time. The enormous increase in prices of all necessary commodities that go to maintain the average American family has decreased the purchasing value of the dollar to the extent that grave difficulties are experienced in trying to continue a fair standard of living. The contention of these employees that their present pay is utterly inadequate to support their families and themselves is genuine and will be borne out by a close study of statistics compiled by the Department of Labor and by special investigators and committees directed to look into the unsettled affairs to see if a remedy could be had to relieve the situation.

In the report of the Department of Labor, Bureau of Labor Statistics, No. 194, on page 20, we are informed that rates of wages of the industrial classes of employees covered in their investigation advanced 15 per cent from 1907 to 1915, while the advance in the retail prices of foods for the same period showed a 23 per cent rise. No later data officially compiled is available showing the rates of increase or the number of employees affected in outside industries since 1915, but it is safe to say that increases ranging from 10 per cent to 50 per cent have been allowed and that approximately 6,000,000 employees have benefited thereby. From 1915 to 1916 the Bureau of Labor Statistics show that there has been an increase of 16 per cent in the retail prices of articles of food, or an approximate total of 39 per cent increase in the prices of foods alone since 1907, the time that the present salary schedule went into effect. Another interesting fact shown by the report of the Department of Labor is that

between the months of September and October, 1916, the prices of foods jumped 3 per cent. These reports, however, deal only with articles of food and do not take into consideration other necessary commodities that are needed by the average family. Figures compiled by Bradstreet's, and which we can assume as being reasonably correct, show that at the opening of the month of December commodity prices, collectively considered, were 25 per cent higher than the level registered at the outset of the year, and that in the period November 1 to December 1 alone the increase in commodity prices jumped 7 per cent. Employers in the industrial and commercial world have granted their employees reasonable and fair wage increases as an absolute necessity and as an act of justice.

According to reports the United States Steel Corporation has added $20,000,000 to its annual pay roll, and similar action has been taken by independent steel makers. According to a statement published in the Literary Digest the trend toward wage raising is almost universal. The successive advances of the Standard Oil Co. of New Jersey mean that its employees are getting 37 per cent more than they did in August, 1915, while their working days are shorter. Silk mills near Passaic, N. J., have followed up an earlier increase of 20 per cent with one of 10 per cent more. Some 30,000 workers employed by the American Clothing Manufacturers' Association are to get wage increases of from 35 per cent to 40 per cent, and nonmember manufacturers are expected to follow.

The Edison Co. and the Consolidated Gas Co. of New York have devised schemes for paying their workers the same percentages on their quarterly wages that stockholders receive in dividends on their stock. The Westinghouse Electric Co. reports a 12 per cent increase. The Northern Pacific Railroad's less-highly paid workers get a 5 per cent wage raise. New York State glove manufacturers are to give their Fulton County workers from 4 per cent to 25 per cent more than they have been getting. It was recently announced in Chicago that 25 business concerns were putting an additional $10,000,000 per year into the pay envelopes of their 100,000 employees. Some 35,000 employees of the American Woolen Co. get a 10 per cent raise. Others sharing in the widespread distribution of prosperity are rubber workers in Rhode Island; cement workers in New Jersey; coal miners in Kentucky; cotton-mill operatives in Georgia; potters in Ohio; tanners in Pennsylvania; plowmakers in Indiana; Colorado Fuel & Iron employees in Colorado; lumbermen in Missouri, Arkansas, Louisiana, and Texas; explosive makers in Pennsylvania, New Jersey, Michigan, Missouri, and Oklahoma; and the scattered employees of the Adams, Wells-Fargo, and Western Express Cos.

From these statements it will be seen that the wages of employees in all branches of industries have more than kept pace with the increased cost of the necessaries of life, but that no increases have been allowed the Government employees to offset the steadily diminishing value of their fixed compensation. We are face to face with a condition that should be remedied. These men have no other alternative than to look to this Congress for relief, and, as has aptly been said by the gentleman from Illinois [Mr. MANN], it is in our power to say whether or not the prosperity that is enjoyed by others shall result in a calamity to the Government employees.

The House of Representatives in its wisdom has seen fit to include in the legislative, executive, and judicial appropriation bill a provision to allow similar increases to the employees in the executive departments, as are proposed in this amendment. I believe that we should make no discrimination against the employees in other branches of the Government service. It costs just as much, if not more, to live in other sections of the country as it does in Washington, and the employees in the Postal Service located in every part of the United States should benefit by legislation to allow them this fair advance in pay.

City of Okmulgee—The Creek Capital.

EXTENSION OF REMARKS

OF

HON. WILLIAM W. HASTINGS,

OF OKLAHOMA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, January 19, 1917.

Mr. HASTINGS. Mr. Speaker, in the early part of the last century, about 75 years ago, the Creek Tribe of Indians was induced by treaty to remove west of the Mississippi River and to locate in what is now the State of Oklahoma. A very large tract of land was patented to the tribe by the Government. From time to time, however, their land holdings were reduced, and by the treaty of 1866 alone they were induced to sell to the Government more than 3,000,000 acres of land at the very low price of about 30 cents per acre.

When the Dawes Commission, by the act of March 3, 1893, was sent to the Five Civilized Tribes to get them to give up their tribal government and consent to the allotment of their lands, this tribe consisted of about 16,000 members and held more than 3,000,000 acres of land in the very heart of eastern Oklahoma. Under agreements made the land of this tribe has been allotted and their affairs, in a large measure, have been wound up.

Okmulgee was the Creek tribal capital, where the Creek Legislature met from year to year for more than three-quarters of a century. The item in this bill provides for the purchase of the old capitol building and the block of ground upon which it stands to be used by the Government as a post office and other offices in the city of Okmulgee. Under an agreement with the Creek Tribe this block of ground was appraised about four years ago by representatives of the Government and the Creek Tribe at $65,000. It is in the business district and is easily worth $100,000. A representative of the Government sent to inspect the building and block in his report verified my estimate of the value of the property made before the committee.

The members of the Creek Tribe, whose tribal existence is passing into history, and the white people of Oklahoma earnestly desire to have the exterior of this old capitol building retained in its present form, so far as possible, as a memorial to the Creek Tribe. The purpose of this item is to appropriate money with which to buy it and the ground upon which it stands, rearrange the interior of the building, modernize it and enlarge it, for use as a post office and other Government offices. The additional appropriation reported for the enlargement is upon the estimate made by the Treasury Department.

The city of Okmulgee has now a population of perhaps 15,000 people. It is one of the rapidly growing cities in eastern Oklahoma. It is difficult to explain to the House how rapidly cities grow in my State in the heart of the oil belt. A few years ago oil was discovered in northern Oklahoma, and its development has extended southward throughout the entire State until it has reached the southern border. Within the past four years oil, gas, and coal in very large quantities have been found on all sides of Okmulgee and developed, so that the population has grown phenomenally. A representative of the department verified my estimate of the population a year ago, when these hearings were held, and I am satisfied that since then the population has increased, so that I am safe in estimating it at 15,000.

Since hearings were had upon this bill, new pools of oil have been found almost within the city limits. Wells have been struck in this new field reported to be making 500 barrels of oil per day. You can stand in the city of Okmulgee and see oil derricks piercing the sky in every direction. This fact accounts for the very rapid growth of the city. Another railroad has been built into the city in the past year, connecting the M., O. & G. R. R. and the wonderful coal fields 10 or 12 miles south of there, so that appreciating the growth made in the past few years and anticipating the future growth of the city, the Treasury Department recommended an enlargement of the capitol building, in the event it is purchased.

The postal receipts at Okmulgee for the fiscal year ending July 1, 1915, amounted to $25,767.25. From the statement of the chairman of the committee I see that the receipts for the fiscal year ending June 30, 1916, were $28,634.30.

When the hearings upon this bill were held there were 13 employees in the post office there, including the city carriers, rural-route carriers, and other employees.

In addition, there are located in the Government service at Okmulgee an examining United States commissioner, a probate attorney with a stenographer and other assistants, a field clerk with an interpreter and stenographer in the Indian Service, and other employees of the Government. It is the purpose to use this building to accommodate not only the post office, but the other offices of the United States.

Okmulgee is one of the most rapidly growing cities in my district, and before this building can possibly be completed, I predict that it will have a population of 25,000. It is in the center of a splendid agricultural country, and, as before remarked, to the south, only a few miles and in the same county, large areas of land are underlaid with coal. This cheap fuel has attracted many industries to Okmulgee, and among them there are a number of oil refineries employing a small army of men, and three or four glass factories, one of which, the Okmulgee Window Glass Co., is said to be the largest of its kind in the United States, employing 640 men. When I visited this plant more than a year ago I saw a large number of cars

of plate glass boxed and addressed for shipment to China. Several foundries and a bottle factory are also located there. All these industries in the aggregate, it is estimated, employ more than 2,000 men.

A large number of oil companies have headquarters at Okmulgee. To indicate the size and importance of these companies, their financial responsibility and the extent of their operations. I call your attention to an article in the Okmulgee Daily Democrat of date January 14, 1917, which I hold in my hand. It is stated therein that the Okmulgee Producing and Refining Co. has been organized with headquarters at Okmulgee, capitalized at $5,000,000, with $2,000,000 of the stock subscribed in the city of Okmulgee alone.

Okmulgee has many magnificent hotels, as well as costly church and school buildings. Okmulgee County recently voted $125,000 in bonds to build a county courthouse, and the county also voted a bond issue of $800,000 to build a fine system of roads throughout the county. It is modern and up to date in every respect. It has up-to-date office buildings, four or five large banks, a street-car system, a daily newspaper, a live commercial club, paved streets, electric lights, and waterworks. There is no more active section of our State or country. No city contains a more intelligent or progressive citizenship.

The tract of ground proposed to be purchased comprises an entire block, 205 feet by 218 feet.

Everyone in my section is familiar with the growth of eastern Oklahoma. The Federal census showing the population of our State is not a fair guide, but, as before stated, the report of the Post Office Department, transmitted through the Treasury Department to the committee, verifies my estimate of it a year ago.

This is a meritorious item. The building is needed for use as a post office and for other employees of the Government. In view of the fact that the Creek Tribe of Indians has contributed so much to civilization by yielding to the demands of the Government in the sale of their lands at a nominal figure and consenting later to an allotment of the remainder, there should be some monument left in their country that for years to come will show to thousands who visit the old Creek capital that this tribe once occupied that country.

With this block of ground sold for commercial purposes and the building destroyed there would be nothing in the future to indicate that a civilized tribe ever possessed it. In closing, I appeal to Congress to give this slight recognition to a tribe whose government is passing into history.

Snobbishness Rampant.

EXTENSION OF REMARKS
OF
HON. GEORGE HUDDLESTON,
OF ALABAMA,
IN THE HOUSE OF REPRESENTATIVES,

Friday, January 19, 1917.

Mr. HUDDLESTON. Mr. Speaker, strange to say we have our American lovers of titles and aristocracy. There are citizens of our country who hanker for the false social distinctions of the Old World and would like to import European customs and institutions. They are not content with the plain Democratic customs such as suited the founders of the Republic, but pine for a system of titles and privilege.

The rampant snobbishness of these dissatisfied Americans is illustrated by three bills now pending before the House Committee on Foreign Affairs by which certain Army and Navy officers are seeking permission to accept decorations of knighthood from European governments. The bills in question were recently referred for report to a subcommittee of which Hon. JOHN J. ROGERS is a member. Mr. ROGERS has given the subject matter of these bills diligent and careful consideration, and my purpose here is to set forth a memorandum upon the subject that Mr. ROGERS has prepared, as follows:

MEMORANDUM OF HON. JOHN J. ROGERS.

Three bills are pending before the Committee on Foreign Affairs, each authorizing a United States Army or Navy officer "to accept and wear" a decoration bestowed upon him by a foreign Government. The first, H. R. 7813, introduced by Mr. FLOOD on January 5, 1916, is to authorize Lieut. Col. William E. Horton, United States Army, to accept the decoration of knight commander of the Order of Nichan-el-Anouar bestowed upon him by the President of the French Republic through the Department of State of the United States; the second, H. R. 8312, introduced by Mr. MOTT on January 7, 1916, is to authorize Lieut. Col. John P. Finley, United States Army, to accept the decoration presented to him by the Sultan of Turkey through the Department of War of the United States; the third, H. R. 9651, introduced by Mr. STEELE of Pennsylvania on January 20, 1916, is to authorize Lieut. Commander W. Pitt Scott, United States Navy, to accept the decoration presented to him by the Sultan of Turkey through the Department of State of the United States.

Article I, section 9, of the Constitution of the United States provides, in part:

"And no person holding any office of profit or trust under them [United States] shall, without the consent of the Congress, accept of any present, emolument, office, or title, of any kind whatever, from any king, prince, or foreign State."

The three bills above referred to clearly come within the constitutional prohibition, and therefore require enabling legislation from Congress if the officers in question are to be permitted to receive the decorations. An act of Congress, approved January 31, 1881, provides, in part, as follows:

"SEC. 2. That no decoration or other thing, the acceptance of which is authorized by this act, and no decoration heretofore accepted, or which may hereafter be accepted, by consent of Congress, by any officer of the United States, from any foreign Government, shall be publicly shown or exposed upon the person of the officer so receiving the same.

"SEC. 3. That hereafter any present, decoration, or other thing, which shall be conferred or presented by any foreign Government to any officer of the United States, civil, naval, or military, shall be tendered through the Department of State, and not to the individual in person, but such present, decoration, or other thing shall not be delivered by the Department of State unless so authorized by act of Congress."

This legislation adds two elements to the constitutional provision above quoted: First, that no decoration shall be publicly worn by the recipient, and, second, that all such recognitions by foreign Governments shall be tendered via the Department of State. The permission of Congress is, of course, still requisite.

Congressional permission has been rather sparingly extended to officers of the Army and Navy during past recent years. Herewith is appended what is believed to be a substantially complete list of decorations, the acceptance of which by Army and Navy officers has been authorized by Congress during the past 35 years:

J. W. A. Nicholson, commodore, United States Navy: Decoration conferred by Spanish Government in recognition of his services to the officers and crew of the wrecked warship *Pizarro*. (Approved Jan. 31, 1881.)

Francis V. Greene, lieutenant, United States Army: Decoration conferred by Emperor of Russia for bravery at the Battle of Shipka Pass and at the assault of Plevna; also decoration for bravery under fire during the passage of the Balkans and at the Battle of Philippopolis. (Approved Jan. 31, 1881.)

John J. Almy, rear admiral, United States Navy: Decoration conferred by King of Hawaiian Islands as an evidence of his appreciation of that officer. (Approved Jan. 31, 1881.)

William J. Wilson, assistant surgeon, United States Army: Decoration conferred by Khedive of Egypt for gallantry in battle. (Approved Jan. 31, 1881.)

Joseph Irish, United States revenue marine: Decoration conferred by Spanish Government in recognition of his services to the officers and crew of the Spanish warship *Pizarro*. (Approved Jan. 31, 1881.)

Benjamin H. Buckingham, lieutenant, United States Navy. Decoration conferred by President of France in appreciation of his services in connection with the exposition of 1878 at Paris. (Approved Jan. 31, 1881.)

Henry Metcalfe, lieutenant, United States Army: Decoration conferred by Sultan of Turkey for his services in connection with the inspection of arms and ammunition manufactured for the Imperial Ottoman Government.

Francis A. Walker, general, Superintendent of the Census: Decorations conferred by the Government of Spain and the Government of Sweden, respectively, in recognition of his services at the Centennial Exposition at Philadelphia. (Approved Jan. 31, 1881.)

Oliver Otis Howard, major general, United States Army: Decoration conferred by President of France. (Approved Mar. 9, 1894.)

F. W. Dickins, commander, United States Navy: Decoration conferred by King of Spain in recognition of his services in representing the President of the United States, in charge of the courtesies to the Duke of Veragua, Christopher Columbus 13th, while he was the guest of the Nation at the time of the late Columbian Exposition. (Approved Apr. 24, 1894.)

John G. Walker, rear admiral, United States Navy: Decoration conferred by President of Venezuela in acknowledgment of the care and attention shown to the wounded officers and men of both political parties in the vicinity of La Guayra, Venezuela, during the revolution of 1892. (Approved July 23, 1894.)

J. Rufus Tyron, surgeon general, United States Navy: Decoration conferred by President of Venezuela in acknowledgment of the care and attention shown to the wounded officers and men of both political parties in the vicinity of La Guayra, Venezuela, during the revolution of 1892. (Approved July 23, 1894.)

C. H. Davis, commander, United States Navy: Decoration conferred by King of Spain in recognition of his services while detailed to attend the Infanta of Spain during her visit to this country. (Approved July 23, 1894.)

George P. Blow, ensign, United States Navy: Decoration conferred by Hawaiian Government in recognition of services to the King of Hawaii upon his visit to California. (Approved Mar. 3, 1897.)

S. B. Luce, rear admiral, United States Navy: Decoration conferred by King of Spain in recognition of the services rendered by that officer as a delegate of his Government in the commemoration of the fourth century of the discovery of America and his active cooperation toward the brilliancy of the acts with which the event has been celebrated. (Approved Jan. 16, 1895.)

P. M. Rixey, surgeon, United States Navy: Decoration conferred by the King of Spain in recognition of his services to an officer and sailors of the *Santa Maria* injured by an explosion on that ship in New York Harbor. (Approved Jan. 26, 1897.)

George S. Dyer, lieutenant, United States Navy: Decoration conferred by Hawaiian Government in recognition of services to the King of Hawaii. (Approved Mar. 3, 1897.)

George C. Remey, captain, United States Navy: Decoration conferred by Hawaiian Government in recognition of his services to the King of Hawaii. (Approved Mar. 3, 1897.)

George W. Woods, medical inspector, United States Navy: Decoration conferred by Hawaiian Government in recognition of services to the King of Hawaii. (Approved Mar. 3, 1897.)

George Brown, rear admiral, United States Navy: Decoration conferred by Hawaiian Government in recognition of services to the King of Hawaii.

Simon Newcomb, professor, United States Navy: Decoration conferred by France for his services to the French Academy of Sciences as corresponding member. (Approved Mar. 3, 1897.)

Asaph Hall, professor, United States Navy: Decoration conferred by France for his services to the French Academy of Sciences as corresponding member. (Approved Mar. 3, 1897.)

William McCarty Little, lieutenant, United States Navy: Decoration conferred by Spain for his services in connection with the Columbian Exposition. (Approved Mar. 3, 1897.)

In addition to the foregoing, which are all cases of recipients of decorations from foreign Governments, the following men in the service of the United States have received congressional authority to accept medals, diplomas, or gifts tendered by foreign Governments:

Thomas Williamson, surgeon, United States Navy: Awarded a gold medal by Emperor of France. (Approved Aug. 30, 1856.)

James F. Harrison, passed assistant surgeon, United States Navy: Awarded gold medal by Emperor of France. (Approved Aug. 30, 1856.)

M. F. Maury, lieutenant, United States Navy: Awarded gold medals by Governments of Prussia and Holland and the Republic of Bremen, respectively. (Approved Aug. 30, 1856.)

Dr. Elisha K. Kane, passed assistant surgeon, United States Navy: "Token of thankfulness" from Great Britain for search in Arctic Seas for Sir John Franklin. (Approved Aug. 30, 1856.)

Alexander D. Bache, superintendent of Coast Survey, United States: Awarded gold medal by King of Sweden. (Approved Aug. 30, 1856.)

Spencer F. Baird, assistant secretary of Smithsonian Institution: Awarded medal and diploma by King of Sweden in recognition of his scientific services. (Approved June 30, 1878.)

Edmund O. Matthews, commander, United States Navy: Awarded a gilt teapot by Emperor of Siam, as a souvenir. (Approved Dec. 15, 1877.)

Z. L. Tanner, lieutenant, United States Navy: Awarded vases and lacquered box by Japanese Government in recognition of his services to four Japanese seamen whom he rescued. (Approved Jan. 19, 1877.)

William Reynolds, rear admiral, United States Navy: Vases and Chenam box from the Siamese Government. (Approved Mar. 4, 1878.)

T. B. M. Mason, lieutenant, United States Navy: Awarded silver medal by King of Italy in rescuing Italian steamer from fire. (Approved May 16, 1878.)

John E. Johnson, keeper of life-saving station at Hog Island, Va., and members of the life-saving crew were awarded medals of honor and diplomas by the Government of Spain in recognition of their gallant rescue of the crew of the Spanish steamship *San Albano*, wrecked in the vicinity of Cape Charles. (Approved July 23, 1894.)

Dennis W. Mullan, commander, United States Navy: Medal presented to him by Chilean Government as a memento of his presence with the headquarters of the Chilean Army at the battles of Chorillos and Miraflores, in Peru. (Approved Jan. 21, 1895.)

Sidney S. Jordan, lieutenant, Fifth United States Artillery: Awarded medal by Great Britain for humane services to the shipwrecked crew of the British ship Strathblane. (Approved Mar. 7, 1896.)

Edward C. Carter, assistant surgeon, United States Army: Medal from Government of Great Britain for humane services to the shipwrecked crew of the British ship Strathblane. (Approved Mar. 7, 1896.)

Benjamin Harrison: Medals presented to him by the Governments of Brazil and Spain during the term of his service as President of the United States. (Approved Apr. 2, 1896.)

Herbert H. D. Pierce, secretary of legation at St. Petersburg: Medal conferred upon him by the Imperial Russian Government in recognition of his services at the time of the coronation of the Czar. (Approved Mar. 3, 1897.)

W. A. Kirkland, rear admiral, United States Navy: Gold box presented to him by Emperor of Germany. (Approved Mar. 3, 1897.)

Frank Laviere: Awarded medal by Hawaiian Government in recognition of services to the King of Hawaii. (Approved Mar. 3, 1897.)

B. H. McCalla, rear admiral, United States Navy: China war medal from Great Britain and Order of the Red Eagle, with swords, from Germany. (Approved Mar. 4, 1907.)

In the Sixty-first Congress there were pending before the Committee on Foreign Relations of the Senate 200 requests for the consent of Congress to the acceptance of gifts or decorations tendered by foreign Governments to officers of the United States. Senate Report 373, Sixty-first Congress, second session, presented to the Senate by Mr. Root on March 10, 1910, considers quite fully the underlying principles to be applied to legislation of this sort. In part, this report reads as follows:

"It seems that requests of this character should be passed upon in accordance with some declared principle of action, so that one officer should not have his request refused and another receive authority as the result of accidental circumstances attending the presentation of the request.

"The existence of the prohibition in the Constitution indicates that the presumption is against the acceptance of the present, emolument, office, or title. A habit of general and indiscriminate consent by Congress upon such applications would tend practically to nullify the constitutional provision, which is based upon an apprehension, not without foundation, that our officers may be affected in the performance of their duties by the desire to receive such recognition from other Governments. A strong support for the view that the practice should not be allowed to become general is to be found in the fact that the Government of the United States does not confer decorations or titles or, unless in very exceptional cases, make presents to the officers of other Governments. It is not suitable that we should permit our officers to receive courtesies which we do not reciprocate by extending similar courtesies to the officers of other Governments. We are of the opinion that the following rules should be observed:

"1. That no decoration should be received unless possibly when it is conferred for some exceptional, extraordinary, and highly meritorious act, justifying beyond dispute a special mark of distinction.

"2. That no presents should be received except such articles as are appropriate for souvenirs and marks of courtesy and appreciation and having an intrinsic value not disproportionate to such a purpose.

"3. That the acceptance of presents within the limitation above stated should be further limited to cases in which some exceptional service or special relation justifying the mark of courtesy exists between the recipient and the Government offering the present.

"4. That no offer of any other title or emolument or office should be considered.

"5. We consider that membership in learned societies, even though the appointment thereto may have a quasi governmental origin, should not be considered as coming within the constitutional provision, and it may well be that as to certain trifling gifts, such as photographs, the rule of de minimis lex non curat should be deemed to apply."

Applying the foregoing rules the Committee on Foreign Relations recommended that the consent of Congress to the acceptance of presents offered to officers of the United States be given in some 30 of the 200 cases pending. The report concludes:

"We recommend that consent be refused in all the other cases specified in the pamphlet, including all the offers of decorations."

The bill embodying the recommendations of this report passed the Senate and was referred to the House Committee on Foreign Affairs, where it lapsed. Since that time no action along the line indicated has been taken.

In response to a request for information upon the subject, Adjt. Gen. McCain, on January 15, 1916, states:

"No compilation has ever been made by the War Department showing the total number of cases in which acceptance of foreign decorations has been authorized."

If the House should concur in the general principles laid down by the Committee on Foreign Relations of the Senate, it will be observed that no decoration—such as is contemplated by the three pending bills—should be authorized unless the cases present "some exceptional, extraordinary, and highly meritorious act, justifying beyond dispute a special mark of distinction." This, of course, is a question of fact to be considered by the committee in the light of the evidence accompanying the bills.

Philadelphia Customhouse.

EXTENSION OF REMARKS

OF

HON. J. HAMPTON MOORE,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, January 19, 1917.

Mr. MOORE of Pennsylvania. Mr. Speaker, in addition to what I said in debate on the public buildings and grounds bill, I desire to insert some interesting data with respect to the famous old Philadelphia customhouse and the work it does for the United States. The appropriation of $750,000 carried in the bill is to purchase a site for a new customhouse. It does not contemplate the destruction or removal of the present building, which is one of the architectural attractions of the Nation. This majestic old structure was built for the Bank of the United States, and in it that bank was housed during the memorable controversy between its president, Nicholas Biddle, and Andrew Jackson, President of the United States. The bank was located in this building when Jackson finally triumphed over it, and for years, at least, determined the fate of a great central bank in this country.

With this brief reference to the history of the customhouse building, I respectfully submit particulars concerning its use, which have been verified by the present collector of the port. They will be found worth reading from a historical as well as from an economical point of view.

MEMORANDA REGARDING PROPOSED NEW CUSTOMHOUSE.

The present customhouse building on Chestnut Street, below Fifth, extending to Sansom Street, was erected in 1821, at a cost of $413,081, by and for the use of the United States Bank. It was purchased by the Government in 1841 for $225,000, and was used for customs purposes exclusively until 1867, in which year the United States Subtreasury was moved into the building and has since occupied the entire rear or Sansom Street end, comprising an area of 87 by 54 feet. This includes offices, record rooms, vaults, and stairways, and is practically one-third of the entire building.

RECEIPTS.

The receipts of the office for 1915 were $11,718,228.95; for 1914, $14,876,952.67; and for 1913, $19,356,120.40, showing a gradual falling off by reason of the war and conditions resulting therefrom. A large sugar refinery has been reopened after 20 years' idleness, and the receipts for 1916, conservatively estimated, will be $18,000,000.

While it is impracticable to report the collections made in this building since its occupancy by the Government in 1841, it has been found, on examination of the available records, that the total customs receipts from January 1, 1881, to January 1, 1916, were $604,386,640.30.

IMPORTS AND EXPORTS.

The value of imports for the three years in question decreased from $91,947,390 in 1913 to $69,473,983 in 1915, while for the corresponding period the value of exports increased from $72,236,967 in 1913 to $132,216,106 in 1915. This increase and decrease are due largely to the war.

ENTRIES.

Entries and their accompanying invoices are an index of a part of the work of customs officials. The number of entries filed during the year 1915 was subnormal by reason of the European war. The number of entries filed for the last three years is as follows: 1913, 74,315; 1914, 66,355; 1915, 35,377.

STEAMSHIP LINES, PASSENGERS, AND TONNAGE.

When the war broke out there were 38 regular steamship lines plying between this port and foreign ports. Since that time the German, Austrian, and Belgian lines have been discontinued, and the regular lines to other countries have had very uncertain schedules. Nevertheless, the number of arrivals of vessels from foreign countries has not fallen off to the extent to be expected. The number of such vessels which entered Philadelphia and their tonnage for the last three years is as follows: In 1913, 1,196 vessels arrived, with a tonnage of 2,914,944 tons; in 1914, 1,021 vessels arrived, with a tonnage of 2,305,459; and in 1915, 1,077 vessels arrived, with a tonnage of 2,091,586 tons.

The effect of the war is more pronounced as to the number of passengers arriving at this port than in any other respect. During the year 1913, 74,479 passengers arrived in Philadelphia, while in the year 1915 only 1,338 arrived.

COST OF COLLECTIONS.

The cost of collecting $1 at Philadelphia is $0.042; the cost at the other large ports is as follows: New York, $0.028; Boston, $0.088; San Francisco, $0.096; New Orleans, $0.044; Baltimore, $0.123.

MORE ROOM NEEDED FOR COLLECTOR.

The collector's room is large enough, but the room adjoining which should be used by him as a waiting or anteroom, and was formerly so used, is divided into two offices and occupied by his private secretary and stenographer and the special deputy collector. This was rendered necessary because the room formerly occupied by the special deputy had to be given up in order to relieve a congested condition in the main room.

Persons waiting to see the collector must stand, or, if there be room enough, sit on a bench in the corridor.

ALSO FOR THE SPECIAL DEPUTY.

The special deputy's present office is too small to contain the necessary furniture, such as bookcases, filing cases, office safe, and so forth. Books of reference and other documents that should be in this room are relegated to remote parts of the building for want of room. There is no waiting room to this office save the corridor.

ALSO FOR THE SECRETARY AND STENOGRAPHER.

This office is nearly filled with absolutely necessary furniture, and the accommodations for persons having business to transact therein are ridiculously inadequate.

Neither this office nor the office of the special deputy—which are practically in one room—is properly lighted. Not a single ray of direct sunshine ever finds its way into either office.

MAIN BUSINESS ROOM CRAMPED.

In this office every available spot is being utilized, even to the extent of building filing cases under the windows and wardrobes in the corridors. Everything is crowded, and the working force is seriously incommoded. Additional filing cases and desks are badly needed; in fact, have been ordered by direction of the department, but there is no space to put them. The work of the office is increasing every year, and it is even now necessary to increase the force, but no room can be found for additional employees. The bulk of the correspondence is prepared in this office under great difficulties. There should be a special room for this work.

AUDITING AND STATISTICAL DEPARTMENTS.

These departments are confined to what is practically one room. This room is overcrowded, and the facilities for doing business are very unsatisfactory.

THE CASHIER CROWDED.

In the effort to secure more space for general business, the toilet room was moved into the basement, and the vacated space fitted up as a cashier's office. It is too small, too close and hot, and too generally unfit for the purpose to be satisfactory. The size of this room is 19 by 11 feet. The space occupied by furniture, which consists of three desks, a large counter, wardrobe, safe, chairs, and so forth, reduces the working space for a force of three men to a decidedly uncomfortable limit.

THE NAVAL OFFICE.

The naval officer, his deputy, and 13 employees are crowded into two rooms. The space is entirely inadequate for the work of the office, and much inconvenience is experienced.

THE SURVEYOR'S QUARTERS.

The surveyor, his special deputy, and 11 employees occupy two rooms on the second floor, neither of them large. They are overcrowded, and the work is consequently impeded.

THE FILING OF RECORDS.

The file rooms in the loft of the building are inadequate for the purpose and not at all adapted to modern needs. Owing to want of room, it is necessary, at stated periods, to inclose in packing boxes valuable records and send them for storage in the appraiser's stores building. This makes it very inconvenient when it becomes necessary, as it frequently does, to examine these records for statistical purposes.

THE CUSTOMHOUSE LACKS AN ELEVATOR.

The absence of an elevator in that portion of the building used for customs purposes is a source of great inconvenience, not only to the officials and employees, but to all persons having customs business to transact, and is the subject of frequent comment and complaint. To enter the building on the main business floor it is necessary to ascend a flight of 20 steps, and to reach the second floor a further climb of 35 steps is required. A large amount of business is transacted with the surveyor's office, which is improperly located on the second floor, and which makes it necessary for the importing public to climb a flight of stairs. To ladies and persons advanced in years, many of whom have business transactions with the customhouse, this is a great hardship.

In short, the building is archaic, incommodious, and not at all adapted to the present needs of the service.

PORT STATISTICS UP TO DATE.

As showing the present need for a new customhouse, and in order to bring the Philadelphia port statistics up to date, I also append the following statement of the surveyor of customs at Philadelphia for the fiscal years ending June 30, 1915 and 1916. In this connection I am also pleased to include the words of commendation by the Secretary of Commerce of the work done at the port of Philadelphia:

OFFICE OF THE SURVEYOR OF CUSTOMS,
PORT OF PHILADELPHIA.

Comparative statement of revenue collected, etc., by principal customs districts, compiled from the annual reports of the Secretary of the Treasury for the fiscal years ending June 30, 1915 and 1916 (issued Dec. 4, 1916).

Ports.	Receipts.	Expenses.	Cost of collecting $1.	Number of employees.
New York:				
1915	$148,536,425	$4,224,525	$0.028	3,107
1916	152,943,408	4,207,659	.0275	3,021
1916	[1] 4,406,983	[2] 16,866	[2] .0054	[2] 86
Philadelphia:				
1915	12,058,890	510,296	.042	392
1916	15,121,689	497,688	.0329	384
1916	[1] 3,052,799	[1] 12,613	.009	[2] 8
Boston:				
1915	10,391,891	923,089	.088	697
1916	9,831,646	899,117	.0915	682
1916	[2] 560,245	[1] 23,972	[1] .004	[1] 15
New Orleans:				
1915	7,200,040	321,772	.044	247
1916	6,548,644	311,501	.0476	227
1916	[2] 651,396	[2] 10,271	[1] .004	[2] 20
San Francisco:				
1915	4,887,611	470,279	.096	348
1916	4,754,196	468,910	.099	339
1916	[2] 133,415	[2] 1,387	[1] .003	[2] 9
Baltimore:				
1915	2,310,122	284,270	.123	208
1916	1,784,702	273,000	.1529	204
1916	[2] 525,420	[2] 11,270	[1] .0299	[2] 4
Total, all ports, 1916	215,346,745	9,813,085	.0456	6,776

[1] Increase. [2] Decrease.

The port of New York collects more revenue than all the other districts combined; therefore is in a class by itself. While it collects about ten times as much revenue as Philadelphia, with a vast volume of business in large units, nevertheless the expense of collecting $1 at New York is only $0.0054 less than at Philadelphia.

The expense of administration at Philadelphia is far below that of similar ports, being only $0.0329 to collect $1. The expense of collecting $1 at other ports is: Boston, $0.0915; New Orleans, $0.0476; San Francisco, $0.099; Baltimore, $0.1529.

Philadelphia during 1916 collected $5,290,043 more revenue than Boston, and did it with 298 less employees and at $402,434 less expense. The cost of collection at San Francisco is three times greater than at Philadelphia, while Baltimore is almost five times greater.

During 1916 revenues at New York increased $4,406,983; at Philadelphia, increased $3,052,799; at Boston, decreased $560,245; at New Orleans, decreased $651,396; at San Francisco, decreased $133,415; at Baltimore, decreased $525,420.

During 1916—		
Boston collected	$9,831,646, at expense of	$899,117
San Francisco collected	4,754,196, at expense of	468,910
Baltimore collected	1,784,702, at expense of	273,000
Total	16,370,544, at expense of	1,641,027
Philadelphia collected	15,121,689, at expense of	497,683
Total	1,248,855, at expense of	1,143,344

The following extract is taken from a letter sent by William C. Redfield, Secretary of Commerce, to the Secretary of the Treasury, October 23, 1916:

"SIR: I attach hereto a copy of a report dated the 30th ultimo of the work done in the Philadelphia customs district during the past summer in the enforcement of the navigation laws.

"Their report outlines the most efficient navigation service rendered in any customs district during the year."

CHAS. R. KURTZ, *Surveyor.*

Philadelphia, December 15, 1916.

Public Buildings Bill.

EXTENSION OF REMARKS
OF
HON. WILLIAM S. VARE,
OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, January 19, 1917.

Mr. VARE. Mr. Speaker, provision included in the public-buildings bill for an appropriation of $750,000 for the purchase of a site for the erection of a customhouse in the city of Philadelphia, to take the place of a structure erected in 1821 and which has been used by the Government in its present capacity since 1844, fills a long-felt need in maritime activity in that city.

Philadelphia has the same provision to-day, with a population of nearly 2,000,000 persons, for the handling of its customs business that it had in 1844 when its population was but 93,000 persons. The provision is one which should have been made years ago to keep the Philadelphia customs office abreast with the times and its increasing business.

Millions of dollars are being spent by the city of Philadelphia for modern piers to invite new shipping to its doors. Millions are being spent by the State and National Government to deepen the channel for the admittance of the largest vessels afloat.

This work of a progressive city and State government in which Congress has shown every willingness to cooperate is already bearing its fruit. Only this week reports of port activity show that more vessels are awaiting cargoes in the port of Philadelphia than at any time in its history. Philadelphia has taken her place as the second port in the United States.

Notwithstanding war conditions, which have caused a falling off of receipts in customs at virtually every port, Philadelphia during the year of 1916 collected $15,932,340, against $11,718,228 in 1915. In 1916 imports increased to $111,407,851, against $69,473,983 in 1915, while exports increased to $321,054,815, compared with $132,216,106 in 1915.

This increase in imports and exports, which will grow with the completion of additional municipal docks, must be met with additional accommodations for those who handle the Government business connected with customs activities. The Secretary of the Treasury has recommended the purchase of the proposed site, declaring that the present building is fitted for the work of the Federal reserve bank and the Subtreasury.

With this whole-hearted indorsement and the obvious need for additional accommodations for the benefit of maritime activity in Philadelphia, which can be regarded as a benefit for the entire country, using Philadelphia as a port of entry, I see no reason why this provision should not receive the unanimous support of the House, to which, in my mind, it is entitled.

HISTORY.

The present customhouse building, on Chestnut Street below Fifth, extending to Sansom Street, was erected in 1821, at a cost of $413,081, by and for the use of the United States Bank. It was purchased by the Government in 1841 for $225,000 and was used for customs purposes exclusively until 1867, in which year the United States Subtreasury was moved into the building and has since occupied the entire rear, or Sansom Street end, comprising an area of 87 by 54 feet. This includes offices, record rooms, vaults, and stairways, and is practically one-third of the entire building.

It is a two-story building, with basement, which can not be used for business purposes, and a loft, which is used only for the storage of records, books, blanks, and so forth, and is entirely inadequate even for that purpose.

RECEIPTS.

The receipts of the office for 1916 were $15,932,340.34; for 1915, $11,718,228.95; for 1914, $14,876,952.67; and for 1913, $19,356,120.40, showing a gradual falling off by reason of the war and conditions resulting therefrom until last year, when there was a decided increase.

While it is impracticable to report the collections made in this building since its occupancy by the Government in 1841, it has been found, on examination of the available records, that the total customs receipts from July 1, 1880, to January 1, 1917, were $620,827,655.64.

IMPORTS AND EXPORTS.

The value of imports decreased from $91,947,390 in 1913 to $69,473,983 in 1915, while for the corresponding period the value of exports increased from $72,236,967 in 1913 to $132,216,106 in 1915.

In 1916 the total value of imports increased to $111,407,851, and the total value of exports increased to $321,054,815, both of these items being the largest in the history of the port.

ENTRIES.

Entries and their accompanying invoices are an index of a part of the work of customs officials. The number of entries filed during the year 1916 was subnormal, by reason of the European war. The number of entries filed for the last four years is as follows: 1913, 74,315; 1914, 66,355; 1915, 35,377; and 1916, 27,398.

STEAMSHIP LINES, PASSENGERS, AND TONNAGE.

When the war broke out there were 38 regular steamship lines plying between this port and foreign ports. Since that time the German, Austrian, and Belgian lines have been discontinued, and the regular lines to other countries have had very uncertain schedules. Nevertheless, the number of arrivals of vessels from foreign countries has not fallen off to the extent to be expected.

The number of vessels which entered Philadelphia, and their tonnage for the last four years, is as follows: In 1913, 1,196 vessels arrived, with a tonnage of 2,914,944 tons; in 1914, 1,021 vessels arrived, with a tonnage of 2,305,459; in 1915, 1,077 vessels arrived, with a tonnage of 2,091,586; and in 1916, 1,092 vessels arrived, with a tonnage of 2,312,879.

COST OF COLLECTIONS.

The cost of collecting one dollar at Philadelphia is 3.3 cents; the cost at the other large ports is as follows: New York, 2.8 cents; Boston, 9.1 cents; San Francisco, 9.9 cents; New Orleans, 4.8 cents; Chicago, 4.8 cents; Baltimore, 15.3 cents.

MORE ROOM NEEDED FOR COLLECTOR.

The collector's room is large enough, but the room adjoining, which should be used by him as a waiting or ante room, and was formerly so used, is divided into two offices and occupied by his private secretary and stenographer and the special deputy collector. This was rendered necessary because the room formerly occupied by the special deputy had to be given up in order to relieve a congested condition in the main room.

Persons waiting to see the collector must stand, or, if there be room enough, sit on a bench in the corridor.

ALSO FOR THE SPECIAL DEPUTY.

The special deputy's present office is too small to contain the necessary furniture, such as bookcases, filing cases, office safe, etc. Books of reference and other documents that should be in this room are relegated to remote parts of the building for want of room. There is no waiting room to this office save the corridor.

ALSO FOR THE SECRETARY AND STENOGRAPHER.

This office is nearly filled with absolutely necessary furniture, and the accommodations for persons having business to transact therein are ridiculously inadequate.

Neither this office nor the office of the special deputy (which are practically in one room) is properly lighted. Not a single ray of direct sunshine ever finds its way into either office.

MAIN BUSINESS ROOM CRAMPED.

In this room every available spot is being utilized, even to the extent of building filing cases under the windows and wardrobes in the corridors. Everybody is crowded and the working force is seriously incommoded. Additional filing cases and desks are badly needed; in fact, have been ordered by direction of the department, but there is no place to put them. The bulk of the correspondence is prepared in this office under great difficulties. There should be a special room for this work.

AUDITING AND STATISTICAL DEPARTMENTS.

These departments are confined to what is practically one room. This room is overcrowded and the facilities for doing business are very unsatisfactory.

THE CASHIER CROWDED.

In the effort to secure more space for general business the toilet room was removed into the basement and the vacated space fitted up as a cashier's office. It is too small, too close, and too hot, and too generally unfit for the purpose to be satisfactory. The size of this room is 19 by 11 feet. The space occupied by furniture, which consists of three desks, a large counter, wardrobe, safe, chairs, etc., reduces the working space for a force of three men to a decidedly uncomfortable limit.

THE NAVAL OFFICE.

The naval officer, his deputy, and 13 employees are crowded into two rooms. The space is entirely inadequate for the work of the office and much inconvenience is experienced.

THE SURVEYOR'S OFFICE.

The surveyor, his special deputy, and 11 employees occupy two rooms on the second floor, neither of them large. They are overcrowded and the work is consequently impeded.

THE FILING OF RECORDS.

The file rooms in the loft of the building are inadequate for the purpose and not at all adapted to modern needs. Owing to want of room it is necessary, at stated periods, to inclose in packing cases valuable records and send them for storage in the appraiser's stores building. This makes it very inconvenient when it becomes necessary, as it frequently does, to examine these records for statistical purposes.

THE CUSTOMHOUSE LACKS AN ELEVATOR.

The absence of an elevator in that portion of the building used for customs purposes is a source of great annoyance, not only to the officials and employees but to all persons having customs business to transact, and is the subject of frequent comment. To enter the building on the main business floor it is necessary to ascend a flight of 20 steps, and to reach the second floor a further climb of 35 steps is required. To ladies and persons advanced in years, many of whom have business transactions with the customhouse, this is a great hardship. A large amount of the business is transacted with the surveyor's office, which is improperly located on the second floor, causing great inconvenience.

In short, the building is archaic, incommodious, and not at all adapted to the present needs of the service.

Increase of Grazing Fees in National Forests.

EXTENSION OF REMARKS

OF

HON. BENIGNO C. HERNANDEZ,

OF NEW MEXICO,

IN THE HOUSE OF REPRESENTATIVES,

Friday, January 5, 1917.

Mr. HERNANDEZ. Mr. Speaker, before I take leave of this honorable body, in which I have served as the Representative at Large from my State, and where I have been treated most courteously, and have added my mite by voting for a good deal of the constructive legislation enacted by the Sixty-fourth Congress, I would be remiss in my duty to my constituents if at this time I would not enter my solemn protest to the proposed increase of grazing fees in the national forests.

The protest which I am about to enter is not so much in behalf of the well-to-do class of users of the national forests, but is particularly in behalf of the poor ranchman living within or adjacent to the various forests in the State of New Mexico.

The fees now charged are in my opinion not justified.

This is what will happen if the proposed raise is made: The well-to-do stockman, whether engaged in sheep or cattle raising, will be very well able to stand it, because he is making money out of his business, but the poor man who has lived all of his life within what are now national forests or in close proximity to them, and who has pastured his small flock of goats or sheep or a few head of cows, and is really trying to make a small living out of his little farm, depending entirely on his few head of stock—I would say from 50 to 100 head of goats or sheep, or 10, 20, or 30 head of cows—which furnish him in some instances with meat, and so forth, for himself and his family only, will suffer the hardships. As it is now the fees for this class of users of the forest reserve are more than he can afford to pay, and they feel that they are being discriminated against.

One of the district foresters says in support of this advance in fees:

The great criticism of the National Forest administration is that they are not self-supporting, and this change will make them so.

I quote from a letter written by a stockman in Arizona, addressed to Mr. William Babbitt, president of a cattle growers' association in that State:

I have read with interest the article by T. S. Woolsey, jr., in the June, 1916, issue of the Forest Quarterly, "National forest revenue and organization." He makes the statement that grazing fees on national forests should be two or four times as much as at present, and to prove this he cites the following, which I quote:

"For example, on the Apache Indian Reservation the 1916 year-long rates for cattle were $2.50, and 50 cents for sheep. These rates were the result of competitive bid. Forest Service timber sale rates are in theory at least also fixed by competitive bid. On the Sitgreaves, which joins the Apache Indian Reservation, the year-long rate for cattle is 48 cents and for sheep 12 cents."

Such an unqualified statement I believe to be misleading to the public and should not be unchallenged.

Just what is the comparison between grazing on a national forest and an Indian reservation?

Sheep and cattle are not alloted to the same range on an Indian reservation, nor do they allow on the same area more than one permittee, which is of great advantage in the economic use of the area.

On a national forest they do.

On an Indian reservation a permittee may buy the stock and grazing privilege of the whole reservation, if he so desires.

On a national forest he can not.

On an Indian reservation you may construct as many small inclosures as you desire without extra charge for the forest material necessary for its construction or the area involved.

On a national forest you can not.

On an Indian reservation the permittee is reimbursed for permanent improvements made on his allotment by the deduction of that amount from his grazing tax.

On a national forest he is not.

On an Indian reservation the lease and privilege is for a term of five years, and no advance can be made during that time, which is of immense value to the lessee.

On a national forest only an annual lease can be obtained and a raise in fees possible each year.

Mr. Woolsey fails to mention the fact that the Coconino National Forest pays a net return over and above the cost of administration of from $65,000 to $100,000 annually.

The live stock on the Indian reservation may change hands as often as desired without reductions thus permitting the stockman to take every advantage of the live-stock market.

A grazing permit on a national forest must be held three years at least before it is transferable, and is then subject to a cut of 20 per cent.

The Forest Service has to this time expended hundreds of thousands of dollars to perfect and maintain a system for preventing and fighting forest fires, yet this would not be a "drop in the bucket" to what would have to be expended were it not for the live stock that keep the excess under cover and grass down to a point where the spread of fire is minimized. These areas would not be forests, but fire traps instead, which means a direct saving to the Government of vast sums of money in actual cash besides an incalculable amount of valuable timber.

I understand that the service is seriously considering the placing of live stock on parts of some forests where they do not now graze, as the cheapest and most effective way of combating that greatest of all menaces to a forest, fire.

The Forest Service has spent thousands of dollars in an exhaustive study of the timber business, which goes into great detail as to the cost of logging, the cost of transportation, the cost of milling, the depreciation on the plant and rolling stock, capital invested and interest on same, and then sells the timber so that the manufacturer can have a fair profit, which to my mind is sensible and fair.

Has the stockman ever had such a study made of his business?

No; yet the department has more than doubled the present rate on live stock and has set the last date of hearing for February 1, 1917.

The semiarid States of the West must always be the great breeding ground of the United States. National forests in these States will therefore always be a very important factor in the production of live stock and its products. The forests now embrace the high timberland principally adapted for summer use as a grazing ground and they do not control winter forage land in a sufficient quantity to support the summer areas, and they are fully utilized now only because the woolgrowers find winter pasture far removed from the summer areas.

These remarks in my mind are most convincing as to my contention that the Government and not the user is getting the most out of the forests, let alone the enhancing of the value of the forests, its timber, and so forth.

I hope the Forestry Bureau before it finally determines to make a raise will stop and consider the conditions which exist among the poorer ranchmen in New Mexico and other States that will suffer under a higher taxation.

I am giving you some figures taken from the records of the Bureau of Forestry, which disclose the fact that in nearly all of the forests in New Mexico the upkeep or administration of same is fully met by the revenues derived therefrom. By this I mean salaries of supervisors, rangers, and guards, general expenses, supplies, and so forth, and I do not believe that all the items shown in the statement under the head of expenditures should be charged up as administration expense. While the statement submitted to me is in detail, it most certainly fails to give anyone understanding the question a clear conception of the method of handling the matter, when, in my opinion, the improvement of the roads, the planting of trees, and other improvements enhances the value of the forests to such a degree

that it would be impossible to compute the present value of such lands and forests in comparison to their respective value before the establishment of the service.

The United States have taken over these lands not merely for the protection of the individual but to increase the intrinsic value, so that in years to come the future generations may be able to purchase timber and lands from the Government and the money so derived to go into the Public Treasury, but this should not be done so as to work a hardship on those who are hardly able to bear it, even at its present rate of rentals, and so forth.

The receipts of the Carson Forest Reserve amounted in the year 1916 to $27,267.49; the administration expenses were $24,494.26.

The Gila, receipts, $33,786.34; administration expenses, $32,-639.67.

The Manzano, receipts, $16,347.37; administration expenses, $12,403.09.

While it is true that other reserves did not receive enough to cover this class of expense the final totals show that the receipts are within $30,000, in round numbers, of being sufficient to pay the administration expenses, the balance of expenses borne, which has also been charged up to the several reserves, are for land classification, surveys, planting, improvements, and miscellaneous items, the presumption being that they were all for the enhancing of the value of property belonging to the United States.

Address Delivered by Hon. Charles M. Stedman on Robert E. Lee's Birthday in Washington, D. C.

EXTENSION OF REMARKS

OF

HON. ROBERT L. DOUGHTON,

OF NORTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, January 20, 1917.

Mr. DOUGHTON. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include an address delivered by Hon. CHARLES M. STEDMAN on Robert E. Lee's birthday, in Washington, D. C.

The address is as follows:

ADDRESS DELIVERED BY HON. CHARLES M. STEDMAN ON ROBERT E. LEE'S BIRTHDAY.

Ladies and gentlemen, comrades: I congratulate you upon this, the advent of another anniversary of a day which should ever be canonized in the historic calendar of all who recognize and admire the highest type of chivalric courage and self-abnegation portrayed in history in all the tide of time.

This audience has assembled to observe with fitting and appropriate ceremony the birthdays of Robert E. Lee and Stonewall Jackson. Both were so unrivaled in the splendor of their marvelous achievements, so grand in their mental and moral qualities, that all citizens of our common country might well commemorate the birthday of each. And yet it has ever seemed meet and proper to make one day the occasion of the observance of the birthdays of both, whose names represent a glory and whose deeds have illumined a cause with a radiance which shall never die.

Unlike in many of their personal characteristics, both possessed those great qualities essential to glorious achievements.

No two names will be found in military history more closely linked together; none which appeal more strongly to the sentiment of exalted heroism which holds captive the imagination of mankind.

Both were absolutely fearless morally and physically, and when on the battle field felt the joy of the strife.

Both possessed to a marked degree moral courage, which caused them to assume without hesitancy every responsibility demanded by a sense of duty, regardless of consequences to themselves.

Both inspired their soldiers with a most unbounded love and confidence. It was their own mighty spirit communicated to the army of northern Virginia which made it invincible upon any field of equal combat and gave it immortal renown.

As masters of strategy in war, both ranked with the foremost historic generals through all the ages.

Both were devout Christians, and the private life of each was as stainless as that of a pure woman, and a model for all the world.

Neither was elated by success nor intoxicated by glory. Neither was depressed when disaster and irretrievable ruin threatened destruction to all that was near and dear to him.

A rare and wonderful combination of two soldiers who rose superior to every temptation of ambition or glory, who were equal to any crisis, whose attainments have won the admiration of the brave in every civilized land—each without an alloy of selfishness or unholy greed.

So profound is my love and admiration for the character and attributes of both Lee and Jackson that my heart would rebel were I to attempt to institute a comparison as to the relative merits of these two great commanders, who reflect renown and glory upon the English-speaking race. I prefer to leave to the historian the task of recounting their great deeds and directing the judgment of future ages to a fair and impartial verdict.

All who owe allegiance to this reunited and unrivaled Republic—it matters not from what section they may come—can with just pride claim that both of these illustrious chieftains were children of our common country.

In the imperial "Meditations" of Marcus Aurelius will be found these words: "What has become of all great and famous men and all they desired and loved? They are smoke and ashes and a tale." Such was the language of a Pagan emperor and philosopher, and such is the eternal truth as it comes to us from the highest of all authority—the Holy Bible. Yet man was not created without a design or purpose. Most men drift down the stream of time—mere atoms upon its surface; they pass over the cataract unto death and are forgotten.

The eminent deeds of statesmen, the alluring eloquence of orators, the exploits of warriors become dimmed by the obscurity of time, and flit before us as shadows of the past. But there are a few set apart by Providence from the mass of humanity who stand forever as mighty rocks in the ocean, and as beacon-lights through all ages, that their example may ever cheer the weary and faint of heart in the struggle of life which must come to all. Such were the great leaders whose birthdays you celebrate this day. Yet the chief significance of this occasion arises from the fact that Lee and Jackson symbolize to the world the Confederate soldier. They represent his sternest valor, his highest morality, his most exalted heroism. The cardinal feature of the mental and moral nature of each was his absolute devotion to whatever he deemed to be the cause of right. In this they typify to you the soldier whom the South sent to the battle field. The names of Lee, Jackson, and the Confederate soldier linked together with immortality have ever represented since the close of the Civil War, one great idea. They stand for one principle, unchanging, unconquerable, and imperishable—a supreme sense of duty. The ragged Confederate soldier who carried upon his bayonet the honor, glory, and fortunes of his native land is as tenderly loved as those whose fame has resounded throughout the world, and by the observance of this day, you attest the unfading homage of your hearts for his memory. It would be idle and vain within the space of time which I must allow myself to-night to attempt a eulogy upon the character of either Robert E. Lee or Stonewall Jackson. I must relegate to history their splendid military achievements which have placed both in the front rank of the world's greatest commanders. Their absolute scorn for the vulgar love of money, their sacred observance of every promise, whether made to friend or foe, their strict regard for truth and abhorrence of falsehood, cant, and hypocrisy were some of the elements of character which would have been resplendent in any age, and won love from any people. Of all these, and many other traits which belong only to the noble, I can not speak to you now.

Who was this Confederate soldier—this boy from the South, whose deeds have challenged the wonder and admiration of the world and enlisted the love of his countrymen? Why did he leave a home about which clustered the warmest affections of his heart? Was it hatred of his brethern of the North and an abhorance of the union of the States? Not so! He rejoiced with them in the common glory which belonged alike to all citizens of this great and unrivaled Republic, and was ever ready to march forward with them to a common destiny to perpetuate its power and renown. Tragic, grand, and terrible as was the struggle which immortalized him, it was not of his seeking. Taught by his father to revere the union of the States, he was taught at the same time that it must be a union of love and not of force, and that his first allegiance was to his native State or the State of his adoption. Whether the lesson taught him was right or wrong is not now a subject for discussion, but is left to the unbiased judgment of future ages. When the tread of an invader was heard upon the soil of a sister State whose fate was inseparably connected with that

of his own, he left the plow in the furrow, his harvest ungathered in the field, and hastened to the conflict, whose echoes reverberated throughout the world. Then was seen how sublime and terrible is the courage of a soldier who is not actuated by a desire for conquest or gain, but by a supreme sense of duty. What grander spectacle does the world's history furnish than the unconquerable resolution with which they maintain the fight? They were neither elated by success nor disheartened by disaster, but ever the same unchanged and unchanging men of iron.

When the strife of war was over and peace had come once again to our distracted country, that moral power which had sustained them upon the battle field and won for them imperishable renown gave them strength to bear the terrible calamities which befell them and those they loved at the close of a great and disastrous conflict, and saved them from the vices which generally degrade and ruin the vanquished. They took up the new burden calmly and bravely; they rehabilitated the waste places and desolate fields where once was their boyhood's happy home, when "Life was young and hope's fair flower in bloom." They were the leaders in every enterprise which could increase the wealth and power of their people. They built schoolhouses and were the advocates of morality and education, knowing that without them there is no safety for free government. They made no terms with those who would traffic and barter in commercial dishonesty, but were their uncompromising foes. They have been, are now, and ever will be the steadfast defenders of the honor and integrity of their native land.

With such defenders, how could a cause have gone down in disaster and gloom? It ought not to be accounted strange that this inquiry will find its way from your hearts. Yet it is sufficient for all to realize that God in His wisdom knew what was best, and the methods by which He ofttimes bring about the greatest blessings to a common humanity are neither to be questioned by us nor can they be fathomed until to Him it seems fit that light be given.

Was it all to no purpose that the Confederate soldier died in the red glare of battle; that squalid poverty and hideous want stalked as specters through the desolate fields of his kinsmen; that a mortal agony filled their hearts and that they drank of the cup of bitterness to its dregs? All this sad lesson will yet be made plain. Suffering is necessary to make up a great character to its fullness. No man nor woman, unless by special providence of God, can live in the unbroken sunshine of plenty and prosperity without developing to a greater or less degree selfishness in some of its many monstrous forms, and being debarred from reaching the high state of excellence to which their natures might aspire. Suffering is needed to purify nations as well as individuals. It is from sacrificial flames that have arisen the noblest and grandest spirits which have spread a halo of glory around humanity.

In estimating the merits of the personal conduct of Robert E. Lee and Stonewall Jackson, their moral grandeur and military greatness, the verdict of history has ignored the rule which in every age governs the judgment of the ignorant and vulgar, which awards praise and renown alone to the victor. It has awarded to them that high position to which they are rightfully entitled and which they hold with undisputed claim. The splendor of their fame increases with each revolving year, not only with the citizens of the American Republic but with the educated and brave throughout the civilized world.

They repose in their sleep of glory in the town of Lexington, in the Valley of Virginia, not remote from the theater of conflict immortalized by the campaign of Jackson. The mountains of Virginia, so loved by both, will ever keep watch over their graves, but their resting place will be found in every land where patriotic heroism has a home. The traveler from distant lands who is enamored of great names will not fail to visit the town of Lexington. As he stands with uncovered head before the tomb of Robert E. Lee, the character of that matchless soldier will come in review before him and fasten itself indelibly upon his memory. He will see him with the storm of war upon his face as at the head of a brigade he hurls back the Federal battalions amidst the dense thickets of the wilderness. Again, his face will come before him as, calm and unmoved, at Spotsylvania Court House he directs the shattered regiments of the South to the front and he hears their yell of battle proclaiming above the cannon's roar and the steady rattling of musketry their faith in Robert E. Lee. And still again Chancellorsville and Fredericksburg greet his vision, with the same great master of war unchanged by triumph. And he will not forget Gettysburg, where the air was sulphurous with carnage and death. And there he will find him with demeanor grave but with the fire of battle in his eye, quiet, self-possessed, and gentle, as he speaks kindly to some southern boy who, torn and mangled, lifts his head and cheers him as he passes by. And then he will ask what manner of man was this great captain in his private life, in the early days of his manhood, and when he was in the walks of civil life? And he will be told that during all his days, in peace and in war, a sense of duty was the cardinal feature of his character that he loved truth and scorned the desire for money, that he was a man of simple habits, a sincere and devout Christian—an exemplar for all the world.

With these memories crowding thick and fast upon him, he will stroll to the grave of Stonewall Jackson—his great lieutenant. He will be enthralled by the fascinating story of his life and linger long as he listens to its recital. The green fields of the Valley of Virginia will be before him, ever to be connected with the name of the great soldier whose wondrous deeds have given to them a new and unfading luster. Bull Run, Second Manassas, Fredericksburg, Sharpsburg—every field upon which he fought—pays tribute to his genius. The great charge at Chancellorsville (called by military historians the tactical masterpiece of the nineteenth century), where, as the very incarnation of battle, he rode the storm of war, cannot be forgotten. But grander, more attractive than all the victories on the fields of his renown will be his Christian character and abiding faith in the providence of God. From his tomb goes forth to the young men of our country words which find an echo around the world:

What is life without honor? Degradation is worse than death. We must think of the living and of those who are to come after us, and see that by God's blessing we transmit to them the freedom we have ourselves inherited.

He will learn from the lives of both the lesson of courage, of morality, of self-denial, of virtue in its broadest sense, and he will realize that it is moral grandeur which overshadows physical force which brings genuine success and attracts permanently the attention of mankind.

There is another lesson which has been learned by the entire world: The grandeur and nobility of the American people has been exemplified by their treatment of the Confederate soldier. The great events which have transpired in the lives of different nations, which have added luster to their names, have been marked by an era in their history which dazzled their contemporaries and was cherished by posterity with love, with pride, and with delight. Such an epoch in the life of the American Republic will be the year 1917.

During the entire unfortunate Civil War the courage and sincerity of the Confederate soldier was never questioned by his brave opponents upon the battle field. The ability of Lee, of Jackson, and other great leaders of the South was never questioned or minimized. But the culmination of fraternal feeling between all classes of citizens of this great land of ours has been reserved for the year 1917, when the survivors of Confederate veterans, in response to the recognized wish of our whole country (and it might with truth be said by its invitation), will meet in reunion in this beautiful and attractive Capital in June next.

The man from Maine shall meet in friendly intercourse the man from North Carolina; the man from Minnesota shall rejoice with the man from Mississippi. From ocean to ocean shall be gathered together those who will share in the enjoyment of this auspicious and delightful occasion, which shall proclaim to all the enduring greatness of our common country and the memory of which shall live long after the participants have passed away.

It will further make manifest a truth which none will ever hereafter question, that amongst the people of the South (Confederate soldiers and the descendants of Confederate soldiers), regenerated by fire and blood, will be found that high and broad and lofty patriotism which shall constitute them amongst the strongest, safest, and best defenders of the land of our fathers in its entirety. And as the suffering and oppressed of every land and every clime shall still turn their steadfast gaze toward the Western Hemisphere, they shall rise up and call you blessed.

Was the enthusiastic valor and enduring fortitude of the Confederate soldier who followed the banner of Lee and Jackson all in vain?

Ah, wasted valor! Was it all in vain?
Left it no lesson for the coming years?
From that grim harvest shall there be no gain?
No joy from all the tears?

Not all in vain! The future years shall learn
From you that death is not the greatest ill;
Life not the highest nor the chief concern,
But duty higher still.

Then rest in peace; your memory shall remain
Green in all hearts, in spite of fleeting years;
Time leaves the glory while it heals the pain
And wipes away all tears.

Virginia hills, your fame shall echo long;
Your memory haunt the Carolina shores
And all the streams that, in one countless throng,
The Mississippi pours.

Yet twine a garland, let a shaft upspring,
To those who sleep on mountain or on plain,
Or where the sea may never cease to sing
A requiem for the slain.

The Efforts Toward Peace.

EXTENSION OF REMARKS
OF
HON. S. D. FESS,
OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Monday, January 22, 1917.

Mr. FESS. Mr. Speaker, on January 12, the day the entente reply to the President's peace note was made public, I inserted in the RECORD the several documents detailing the action of both belligerent and neutral countries on the efforts toward peace.

By leave granted me to-day I am here inserting documents showing the sentiment on same matters.

German opinion of the entente reply is expressed by the two dispatches on even date:

[From a staff correspondent.]

[Special cable to the New York Times.]

BERLIN, *January 12.*

Germany's note to the neutrals, as read here, is unambiguously simple of interpretation. In political circles it is regarded from three different angles—as an indirect answer to the entente's refusal of the central powers' peace offer; as a defensive brief submitted to the high tribunal of neutral public opinion; and in the third line for home consumption.

While the substance and the brusque tone of the entente's note made a formal answer impossible to the German mind without a sacrifice of national dignity, yet, certainly, silence would be interpreted as a confession of guilt and an inability to answer the charges and insinuations of bad faith contained in the entente's refusal, and this would alone have been sufficient to determine the Imperial Government to make an indirect answer, despite the protestations of most of the German press that the door had been slammed to further discussions.

Viewed as an indirect answer to the entente, Germany's note, it is said, is to be interpreted as a reiteration of her good faith in making the original peace proposal, with the further unmistakable intimation that the central powers still are willing to talk peace in a businesslike way around a conference table, but that a revival of the old polemic regarding blame for the outbreak of the war is a waste of time, so far as the object of restoring peace to the world is concerned, and that fruitful peace negotiations can be brought no nearer by a mutual flinging of diplomatic billingsgate and venting of rhetorical generalities.

—

[From a staff correspondent. Special cable to the New York Times.]

BERLIN, *January 11.*

Coupled with a marked stiffening of the national backbone almost all along the line is the fear in many quarters that a hard and fast peace program may be sprung on the German nation without giving the people, through their elected representatives, a chance to say anything about what the terms shall be. Many patriotic Germans fear that the Bethmann Hollweg Government, which is known to hold relatively moderate peace ideas, may let Germany in for an unfavorable and premature peace merly for the sake of peace.

This feeling is finding almost nation-wide expression, and a stern warning against a premature peace and sacrificing the fruits of victory is being sounded in Hamburg, in Bavaria, and particularly in the Rhineland, whence two utterances indicative of public opinion are worth pondering as corrective of the false notion that may have resulted from the Socialist peace propaganda—that all Germany wants an immediate peace at any price short of honor.

Dr. Marx, a prominent Center Party member of the Reichstag, in a speech to his Catholic voters couched in annexationist terms, charged all those with "a heavy responsibility who demand a premature peace only for the sake of peace."

The Cologne Tageblatt, to counteract the effect of the Socialist peace apostle, Sheldmann, propaganda tour of Germany, issues a call for a similar nation-wide propaganda for a "strong German peace," asserting that 90 per cent of the Socialists at the front are annexationists and quoting Gen. von Gallwitz's words:

"We on the Somme have seen the foe weaken, and we stand firm and confident. Our feelings become depressed only when the echo of newspaper quarrels at home reaches us and we become aware how those who know nothing of the spirit of the front are ready to sacrifice the fruits of our victories on the enemy's altar."

The Cologne organ, further arguing, says: "Even though the entente has scornfully refused our proposal, Mr. Wilson is continuing his work for his peace. Under these circumstances it seems imperative that all those political parties, national associations, and economic and social organizations who see the best guaranty of peace in a strong German peace should finally come forward united and let the German nation speak out regarding its war and peace aims. Two national memorial days are available this month for this purpose. It is not yet too late to give the Government a clear expression of the true war and peace will of the German nation."

On the day following the head of the central powers made a proclamation:

KAISER'S PROCLAMATION DECLARES VICTORY SURE.

AMSTERDAM, *January 13.*

The following proclamation by the Emperor to the German people has been officially published in Berlin:

"Our enemies have dropped the mask. After refusing with scorn and hypocritical words of love for peace and humanity our honest peace offer they have now, in their reply to the United States, gone beyond that and admitted their lust for conquest, the baseness of which is further enhanced by their calumnious assertions. Their aim is the crushing of Germany, the dismemberment of the powers allied with us, and the enslavement of the freedom of Europe and the seas under the same yoke that Greece, with gnashing of teeth, is now enduring.

"But what they could not achieve in 30 months of the bloodiest fighting and unscrupulous economic war they will also fail to accomplish in the future. Our glorious victories and our iron strength of will with which our fighting people at the front and at home have borne all hardships and distress guarantee that also in the future our beloved fatherland has nothing to fear.

"Burning indignation and holy wrath will redouble the strength of every German man and woman, whether it is devoted to fighting, to work, or to suffering. We are ready for all sacrifices. The God who planted His glorious spirit of freedom in the hearts of our brave people will also give us and our loyal allies, tested in battle, the full victory over all the enemy lust for power and rage for destruction.

"WILHELM I. R."

The most notable opinion expressed by an American was that of Ex-Secretary of War Garrison, on the following day. This opinion has more reference to our Nation's attitude:

EX-SECRETARY OF WAR SAYS THAT UNITED STATES HAS ALL IT CAN DO TO GOVERN ITS OWN AFFAIRS—SAFER TO STAND ALONE—BAR ASSOCIATION COMMITTEE, HOWEVER, PRESENTS REPORT FAVORING WORLD ALLIANCE.

Declaring that a nation, like an individual, has all it can do to govern its own affairs wisely and properly, Lindley M. Garrison, former Secretary of War under President Wilson, last night condemned as dangerous and un-American the proposed post-bellum league to insure peace, to which the President has committed himself in his peace notes to the warring powers of Europe. Mr. Garrison was delivering the annual address before the New York State Bar Association in the Academy of Music in Brooklyn.

Some 300 lawyers, members of the association, were gathered in the banquet hall of the Academy to listen to Mr. Garrison, and at the conclusion of his speech filed past him and ex-Justice Charles Evans Hughes, the newly elected president of the association, to shake hands with and congratulate them. Ex-Supreme Court Justice Morgan J. O'Brien, the retiring president, introduced Mr. Garrison.

The former War Secretary expressed the opinion that there would pobably always be wars, and asked if mixing in the affairs of other nations was not a surer way to produce war than to prevent it. This was why he thought a world alliance dangerous. He thought it un-American, because the United States, he said, had always had policies and principles singularly its own, and participation in a league of nations could have no other result than a participation by allens in the management of our affairs and the determination of our destinies.

"I for one would not consent to enter into any such agreement through fear," he said. "Fear, I mean, of what might happen to my Nation if I did not have the support of other nations assured by alliance in the event of aggressions against my Nation. We have the means and the men to provide for our own safety, and if we will not avail ourselves of them we are not worth saving. I would not consent to enter any such alliance purely because of the supposed beneficent effect to other nations unless it was essentially beneficial to my own Nation.

AGAINST MIXING IN.

"A nation, like an individual, has all it can do to govern its own concerns wisely and properly, and that is a task requiring its virtue, its strength, and its intelligence. It can best serve mankind by developing itself along lines of its native and peculiar genius. If each nation so devoted itself, there would be no need of an alliance to prevent war or preserve peace.

"It would hesitate long and consider thoroughly whether mixing in the affairs of other nations of the world was not probably a surer way to produce war than to prevent it. A misalliance is more likely to produce discord than if the respective parties had continued to live separate, self-respecting, self-reliant lives.

"If such an alliance only deals with the trifling, superficial things which lie on the surface, then it never can amount to anything. If it, however, covers all questions between nations, then no nation has a right to enter it unless it is willing to have its own concerns decided by alien minds and alien motives.

"So soon as you get beyond those things which most nations are willing, and all should be willing, to leave to The Hague or other like tribunals, and when you get down to things which vitally matter, I for one doubt if any self-respecting nation should enter such alliance unless it stands ready to accept the inevitable consequences of seeing its destiny determined by other minds and other interests.

"Does our Nation so stand ready? It should be perfectly sure that it does before it says yes.

"The ease of getting into such a situation should mislead no one as to the ease of withdrawing from it and from the consequences of having entered it. Agreements, as we lawyers know, are made in haste and repented at leisure—are broken as often, if not oftener, than they are kept, and are quite as likely to be the beginning of trouble as the ending of it.

"We occupy a conspicuous place on the world's stage," continued Mr. Garrison. "We have the strength of a giant and should use it like a giant."

DEEP THOUGHT NECESSARY.

After reviewing the recent foreign policy of the Nation, he said: "We must not let unregulated sentiment or emotion dictate our course in matters which can only be decided properly by deep thought and broad reasoning.

"Poison taken by mistake," he declared, "is just as deadly as though taken intentionally. A mistaken policy entered upon from the best of motives may be just as disastrous as one entered upon from the worst of motives.

"In any and every event we must remember we are dealing with human nature—with man, who amid all the changing years has changed so little. Civilization has made him more civil and more civic. It has laid an outward covering of refinement over his elemental and primitive

qualities. It has altered his manifestations but not his content. The superstructure, fine and attractive as it is, is still superstructure. The foundation and basic element is primitive human nature with all its innate strength and all its innate weaknesses. Those who direct and determine the destiny of each nation must guide its course in the light of this knowledge.

"The duty of each nation is first and foremost to its own people. Its course should be guided by enlightened self-interest. It knows its own history, its genius, and the traditions of its people and their interests and aspirations. It knows what will tend best to preserve and conserve its strength and virtue.

"It knows also the history of the world. That from the Peloponnesian and the Punic wars until this day the last great war has always been the last great war until the next great war came along and took its place. Nations as seemingly solid and impregnable as the everlasting hills have toppled over, and nothing is now left of them but their names."

After asking what we should do to avoid war, Mr. Garrison said:

"I will waste no time in discussing its avoidance by the supine surrender of our self-respect and by a refusal to maintain and defend the Nation's interests from the Nation's enemies. Of what profit is it to a nation to save its skin if it lose its soul?

"There are, however, other suggestions and proposals proceeding from men who love their country and who have its best interests at heart, and who hope to devise some method of safeguarding it and preserving it and the other nations of the world from the results of unnecessary conflict.

"I do not propose discussing these in detail. They all revolve around the central idea of a world alliance—an alliance to enforce peace or preserve peace or insure peace—a world court or a world parliament.

"The spirit which animates these suggestions is of the finest and best in humanity. But we should not be led by these emotional impulses into any radical departure from what has made us great or has kept us great.

"During the 135 years of the existence of this Nation we have pursued one clear-cut, defined, and consistent policy in our foreign affairs. We have interfered with none and permitted none to interfere with us. We have promulgated a doctrine to cover this hemisphere and have undertaken vast responsibilities in connection therewith. By guiding our own foreign affairs we can be sure that our judgments proceed from justice and equity and fairness and need quarrel with none unless the quarrel is forced upon us against our will.

WISE LEADERSHIP NEEDED NOW.

"I can conceive of no more important question to be passed upon by a nation. Of all questions conceivable, this is the one which should be least dealt with lightly or emotionally. The hardest kind of common sense should be applied to the situation—the most courageous facing of facts and the greatest wisdom and foresight of which men are capable. Wise leadership to-day probably has in its hands the destiny of the Nation."

Mr. Garrison began his speech by urging lawyers to take a more intensive interest in public life, on the ground that the Nation needed more judicial action by its citizens. He said that party lines had ceased to mean anything, and that there would be a realignment of American citizens on the question of how far the National Government should or should not go in concerning itself with the daily life of the citizen. In addition to the question of foreign policies, he thought the matter of national defense was one into which no politics should be allowed to enter.

"Whatever diversity there may properly be upon other matters, here there must be unanimity," he said. "No one is worthy of citizenship in a nation if he is not willing to devote his all to its defense. To deny this is to take all meaning from the word loyalty and to place mankind in the lowest plane of purse selfishness.

"Our people have been slow in considering and deliberate in acting upon this question. Democracies are notoriously and necessarily slow in this as well as in other matters. Appeals to the pocketbook of the citizen, to his fear, and to his prejudices have impeded a proper settlement of this great question. But do not be deceived. Our people are not sunk in sordidness; they are not sapped of their virtue and courage; they are not daunted and afraid. They do believe in some things higher and finer than money and money-making."

The report of the State Bar Association's Committee on International Arbitration, read at the day session of the organization's meeting in the building of the Long Island Historical Society, had praised the idea of a world alliance, condemned by Mr. Garrison.

"The League to Enforce Peace has gone on with its good work," the report said. "A World's Court League has been incorporated in this country for the purpose of promoting a league among nations for the creation of 'An international court of justice representing the nations of the world and, subject to the limitations of treaties, empowered to assume jurisdiction over international questions in dispute that are justiciable in character and that are not settled by negotiation.'"

On the 13th a British authoritative statement was made on her treatment of neutrals:

BRITISH REPLY THAT GERMANY BEGAN WAR—CHARGE REPEATED IN AUTHORITATIVE ANSWER TO BERLIN'S STATEMENT TO NEUTRALS—RUSSIA FORCED TO ACTION—INSIST THAT CONFERENCE WAS REJECTED BY TEUTONS FOUR DAYS BEFORE CZAR CALLED FOR ARMY.

LONDON, *January 13.*

An authoritative statement issued here to-day gives the British view of the German and Austrian notes to neutrals. It repeats the assertion that Germany was responsible for starting the war, inasmuch as the proposal for a conference was rejected. This refusal, it is pointed out, was given on July 27, 1914, while it was not until July 31 that orders were given for a general mobilization by the Russian Government.

The statement deals at length with the German charge that the proposals of the Allies regarding the rights of small nationalities lacked sincerity in view of the treatment of the Irish and the Boers, the subjection of northern Africa, the suppression of foreign nationalities in Russia, and the treatment of Greece. On this point the statement says:

"As for Ireland and South Africa, their sons have shown on many battle fields, as the Germans know to their cost, that whatever differences there may have been between those countries and Great Britain they are now united with the rest of the empire in repelling German aggression. As for northern Africa, at the beginning of the war had not Germany, too, great colonies in Africa? Did not they obtain those colonies by similar means to those which place the French, Italian, and British in coastal northern Africa?"

It is pointed out that the whole of Russia is united against the central powers, while as regards Greece "the allies have done no more than exact in their capacity of protecting powers the guarantees to which they were entitled against German intrigue to protect the safety of their own armies."

Dealing with the charge that the allies were the first to violate the laws of war at sea, the statement says: "From the very beginning the Germans sowed mines indiscriminately on trade routes in defiance of all international law and with total disrespect of the rights and lives of neutrals. * * * The right of cutting off supplies of an enemy is a well-recognized belligerent right practiced by all nations. The avowed purpose of the submarine measures of Germany was to cut off the supplies of these islands. This campaign has been carried out ruthlessly and with total disregard of the rights of neutrals and of their lives. Even the Germans can not pretend to excuse such crimes as those of the Lusitania, the Arabic, the Sussex, and many others. The Germans profess to regard as inhuman the employment of starvation as a weapon. Were they of the same opinion in 1870, when they starved the city of Paris?

LAY WAR IN AFRICA TO GERMANS.

The statement charges that Germany herself started the war in Africa by an attempt to raise an insurrection in South Africa, and says the Germans are better supplied with munitions and machine guns in Africa than are the allies. Denial also is made of the charges of bad treatment of prisoners, and attention is drawn to the events in Belgium, the Armenian massacres, and the alleged illtreatment of prisoners in the Wittenberg camp and elsewhere.

"Have the Germans forgotten," the statement continues, "that the chancellor admitted the violation of Belgian neutrality was wrong, but claimed it was justified by military necessity? As for the treatment of Belgium, the world will not readily forget the massacres of Aerschet and Louvain, the forced levies of Belgian funds, and the inhuman, barbarous deportations which are being carried out this day."

It is improbable the allies will make any further comment on the German and Austrian notes.

The Westminster Gazette says:

"There is no power in the world but Germany which could set up such a defense for such conduct, and that she can do it is proof that her ideas on the subject of treaties and international morality are wholly at variance with those of the rest of the world. The whole of what she gained on the western front is due to this initial foul strike, which was planned and executed with the knowledge that France had trusted her guarantee and had made her defensive preparations accordingly."

On the 15th, two days later, an authoritative statement was made by Germany through her foreign minister:

[By wireless to Sayville.]

BERLIN, *January 15.*

Dr. Alfred Zimmermann, the German foreign minister, informed the Associated Press yesterday that, in his opinion, the entente reply to President Wilson's peace note barred the possibility for the present of further German steps to bring about peace. In particular, he says, it precluded any direct announcement by Germany of her peace conditions, in answer to the terms set forth in the entente note.

Dr. Zimmermann asserted, however, that the answer of the entente to the President did not finally and completely close the door to later efforts for peace before one side or the other was completely crushed.

The foreign minister, in the course of a conversation with the correspondent stated, although with obvious reluctance, that it was impossible for him to give a more definite statement of the peace program of the central powers than that indicated in the declarations of Dr. von Bethmann Hollweg, the chancellor, because the German terms were such that the unsolicited promulgation of them in their moderate details, after what he characterized as the aspiring program of conquest and dismemberment outlined by the entente, would be interpreted by the entente powers as a sign of weakness and of a desire for peace at any cost.

Publication of the peace terms of the central powers, therefore, would defeat its every purpose, said Dr. Zimmermann. The foreign minister expressed doubt whether, after what he described as a rebuff to President Wilson's peace efforts given in the reply of the entente, the President could take any further action for the present, adding that the entente answer excluded for the present any possibility of peace.

Expressing a profound conviction that the program of the entente powers never could be carried into effect, Dr. Zimmermann intimated that a failure of the entente's offensive this year, which he expected, might again make it possible to approach the subject of peace on reasonable terms and with some prospect of success.

"The entente powers gave out for themselves a big program," said Dr. Zimmermann in answer to a question as to his opinion on the note to President Wilson. "What more is there for Germany to say regarding it?"

NO "CHASING AFTER PEACE."

"Now that the allies have to a certain extent outlined their plans," said the correspondent, "do you think there is any possibility of Germany declaring in some form or other its program for a peace settlement?"

"No," replied the minister, after an instant's reflection. "I think we can do nothing more. We can not afford to give the impression that we are chasing after peace at all costs. After the entente allies have put out this highly ambitious program, an announcement of the firm and moderate German terms of peace would by contrast probably be interpreted by our adversaries as an indication of weakness and would be used by them to encourage their people to fight on. Our people would not understand any further effort by us for the introduction of peace after the entente's declaration. We have to consider public opinion here."

Dr. Zimmermann said that obviously he could discern the advantages from one point of view in stating Germany's terms and letting the world see by contrast with those to which the entente powers have committed themselves the real state of affairs, but he seemed to be convinced that such advantages were not sufficient to affect the attitude of the entente powers or to outweigh the effect on opinion in enemy countries of the announcement of the terms regarding Belgium and other nations in this war.

To the question as to whether he saw the possibility of Germany's making such a declaration of her intentions, should a further inquiry be made from the neutral side, for example, by President Wilson, the minister replied critically:

"But will he make such an inquiry after the entente reply, which in its nature is, shall we say, insulting?"

MEDIATION POSSIBLE AFTER ALLIES FAIL.

"Do you think that after an interval there will be any possibility of an offer of mediation for peace being accepted by both sides?" the minister was asked.

"Yes," he replied. "The desire for peace of all the peoples—peoples, mind you, I say, not Governments—is so strong that after the entente has had another try with a new offensive, after it has seen the fruitlessness of all the endeavors to crush the military strength of the central powers, there may be a better possibility of negotiating a satisfactory and reasonable peace.

"Of course if the entente powers persist in trying to execute their program the war must be fought out to the bitter end. There is not a German who would not rather die than see the accomplishment of the announced intention of the entente powers with respect to Germany, to see German Provinces with predominant German populations torn from the German Empire, and united Germany, which our fathers so labored to achieve, torn asunder and the country reduced, as the allies have plainly announced as their ambition, to a condition of subjection to rival great powers of Europe.

"The conditions for Austria-Hungary are even more difficult. Its dismemberment to satisfy the passion for territorial aggrandizement of Russia, Italy, Serbia, and Roumania would leave the State not even a third-rate power, while who can say what would be the fate of the 'redeemed small nationalities' when brought under the sway of Russia? Bulgaria, of course, would be bitterly punished, and Turkey would practically cease to exist if the plans contemplated in the entente's answer were attained.

LET ENGLAND SET IRELAND FREE.

"The entente tries to justify its aims of conquest by what it calls liberation, instead of pillaging. Charity begins at home. Why does not England give a practical example of her idea of liberty by setting Ireland free?"

Italy's aim is suggested by the following:

DEFENDS ITALY'S AIM TO GAIN TERRITORY—MINISTER RUFFINI COUNTS ON AMERICAN OPINION TO DECLARE NATION'S DESIRES JUST.

ROME, *January 14 (via Paris January 15)*.

Italy's territorial aspirations in connection with the war were explained and defended to-day by Francesco Ruffini, minister of public instruction and a historian of prominence.

"In the note of the allies to President Wilson," he said, "they make a point which is understandable to neutrals, and particularly to America. Italy, no less than her allies, awaits with calm confidence the realization of the aims set forth in that passage of the note which refers to the redemption of Italians subject to Austria. The German press seeks to depict Italy as desirous of conquests, but American public opinion, so far-seeing, so well educated to freedom, and to a deep spirit of national unity, can not confound brutal lust of conquest with a justified claim to territories with populations like those of the Trentino, Istria, and Dalmatia.

"These territories have had only one civilization in their history, that of Italy, and only one great humiliation—which must cease—that of foreign domination which attempted to destroy the principle of nationality. America knows well that Italy, notwithstanding these just claims, abstained from any provocation before the European conflagration, being occupied only with her peaceful development. Austria was responsible for the outbreak of the conflict, having willed war with Serbia after provoking Italy one hundred times with violent persecution of Italians of Trent, Trieste, Fiume, and Zara, whom she denied even the right to educate themselves in their own language.

"Once the conflagration was ignited, Italy felt that fate called her to complete her national unity and resume her just and holy work and her wars of independence, which have been studied with such enthusiasm by your illustrious American historian. Only those who are ignorant of the history of Austria's violent usurpations were surprised by Italy's action, initiated by her victorious armies, or considered her just claims to be ambition for conquest. Italy faced the terrible sacrifices of blood and riches imposed by the war with that same religious spirit which animated all the deeds of her national resurrection, of which America's attainment of independence was so full.

"Italy counts on the considered and tranquil judgment of American public opinion, which, while justly desiring the return of peace, can not, if it examines the origin of the conflict and the problem raised thereby, wish that the European equilibrium, broken by violence in 1914, be replaced to-day by a premature and unfruitful peace containing the germs of graver conflicts in the future."

The situation of neutral countries becomes more delicate, as indicated by the following:

GREECE TO YIELD WITHOUT RESERVE—TOLD QUALIFIED ACCEPTANCE OF ALLIED ULTIMATUM WON'T DO—ANOTHER ISLAND OCCUPIED.

ATHENS, *January 15.*

The entente powers, through the Italian minister, have insisted on unqualified acceptance of the last entente ultimatum, considering the Greek Government's reply equivocal.

It is stated in Government circles that while maintaining that the observations accompanying Greece's reply in nowise constituted reservations vitiating the fullest acceptance of the ultimatum, the Government is willing to repeat its acceptance categorically, as desired.

—

ATHENS, *January 12 (via London, January 15. Delayed)*.

The allies occupied the island of Cerigo on Wednesday.

—

Cerigo is the southernmost of the principal of the Ionian Islands, belonging to Greece. It is in the Mediterranean, off the southern extremity of Morea. A number of other Greek insular possessions have been occupied by the allies, supposedly on account of the establishment of bases for hostile submarines.

—

SWISS TO MOBILIZE MORE MEN ON BORDER—FEDERAL COUNCIL CALLS OUT THE SECOND DIVISION AND PARTS OF FOURTH AND FIFTH.

BERNE, SWITZERLAND, *January 16.*

Official announcement was made to-day that the Swiss Federal Council had decided, as a measure of protection, to mobilize on January 24 the second division and the contingents of the fourth and fifth divisions, which have not yet been mobilized. The bulletin says:

"The Federal Council declares that circumstances enabled it to reduce very considerably during recent months the forces on the frontier. At the beginning of the year it was considered necessary to take more extensive measures of precaution, and for this reason it ordered the mobilization on January 24 of the second division and the contingents of the fourth and fifth divisions, which have not yet been mobilized. The Federal Council remains fully confident of the intentions of the belligerent parties toward the neutrality of Switzerland."

There have been frequent reports recently of uneasiness in Switzerland regarding possible violation of the country's neutrality. Italy, according to official dispatches, has been strengthening her defenses on the Swiss border. President Schulthess, of Switzerland, said recently that the Swiss people would never allow a foreign army to invade their soil. On account of the reiteration of these reports the French and German Governments renewed their assurances to Switzerland that they would respect her neutrality.

—

WAR PERIL GROWING, KING TELLS SWEDES—COUNTRY'S POSITION MORE DIFFICULT THE LONGER IT LASTS, SAYS GUSTAVE.

LONDON, *January 16.*

At the opening of the Riksdag to-day, says Reuter's Stockholm correspondent, King Gustave's speech from the throne constituted a serious appeal to the Swedish nation on the grave circumstances of the third year of the continuance of the war.

"To the present," said King Gustave, "we have been able, by the grace of God, to avoid being drawn into the war. But the effects of the war, none the less, have inflicted on us many sufferings, and the longer it lasts the greater will become our difficulty. We can not shut our eyes to the profound gravity of the present hour."

King Gustave made an appeal for national unity, and the sinking of all internal dissensions, which, he said, had peculiarly aggravated the Government's task of safeguarding the country's liberty, sovereignty, and neutrality. The King announced the need of maintaining the special preparations by the land and sea forces, which hitherto had been judged indispensable, and alluded to the extraordinary measures that had been necessitated by the increasing extent of war operations carried on in territorial waters.

The King added that it was the duty of all the neutral States to maintain international law and care for their common and legitimate interests. He said a desire to contribute to the establishment of a durable peace had induced Sweden to enter into relations with other neutrals, especially the other two Scandinavian kingdoms, with a view to common deliberation. "I trust the cooperation already effected," said the King, "will be further strengthened and extended."

—

GREECE SUBMITS TO ALL DEMANDS—ACCEPTS ALLIES' TERMS CATEGORICALLY WHEN BRITISH ENVOY INSISTS—ITALIAN MILITARY MISSION AT ATHENS—CONSTANTINE'S TROOPS VACATING THESSALY AND KING'S FALL IS NEARER.

[By cable to the Tribune.]

LONDON, *January 17.*

Greece has yielded to the demands of the entente in their entirety. This was announced to-day by Sir F. E. H. Elliott, British minister at Athens. Venizelists arrested following the outbreak in Athens are expected to be released immediately.

The decision of the Greek Government was reached after a conference between Premier Lambros and Minister Elliott, at which the British envoy insisted that nothing short of a categorical acceptance of their demands would satisfy the allies.

The first indication of the great part Italy is to play in Macedonia in the near future is seen in the announcement from Athens that an Italian military mission has arrived there to participate in the allied control of Greece.

A mixed commission of entente and Greek officers will begin immediately the carrying out of the military guarantees. The first step will be the completion of the transfer of Greek troops and munitions in Peloponnesus, which must be done by January 23, according to the terms of the ultimatum. It is reported to be proceeding rapidly.

The next move by the entente, according to private advices, will be the removal of King Constantine, who will be supplanted by some one in sympathy with the allied cause. Unless signs fail, the new Greek ruler will be thoroughly in sympathy with the development of Italian plans in the Balkans and will be assured of the support of the Italian people.

Great satisfaction is expressed here over the sudden turn of events in Greece. It is the general opinion that there will be little further trouble from that quarter.

Great Britain amplifies the entente reply in a new note to the President, made public last Thursday, January 18, in which the bases of a durable peace are named:

TEXT OF NEW NOTE FROM GREAT BRITAIN CONCERNING PEACE SENT IN AMPLIFICATION OF ALLIED REPLY TO WILSON.

LONDON, *January 13.*

His Excellency the Right Honorable Sir Cecil Spring-Rice:

In sending you a translation of the allied note I desire to make the following observations, which you should bring to the notice of the United States Government:

I gather from the general tenor of the President's note that, while he is animated by an intense desire that peace should come soon and that when it comes it should be lasting, he does not, for the moment at least, concern himself with the terms on which it should be arranged. His Majesty's Government entirely share with the President's ideas; but they feel strongly that the durability of peace must largely depend on its character and that no stable system of international relations can be built on foundations which are essentially and hopelessly defective.

This becomes clearly apparent if we consider the main conditions which rendered possible the calamities from which the world is now suffering. These were the existence of great powers consumed with the lust of domination in the midst of a community of nations ill prepared for defense, plentifully supplied, indeed, with international laws, but with no machinery for enforcing them, and weakened by the fact that neither the boundaries of the various States nor their internal constitution harmonized with the aspirations of their constituent races or secured to them just and equal treatment.

That this last evil would be greatly mitigated if the allies secured the changes in the map of Europe outlined in their joint note is manifest, and I need not labor the point.

It has been argued, indeed, that the expulsion of the Turks from Europe forms no proper or logical part of this general scheme. The maintenance of the Turkish Empire was during many generations regarded by statesmen of world-wide authority as essential to the maintenance of European peace. Why, is it asked, should the cause of peace be now associated with a complete reversal of this traditional policy?

The answer is that circumstances have completely changed. It is unnecessary to consider now whether the creation of a reformed Turkey, mediating between hostile races in the Near East, was a scheme which, had the Sultan been sincere and the powers united, could ever have been realized. It certainly can not be realized now. The Turkey of "union and progress" is at least as barbarous and is far more aggressive than the Turkey of Sultan Abdul Hamid. In the hands of Germany it has ceased even in appearance to be a bulwark of peace, and is openly used as an instrument of conquest. Under German officers Turkish soldiers are now fighting in lands from which they had long been expelled, and a Turkish Government controlled, subsidized, and supported by Germany has been guilty of massacres in Armenia and Syria more horrible than any recorded in the history even of those unhappy countries. Evidently the interests of peace and the claims of nationality alike require that Turkish rule over alien races shall, if possible, be brought to an end, and we may hope that the expulsion of Turkey from Europe will contribute as much to the cause of peace as the restoration of Alsace-Lorraine to France, or Italia Irredenta to Italy, or any of the territorial changes indicated in the allied note.

Evidently, however, such territorial rearrangements, though they may diminish the occasions of war, provide no sufficient security against its recurrence. If Germany, or rather those in Germany who mold its opinions and control its destinies, again sets out to domineer the world, they may find that by the new order of things the adventure is made more difficult, but hardly that it is made impossible. They may still have ready to their hand a political system organized through and through on a military basis; they may still accumulate vast stores of military equipment; they may still persist in their methods of attack, so that their more pacific neighbors will be struck down before they can prepare themselves for defense. If so, Europe when the war is over will be far poorer in men, in money, and in mutual good will than it was when the war began, but it will not be safer, and the hopes for the future of the world entertained by the President will be as far as ever from fulfillment.

There are those who think that for this disease international treaties and international laws may provide a sufficient cure. But such persons have ill learned the lessons so clearly taught by recent history. While other nations, notably the United States of America and Britain, were striving by treaties of arbitration to make sure that no chance quarrel should mar the peace they desired to make perpetual, Germany stood aloof. Her historians and philosophers preached the splendors of war; power was proclaimed as the true end of the State; and the general staff forged with untiring industry the weapons by which at the appointed moment power might be achieved. These facts proved clearly enough that treaty arrangements for maintaining peace were not likely to find much favor at Berlin; they did not prove that such treaties, once made, would be utterly ineffectual. This became evident only when war had broken out, though the sought demonstration, when it came, was overwhelming. So long as Germany remains the Germany which, without a shadow of justification, overran and barbarously ill treated a country it was pledged to defend, no State can regard its rights as secure if they have no better protection than a solemn treaty.

The case is made worse by the reflection that these methods of calculated brutality were designed by the central powers not merely to crush to the dust those with whom they were at war, but to intimidate those with whom they were still at peace. Belgium was not only a victim, it was an example. Neutrals were intended to note the outrages which accompanied its conquest, the reign of terror which followed on its occupation, the deportation of a portion of its population, the cruel oppression of the remainder. And, lest the nations happily protected either by British fleets or by their own from German armies, should suppose themselves safe from German methods, the submarine has (within its limits) assiduously imitated the barbarous practices of the sister service. The war staffs of the central powers are well content to horrify the world if at the same time they can terrorize it.

If, then, the central powers succeed, it will be to methods like these that they will owe their success. How can any reform of international relations be based on a peace thus obtained? Such a peace would represent the triumph of all the forces which make war certain and make it brutal. It would advertise the futility of all the methods on which civilization relies to eliminate the occasions of international dispute and to mitigate their ferocity. Germany and Austria made the present war inevitable by attacking the rights of one small State, and they gained their initial triumphs by violating the treaty guaranties of the territories of another. Are small States going to find in them their protectors or in treaties made by them a bulwark against aggression? Terrorism by land and sea will have proved itself the instrument of victory. Are the victors likely to abandon it on the appeal of neutrals? If existing treaties are no more than scraps of paper, can fresh treaties help us? If they be crowned with success, will it not be in vain that the assembled nations labor to improve their code? None will profit by their rulers but powers who break them. It is those who keep them that will suffer.

Though, therefore, the people of this country share to the full the desire of the President for peace, they do not believe peace can be durable if it be not based on the success of the allied cause. For a durable peace can hardly be expected unless three conditions are fulfilled: The first is that existing causes of international unrest should be as far as possible removed or weakened; the second is that the aggressive aims and the unscrupulous methods of the central powers should fall into disrepute among their own peoples; the third is that behind international law and behind all treaty arrangements for preventing or limiting hostilities some form of international sanction should be devised which would give pause to the hardiest aggressor.

These conditions may be difficult of fulfillment. But we believe them to be in general harmony with the President's ideas, and we are confident that none of them can be satisfied, even imperfectly, unless peace be secured on the general lines indicated (so far as Europe is concerned) in the joint note. Therefore it is that this country has made, is making, and is prepared to make sacrifices of blood and treasure unparalleled in its history. It bears these heavy burdens, not merely that it may thus fulfill its treaty obligations, nor yet that it may secure a barren triumph of one group of nations over another. It bears them because it firmly believes that on the success of the allies depend the prospects of peaceful civilization and of those international reforms which the best thinkers of the New World, as of the Old, dare to hope may follow on the cessation of our present calamities.

ARTHUR J. BALFOUR.

At 1 p. m. to-day the President addressed the Senate as a body, as follows:

TEXT OF PRESIDENT WILSON'S ADDRESS BEFORE THE SENATE GIVING HIS IDEAS OF STEPS NECESSARY FOR WORLD PEACE.

GENTLEMEN OF THE SENATE: On the 18th of December last I addressed an identic note to the Governments of the nations now at war requesting them to state more definitely than there had yet been stated by either group of belligerents the terms upon which they would deem it possible to make peace. I spoke on behalf of humanity and of the rights of all neutral nations like our own, many of whose most vital interests the war puts in constant jeopardy. The central powers united in a reply which stated merely that they were ready to meet their antagonists in conference to discuss terms of peace.

The entente powers have replied much more definitely and have stated, in general terms, indeed, but with sufficient definiteness to imply details, the arrangements, guarantees, and acts of reparation which they deem to be the indispensable conditions of a satisfactory settlement.

We are that much nearer a definite discussion of the peace which shall end the present war. We are that much nearer the discussion of the international concert which must thereafter hold the world at peace.

In every discussion of the peace that must end this war it is taken for granted that that peace must be followed by some definite concert of power which will make it virtually impossible that any such catastrophe should ever overwhelm us again. Every lover of mankind, every sane and thoughtful man, must take that for granted.

I have sought this opportunity to address you because I thought that I owed it to you, as the council associated with me in the final determination of our international obligations, to disclose to you without reserve the thought and purpose that have been taking form in my mind in regard to the duty of our Government in these days to come, when it will be necessary to lay afresh and upon a new plan the foundations of peace among the nations.

It is inconceivable that the people of the United States should play no part in that great enterprise. To take part in such a service will be the opportunity for which they have sought to prepare themselves by the very principles and purposes of their policy and the approved practices of their Government ever since the days when they set up a new Nation in the high and honorable hope that it might, in all that it was and did, show mankind the way to liberty. They can not in honor withhold the service to which they are now about to be challenged. They do not wish to withhold it. But they owe it to themselves and to the other nations of the world to state the conditions under which they will feel free to render it.

That service is nothing less than this: To add their authority and their power to the authority and force of other nations to guarantee peace and justice throughout the world. Such a settlement can not now be long postponed. It is right that before it comes this Government should frankly formulate the conditions upon which it would feel justified in asking our people to approve its formal and solemn adherence to a league for peace. I am here to attempt to state those conditions.

The present war must first be ended; but we owe it to candor and to a joint regard for the opinion of mankind to say that so far as our participation in guarantee of future peace is concerned it makes a great deal of difference in what way and upon what terms it is ended. The treaties and agreements which bring it to an end must embody terms which will create a peace that is worth guaranteeing and preserving; a peace that will win the approval of mankind, not merely a peace that will serve the several interests and immediate aims of the nations engaged. We shall have no voice in determining what those terms shall be, but we shall, I feel sure, have a voice in determining whether they shall be made lasting or not by the guarantees of a universal covenant; and our judgment upon what is fundamental and essential as a condition precedent to permanency should be spoken now, not afterward, when it may be too late.

No covenant of cooperative peace that does not include the peoples of the New World can suffice to keep the future safe against war; and yet there is only one sort of peace that the peoples of America could join in guaranteeing.

The elements of that peace must be elements that engage the confidence and satisfy the principles of the American governments, elements consistent with their political faith and the practical convictions which the peoples of America have once for all embraced and undertaken to defend.

I do not mean to say that any American government would throw any obstacle in the way of any terms of peace the governments now at war might agree upon, or seek to upset them when made, whatever they might be.

I only take it for granted that mere terms of peace between the belligerents will not be satisfactory even to the belligerents themselves. Mere agreements may not make peace secure. It will be absolutely necessary that a force be created as a guarantor of the permanency of the settlement so much greater than the force of any nation now engaged or any alliance hitherto formed or projected that no nation, no probable combination of nations, could face or withstand it. If the peace presently to be made is to endure, it must be a peace made secure by the organized major force of mankind.

The terms of the immediate peace agreed upon will determine whether it is a peace for which such a guaranty can be secured. The question upon which the whole future peace and policy of the world depends is this:

And the paths of the sea must, alike in law and in fact, be free. The freedom of the seas is the sine qua non of peace, equality and cooperation. No doubt a somewhat radical reconsideration of many of the rules of international practice hitherto sought to be established may be necessary in order to make the seas indeed free and common in practically all circumstances for the use of mankind, but the motive for such changes is convincing and compelling. There can be no trust or intimacy between the peoples of the world without them. The free, constant, unthreatened intercourse of nations is an essential part of the process of peace and of development.

It need not be difficult to define or to secure the freedom of the seas if the Governments of the world sincerely desire to come to an agreement concerning it.

It is a problem closely connected with the limitation of naval armament and the cooperation of the navies of the world in keeping the seas at once free and safe. And the question of limiting naval armaments opens the wider and perhaps more difficult question of the limitation of armies and of all programs of military preparation.

Difficult and delicate as these questions are, they must be faced with the utmost candor and decided in a spirit of real accommodation if peace is to come with healing in its wings, and come to stay. Peace can not be had without concession and sacrifice. There can be no sense of safety and equality among the nations if great preponderating armaments are henceforth to continue here and there to be built up and maintained.

The statesmen of the world must plan for peace, and nations must adjust and accommodate their policy to it as they have planned for war and made ready for pitiless contest and rivalry.

The question of armaments, whether on land or sea, is the most immediately and intensely practical question connected with the future fortunes of nations and of mankind.

I have spoken upon these great matters without reserve and with the utmost explicitness because it has seemed to me to be necessary if the world's yearning desire for peace was anywhere to find free voice and utterance. Perhaps I am the only person in high authority amongst all the peoples of the world who is at liberty to speak and hold nothing back. I am speaking as an individual, and yet I am speaking also, of course, as the responsible head of a great Government, and I feel confident that I have said what the people of the United States would wish me to say.

May I not add that I hope and believe that I am in effect speaking for liberals and friends of humanity in every nation and of every program of liberty? I would fain believe that I am speaking for the silent mass of mankind everywhere who have as yet had no place or opportunity to speak their real hearts out concerning the death and ruin they see to have come already upon the persons and the homes they hold most dear.

And in holding out the expectation that the people and Government of the United States will join the other civilized nations of the world in guaranteeing the permanence of peace upon such terms as I have named I speak with the greater boldness and confidence, because it is clear to every man who can think that there is in this promise no breach in either our traditions or our policy as a nation, but a fulfillment rather of all that we have professed or striven for.

I am proposing, as it were, that the nations should with one accord adopt the doctrine of President Monroe as the doctrine of the world; that no nation should seek to extend its policy over any other nation or people, but that every people should be left free to determine its own polity, its own way of development, unhindered, unthreatened, unafraid, the little along with the great and powerful.

I am proposing that all nations henceforth avoid entangling alliances which would draw them into competitions of power, catch them in a net of intrigue and selfish rivalry, and disturb their own affairs with influences intruded from without. There is no entangling alliance in a concert of power. When all unite to act in the same sense and with the same purpose all act in the common interest and are free to live their own lives under a common protection.

I am proposing government by the consent of the governed; that freedom of the seas which in international conference after conference representatives of the United States have urged with the eloquence of those who are the convinced disciples of liberty; and that moderation of armaments which makes of armies and navies a power for order merely, not an instrument of aggression or of selfish violence.

These are American principles, American policies. We can stand for no others. And they are also the principles and policies of forward-looking men and women everywhere, of every modern nation, of every enlightened community. They are the principles of mankind and must prevail.

Is the present war a struggle for a just and secure peace or only for a new balance of power? If it be only a struggle for a new balance of power, who will guarantee, who can guarantee, the stable equilibrium of the new arrangement? Only a tranquil Europe can be a stable Europe. There must be not a balance of power but a community of power, not organized rivalries but an organized common peace.

Fortunately, we have received very explicit assurances on this point. The statesmen of both of the groups of nations now arrayed against one another have said in terms that could not be misinterpreted that it was no part of the purpose they had in mind to crush their antagonists. But the implications of these assurances may not be equally clear to all—may not be the same on both sides of the water. I think it will be serviceable if I attempt to set forth what we understand them to be.

They imply, first of all, that it must be a peace without victory. It is not pleasant to say this. I beg that I may be permitted to put my own interpretation upon it and that it may be understood that no other interpretation was in my thought. I am seeking only to face realities and to face them without soft concealments. Victory would mean peace forced upon the loser, a victor's terms imposed upon the vanquished.

It would be accepted in humiliation, under duress, at an intolerable sacrifice, and would leave a sting, a resentment, a bitter memory upon which terms of peace would rest not permanently but only as upon quicksand. Only a peace between equals can last. Only a peace the very principle of which is equality and a common participation in a common benefit. The right state of mind, the right feeling between nations, is as necessary for a lasting peace as is the just settlement of vexed questions of territory or of racial and national allegiance.

The equality of nations upon which peace must be founded if it is to last must be an equality of rights; the guaranties exchanged must neither recognize nor imply a difference between big nations and small, between those that are powerful and those that are weak. Right must be based upon the common strength, not upon the individual strength, of the nations upon whose concert peace will depend.

Equality of territory or of resources there, of course, can not be; nor any other sort of equality not gained in the ordinary peaceful and legitimate development of the peoples themselves. But no one asks or expects anything more than an equality of rights. Mankind is looking now for freedom of life, not for equipoises of power.

And there is a deeper thing involved than even equality of right among organized nations. No peace can last, or ought to last, which does not recognize and accept the principle that governments derive all their just powers from the consent of the governed, and that no right anywhere exists to hand people about from sovereignty to sovereignty as if they were property.

I take it for granted, for instance, if I may venture upon a single example, that statesmen everywhere are agreed that there should be a united, independent, and autonomous Poland, and that henceforth inviolable security of life, of worship, and of industrial and social development should be guaranteed to all peoples who have lived hitherto under the power of governments devoted to a faith and purpose hostile to their own.

I speak of this not because of any desire to exalt an abstract political principle, which has always been held very dear by those who have sought to build up liberty in America, but for the same reason that I have spoken of the other conditions of peace which seem to me clearly indispensable, because I wish frankly to uncover realities. Any peace which does not recognize and accept this principle will inevitably be upset.

It will not rest upon the affections or the convictions of mankind. The ferment of spirit of whole populations will fight subtly and constantly against it and all the world will sympathize. The world can be at peace only if its life is stable, and there can be no stability where the will is in rebellion, where there is not tranquillity of spirit and a sense of justice, of freedom, and of right.

So far as practicable, moreover, every great people now struggling toward a full development of its resources and of its powers should be assured a direct outlet to the great highways of the sea. Where this can not be done by the cession of territory, it can, no doubt, be done by the neutralization of direct rights of way under the general guarantee which will assure the peace itself. With a right comity of arrangement no nation need be shut away from free access to the open paths of the world's commerce.

In order to make this record fairly complete I here insert the President's address on the peace question here in the Capital on the evening of the 27th of last May at the Peace Conference banquet:

When the invitation to be here to-night came to me I was glad to accept it—not because it offered me an opportunity to discuss the program of the league—that you will, I am sure, not expect of me—but because the desire of the whole world now turns eagerly, more and more eagerly, toward the hope of peace, and there is just reason why we should take our part in counsel upon this great theme. It is right that I, as spokesman of our Government, should attempt to give expression to what I believe to be the thought and purpose of the people of the United States in this vital matter.

This great war that broke so suddenly upon the world two years ago, and which has swept within its flame so great a part of the civilized world, has affected us very profoundly, and we are not only at liberty, it is perhaps our duty, to speak very frankly of it and of the great interests of civilization which it affects.

RIGHTS OF NATION AFFECTED.

With its causes and its objects we are not concerned. The obscure fountains from which its stupendous flood has burst forth we are not interested to search for or explore. But so great a flood, spread far and wide to every quarter of the globe, has of necessity ingulfed many a fair province of right that lies very near to us.

Our own rights as a Nation, the liberties, the privileges, and the property of our people have been profoundly affected. We are not mere disinterested lookers-on.

The longer the war lasts the more deeply do we become concerned that it should be brought to an end and the world be permitted to resume its normal life and course again. And when it does come to an end we shall be as much concerned as the nations at war to see peace assume an aspect of permanence, give promise of days from which the anxiety of uncertainty shall be lifted, bring some assurance that peace and war shall always hereafter be reckoned part of the common interest of mankind.

ARE PARTNERS WITH THE REST.

We are participants, whether we would or not, in the life of the world. The interests of all nations are our own also. We are partners with the rest. What affects mankind is inevitably our affair as well as the affair of the nations of Europe and of Asia.

One observation on the causes of the present war we are at liberty to make, and to make it may throw some light forward upon the future as well as backward upon the past. It is plain that this war could have come only as it did, suddenly and out of secret counsels, without warning to the world, without discussion, without any of the deliberate movements of counsel with which it would seem natural to approach so stupendous a contest.

It is probable that if it had been foreseen just what would happen, just what alliances would be formed, just what forces arrayed against one another, those who brought the great contest on would have been glad to substitute conference for force.

MIGHT HAVE AVERTED WAR.

If we ourselves had been afforded some opportunity to apprise the belligerents of the attitude which it would be our duty to take, of the policies and practices against which we would feel bound to use all our moral and economic strength, and in certain circumstances even our physical strength also, our own contribution to the counsel which might have averted the struggle would have been considered worth weighing and regarding.

And the lesson which the shock of being taken by surprise in a matter so deeply vital to all the nations of the world has made poignantly clear is, that the peace of the world must henceforth depend upon a new and more wholesome diplomacy.

Only when the great nations of the world have reached some sort of agreement as to what they hold to be fundamental to their common interest, and as to some feasible method of acting in concert when any nation or group of nations seeks to disturb those fundamental things, can we feel that civilization is at last in a way of justifying its existence and claiming to be finally established.

MUST BE GOVERNED BY HONOR.

It is clear that nations must in the future be governed by the same high code of honor that we demand of individuals.

We must, indeed, in the very same breath with which we avow this conviction admit that we have ourselves upon occasion in the past been offenders against the law of diplomacy which we thus forecast; but our conviction is not the less clear, but rather the more clear on that account.

If this war has accomplished nothing else for the benefit of the world, it has at least disclosed a great moral necessity and set forward the thinking of the statesmen of the world by a whole age.

Repeated utterances of the leading statesmen of most of the great nations now engaged in war have made it plain that their thought has

come to this: That the principle of public right must henceforth take precedence over the individual interests of particular nations, and that the nations of the world must in some way band themselves together to see that that right prevails as against any sort of selfish aggression; that henceforth alliance must not be set up against alliance, understanding against understanding, but that there must be a common agreement for a common object, and that at the heart of that common object must lie the inviolable rights of peoples and of mankind.

NATIONS ARE NOW NEIGHBORS.

The nations of the world have become each other's neighbors. It is to their interest that they should understand each other. In order that they may understand each other it is imperative that they should agree to cooperate in a common cause, and that they should so act that the guiding principle of that common cause shall be even-handed and impartial justice.

This is undoubtedly the thought of America. This is what we ourselves will say when there comes proper occasion to say it. In the dealings of nations with one another arbitrary force must be rejected, and we must move forward to the thought of the modern world, the thought of which peace is the very atmosphere. That thought constitutes a chief part of the passionate conviction of America.

RIGHTS OF THE LITTLE NATIONS.

We believe these fundamental things: First, that every people has a right to choose the sovereignty under which they shall live. Like other nations we have ourselves no doubt once and again offended against that principle when for a little while controlled by selfish passion, as our franker historians have been honorable enough to admit; but it has become more and more our rule of life and action. Second, that the small States of the world have a right to enjoy the same respect for their sovereignty and for their territorial integrity that great and powerful nations expect and insist upon. And, third, that the world has a right to be free from every disturbance of its peace that has its origin in aggression and disregard of the rights of peoples and nations.

So sincerely do we believe in these things that I am sure that I speak the mind and wish of the people of America when I say that the United States is willing to become a partner in any feasible association of nations formed in order to realize these objects and make them secure against violation.

READY TO CHECK AGGRESSION.

There is nothing that the United States wants for itself that any other nation has. We are willing, on the contrary, to limit ourselves along with them to a prescribed course of duty and respect for the rights of others which will check any selfish passion of our own, as it will check any aggressive impulse of theirs.

If it should ever be our privilege to suggest or initiate a movement for peace among the nations now at war, I am sure that the people of the United States would wish their Government to move along these lines:

First, such a settlement with regard to their own immediate interests as the belligerents may agree upon. We have nothing material of any kind to ask for ourselves, and are quite aware that we are in no sense or degree parties to the present quarrel. Our interest is only in peace and its future guaranties.

Second, an universal association of the nations to maintain the inviolate security of the highway of the seas for the common and unhindered use of all the nations of the world, and to prevent any war begun either contrary to treaty covenants or without warning and full submission of the causes to the opinion of the world—a virtual guaranty of territorial integrity and political independence.

ONLY AVOWS A CREED.

But I did not come here, let me repeat, to discuss a program. I came only to avow a creed and give expression to the confidence I feel that the world is even now upon the eve of a great consummation, when some common force will be brought into existence which shall safeguard right as the first and most fundamental interest of all peoples and all governments, when coercion shall be summoned not to the service of political ambition or selfish hostility, but to the service of a common order, a common justice and a common peace.

God grant that the dawn of that day of frank dealing and of settled peace, concord, and cooperation may be near at hand.

Some Afterthoughts Upon the Public-Buildings Bill Jammed Through the House on Saturday Which May Serve as Forethoughts Upon the Rivers and Harbors Bill Which Has Taken the Front of the Stage With the Same Force Back of It.

EXTENSION OF REMARKS

OF

HON. S. D. FESS,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, January 23, 1917.

Mr. FESS. Mr. Speaker, the passage of the public-buildings bill through the House by a vote of 234 to 92 of those voting, 106 not voting, demonstrates in a bald degree the imperative necessity of a radical change in this method of legislation. This bill is condemned widely from every standpoint. The bill itself condemns its passage in the most open manner. The bill provides for a building commission. The law then proceeds—

There shall be in the bureau of public buildings a board of estimates, consisting of three persons, two of whom shall be designated by the Secretary of the Treasury, and the third member shall be the commissioner of public buildings, who shall be the chairman of said board. It shall be the duty of such board of estimates, immediately upon the introduction of a bill in Congress proposing to purchase a site or to construct a Federal building, or both, to institute an investigation, through the field force in the proper group of States and Territories, or otherwise, and, as early as possible, report to the Secretary of the Treasury, who shall at once forward the same to the committee of Congress having jurisdiction of the bill, the following facts:

First. The postal receipts for the last fiscal year.
Second. The different Federal activities to be provided for.
Third. The number of employees for each Federal activity to be housed.
Fourth. The population according to the last Federal census and the preceding one.
Fifth. The estimated population at time of making the report.
Sixth. What important industries, if any, are located in or adjacent to the town or city.
Seventh. How many railroads.
Eighth. Whether county seat or not.
Ninth. Character of public and business buildings.
Tenth. What municipal improvements.
Eleventh. Present needs as to space and probable needs within 10 years.
Twelfth. Character of rented quarters occupied by the Government at time of making report.
Thirteenth. Amount of rent being paid annually in the town or city by the Government at time of making report.
Fourteenth. Distance of post office from union station or depot of railroad to which bulk of mail is brought at time of making report.
Fifteenth. Amount being paid annually by the Government for carriage of mail to and fro between depots and wharves and post office at time of making report.
Sixteenth. Any further fact or facts showing or tending to show advisability of providing for a Federal building at the place named in the bill.

That from and after the passage of this act no city or town in the United States where there are no Federal activities other than the post office shall be considered, either for the purchase of a site or for the construction of a Federal building, by the commissioner of public buildings or the bureau of public buildings or by any committee of Congress, unless it shall appear that the postal receipts for such city or town have amounted to at least $10,000 annually for three successive years: *Provided*, That nothing herein shall apply to cities or towns where sites for public buildings have been acquired or authorized.

It will be noted that the last paragraph fixes $10,000 as the sum of postal receipts as a necessary requirement for a building. However, it expressly declares "hereafter" this shall be the requirement, then to be doubly safe, declares that "nothing herein shall apply to cities or towns where sites for public buildings have already been acquired or authorized." Splendid! Here is a bill that inserts the items which would be excluded by its last provision, a limitation demanded by common sense, but covers them by providing it shall not be operative as to them. If this provision is a correct position why not prove its merit by respecting it by omitting all items in this bill which it excludes in the future?

If this law were operative as to its own items two out of the seven towns in the State of Florida, the home of the chairman of the committee, would be excluded. Not one of them, save a winter resort, according to the estimates upon which this bill was drafted, will reach $15,000 postal receipts. Oh, but we are told there are "other Federal activities," as if those activities could not be carried on without the proposed buildings.

Members upon the committee did well for themselves. Our genial colleague, Judge PARK, of Georgia, has to his credit 19 items—all but 2 would be excluded from the bill if the last clause were operative as to this bill as well as to future bills. One has a population less than 1,000, 7 less than 2,000, and 14 less than 3,000. Our colleague, Judge BURNETT, from Alabama, got 10 items, all but 2, Montgomery and Mobile, would be excluded. Our colleague, Mr. SUMNERS, got for Texas 18 items, 14 of which would not pass the test. Our South Carolina friends secured 12 items, 9 of which would be excluded. Our distinguished friends from Missouri secured 21 items, 13 of which, with less than 3,000 population, would be excluded if the bill was made operative to-day. Congressman HOOD of North Carolina secured 16 items, a dozen of which have a population of less than 3,000, and would be excluded from the present bill if it were self-operative. Judge CANTRILL of Kentucky, aided by our amiable colleague, LANGLEY, cinched 13 items, 10 of which fall under 3,000 people and would not meet the requirements of the present bill. The same can be said of Tennessee, which gets 9 items, every one of which would be excluded. Mississippi's eight districts get 7 items, 6 of which would be excluded. Louisiana's eight districts get 8 items, 3 of which would be excluded. Arkansas receives 8 items, half of which could qualify under the present bill.

The greatest number of towns disqualified by this measure, but included in it, are found in the southern section. This is partly due to the slow growth of towns in that part of the country.

In other words, if this bill were made operative on its own items, it would exclude 80 per cent of those in Alabama, 50 per cent of those in Arkansas, 28 per cent of those in Florida, 90 per cent of Georgia, 92 per cent of Kentucky, 37 per cent of Louisiana, 85 per cent of Mississippi, 75 per cent of North Carolina, 75 per cent of South Carolina, 100 per cent of Tennessee, 20 per cent of Texas, and so forth.

In these 11 States 127 items were allowed, 82 of which would be excluded by the standard of the bill.

In 24 States, North and West, 199 items were allowed, but 10 of which would have been excluded by the standard of the bill.

This feature is the ground for some criticism heard in the debate.

When postal receipts are compared the contrast is apparent.

The 14 towns in Ohio show receipts of $1,509,000—if Columbus is deducted they are $369,850—while the 13 towns in Kentucky show $81,850, or one-fourth.

The 18 towns of Illinois show $818,995, not counting Chicago's $27,000,000, while the 19 towns of Georgia show $142,000, or one-seventh.

The 10 towns in Indiana show $444,310, while the 9 towns of Tennessee show $63,550, or one-seventh.

The 14 towns of Massachusetts show $506,210, not including Boston, while the 16 towns of North Carolina show $157,000, or one-third.

This bill has been charged as sectional. That charge is based on several facts: First, a majority of the members of the Public Buildings Committee are from Southern States. Second, the great bulk of towns not within the limits fixed by this bill for future buildings are in the South. Seventy per cent of the new sites which would be excluded were the bill self-operative are in Southern States. Third, the "pork-barrel" advocates of the South are most vocal in their demands for "our share." Chairman CLARK loudly proclaimed his desire to remedy the evil by the "great reform" proposed in the bill, but denounced the charge that it is sectional, and in proof pointed out that the bill allowed only about $6,000,000 for the South and $25,000,000 for the balance of the country. The bill carries more than $38,000,000.

Mr. Speaker, this angle of legislation is beyond the appreciation of many Members of this House. This is the demand that we have "our share." The brilliant debater, Judge BURNETT, charged me that I was willing to accept my own share, but was unwilling to give others their shares. This method of doing the Government's public business by personal reciprocation, either of Members or of sections of the country, is pernicious. For example, Chicago has an item of $4,500,000 in this bill. The expense of the Chicago post office is $7,000,000 annually. The postal receipts are $27,000,000 per year, a net profit to the Government of $20,000,000 per year. These "our-share" statesmen would demand of me if I vote for the $4,500,000 item for Chicago, where the Government reaps every year $20,000,000 profit, I must in equity vote for such towns at Albertville, Ala., where the postal receipts are $5,663 and the cost of maintenance $3,700. This cost does not include the interest on the money, nor the depreciation and repairs.

The department counts upon 4 per cent for interest and 2½ per cent for repairs and depreciation. If we add to the cost of maintenance the interest on site and building, and repairs, the cost will be equal to, or greater than, the total receipts.

The Post Office Department is running behind. The large cities are paying great profits beyond the cost of the service. The small places can not do this. The Government guarantees the regular mails to towns, great and small, and properly houses the service even at great loss in places for rented quarters. It must appear the height of business folly to increase this loss by building Government buildings in these small places when rented quarters can be secured at a very much smaller cost.

But these "our-share" statesmen say the $4,500,000 for Chicago would build a post-office building at a cost of $50,000 in 90 towns of the country. We are therefore faced with the demand if we expect the needed extension of these offices where the Government's postal business has so greatly outgrown the quarters we must stand ready to reciprocate for the town of one to three thousand, notwithstanding the former covers into the National Treasury great profits while the latter involves great losses. Here is the viciousness of this "pork-barrel" method. The Government's needed extensions can not be granted until the small town's rented quarters are superseded by a Government building, no matter how much profit the former may turn into a depleted treasury, nor how much loss the latter will entail upon the exchequer. They charge that it is patriotism to support a Federal-building program, as one Member said it was the only place where the citizen could see the American flag.

A similar situation faces the Congress in the rivers and harbors bill. Here are many valuable projects loudly demanding extensions, at least continued construction. We are one in our desire to do so. But in order to secure favorable action upon these concededly needed projects, we have put up to us the expenditure of millions of money for wasteful projects and given to understand if we wish the completion of the profitable project we must vote for "our-share" statesmen's claims in this bill. If we refuse to vote for "our share," then we must vote against the whole bill, including the meritorious, or for the whole bill, including all the salvage with which it teems.

The country will support any measure justified by the needs of the people; especially is this true in the matter of the mails, city or rural. The Government loses a great sum on the Rural Mail Service, but the country justifies the delivery of daily mail to our rural population even at a loss, as it justifies a post office in every town, in many of which it costs much more than it pays. This does not mean that the Government should build the roads or own the horses and wagons or automobiles or the mail boxes in order to insure a daily mail service. Likewise a Government building is not essential in every town in order to have our mail each day.

This "our-share" statesmanship refuses the needed extension of mail facilities in the cities where the business is so great that quarters are demanded in order to care for it, even at a great profit to the Government, unless the Congressmen who ask for these extensions are willing to vote for the erection in towns of less than 1,000 people a building to care for the mail the receipts of which may fall below the actual running expenses, including the interest on the investment.

The embarrassment of this situation grows out of the sincerity of these men, who believe their duty is to secure for their town a Government building no matter at what loss to the Government. These Congressmen, acting upon such conviction, not only attempt to defend an indefensible position, but join in a scheme to pass the bill at any cost, even though it be at the price of a "gag" proceeding. During the consideration of the bill opponents of this measure undertook to expose defenseless items by showing their inconsistency with the last clause fixing $10,000 postal receipts as the minimum requirement for a public building hereafter. The chairman of the committee invoked what he claimed was his right to shut off all debate and amendment and at the very moment when the committee was proceeding under a special rule permitting both. He charged that the citation of the facts of an item such as the population of the town, the postal receipts of the office, and the cost of maintenance was a filibuster. He invoked the rule which permits the committee to close debate after the debate had begun.

This fiction was successfully employed, as follows:

The Clerk read the item. The opponents were on their feet for recognition to strike out the item, and under the rules of the House to exercise their right to give the facts about the item in justification of striking it out. The chairman in charge of the bill demanded and secured recognition, and proceeded to say "This is an important item and should be in the bill," and then debate having begun, he, without yielding the floor, moved to close debate, which motion was put, and supported by the House, which during the entire consideration of the bill was surprisingly well filled. When a point of order was made against such procedure, which, carried to its legitimate end, would prevent any consideration of any bill by gagging all opposition, and by forcing a vote upon every item without debate, the chairman of the Committee of the Whole decided in favor of the fiction. I here reprint two columns of the CONGRESSIONAL RECORD of Thursday, January 18. It will tell the story of the procedure when a pork measure is being considered:

The Clerk read as follows:
"United States post office at Fairfield, Iowa, $50,000."
Mr. CLARK of Florida. Mr. Chairman, I want to say that the proposition ought to be in the bill, and I move that further debate on the paragraph just read be now closed. I refer to the item for Fairfield, Iowa.
The CHAIRMAN. The gentleman from Florida moves that all debate on the paragraph just read be now closed.
The motion was agreed to.
The Clerk read as follows:
"United States post office at Falmouth, Ky., $25,000."
Mr. CLARK of Florida. Mr. Chairman, that, too, is a very deserving item, and I move that all debate on that item be now closed.
The CHAIRMAN. The gentleman moves that all debate on this paragraph close.
The motion was agreed to.
The Clerk read as follows:
"United States post office and other Government offices at Fargo, N. Dak., $250,000."
Mr. CLARK of Florida. Mr. Chairman, that is also a very deserving item, and I move that all debate on it be now closed.
The CHAIRMAN. The gentleman moves that all debate on the paragraph just read be now closed.
The question was taken, and the Chair announced that the ayes seemed to have it.
Mr. FREAR. Tellers, Mr. Chairman.
Tellers were refused.
The motion was agreed to.
The Clerk read as follows:
"United States post office and other Government offices at Forrest City, Ark., $25,000."
Mr. CLARK of Florida. Mr. Chairman, I offer an amendment.
The CHAIRMAN. The gentleman from Florida offers an amendment, which the Clerk will report.

The Clerk read as follows:

"Page 11, line 20, strike out the figures '$25,000' and insert in lieu thereof the figures '$35,000.'"

The CHAIRMAN. The question is on agreeing to the amendment.

Mr. JAMES rose.

Mr. CLARK of Florida. I will say, Mr. Chairman, that that is offered because of the fact that other towns of that size have that sum, and in proportion to those the original sum is not sufficient. I move that all debate on the paragraph and amendments thereto be closed.

Mr. STAFFORD. Mr. Chairman, I make a point of order.

The CHAIRMAN. The gentleman will state it.

Mr. STAFFORD. The gentleman can not move to close debate when another gentleman has the floor——

Mr. CLARK of Florida. Another gentleman has not the floor——

Mr. STAFFORD. Another gentleman, demanding recognition. He can not move to close debate until five minutes' debate has been had. The gentleman can not by these tactics foreclose Members from discussing items under the five-minute rule.

The Chair must take cognizance of the fact that five minutes have not been consumed on these respective items. The gentleman from Michigan [Mr. JAMES], demanding recognition, should be recognized, and the Chair can not entertain a motion to close the debate before five minutes' debate has been consumed. I call the attention of the Chair to section 6 of Rule XXII, which reads as follows:

"The committee may, by the vote of the majority of the Members present, at any time after the five minutes' debate has begun upon proposed amendments to any section or paragraph of a bill, close all debate upon such sections or paragraphs or, at its election, upon the pending amendments only (which motion shall be decided without debate); but this shall not preclude further amendment, to be decided without debate."

It has always been the practice, Mr. Chairman, to allow at least five minutes' debate under all conditions.

Mr. CLARK of Florida. The very rule that the gentleman quoted says "after debate had begun." I had the floor.

* * * * * * *

The Clerk read as follows:

"United States post office at Georgetown, Tex., $30,000."

Mr. CLARK of Florida. Mr. Chairman, I move to strike out the last word. I do that for the purpose of calling attention to the fact that Georgetown, Tex., is a very progressive city in that State. This is certainly an item that is worthy. I desire now to withdraw the pro forma amendment, and I move that all debate upon the paragraph and amendments thereto be now closed.

The CHAIRMAN. Without objection, the pro forma amendment will be withdrawn.

Mr. GARDNER. Mr. Chairman, I object.

The CHAIRMAN. The question is on closing debate upon the paragraph and amendments thereto.

The question was taken; and on a division (demanded by Mr. GARDNER) there were—ayes 114, noes 6.

So the motion was agreed to.

The CHAIRMAN. The question now is on the amendment offered by the gentleman from Florida to strike out the last word.

The question was taken, and the amendment was rejected.

The Clerk read as follows:

"United States post office at Green River, Wyo., $25,000."

Mr. CLARK of Florida. Mr. Chairman, I move to strike out the last word. The town of Green River, Wyo., is a very prosperous place. There are many Federal activities there, and this post office is absolutely essential to that community. I move that all debate upon this paragraph and amendments thereto be now closed.

The CHAIRMAN. The question is on the motion to close debate upon the paragraph and amendments thereto.

The question was taken; and on a division (demanded by Mr. FREAR) there were—ayes 97, noes 5.

So the motion was agreed to.

The CHAIRMAN. The question now is upon the amendment offered by the gentleman from Florida to strike out the last word.

The question was taken; and on a division (demanded by Mr. JAMES) there were—ayes 0, noes 52.

So the amendment was rejected.

The Clerk read as follows:

"United States post office at Greenville, Ala., $30,000."

Mr. CLARK of Florida. Mr. Chairman, I rise to discuss the item——

Mr. GARDNER. Mr. Chairman, I make the point of order that there is nothing before the House. What question is before the committee?

Mr. CLARK of Florida. The adoption of this item.

Mr. GARDNER. But the gentleman can not be recognized unless he has an amendment to offer.

Mr. CLARK of Florida. Then, Mr. Chairman, I move to strike out the last word. Mr. Chairman, I desire to say that many years ago I visited Greenville, Ala.——

Mr. GARDNER. Mr. Chairman, I make the point of order that the gentleman is not discussing his motion to strike out the last word.

Mr. CLARK of Florida. Yes; I am discussing it. This relates to Greenville, Ala. I want to say——

Mr. GARDNER. But the gentleman is discussing Alabama.

Mr. CLARK of Florida. Yes; Greenville, Ala. Having said what I did, that I visited this place several years ago, I can conclude my remarks by stating that it is rightly included in this bill. Mr. Chairman, I move that all further debate upon this paragraph and amendments thereto be now closed.

The CHAIRMAN. The question is on the motion of the gentleman from Florida to close debate on the paragraph and amendments thereto.

The question was taken, and on a division (demanded by Mr. JAMES) there were—ayes 83, noes 4.

Mr. GOOD. Mr. Chairman, I demand tellers.

The CHAIRMAN (after counting). Five gentlemen have risen, not a sufficient number.

Mr. GOOD. Mr. Chairman, I demand the other side.

Mr. MANN. There is no other side to the Committee of the Whole House on the state of the Union.

The CHAIRMAN. The rule is one-fifth of a quorum may decide whether there shall be tellers or not.

The town of Falmouth, thus protected from exposure of the facts upon which to judge its needs, had in 1910 a population of 1,180 people, less than any one of a dozen towns in my own district, and postal receipts of $5,638 in the last fiscal year. Forest City, thus protected, had a population in 1910 of 2,484 people. Georgetown, thus guarded, had in 1910 a population of 3,096. Greene River, thus shielded, had but 1,313 people in 1910. Greenville, Ala., but 3,377.

This gag was working in perfect order, with no successful interruption, until Mr. MANN, the minority leader, asked for three minutes and said:

Mr. Chairman, under the rules of the House it is impossible to save time by attempting to stifle debate. Of the procedure of the gentleman from Florida I have no criticism to make. Under the rules the motion to close debate is subject to amendment ad libitum, and upon every one of those you can have a division. After debate is closed you can offer amendments until the Chair goes blind, and I have never seen the Chairman of this committee get blind. Now, two or three gentlemen are here who desire to discuss certain items. The only way to do, after all, will be for the House to let them discuss those items in accordance with the rules. The time is not very great for any one item, and then this body, if it is necessary, might have to sit at night in order to pass the bill. That has occurred frequently in the past and will occur in the future; and if the House becomes satisfied that some Members are attempting to debate purely for filibuster, they never make any progress by that, whereas a filibuster is always successful in the effort to get a chance to debate. Now, Members are pretty well worked up to-night, and I suggest to the chairman of the committee he move to rise, and if necessary sit all to-morrow and to-morrow night and let gentlemen debate if they want to be heard.

The committee soon after rose, and after sleeping over the situation one night, it resumed a normal stage again.

The most significant fact in this legislation was not the boldness necessary to resort to these tactics, but the fact that the Members supported the gag, and did it almost unitedly and with evident enthusiasm.

There were 92 Members of the House to refuse to indorse this sort of legislation. Many of those opposing it placed their opposition upon the ground that the state of the Treasury will not permit an expenditure of $38,000,000. For the same reason these will offer opposition to the rivers and harbors bill, which was made the next in order, with the same enthusiasm displayed over the buildings bill and by the same group. This bill is built upon the same order, urged upon the same grounds, supported by the same people, and carries about the same charge upon the Treasury. The condition of the Treasury did not prevent those Members charged with providing the revenue for the Government from supporting these measures. Mr. KITCHIN, the chairman of the Ways and Means Committee, charged with the duty of providing revenue, voted for the legislation. He has notified the country that it is running behind at a frightful speed—about $2,000,000 per day. The next year's deficit is estimated at a figure beyond $300,000,000, a matter that would ordinarily stagger the average Congressman charged with the burden. But the way seems easy. We are notified that the tariff law will be left untouched—the inheritance tax will be increased, the income tax may also get a lift, and an excess-profits tax of 8 per cent above 8 per cent profit will be levied. Of course, no one knows what such a plan will produce. The authority will be given to issue $289,000,000 of bonds. There may be given authority to issue short-time Government checks or certificates to tide over until July when the income tax is expected to care for as much as $300,000,000 of such checks. These enormous sums we talk of borrowing do not include the Panama bonds of nearly $240,000,000, which are already authorized.

Here is high finance—$1,700,000,000 for one session of Congress. In addition to the necessary running expenses such as designated by the various appropriations for the different Government departments we are embarking upon the plane of high finance.

Thirty million dollars for Alaskan Railway.

Fifty million dollars to purchase ships.

Forty-five million dollars for flood control, so far as the House can induce it.

Twenty million dollars for nitrate plant.

Eleven million dollars for armor-plate plant.

Eighty-five million dollars for good roads.

Thirty-eight million dollars for public buildings.

Thirty-eight million dollars for rivers and harbors.

Forty million dollars for extra offices.

Twenty-five million dollars for Danish Islands.

One hundred and sixty million dollars for watchful waiting in Mexico.

These are a few of the high lights of Government finance. They indicate our agility in making debts for the country. What about the pay day?

What is the method to secure the needed revenues? Oh, borrow, of course, what can not be raised by direct tax. Penalize all enterprise by taxing it. Why not? It does not hurt us. We propose to make those who succeed support those of us who have not the time or the patience or else the talent to succeed. We will vote the obligation without the blink of an eye and without limit and then the tax to meet it. What difference if a public building in each of our towns of one or two

thousand people costs the Government millions of money? We can make those who do not live in our towns pay it. We have the votes; then, why hesitate?

It would be refreshing to examine these bills with reference to the towns where we propose to build or the rivers and harbors we propose to improve and the revenue such towns or State where the improvements are to be made pay into the Treasury to help to defray the additional expense.

Mr. Speaker, there is a day of reckoning coming. It can not be long deferred. This craving for "my share" of Federal money and this readiness to penalize the successful enterprise with never-ending new ways to tax will ultimately reach its inevitable end, where there will be no profit to tax, and where the resulting paralyzed industry will cause an army of unemployed to tramp the streets begging for bread. The demand will again be heard to issue more bonds, create more Government certificates, coin more silver, in a word to let Uncle Sam make the money and pay the bills. A nation, no more than an individual, can long maintain her integrity when she spends more than she makes. The outgo must have some connection with the income.

As I said at the outset, this sort of "pork-barrel" legislation makes it evident that a change must be wrought in our governmental management of our business affairs. We to-day are running the greatest business on earth in the most unbusinesslike way conceivable, a fact apparent to every Member of the House. Such methods would not be tolerated a moment by any business concern in the country, and is condemned by the best business sense of the Nation. Yet, in the face of it all, we constantly hear the statement that we must adopt Government ownership and operation of various utilities. This same reciprocity legislation which squares the account by a promise that you will get your share if you will help me to get my share is but a step to the abolition of private enterprise in favor of governmental activity, and is at once the strongest argument against it. If the Government erects buildings in our towns, it costs us nothing, say these statesmen; then why not compel the Government to do so, since we have the votes to do it? No matter about the Treasury nor the unbusinesslike character of such construction. This is the philosophy of the reciprocity legislator. This wicked waste of public money is but the seed sowing. The harvest will be reaped in due time. I am opposed to this legislation not so much because the Treasury can not stand the drain; that is a legitimate objection, but not fundamental. I am opposed to it because the system is wrong—so palpably wrong that its logrolling features have become notoriously obnoxious to the public. Its boldness has led its proponents to personal abuse of those who denounce it—a conclusive proof of its approaching rebuke. Personal ridicule and abuse of those who decline to reciprocate display as nothing else can the uneasy ground occupied by the proponents of such legislative procedure. The "pork-barrel" system will cease.

Inland Waterway Problems.

EXTENSION OF REMARKS

BY

HON. J. HAMPTON MOORE,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, January 22, 1917.

Mr. MOORE of Pennsylvania. Mr. Speaker, it may help a little in the approaching discussion of the rivers and harbors bill to consider some suggestions made last year by Brig. Gen. William M. Black, Chief of Engineers, United States Army, in an address before the Atlantic Deeper Waterways Association, on "Some problems of inland waterway transportation." The convention was held in the city of Philadelphia and was attended by approximately 1,000 delegates coming from all the States along the Atlantic seaboard. In that address Gen. Black said:

HELPING PRODUCER AND CONSUMER.

Ladies and gentlemen of the Atlantic Deeper Waterways Association, it gives me great pleasure to be with you again. Memories are very vivid of interesting meetings of the convention of 1914 in New York and up the beautiful valley of the Hudson. During that convention it was my privilege to speak a few words concerning the wonderful harbor of New York and the works of improvement required there and in the upper Hudson River.

To-day I want to speak on a more general subject, but it is one in which I am sure you are interested. You advocate, and I believe wisely, an increase in the waterways of our country—the linking, artificially, of the various natural bodies of water near our Atlantic coast, until there shall be a continuous and sheltered water highway from New England to the Rio Grande—with branch lines traversing the entire coastal plain. You do this with the very practical desire to facilitate and cheapen the movement of the products of the soil, the mine, and of the factory between the producer and the consumer, North and South, so that all may profit to the greatest extent from the various resources of this coast country which extends for nearly half the distance from the northern limit of the Tropical Zone to the Arctic Circle. This distribution is made to-day by ocean and rail carriers. Transportation by the first named is costly because of the perils of the sea. The interest on the large investments required to build and equip railroads, added to the daily expenses of maintenance and operation, make the minimum cost of railway transportation comparatively high. Thus, a 10,000-ton ocean steamship can, on long voyages, carry freight for three-tenths of a mill per ton-mile, whereas a like carriage by rail would cost from five to ten times that sum.

FREIGHT BY RAIL AND WATER.

To be successful commercially, and therefore to justify its cost, an intracoastal waterway must be able to compete with ocean and rail carriers. Before it will be built the people of the United States must be convinced that it can so compete, and that the annual saving to the people resulting from lowered freight charges will be greater than the sum of the annual interest on the money invested in its construction, plus the annual cost of maintenance. When this is shown, this fact, added to the undoubted value of such a waterway in the plans for national defense, plus the fact that being open to any man or group of men desiring to run a boat, commerce is not easily made subject to paralysis by the threats of any other group of men, will certainly lead to a quick realization of your desires.

The undoubted falling off of commerce in some of the internal waterways of the Nation which has taken place in recent years gives to the opponents of your plan one of their strongest arguments. They do not believe it a good business proposition. Let us see how this argument may be met successfully. The low cost of freight on ocean carriers is admitted and commercial justification of the cost of the Panama Canal can be found in the fact that the merchants of Los Angeles, San Francisco, and other cities on the Pacific coast, can get their wares from the Atlantic seaboard cheaper, in better condition, and in practically the same time, by ocean carrier, than by the much shorter rail route. Oregon fir is now delivered on the shores of the Hudson by an ocean carrier at a lower price than is charged for southern pine. Coal costs less at seaports than it does 50 miles back on the very railway line which may take it to the port. The ships of the Great Lakes carry heavy freight at a cost approximately the same as do ocean tramps, and for their heavy bulk freight railways hardly attempt to compete with them. On the Ohio River coal is transported for less than a mill per ton-mile.

WATER TRANSPORTATION ADVANTAGEOUS.

These two instances of exceedingly economical water transportation have been cited to an extent perhaps wearisome, but they illustrate the underlying economic principles, and for this reason it may be permissible to enlarge upon them. On the Great Lakes a ton of iron ore is transported an average distance of approximately 850 miles for 65 cents, which covers also the cost of loading and unloading, the rate per ton-mile, including terminal charges, being between seven-tenths and eight-tenths of 1 mill, and it should be noted that as a rule the carriers must return empty. Pittsburgh coal is carried to New Orleans by way of the Ohio and Mississippi Rivers, a total distance of 2,000 miles, for about $1.25 per ton, the ton-mile rate being about six-tenths mill, and here also there is no return cargo. In neither case is there active railroad competition. In the former case the water distance is about the same as the distance by rail. In the latter the rail distance is not much more than half the distance by the water route, so that in fairness the ton-mile rate for river coal should be stated as about 1 mill. As the lowest known rail rate on coal or any other low-grade commodity is about 2½ mills, and the usual rate for such articles is double this figure, it is evident that under proper conditions transportation by water is decidedly advantageous, and it requires no especial discernment to perceive how the condition is brought about.

Plainly it exists when there is available to the water route a large supply of coarse or low-grade freight, or of package freight if a fairly rapid speed can be assured and when, either by a process of slow growth and change, or else by talent of the high order, ways and means have been devised not only for economical transportation but also for cheap and efficient handling of the freight at both ends of the line. On the Great Lakes and on the Ohio the special problems have been skillfully solved; loading is cheap and rapid, the duration of the water journey has been reduced to a minimum, and, finally, cargo is promptly unloaded. Thus overhead charges on the plant are kept low and operating costs are minimized; but all of these advantages have in time been made possible by the intelligent, progressive adaptation of the water route, of the waterway, and of the carrier to the desired ends.

LIMITING THE CARRYING FACILITIES.

The opposite conditions are frequently encountered, and in the study of the decay of our water transportation industry cases are frequently found to support the assertion that neglect, nonprogressiveness, and indifference to their own interests have resulted in real ascertainable damage to the vital prosperity of the people. As an illustration, I have in mind the case of the old Champlain Canal connecting the Hudson River navigation with Lake Champlain points and with Canada by way of the Chambly Canal. Until the adoption of the Barge Canal project by the State of New York this traffic was limited by the size of the locks to the use of boats with extreme dimensions of 100 by 17 by 4½ feet, carrying an average of 150 tons of cargo, with an average rate of $1.10 per gross ton. The tributary territory is fertile and rich in natural resources so that it would supply a large tonnage of freight were the rates such as to permit it to move and to enter the competitive markets open to it. Due, however, to a lack of carriers of even the small size above referred to, and still more to their uneconomical character, the traffic over this route has remained comparatively small, and much that would have moved over it has been diverted to the competing rail lines. As an illustration Port Henry on Lake Champlain has shipped about 1,000,000 tons of iron ore annually, of which 90 per cent has moved by rail and only 10 per cent by water, whereas bearing in mind the length of the navigation season and the fact that rail rates can probably not be materially lowered, it seems reasonable to assume that fully 75 per cent of this iron ore should move over a really economical water route.

CHAMPLAIN ROUTE TO NEW YORK.

As is well known, the Barge Canal improvement now under way has resulted in the reconstruction of the Champlain Canal with locks 328 by 45 by 12 feet, and with minimum canal sections adapted to the use of boats of such size as to justify the prediction that rates to New York

City on coarse freight will be reduced to 58 cents per ton, the distance being 300 miles, or one-fifth mill per ton-mile. The possibility for this marked reduction of rates will depend on a correct choice of the type of carrier to be adopted. Model, size, and power must be considered with care and such a balance struck between the necessity for cargo capacity and the necessity for speed (which depends on the power) as will result in the transportation of a ton of freight at the minimum cost. It seems profitable therefore to consider in some detail the elements upon which to base a correct choice of the type of carrier. Some guidance may be had from a review of changes and progress in the rail-transportation industry, for after all the problem of carrying freight with the utmost economy is common to both rail and water routes.

RAILWAY PROGRESS.

In this country at least, and probably everywhere else, it will be found that improvements in railroads and in their rolling stock have been very gradual, and that sometimes changes with a view to betterment have turned out to be disappointing. The railway as an agency of transportation has existed in this country on a commercial scale for nearly a century, yet it was not until the introduction of the present form of steel rail that high speed and heavy trainloads became possible. The first railroads had comparatively heavy grades and sharp curves; locomotives were small, and freight cars held little more than the load of a large wagon. Moreover, the roads were short in length and had no through routing arrangements. It was only about the time of the opening of the Civil War that the various short lines began to be joined into systems, and the invention of the modern rail at about this time joined to open to railroad managers the opportunity for making changes which the pressure of a rapidly growing traffic had already rendered very desirable. Then came gradual elimination of sharp curves, steep grades, and grade crossings, and hand in hand locomotives and freight cars gradually increased in size, but expenditures were always based upon careful analysis of the resulting economics, and as a rule no changes were made unless it could be conclusively shown that the resulting saving would more than pay interest on the cost. This applies particularly to the right of way, but was, of course, held in view in the replacement of rolling stock, though here obsolescence and destruction would more naturally facilitate the introduction of new ideas.

GREATER SPEED, LARGER LOADS.

As remarked above, not every change in the rolling stock was an improvement resulting in the expected economies, and many expensive experiments soon found their end in the scrap pile. On the whole, however, there has been a continuing and coordinated growth in efficiency to which improvements in the right of way as well as in the carriers and in the motive power have all contributed, and there has been in evidence a deliberate effort to harmonize the sometimes conflicting elements of the problem. The final result is familiar to all, and it is a commonplace of our day that railroads should employ freight cars of 40 and 50 tons' capacity for miscellaneous freight and others of 100 tons' capacity for iron ore and other bulk freight, and that railroads should be so built as to permit the movement of trainloads of from 6,000 to 8,000 tons drawn by a single locomotive. Evidently improvement has been based upon consideration of the diversity and character of traffic to be moved and the economically justifiable and necessary changes both in the right of way, in the carriers, and in motive power. Thus it is a single problem with many variable elements, but its solution has been successful and railroads are to-day carrying freight at rates averaging about 7½ mills per ton-mile, less than two-thirds the average of 30 years ago, and this in spite of enormous advances in wages and in other important elements in cost. Greater speed and larger trainloads, with corresponding reduction in overhead charges and operating costs, have made this possible.

TRAFFIC ON INLAND WATERS.

The same process of reasoning must be applied to the determination of the best means of handling the traffic on the inland waterways, and it must be kept in mind that the carriers adopted should be susceptible of economical use on each class of waterway embraced in a route. Natural waterways of ample depth and width may be linked by canal, with cross sections of limited area. At times the dimensions of locks must be considered. Thus, for example, in providing barges and towboats for use on the Hudson River and the New York State barge canals we should plan to increase dispatch not only by the use of improved appliances for loading and unloading at terminals but also by adopting such designs for the hulls of barges and such details and capacity in the motive power as shall, considering the limits of depth, width, and capacity of channels, reduce the combined ultimate cost of transportation, including interest on the first cost of the waterway and the annual charge for maintaining, to the lowest attainable figure. As thus stated, decision upon the correct solution is plainly not easy, and it is to be expected that errors will be made. While each case of this kind has individual peculiarities, in many respects experience elsewhere will furnish trustworthy data. Thus, if the traffic is to be handled in towed barges of approximately 1,000 tons' capacity, the Hudson is comparable to the Rhine, where a traffic more than twice that ultimately expected on the Hudson is handled largely in fleets of barges of about that size. Experience on the Rhine has led to the adoption of the "ship-shape" or "model" type of barge in preference to "scow" forms, and, as the available channel capacity on the Rhine is somewhat the same as that on the Hudson, it seems reasonable that the carriers should also be similar.

The most common form of towboat on the Rhine and other European rivers is the side-wheel steamer with compound or triple-expansion engines, the largest having from 1,250 to 1,400 indicated horsepower, towing capacity 5,000 to 6,000 tons, at a speed of 2 to 3 miles per hour upstream. In over-all dimensions these boats run about 240 by 63 by 4 feet, obviously not suited either to the Hudson or to the barge canal, whose locks are about 310 by 45 by 12 feet in available dimensions. A different type of towboat must then be sought, and it is probable that the best now in use there will, with some refinements, be found economical, the changes taking the direction of improvements in machinery, boilers, and possibly propellers and hulls. If the barges are to carry their own motive power, then the waterway will permit their use up to about 3,000 tons' capacity, though for such large craft the speed must be low. For these there is to-day perhaps no exact precedent in successful use elsewhere, but cargo steamers on the Great Lakes embody many of the details which should be found in the final design, exempli gratia, large and numerous hatches affording facilities for rapid loading and unloading, easy forms minimizing the driving power required, and good mechanical plants permitting small crews and the maintenance of a comparatively high speed, thus reducing overhead and operating expense and giving dispatch, the necessity for which I again emphasize. Speed as great as 10 miles per hour can be hoped for only on reaches of the natural waterways which form a part of the system.

In my study of the Hudson, I have become convinced that the employment of properly designed towed or self-propelled barges will permit bulk freight to be handled at a ton-mile cost not exceeding 1.35 mills, the present rail rate for the same commodities being somewhat over 6 mills. It should be pointed out that terminal costs are not included in either case, and that while the rail rate is the total charge for the service, the water rate must be increased (very slightly, however) to cover the interest on the cost of the waterway and the cost of its upkeep and operation.

The present combined rail-and-water traffic of this route is over 80,000,000 tons, and the previously stated estimate that the water route will do a business of 20,000,000 tons seems therefore reasonable. With eight months open to navigation, and barges carrying 1,000 tons each, this traffic would require the passage through the channels of 68 barge loads every day. A shorter season would increase these figures, and as the business will not come with uniform regularity, it seems reasonable to assert that the river will frequently be called upon to handle the full capacity of the Troy Lock—about 200 barges per day. It is of interest, therefore, to tell you something of the observed influences of existing channels.

INFLUENCE OF DEPTH OF CHANNEL.

It is a matter of common knowledge that a vessel in motion has a deeper draft than when at rest, this increase being greater in shoal than in deep water; also that to attain a given speed the amount of power required increases as depth decreases. For example, a rapidly moving boat, such as a torpedo destroyer, can not attain her greatest speed in water of less depth than 60 feet. The channel width also has an important influence on this loss of effective power. In the lower reaches of the Hudson, in depths of 40 feet and over, the day-line steamers attain a speed of 22.5 miles per hour. In the upper reaches, with a draft of 9½ to 10 feet in a channel depth of 14 feet, the *Hendrick Hudson* attained a speed of 9.1 miles per hour with the expenditure of 350 engine horsepower. By increasing the power developed to 730 horsepower the speed was increased to only 9.48 miles. It is also of common knowledge that a boat will not steer well unless she has considerable depth below her keel, and, as boatmen say, "feels the bank" when too near a shoal. In Europe from 2 to 3 feet excess of channel depth over boat draft is regarded as desirable for interior waterways. For a given area of cross section the relative influence of channel width is less than of channel depth on the power required to drive a boat at a given speed.

MOVEMENTS OF WATER PRODUCED BY BOAT.

Doubtless many of you have noticed the movement of the water when passing by boat through narrow channels. First a depression in the water surface starting nearly opposite the bow of the boat and becoming greater to a point a little in rear of the stern and then further back a following wave of considerable height. Have you thought what this means? The hull of the boat occupies a certain volume of the cross section of a channel. As the boat moves forward, not only must a corresponding volume of water be pushed aside but also water must flow to fill the space vacated by the boat in its movement forward. Water will not flow excepting by the creation of a head. The more rapid the velocity required, the greater must be this head. If the volume of space occupied by the hull be small relative to the cross section of the channel, water can flow from the sides of the channel and beneath the boat to fill the constantly vacated space previously occupied by the hull. A large supply of water is thus available and the velocity required in the water is small. If, however, the size of the hull is comparatively large with respect to the channel cross section, smaller channels are available for the water flow and the velocity of the water must be greater. The heads of water thus required must be created by the power of the boat. The greater the head, the greater the power required. In addition, in shoal water and narrow channels the water in rapid movement extends to the soil of the sides and bottom.

The resistance to flow of the channel sides and bottoms—or, in other words, the friction—becomes the more felt as the velocity is increased. This, again, requires an increased head of water which must be produced by the power of the boat. Therefore, when you see a great disturbance of water accompanying the movement of a boat, you may know that a large amount of power is being expended uneconomically. For low speeds of 2 to 3 miles per hour, the area of cross section of a channel should be from 3 to 5 times the area of cross section of the boat. For higher speeds, at least from 6 to 10. Of course, in the above analysis, only the main causes of the expenditure of power in restricted channels have been named. Other sources of loss which induce extended and not well-understood movements in the water surrounding a boat have not been mentioned.

BETTER WATER CARRIERS NEEDED.

My object in making the foregoing observations is to emphasize the need of care and the highest order of skill in the design and operation of the carriers for our water routes. It must be plain to you that the factors that contribute to make up the total cost of water transportation are virtually the same as in transportation by rail, and that the same order of ability is required in the design, organization, and operation of the water carriers. The day of second-rate men and inferior means is past, and my judgment is that desirable economy and efficiency will result only from the intelligent expenditure of large sums. This may mean fleets under unified control.

Figures of actual cost of transportation on restricted waterways in the United States are relatively scarce in regard to such waterways as may be considered at all efficient and modern, both in themselves and as to the boats using them. On the old Erie Canal, the boats were 98 by 17½ by 6 feet, and the fleets were usually one steamer and three consorts. In 1897 the ton-mile rate charged on wheat, Buffalo to New York, was 1.22 mills, and from that time up to 1915 there was a more or less regular increase, the rate in the latter year being 2.98 mills. It is known that these rates were kept as near as possible to the rail rate. Even so, the higher rate is comparatively low.

That water transportation properly conducted is economical is well known to railroad traffic men, and they have always owned and used boats whenever the circumstances were favorable. Thus on the Great Lakes, the Pennsylvania, Erie, New York Central, Lehigh, and other railroads formerly operated lines of freight carriers in the package freight trade between the head of the Lakes and Lake Erie points, and these lines have only recently been discontinued in consequence of the provisions of the Panama Canal act. Thus the rail carriers were actually competing with themselves. The situation is the same on Long Island Sound, where the traffic is enormous. Here the New York, New Haven & Hartford Railway operates a fleet of about 90 steamers.

CAUSES OF DECLINE WELL KNOWN.

If traffic has declined upon our waterways, the causes are well known, and I shall refrain from enlarging on this well-worn theme further than to say that failure to analyze costs, to reduce lost motion, and to economize in the manner followed by our successful railroads—these, and the failure to organize the business of water transportation upon sound and broad plans, supported by capital in liberal amounts, are as much the explanation as is the policy of hostility undoubtedly practiced in the past by the railroads, now happily passing away. But even though transportation costs be reduced to the minimum, terminal costs of handling, transferring, and delivering to the consumer must all be correspondingly treated or they may neutralize the best efforts of naval architects, shipbuilders, and vessel managers.

An example of somewhat misapplied energy may here interest you. One of our southern rivers affording access to an excellent coal field has recently been improved by the completion of a comparatively large number of locks and dams, so that a low-water depth of 6 feet is now available from tide water to the coal tipples at the present head of navigation, a distance of about 400 miles. For the upper 300 miles the river is usually crooked and some of its curves present considerable difficulty to navigation, in addition to which the channel is usually narrow, sometimes but little over 100 feet in width.

The local coal operators have exhibited a commendable degree of enterprise and are making a genuine effort to realize the economies which should result from the use of this waterway, which affords access to two large seaports, the rail rates to which are, respectively, $1.10 and $1.25 per ton. While three large coal companies have engaged in the traffic, two of them use the same type of carriers—wooden barges of 500 to 600 tons' capacity, pushed by stern-wheel towboats of the western river type, in fleets of two or three, the latter being the largest number that can be taken through the locks in a single locking with the towboat. The third company uses self-propelled steel barges 200 to 220 by 32 by 8 feet depth and carrying capacities of 735 to 850 tons on 6-feet draft. The loads are carried on deck. Power is supplied to twin screws by two producer-gas engines of 75 horsepower each.

COST OF OPERATING BARGES.
